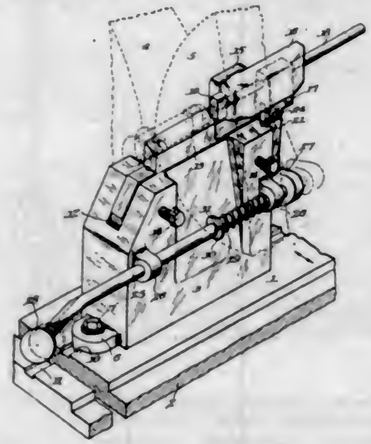
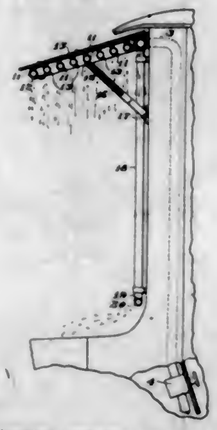
1. In an identification device for fabrics, a body portion including front and back members one of which has a flap at one end under which an edge of a swatch and the free end of the other member are capable of being engaged, means extending through said back member and said flap for securing the swatch thereto, and other flaps on said back member having ends thereof loosely engageable under the first named flap and with portions of said swatch to space said front member from said swatch when the free end of said front member is inserted beneath said first named flap.



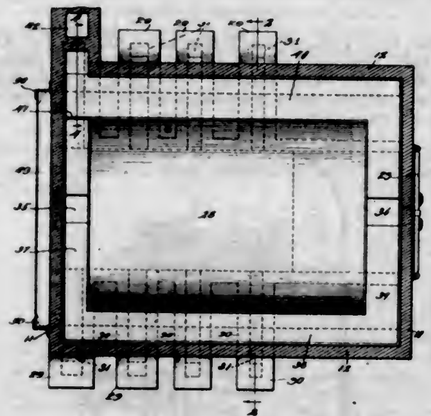
1,688,102. SLEEPER ANCHOR. WILLIAM H. ANDREWS, Los Angeles, Calif. Filed Nov. 9, 1927. Serial No. 232,006. 3 Claims. (Cl. 72—101.)



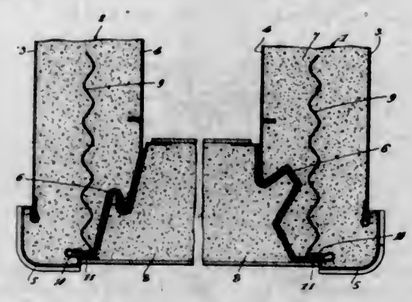
1. An anchor for floor sleepers, comprising a top horizontal body portion having one end thereof pointed and bent inwardly and downwardly at an acute angle to said body and adapted to be driven into one side of a sleeper adjacent the top thereof, and having its other end extending in an opposite direction outwardly and downwardly at an obtuse angle to said horizontal body portion, the latter being of a length equal to the width of the top of a sleeper.

1,688,103. WORK REST AND EJECTING DEVICE FOR GRINDING MACHINES. WALTER D. ARCHEA, Norwood, Ohio, assignor, by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 18, 1924. Serial No. 687,081. 10 Claims. (Cl. 51—215.)

1. The herein described attachment for grinding machines, comprising a standard 3; a work-rest 13 carried thereby, a guideway 16 also carried by said standard; a rod 18 supported and guided in said guideway and provided with a head or bunter 19; a block 17 carried by and adjustable upon the rod 18; a lever 21 fulcrumed in a support carried by the standard and having elongated openings at its ends; an actuating-rod 25 carried and guided in supports upon the standard; a laterally-projecting arm 27 carried by one end of the actuating-rod and extending into the opening in one end of lever 21; a pin 24 carried by block 17 and seated in the opening in the opposite end of said lever; and a spring 29 serving to move rod 25 in an outward direction, and to restore the parts to their normal position after manual movement of said rod inwardly and release thereof.

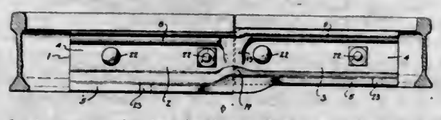


1,688,104. WINDSHIELD CLEANER. PAUL ERIC BANG, Newton, Mass. Filed Dec. 7, 1927. Serial No. 238,451. 4 Claims. (Cl. 20—40.5.)



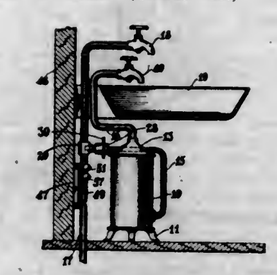
1. The combination with the sun visor and windshield of a vehicle, of a conduit extending outwardly from the top of said windshield at each upper side thereof, a conduit extending between said first two conduits at the top of and closely adjacent to said windshield and having perforations in the bottom thereof, a plurality of tubes attached to said first two conduits and in close relation with said sun visor, said tubes being arranged in staggered relation and each tube extending but partially across said visor, each of said tubes having perforations in their bottoms, a conduit extending from one of the said first two conduits downwardly and at one side of said windshield, and then transversely of said windshield adjacent to the bottom thereof and having perforations in the bottom of said transverse portion, and means to transmit air under pressure to said conduits and tubes.

1,688,105. FURNACE. MICHAL BARAN, Harvey, Ill. Filed Nov. 19, 1927. Serial No. 234,360. 3 Claims. (Cl. 263—42.)



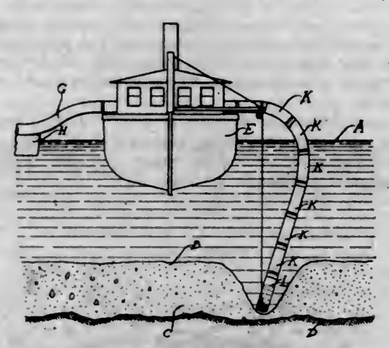
2. A furnace of the type defined and having a combustion chamber and fire box, a muffle chamber above the combustion chamber, an arch above the muffle chamber forming a passage for hot gases, said combustion chamber communicating with the space beneath the arch and above the muffle chamber through tortuous passage ways in a vertical plane, partition walls forming the passage ways, the walls of the furnace having openings which communicate with the horizontal sections of the tortuous passage ways for clean out purposes, said partition walls constituting shelves or trays upon which ashes and soot collects, and certain of the clean out openings being above the partition walls to give access to the same.

1,688,106. FIREPROOF SAFE. CHARLES J. BATES, JR., Englewood, N. J., assignor to The Mosler Safe Company, Hamilton, Ohio, a Corporation of New York. Filed July 30, 1926. Serial No. 125,854. 2 Claims. (Cl. 109—2.)



1. A safe of the character described, including, in combination, jamb walls forming a door opening, inner walls connected to the inner ends of the jamb walls, outer walls connected to the outer edges of the jamb walls, insulating material between the outer walls and the inner and jamb walls, and a corrugated metallic collar embedded in said insulating material, said collar extending from adjacent the front edges of said jamb walls rearwardly thereof and completely surrounding said door opening, and so positioned as to distribute any cracks which may occur in said filling in the vicinity of said jamb walls.

1,688,107. COMPROMISE ANGLE BAR. WILLIAM BENDER, Downers Grove, Ill., assignor to Ramapo Ajax Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 22, 1927, Serial No. 185,769. Renewed Sept. 5, 1928. 10 Claims. (Cl. 238—167.)

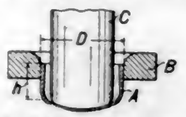


1. A compromise bar having a first part adapted to fit the fishing section of a first rail and a second part adapted to fit the fishing section of a second rail of different size from the first rail, said bar having an offset portion between said parts, said parts and offset portion being drop forged by the same operation from a single billet.

1,688,108. ELECTRIC HOT-WATER HEATER. BETTY BERGER, New York, N. Y. Filed Jan. 16, 1928. Serial No. 246,959. 3 Claims. (Cl. 219—39.)

1. An electric hot water heater, comprising a housing with a water coil, guides connected with the interior of the housing, a heating unit slidably mounted on the guides, and a rod attached to the heating unit and extended from the housing and arranged upon motion for raising or lowering the heating unit so as to be nearer or further from the water coil.

1,688,109. METALLIC-VALUE RECOVERER. FRED FORREST BERRY, Los Angeles, Calif. Filed May 10, 1927. Serial No. 190,368. 6 Claims. (Cl. 37—63.)

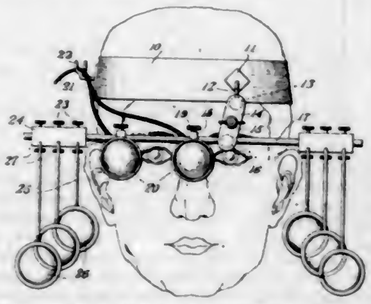


1. A device for capturing detritus from submerged deposits comprising a conduit having a plurality of passages, induction means for one of said passages, means for discharging liquid under pressure from the remaining passages, a head for said conduit having an intake for the induction passage and adjacent thereto an outlet for the discharge passages, mechanical fingers movably mounted at the mouth of said intake, and means to agitate said fingers so as to prevent solids lodging at said intake.

1,688,110. TROLLING HEAD. WILLIAM C. BOGART, Los Angeles, Calif. Filed Mar. 9, 1927. Serial No. 173,890. 5 Claims. (Cl. 43—42.)

1. A trolling device comprising in combination a solid head structure, a plurality of feathers having their stems secured to the rear end of said structure, a covering of parchment also secured to the rear end, said parchment extending over the stems of the feathers and behind the head structure, completely encircling the stems of the feathers and being flexible.

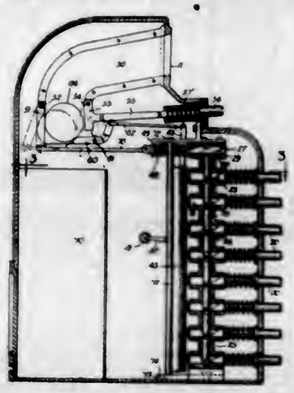
1,688,111. MANUFACTURING KETTLE-SHAPED HOLLOW BODIES. KARL BÖHLE, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Dec. 4, 1925, Serial No. 73,241, and in Germany Dec. 5, 1924. 1 Claim. (Cl. 113—51.)



The process of manufacturing kettle shaped bodies from a blank of thick sheet metal, which consists in forcing said blank through a series of open dies of diminishing diameters by means of plungers, each plunger having a diameter substantially less than the least clear gage of the die with which it is used diminished by twice the wall thickness at the free end of the blank resulting from the pressing operation, the blank engaging ends of the plungers used in successive pressing operations being of different diameters, whereby the position of the dangerous section of the blank is progressively altered.

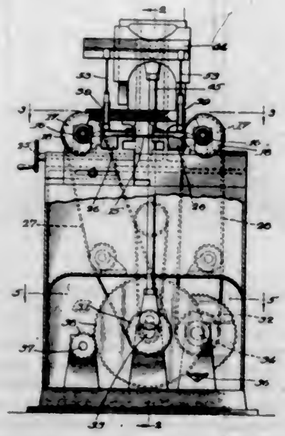
1,688,112. SALINE TRI-SODIUM PHOSPHATE AND PROCESS FOR ITS MANUFACTURE. CHARLES F. BOOTH and ARTHUR B. GERBER, Anniston, Ala., and PAUL LOGUE, Logue, Mo. Refiling of application Serial No. 726,919, filed July 19, 1924. This application filed June 25, 1928. Serial No. 288,287. 16 Claims. (Cl. 23—107.)

1. The herein described process for the manufacture of a sodium chloride tri-sodium phosphate composition, which consists in combining phosphoric acid, sodium carbonate, and caustic soda with sodium chloride and water.



10. The herein described composition of matter consisting of a compound of sodium phosphate and sodium chloride.

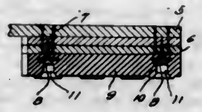
1,688,113. SURGICAL HEADLIGHT. MAX BORNKESSEL, New York, N. Y. Filed June 9, 1927. Serial No. 197,751. 2 Claims. (Cl. 128—23.)



1. A diagnostic head-lamp comprising a head band, a double-ball joint on said head band, a support rod carried by said double-ball joint, a plurality of electric lamps longitudinally adjustable on said rod, and a plurality of lenses longitudinally and pivotally adjustable on said rod, said lenses being adapted to selectively swing in front of the operator's eye.

1,688,114. PREPAYMENT MESSAGE RECEIVING AND DELIVERING DEVICE. RUDOLPH BUCHNER, Sydney, New South Wales, Australia. Filed Aug. 23, 1926, Serial No. 131,063, and in Australia Aug. 25, 1925. 5 Claims. (Cl. 194—70.)

1. A prepayment message receiving and delivering machine comprising a housing, a plurality of members adapted to carry memoranda and to expose the names of addressees and pivot-mounted to swing in a horizontal plane into and out of said housing, spring latches for automatically locking said members in the in-position, and means for releasing any one of said members but not more than one at a time, said means including manually operated plungers co-acting with said latches, and operable only when a coin is inserted in a coin slot in the housing.

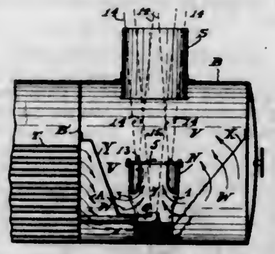


1,688,115. BOX-BLANK FOLDING AND FASTENING MACHINE. ARTHUR TALBOT CAMPBELL, Seattle, Wash., assignor to Band-Bound Box Company, Seattle, Wash., a Corporation of Washington. Filed Sept. 30, 1926. Serial No. 138,614. 15 Claims. (Cl. 1—14.)

12. In machinery for folding and assembling box parts together, preliminary to the insertion of fasening devices to hold the parts in box form, the combination of means

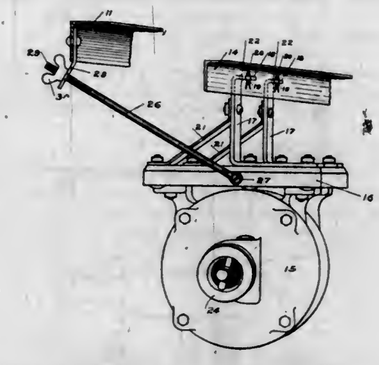
for supporting the parts in position to be folded and assembled, means for engaging the sides of the box to fold them toward each other, and instrumentalities for causing the operation of said means, in combination with a device to push the upper cleat of the box into engagement with the cleats of the side walls, and mechanism automatically controlled to insert nails through the interlocking ends of the top cleat and the side cleats, after said folding and assembling operation has brought the parts into final relation to each other.

1,688,116. RUBBER HEEL. JOSEPH CELENKO, Bedford, Ohio. Filed Feb. 7, 1928. Serial No. 252,513. 2 Claims. (Cl. 36—35.)



1. In combination with a shoe provided with a leather heel, of a plurality of nails distributed in groups for holding the heel to the shoe, the nails in each group being relatively very closely grouped, a rubber heel having a plurality of apertures, and screws extending through the apertures and embedded in the first mentioned heels between the nails of the groups.

1,688,117. COMPOSITION OF MATTER FOR TRANSFER DESIGNS. OLIVER L. DAVIS, Glen Ridge, N. J., assignor to Joseph Walker Co., Irvington, N. J. Filed Apr. 7, 1927. Serial No. 181,893. 1 Claim. (Cl. 134—36.)

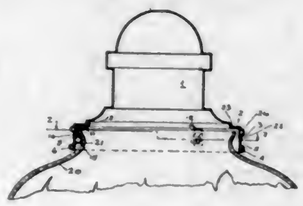


A composition of matter for making transfer designs comprising Cumar gum, rosin, carnauba wax, stearic acid and a coloring matter consisting of ultramarine blue ink and a special white ink containing Titanox and litho varnish, the Titanox containing, in turn, titanium oxide and precipitated barium sulphate.

1,688,118. FORCED-DRAFT DEVICE. CHARLES DUCAS, New York, N. Y. Filed Sept. 1, 1926. Serial No. 132,994. 2 Claims. (Cl. 230—96.)

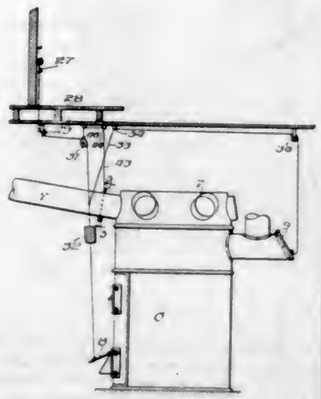
1. In an exhaust nozzle, in combination, a boiler chamber having a discharge stack, means for passage of the gases of combustion from the heating means of the boiler into said boiler chamber, a nozzle disposed in said boiler chamber for cooperation with said stack and having a central chamber provided with a circular discharge opening and having ports for entrance of gases of combustion from the boiler chamber into said central chamber, an annular chamber disposed around said central chamber and having an annular discharge opening and an annular jet cap for the ends of said central and outer chambers, said cap having a relatively large circular opening for discharge of gases of combustion from the central chamber and projecting across the outlet of said annular steam chamber so as to leave a narrow annular opening around and adjacent to said circular opening for discharge of steam from the outer chamber at high velocity, passages connecting said annular chamber with engine cylinders appurtenant to the boiler for providing unbroken passage of steam from said cylinders to said annular discharge opening, the steam discharged from said annular opening being in the form of a hollow cone, the gases of combustion being drawn from the boiler chamber through said inlet ports of the central chamber by entrainment of said hollow cone of steam and discharged through said circular outlet opening of the central chamber in the form of a column of gases of combustion surrounded by the hollow cone of steam, and a jet located in the axial line of said nozzle at the bottom of said central chamber adjacent to the inlet ports thereof and connected to the steam generating means of the boiler for projecting a stream of steam into said chamber whereby the gases of combustion are drawn through said ports and discharged through said circular outlet in a column of mingled gases and steam by entrainment of said stream of steam for providing draft when said engine cylinders are not operating.

1,688,119. MOTOR SUPPORT FOR WASHING MACHINES. JOSEPH H. FEDLER, Kansas City, Mo., assignor, by mesne assignments, to Modern Laundry Machine Manufacturing Company, a Corporation of Missouri. Filed June 1, 1926. Serial No. 113,063. 2 Claims. (Cl. 308—11.)



1. In a washing machine, a frame member, means for suspending a motor from said frame, said means including a motor supporting block, a motor secured to said block, a bracket attached at one end to said block, the other end of said bracket being provided with an offset T-shaped portion, the leg of which is detachably mounted in the frame to provide a pivotal support for the block and motor unit, and means for holding said motor supporting block in various positions of angular adjustment, said holding means comprising a rod pivotally connected to the block at one end, the other end of said rod being threaded, the threaded end of said rod extending through an opening in the frame, and means on the threaded end of the rod for limiting the movement of the rod through the opening in one direction, the rod being free to move through the opening in the opposite direction.

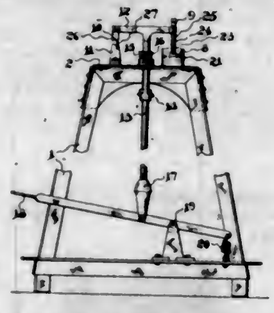
1,688,120. LIGHTING FIXTURE. JOSEPH L. JAFFE and FREDERICK WENING, Cleveland, Ohio; said Frederick Wening assignor to said Joseph L. Jaffe, Cleveland, Ohio. Filed Dec. 2, 1922. Serial No. 604,463. 5 Claims. (Cl. 240—132.)



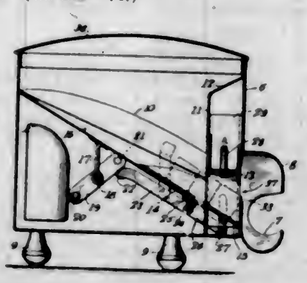
2. In a lighting fixture, the combination of a holder provided near the bottom with a horizontal flange and a globe-receiving flange depending therefrom, said flanges provided adjacent the angle therebetween with a series

of double slots, a series of locking clips comprising angled straps mounted to extend through the upper slots and balanced so as to have their lower ends normally hanging substantially flush with said depending flange

but being movable inwardly, by contact with the upper edge of the globe, into globe-holding position, and a locking ring adapted to fit over said depending flange to secure said clips in their globe-holding position.



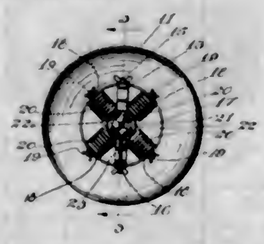
1,688,121. SAFETY DEVICE FOR HOT-AIR FURNACES. JOHN M. LARSON, Chicago, Ill., assignor to National Regulator Company, Chicago, Ill., a Corporation of Illinois. Filed June 9, 1926. Serial No. 114,606. 5 Claims. (Cl. 126—287.5.)



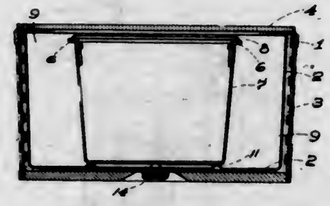
1. The combination with a hot air furnace having heat controlling means and a hot air pipe leading from said furnace for supplying hot air to a room, of means for controlling said heat controlling means to prevent excessive rise of temperature, comprising a pair of strips having overlapping ends secured together by fusible material, said strips when thus secured together forming a bar extending through said hot air pipe, with the overlapping ends located in said hot air pipe, means for preventing withdrawal of said bar from said hot air pipe so long as the two strips are connected together but permitting the withdrawal of both strips when the fusible material fuses, and connections between one of said strips and said heat controlling means.

1,688,122. FUSE CUTTING, SPLITTING, AND CAPPING MACHINE. JOHN MCLEAN, Lime, Oreg. Filed Apr. 4, 1927, Serial No. 180,906, and in Canada Jan. 17, 1927. 9 Claims. (Cl. 86—22.)

1. A fuse preparing machine comprising a table; fuse cutting and splitting means supported thereon; cap crimping means supported thereon; a guide spool round which the fuse material may be led from the cutting and splitting means to the cap crimping means; and means for simultaneously actuating the cutting and splitting and the cap crimping means.

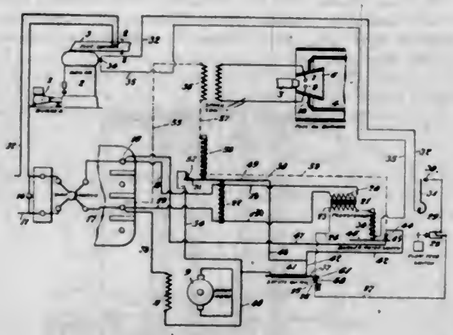


1,688,123. SUGAR DISPENSER. BARUCH LEVY, Brooklyn, N. Y. Filed Apr. 26, 1928. Serial No. 272,930. 5 Claims. (Cl. 312—71.)



2. A sugar dispensing device comprising a casing having an aperture in a wall thereof, a chute positioned in the casing, a yoke to which the chute is pivoted, said yoke having a lip lying normally below the lower edge of the aperture, and means associated with the yoke to raise the lip to a position in alignment with the aperture.

1,688,124. INFRA-RED-RAY GENERATOR. HECTOR P. MACLAGAN, Oak Park, Ill., assignor to McIntosh Electrical Corporation, Chicago, Ill., a Corporation of Delaware. Filed Jan. 3, 1927. Serial No. 158,574. 29 Claims. (Cl. 174—177.)



23. A heating element for an infra-red ray generator comprising a core of refractory insulating material having a groove in its outer surface, a resistance wire in said groove, and refractory insulating material filling said groove outside of said wire, said filling material having a depth distributing the heating effect of said wire through the outer portion of said core and through said filling material to heat them substantially uniformly to a dull red heat.

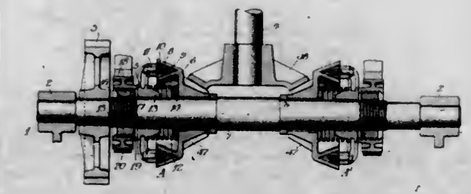
1,688,125. REFRIGERATOR BASKET. SAMUEL A. MEGEATH, New York, N. Y. Filed June 15, 1927. Serial No. 199,049. 5 Claims. (Cl. 62—75.)

1. A refrigerator basket, a portion of the interior chamber of which is adapted for the reception of ice, a drain-port leading through the bottom of said basket, ribs formed in the floor of said basket and radially disposed relative to said port so as to direct the flow of water thereto, and a food compartment removably positioned within said chamber having its lower face spaced from the bottom of said chamber by said ribs for the passage of water through the space thus formed to said drain port.

1,688,126. METHOD OF AND APPARATUS FOR CONTROL OF LIQUID-FUEL BURNERS. ROBERT F. METCALFE, Brooklyn, N. Y., assignor to Socony Burner Corporation, New York, N. Y., a Corporation of Delaware. Filed May 6, 1926. Serial No. 107,112. 16 Claims. (Cl. 158—28.)

1. In combination, a liquid fuel burner, a combustion chamber therein for receiving a mixture of gases capable of combustion, electrical contacts positioned in said chamber and adapted to have the gases pass around and between them, an electrical control system for said burner, said system having included therein means for passing sparks across said contacts for igniting the mixture of gases, and another means in said electrical system controlled by the resistance offered by the gases to the passing of sparks between said contacts while the sparking continues for varying said electrical control system to stop the operation of said burner.

1,688,127. PROCESS FOR IMPREGNATING METAL LAYERS. NIKOLAUS MEURER, Berlin-Neu-Tempelhof, Germany, assignor to Metallogen Gesellschaft mit beschränkter Haftung, Berlin-Neukolln, Germany. Filed Dec. 20, 1922, Serial No. 608,126, and in Germany Jan. 28, 1922. 1 Claim. (Cl. 91—68.)

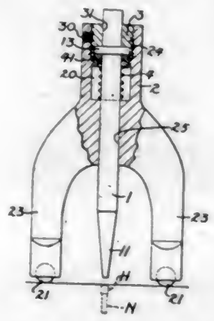


The process for forming a composite metal surface comprised of two or more layers of one or more kinds of metal involving the steps of applying a layer of metal by spraying fluid metal or depositing vaporized metal, then closing the pores of such layer by treating it at different time intervals with solutions of various substance, whereby the substance of one solution upon contact with the substance of the prior solution in the pores of the metal will chemicall react to form a third substance in the pores of the metal and be retained therein as a precipitate, then applying further layers of metal to the surface of the layer, the pores of which have been treated, and repeating the process of closing the pores of each layer directly after it has been applied.

1,688,128. COMPOUND STRUCTURE. ERNEST MOCCETTI, deceased, New York, N. Y., by Louise Moccetti, administratrix, New York, N. Y. Filed May 5, 1927. Serial No. 189,052. 17 Claims. (Cl. 72—61.)

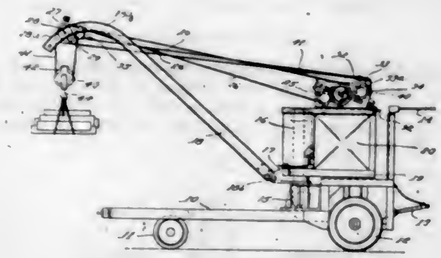
7. A reinforced concrete girder comprising a web portion and a flanged portion extending along its zone of greatest tensile stress, spaced main tensile reinforcing members embedded in and extending along said flanged portion, coupling elements spaced along said main tensile reinforcing members and connecting them through the intervening concrete, and web reinforcing members embedded in and spaced along said girder, said web reinforcing members having portions looped about said coupling elements and parts extending across said web portion.

1,688,129. FRICTION-CLUTCH TRANSMISSION. PHILO A. ORTON, Chicago, Ill., assignor to Orton Crane & Shovel Co., Huntington, Ind., a Corporation of Indiana. Filed Apr. 19, 1926. Serial No. 102,980. 8 Claims. (Cl. 192—36.)



1. In a friction clutch transmission of the type specified, the combination of a shaft, means for rotating said shaft, a rotatable member, a friction clutch on said shaft comprising members, one normally loose thereon and the other splined thereto, means for operating said clutch comprising a thrust member having screw-threaded engagement with said shaft, a brake-drum on said thrust member, a brake-band adjusted thereto, manually controlled means for applying said brake-band, and a driving connection between said loose clutch member and said rotatable member.

1,688,130. NAIL SET. OLE OLSEN, Seattle, Wash. Refiled for abandoned application Serial No. 89,946, filed Feb. 23, 1926. This application filed Feb. 29, 1928. Serial No. 257,841. 6 Claims. (Cl. 145—46.)

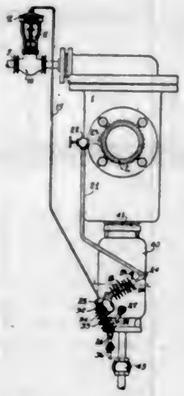


1. A hand tool for setting nails comprising a nail set, a frame comprising a pair of widely spaced floor engaging legs having means well above the floor for connecting said

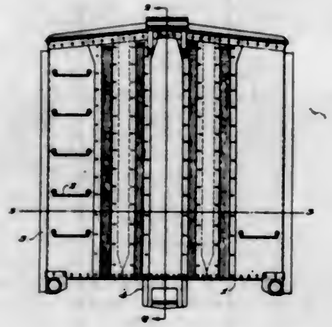
legs and guiding said nail set for reciprocatory movement, and means yieldably supporting said nail set in said frame

with its tip in predetermined position above the floor and nails therein and spaced from all parts of the frame.

1,688,131. INDUSTRIAL TRUCK. EDWARD J. ABBE, Cleveland, Ohio, assignor to The Elwell-Parker Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 27, 1923. Serial No. 615,203. 7 Claims. (Cl. 254—185.)



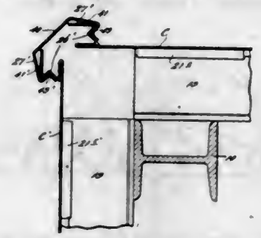
1. In a winding mechanism of the character described, the combination of a pair of drums, a frame supporting the drums, a motor mounted on the frame, said drums and motor having the axes thereof parallel, a pair of aligned shafts having the axes thereof extending transversely to the drum axes, one of said shafts being disposed above the axis of one of the drums, while the other is disposed below the axis of the other drum, like worm gears associated with each of the drums, worms mounted on said shafts for driving the drums in opposite directions, clutch means disposed between said worm shafts and gear means drivingly connecting the motor to said clutch means.



1,688,132. DESUPERHEATER CONTROL. JOSEPH M. BARRETT, Fostoria, Ohio, assignor to The Swartwout Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 3, 1927. Serial No. 158,590. 12 Claims. (Cl. 122—479.)

1. The method of controlling the flow of water to a desuperheater dependent upon the rate of accumulation of water collected below the desuperheater out of the path of steam but in contact with superheated steam including throttling the flow of water to the desuperheater when the quantity of water collected exceeds a given amount.

3. In combination, a desuperheater, a receiver disposed below the desuperheater and in open communication therewith but protected from the flow of steam through the desuperheater and means controlling the flow of water into the desuperheater dependent upon the water level in the receiver.

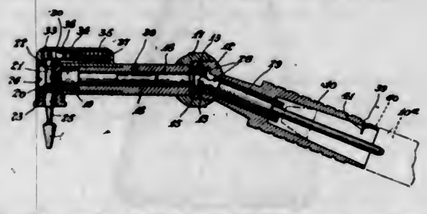


1,688,133. CAR-WALL STRUCTURE. CHARLES DAVID BONSALL, Parnassus, Pa., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 26, 1925. Serial No. 58,845. 17 Claims. (Cl. 105—410.)

1. In a wall for a railway car, a metallic plate having an inwardly projecting corrugation formed therein which terminates within the lower edge but extends to the upper edge of the plate, and a metallic sheet having an outwardly projecting corrugation formed therein which terminates within the upper edge but extends to the lower edge of the sheet, said corrugations being positioned opposite to each other.

1,688,134. BUILDING CONSTRUCTION. ACHILLE BRAUNSTEIN, New York, N. Y., assignor to Anchor Corrugating Construction Co., New York, N. Y., a Corporation of New York. Original application filed Feb. 25, 1926, Serial No. 90,447. Divided and this application filed Nov. 17, 1927. Serial No. 233,751. 1 Claim. (Cl. 189—34.)

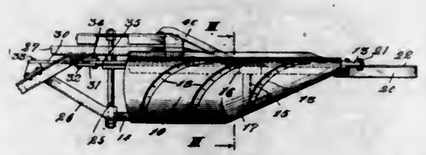
In building construction, two sheets located on adjacent walls at a corner of a building, inturned retaining flanges at the side edges of said sheets at the corner of the building, a cam flange extending from the outer edge of each retaining flange in a direction parallel to the sheet on which the retaining flange is formed, and a resilient cover-piece



adapted to snap over the cam flanges of the sheets and embrace the retaining flanges thereof.

1,688,135. FISHING REEL. FRANCIS M. CASE, Cleveland Heights, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Original application filed Mar. 31, 1923, Serial No. 629,040. Divided and this application filed Nov. 19, 1926. Serial No. 149,395. 14 Claims. (Cl. 242—84.4.)

3. A fishing reel, comprising spaced end heads, a line receiving spool rotatable therebetween, and level wind mechanism including a shaft structure extending between said end heads and being movable endwise through an aperture in one of said end heads, a removable closure for the aperture in said end head, and yielding means interposed between said shaft structure and said closure.

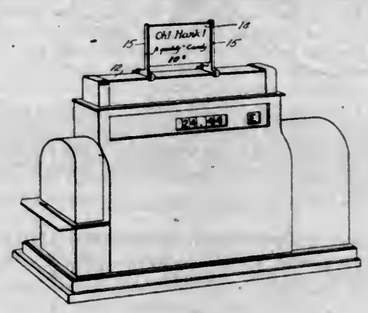


1,688,136. DENTAL TOOL HOLDER. HERMAN E. S. CHAYES and AUGUST P. JURGENSEN, New York, N. Y., assignors to Chayes Dental Instrument Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 10, 1925. Serial No. 61,644. 2 Claims. (Cl. 32—11.)

1. In a dental angle piece, a drill-carrying member, a chuck mounted in said member for receiving a drill, a recess in said member, a latching member slidable in said recess for retaining the drill, said latching member having an upwardly and forwardly extending arm and a sliding cover secured to the forwardly extending arm of said latching member and normally closing said recess.

1,688,137. SEPARATOR PLOW FOR CANE HARVESTERS AND THE LIKE. FREDERICK C. DOUGLAS WILKES and FRANCIS K. FLYNN, Watertown, Wis., assignors, by mesne assignments, to Luce Cane Harvester Corporation, New York, N. Y., a Corporation of Delaware. Filed July 15, 1919. Serial No. 310,956. 20 Claims. (Cl. 56—119.)

1. In apparatus of the character described, the combination with a cane harvester or the like including forwardly extending pick-up chains, of a separator plow mounted at one side of and in advance of the pick-up chains for free pivotal movement in a vertical plane, and means for maintaining the forward end of said plow adjacent to the ground surface irrespective of any irregularities

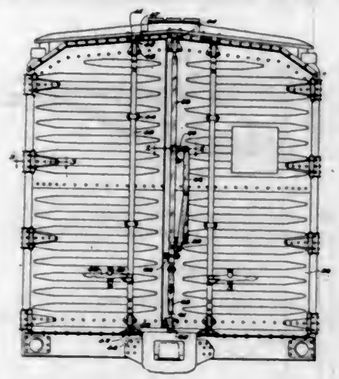


thereof, said plow having a substantially straight inside surface and an outwardly and rearwardly diverging outside surface.

1,688,138. ARTIFICIAL PLANK. WILLIAM H. DROEGE, Fort Wayne, Ind. Filed July 23, 1925. Serial No. 45,041. 1 Claim. (Cl. 106—31.)

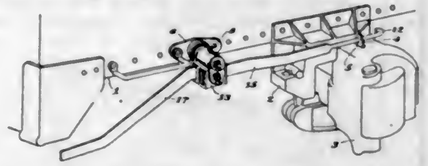
A plank composed of a mixture of 8 to 11% of bitumen, 16 to 25% of stone dust, 54 to 71% of finely divided gravel and 5 to 10% of powdered iron.

1,688,139. DISPLAY SIGN AND MEANS FOR MOUNTING THE SAME. ROBERT G. FISHEL, Chicago, Ill. Filed Jan. 13, 1926. Serial No. 80,893. 1 Claim. (Cl. 40—125.)



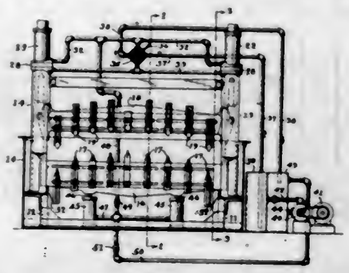
In an advertising device, a pair of integral standards each having a flat foot at its base, said standards having longitudinal slots in their opposed sides, with an advertising plate adapted to be received in said slots, said foot having a guide formed therein, a clamping lug on said foot, a second clamping member sliding in said guide, and screw means enclosed in said foot for actuating said clamping member toward said lug, said screw means having a kerf without engaging shoulders to unscrew the same.

1,688,140. AUTOMOBILE END DOOR. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 18, 1926. Serial No. 89,109. 5 Claims. (Cl. 189—46.)



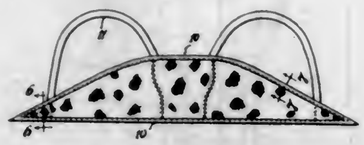
1. An end wall for a railway car comprising two swinging doors, each hinged to a side wall of the car and overlapping at the middle of the car, a stiffener secured to the inner edge of the inside door projecting beyond the outer face thereof, a stiffener secured to the inner edge of the outside door overlapping and engaging both sides of the

stiffener on the other door, a plurality of latches, each pivotally mounted on one of said doors to engage or disengage



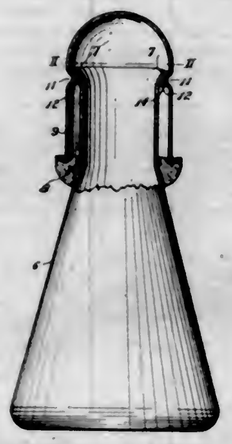
registering apertures in the stiffeners, and a bar to simultaneously operate said latches.

1,688,141. UNCOUPLING DEVICE FOR RAILWAY-CAR COUPLERS. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 12, 1926. Serial No. 147,986. 6 Claims. (Cl. 213—164.)



1. In an uncoupling device for a car coupler, a fulcrum, a pin lifting lever, an operating lever, a connector operatively connecting said levers, and a suspension link pivotally connected to said fulcrum and pivotally connected to said connector.

1,688,142. FORMING AND TEMPERING APPARATUS. JOSEPH GOGAN, Cleveland, Ohio. Filed Oct. 18, 1926. Serial No. 142,233. 4 Claims. (Cl. 266—6.)

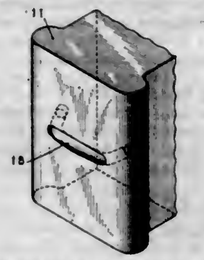


1. In a machine of the class described, the combination of guiding means, a form-supporting member movable on said guiding means, fluid pressure means for moving said member in one direction, a second form-supporting member reciprocable toward and away from the first-mentioned member and cooperating therewith to clamp the work, and fluid pressure means for actuating said second member having sufficient power to move both of said members in one direction and in opposition to the force exerted on the first member by its said fluid pressure means.

1,688,143. VIRGIN-BUST FORMER AND SUPPORTER. ANNA HAGELMAN, Houston, Tex. Filed Nov. 20, 1925. Serial No. 70,249. 1 Claim. (Cl. 2—42.)

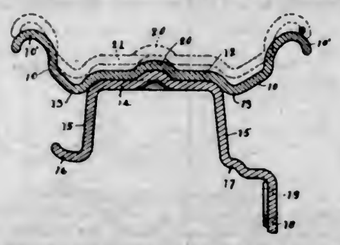
A bust former comprising a flat strip of material having its lower edge straight from end to end and cut on the bias, said strip having middle and end portions having their adjacent edges joined together by a plurality of spaced stitched seams, each of said end portions extending continuously from said middle portion to the end of said former, the lower parts of the adjacent edges of said portions extending at right angles to said straight lower edge and the remainders of said adjacent edges oppositely and substantially equally convexly curved to form recesses, the edges of the completed garment having bias bindings, to provide a comfortable, snugly fitting bust former possessing elasticity to permit freedom and comfort in movement, and should straps attached to the upper ends of said seams and to said end portions.

1,688,144. STERILIZER. MARIAN W. HEILMAN, Tarentum, Pa. Filed Apr. 26, 1924. Serial No. 709,223. 8 Claims. (Cl. 215—37.)



1. In a sterilizer, the combination with a flask having a body portion and a neck portion having an external projection thereon, of a porous washer surrounding the neck portion and supported by the body portion, and a test tube constituting a closure fitting over and substantially surrounding the neck portion and engaging the washer, and having integral means interlocking with the projection on the neck portion for releasably retaining it in operative position.

1,688,145. REMOVABLE DENTAL BRIDGEWORK. AUGUST P. JURGENSEN, New York, N. Y., assignor to Chayes Dental Instrument Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 8, 1926. Serial No. 86,803. 3 Claims. (Cl. 32—12.)

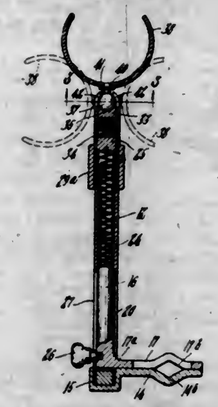


1. A denture comprising pier teeth provided with sockets, a bridge having attaching portions fitting the sockets.

sockets in each attaching portion of the bridge converging towards the outer face of the attaching portion, and a wire

having its ends seated in the sockets of an attaching portion and having its body portion projecting beyond the face thereof.

1,688,146. DEMOUNTABLE-RIM STRUCTURE. FRED R. KLAUS, Warren, Ohio, assignor to The American Welding and Manufacturing Company, Warren, Ohio, a Corporation of Ohio. Original application filed July 3, 1925, Serial No. 41,249. Divided and this application filed Nov. 18, 1926. Serial No. 149,093. 3 Claims. (Cl. 29—159.)



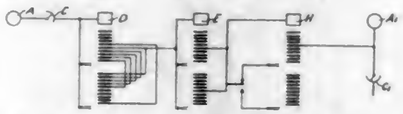
1. The process of forming a metal rim structure that consists in separately forming an annular tire carrying metal rim having a circumferential depression intermediate its side edges on the interior thereof and an annular adapter ring of sufficiently small diameter to be received within said rim, and of a width to fit in said depression, assembling said adapter ring within the rim and changing the diameter of at least one of said parts to cause the outer seating face of the adapter ring to become tightly engaged in the depression of said rim.

1,688,147. AIR HEATER AND THE LIKE. MAURICE LEVRON, Ivry, France. Filed Dec. 23, 1925, Serial No. 77,262, and in France Jan. 19, 1925. 2 Claims. (Cl. 257—245.)

2. In an air heater and like apparatus, walls spaced from each other and providing circulation conduits between them, slidingly removable spacing channel-shaped members respectively inserted longitudinally between the edges of two successive walls, for closing the ends of said conduits, the open side of said spacing members being turned toward the exterior of said circulation conduits, and slidingly removable clamping channel-shaped members with their open side turned toward the open side of said spacing members, said spacing members and said clamping members being both guided in tight contact with each other and with said edges of said walls, the jointing edges of said spacing members and of said clamping members having respectively mating portions so restricted that said jointing edges afford substantially a guiding dovetailed outline preventing the parting of said spacing members away from said clamping members in the transverse direction.

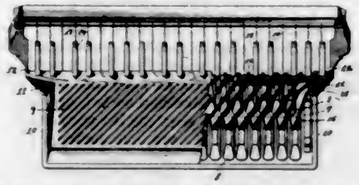
1,688,148. ADJUSTABLE LAMP HOLDER. ABNER R. MARTIN, Chester, Vt. Filed Mar. 11, 1926. Serial No. 93,825. 1 Claim. (Cl. 240—52.)

A lamp-holder comprising a tubular standard having means whereby it may be confined in a predetermined position on a support and provided with a contracted outer end having a mouth coaxial with the standard, and diametrically opposite slots opening into the mouth, a spring-pressed shoe within the standard, said shoe and contracted end forming a ball-shaped frictional socket, and a lamp-supporting clip having free end portions between which a lamp member is insertible, and a trunnion projecting from the midlength portion of the clip and composed of a ball adapted to turn in said socket, and a neck connecting the ball with the clip, the trunnion being movable bodily and rotatable in the said mouth and slots, the arrangement being such that the trunnion may swing in the slots and mouth from side to side of the standard, so that the clip may be located at either of two diametrically opposite sides of the standard, and in various intermediate positions, the trunnion being adapted to turn on its own axis to permit rotative adjustment of the clip, and various angular positions of a lamp member held thereby, when the clip is in either of said positions, the clip and its trunnion being arranged to hold a lamp member in close proximity to said frictional socket, so that the socket is adapted to frictionally maintain the clip and the lamp member in any position to which they are movable.



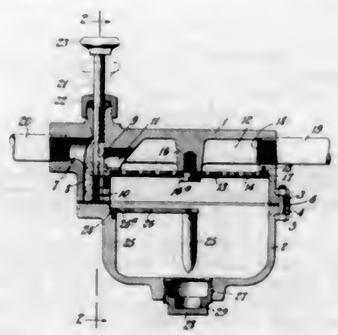
1,688,149. CONFECTIONERY-COATING MACHINE. JOHN MASSARELLA, Cincinnati, Ohio. Filed Oct. 2, 1926. Serial No. 139,191. 6 Claims. (Cl. 91—3.)

1. In combination, an endless web conveyor, means for depositing coating material on said conveyor, a second endless web conveyor delivering articles to the first conveyor, and means whereby the first conveyor applies a substantial part of said coating material to said second conveyor.



6. The method of coating confections which consists of working a coating of thick consistency onto the confaction by hand, depositing the thus coated confection on a pervious carrier having a coating of thick consistency, to bottom the confection, then passing the thus coated and bottomed confection to a pervious carrier having a supply of coating material of thinner consistency and moving said carrier to pass said confection through a stream of said coating material of thinner consistency, then finally disposing of the confection by hand, to allow hardening of the coatings.

1,688,150. TELEPHONE SYSTEM. RICHARD MERCER, Harrow, and FRANK TENCH, London, England, assignors, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 6, 1924, Serial No. 736,354, and in Great Britain Sept. 18, 1923. 32 Claims. (Cl. 179—18.)

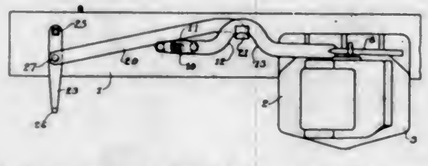


1. In an automatic telephone system a switch train responsive to the digits of a call number to extend a connection, a plurality of wiper sets on the last switch of said train and means controlled by the first of said digits for controlling the application or non-application of a discriminating potential to said last switch for determining the wiper set to be used by said last switch.

1,688,151. ACCORDION. ROBERTO PANCOTTI, Brooklyn, N. Y. Filed June 17, 1927. Serial No. 199,469. 3 Claims. (Cl. 84—376.)

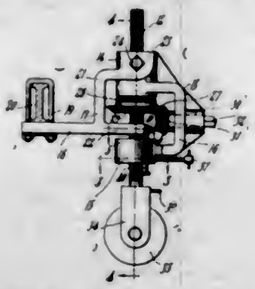
2. In an accordion having a windchest and reed valves, a keyboard having extensions, means connecting the keys of the keyboard to the reed valves, said windchest flared outwardly at the ends to accommodate the extensions of the keyboard and provide room for the connections between the extension keys and their reed valves.

1,688,152. FILTER. BENJAMIN J. PIERSON, Johnstown, N. Y., assignor to D. H. P. Manufacturing Company, Inc., Johnstown, N. Y., a Corporation of New York. Filed Nov. 16, 1927. Serial No. 233,558. 4 Claims. (Cl. 210—167.)



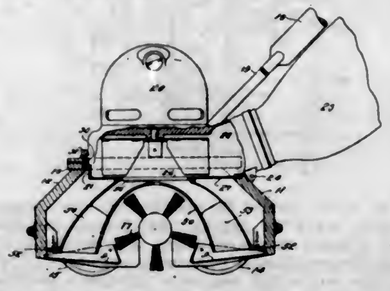
1. A filter comprising a hollow body having an outlet chamber in its upper portion, and a sediment bowl in its lower portion, a horizontal filter member separating the outlet chamber from the sediment bowl, and provided with an inlet port communicating with said body below the filter member, and an outlet port communicating with said outlet chamber, and a horizontally disposed baffle plate located adjacent to the lower edge of the inlet port, and extending therefrom less than all the way to the opposite side of the hollow body and having portions of greater width than the inlet port, whereby the entering liquid will spread laterally upon and over said baffle plate, and deposit sediment thereon, which will be carried off of said plate by the forward movement of the liquid and be deposited in the bottom of the sediment bowl.

1,688,153. DRILL BLADE. HENRY W. PLEISTER, Westfield, N. J., assignor, by mesne assignments, to Henry B. Newhall Corporation, Garwood, N. J., a Corporation of New Jersey. Filed Nov. 7, 1925. Serial No. 67,501. 4 Claims. (Cl. 255—63.)



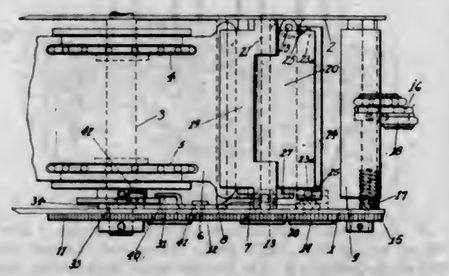
1. A new article of manufacture comprising a flat drill blade for use in the stone working art having an integral projecting strengthening rib and a corresponding groove on the opposite side of the drill part of the rib being between the chuck or drill holder and the end of the drill blade, the strengthening rib adapted to also act as a key.

1,688,154. CAR-COUPLER-OPERATING DEVICE. LUCIUS S. PRATT, Roanoke, Va. Filed Nov. 1, 1926. Serial No. 145,519. 5 Claims. (Cl. 213—164.)



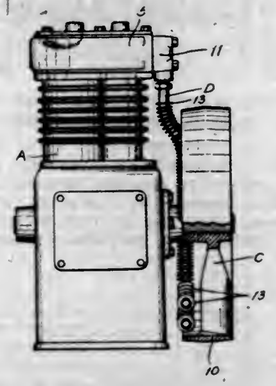
1. In an operating device for a railway car coupler, a pin lifting lever having a fulcrum adjacent one end and an operative connection to a car coupler adjacent the other end, said lever provided with oppositely disposed inclined surfaces, and an operating arm having a slidable engagement upon a car part and having a portion positioned between said inclined surfaces whereby a horizontal movement of said arm in either direction causes said portion to move under said inclined surfaces so as to raise the coupler end of said lever.

1,688,155. VEHICLE LIFTING JACK. CHARLES O. RYBERG, Brockton, Mass. Filed Mar. 5, 1927. Serial No. 172,904. 1 Claim. (Cl. 254—86.)



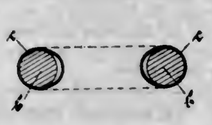
A lifting attachment for vehicle axles, comprising a holder composed of a body portion, an axle engaging clamp and a hinge member, the clamp and hinge member projecting from opposite sides of the body portion, the arrangement of said parts being such that the body portion and hinge member project from one side of an axle with which the clamp is engaged, and the hinge member is located higher than the axle, and a jack including a head composed of spaced apart tubular guides and a neck connecting and offset from said guides, one of the guides being hinged to the hinge member of the holder, a threaded standard movable endwise in the guides, mechanism for longitudinally moving the standard relative to the head, to elongate and contract the jack, said mechanism including a nut engaged with the threaded standard and having a toothed circular periphery, constituting a bevel gear, and an operating shaft journaled in the neck and provided with a bevel gear meshing with the nut gear and cooperating with one of said guides in confining the nut against sidewise movement, the standard and one of the guides being provided with means for preventing rotation of the standard with the nut, the arrangement being such that the standard may be moved to a vertical supporting position beside the axle, and to a substantially horizontal stored position higher than and extending crosswise of the axle, and locking means for confining the jack head when the standard is vertical, said means including a locking member fixed to and projecting from the holder, and a complemental spring-pressed locking member carried by the jack head and engageable with the fixed member by a movement of the jack to a vertical position, so that the jack head is automatically locked.

1,688,156. COMBINED CARPET SWEEPER AND VACUUM CLEANER. WILLIAM E. SHERBONDY, Cleveland, Ohio. Filed Mar. 15, 1924. Serial No. 699,395. 6 Claims. (Cl. 15—8.)



5. In combination, a carpet sweeper casing having an opening therein and in communication with the exterior of the casing, a housing movably connected to the casing above the opening, an electrically operable motor and fan unit disposed within the housing, a dust collector connected to the housing outside the casing, a brush carried by the casing, a dust pan enclosed within the casing on each side of the brush, and a member operatively connected to the housing and extending downwardly on each side of the brush and providing a passagewny which terminates above each dust pan.

1,688,157. MANIFOLDING MACHINE. JOHN Q. SHERMAN, Dayton, Ohio. Filed Nov. 1, 1926. Serial No. 145,385. 8 Claims. (Cl. 242—55.5.)

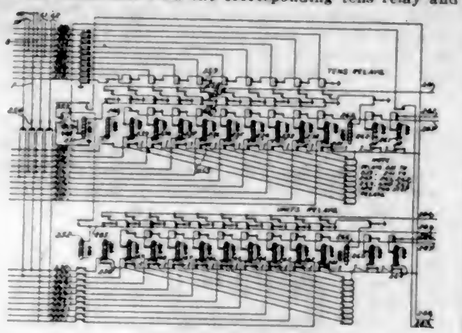


1. In a manifolding machine the combination with means for feeding a web of paper for manifolding purposes, and means for disrupting said web after being so fed, comprising a pair of clamping devices arranged to grip the paper transversely thereof, and means for moving one of the clamping devices in a path which is substantially arcuate at one end of the clamping device, whereby a tearing off action at one edge first will be applied to the paper with respect to the first of the clamps.

1,688,158. COOLING APPARATUS. EDWIN H. STEEDMAN, St. Louis, Mo., assignor to Curtis Manufacturing Company, Wellston, Mo., a Corporation of Missouri. Filed May 21, 1927. Serial No. 193,238. 9 Claims. (Cl. 257—244.)

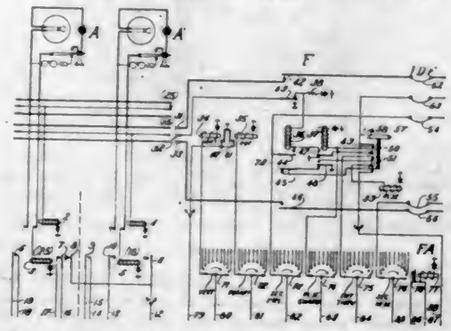
1. A cooling apparatus, comprising a fan formed by blades on a fly wheel, and tubes, conduits or hollow members through which a medium to be cooled circulates, housed in said fly wheel.

1,688,159. DRAWING RING FOR WIRE-DRAWING MACHINES. PETER DARMSTADT, WILHELM STEGMANN, and VALENTIN WEIL, Fechenheim, near Frankfort-on-the-Main, Germany, assignors to the Firm Drahtindustrie Peter Darmstadt & Co., G. m. b. H., Frankfort-on-the-Main, Germany. Filed Jan. 11, 1928, Serial No. 245,835, and in Germany Sept. 22, 1927. 1 Claim. (Cl. 205—20.)



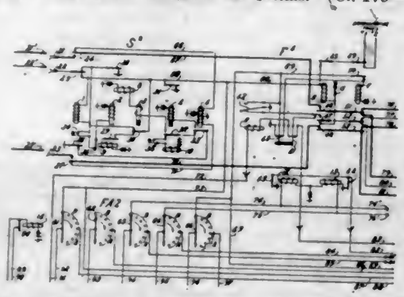
In combination with a drawing roller of a wire-drawing machine, an elastic continuous ring fitted freely on such roller, said ring being adapted to contact with the wire along only a portion of its periphery, the ring thus being deformable by the tension of the wire during the drawing operation to vary the area of the bearing surface between the ring and the roller in accordance with variations in the tension of the wire.

1,688,160. TELEPHONE SYSTEM. RUDOLPH F. STEHLIK, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 22, 1924, Serial No. 733,471. Renewed May 7, 1928. 29 Claims. (Cl. 179—18.)



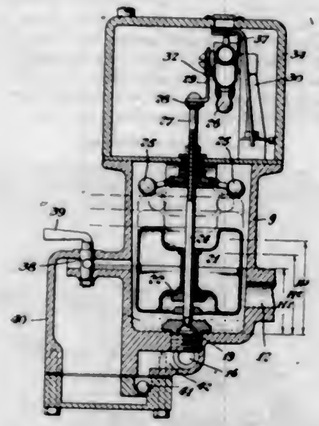
1. In a telephone system, a plurality of lines, tens relays and units relays for registering the numbers of such lines, a connection between one conductor of each line and the corresponding tens relay, a transfer relay, and

means for energizing said transfer relay to disconnect each of said conductors from the corresponding tens relay and



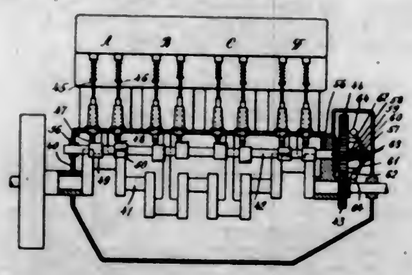
to connect such conductor to the units relay corresponding to the units designation of the corresponding line.

1,688,161. TELEPHONE SYSTEM. RUDOLPH F. STEHLIK, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed May 11, 1925, Serial No. 29,373. Renewed May 18, 1928. 24 Claims. (Cl. 179—18.)



1. In a telephone system a two-motion finder switch, a calling line terminating in the bank thereof, primary and secondary magnets for driving said finder in its respective movements, means for sending a single train of impulses to said finder, and means independent of control by said impulses for diverting the first part of said series to said primary magnet and for diverting the remaining part to said secondary magnet, whereby said finder is set upon the bank contacts of the calling line.

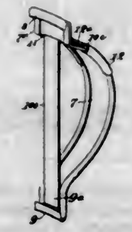
1,688,162. TELEPHONE SYSTEM. RUDOLPH F. STEHLIK, Chicago, Ill., assignor to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed May 7, 1926. Serial No. 107,336. 40 Claims. (Cl. 179—18.)



1. In a telephone system, subscribers' lines divided into groups, a finder equipment normally individual to each of said line groups, means for rendering one of said equipments alternatively accessible to lines of other of said groups, means responsive to a call from one of said lines for operating the equipment normally accessible thereto to connect therewith, and means for releasing said equipment and operating said other equipment if said first operated equipment fails to connect with said calling line.

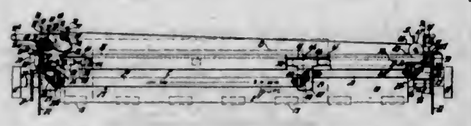
1,688,163. OIL-BURNER SAFETY DEVICE. HARRY F. TAPP, Brooklyn, and HOWARD W. DIX, New York, N. Y., assignors to Socony Burner Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 30, 1926. Serial No. 84,843. 19 Claims. (Cl. 158—42.3.)

1. In an oil burner the combination of a combustion chamber, means for feeding fuel thereto, fuel ignition means, a safety means consisting of a closed oil conduit system connecting said combustion chamber and a fuel supply for said burner, and means mounted in said conduit system and adapted to cooperate with the fuel feeding means to stop the flow of fuel to said combustion chamber when a predetermined quantity of fuel has passed into said conduit system, said fuel stopping means also acting to permit a small amount of fuel normally collected during the initiation of combustion to return to the fuel supply for the burner without operating the safety means to stop the flow of fuel to the burner.



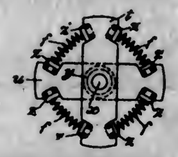
1,688,164. INTERNAL-COMBUSTION ENGINE. FRED K. TARRANT, Yuma, Colo. Filed Mar. 4, 1927. Serial No. 172,611. 8 Claims. (Cl. 123—90.)

8. An internal combustion engine, comprising a plurality of cylinders, a crank shaft, intake and exhaust valves for each cylinder, a cam for operating each intake valve, and a cam for operating each exhaust valve, valve tappets engaging said cams, and means for shifting said tappets relative to and axially of said cams, thereby to vary



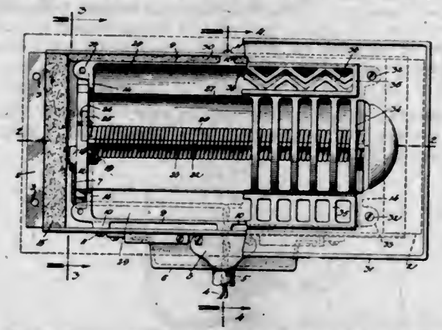
the timing of said valves, said means comprising a shaft to which the tappets are pinned, said tappets being slidably mounted on the valve stems, and a connection for shifting said shaft, said cams being so constructed and arranged as to increase the period of opening of the intake and exhaust valves as the engine speed increases.

1,688,165. HANDLE FOR CANS. WILLIAM TEHEL, Cedar Rapids, Iowa. Filed Dec. 1, 1927. Serial No. 237,109. 2 Claims. (Cl. 16—114.)



1. A can handle having a curved body terminating in hooks to engage the end-flanges of the can, and slotted adjacent to one hook, and a tongue extending through said slot from the opposite end of the handle, by the folding of which tongue the handle is secured on the can.

1,688,166. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 13, 1924. Serial No. 737,447. 27 Claims. (Cl. 197—153.)



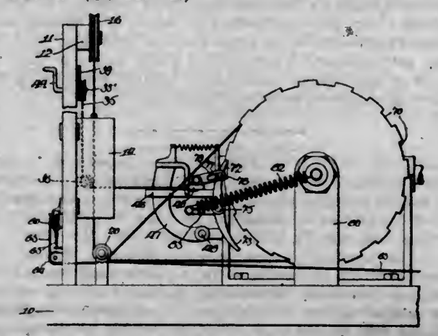
24. In a typewriting machine, the combination of a carriage, a platen on said carriage, type-bars to print at a common point against said platen, a ribbon extending lengthwise of the platen, a ribbon-guide, platen-line-spacing mechanism, and means under the control of the line-spacing mechanism to shift the ribbon-guide whereby to move the ribbon from the printing point to an ineffective position at one side thereof.

1,688,167. POWER TRANSMISSION. JACOB WERZ, Geneva, Switzerland, assignor to Société Anonyme des Ateliers de Sécheron, Geneva, Switzerland, a Confederation of Switzerland. Filed Feb. 6, 1925, Serial No. 7,203, and in Switzerland Feb. 8, 1924. 4 Claims. (Cl. 64—96.)

2. In a transmission apparatus, a driving member, a driven member, a plurality of holders rigidly connected to the said driving and driven members, and a plurality of springs extending between and at their ends rigidly fixed in the said holders, the said springs being curved and under sufficient tension when the transmission device is at rest to offset the effect of centrifugal force when the transmission device is in motion.

1,688,168. WALL-TYPE ELECTRIC HEATER. ARTHUR WHITTAKER, Windsor, Ontario, Canada. Filed Oct. 9, 1925. Serial No. 61,429. 6 Claims. (Cl. 219—34.)

6. An electric wall heater including a wall box adapted to be secured within an opening in a wall of a building with an open side of said box substantially flush with the face of said wall, an outlet box detachably secured to the lower side of said wall box and having an opening in its forward side, a movable plate for closing said opening, an electrical heating device supported in said wall box, electrical conductors extending from said device into said outlet box, and main electrical conductors extending into said outlet box and connected therein to the conductors leading to the heating device, whereby the heater may be set as a unit in the wall of a building and the electrical connection with the wiring of the building then made through the opening in the forward side of the outlet box.

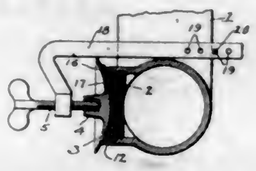


1,688,169. ISOBUTYL ESTER OF THE DI-IODIDE OF BEHENOLIC ACID AND PROCESS OF PREPARING SAME. AUGUST WINGLER, Elberfeld, near Cologne-on-the-Rhine, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y. Filed May 11, 1926, Serial No. 108,413, and in Germany May 12, 1925. 2 Claims. (Cl. 260—106.)

2. The new isobutyl ester of the di-iodide behenolic acid having most probably the formula:—

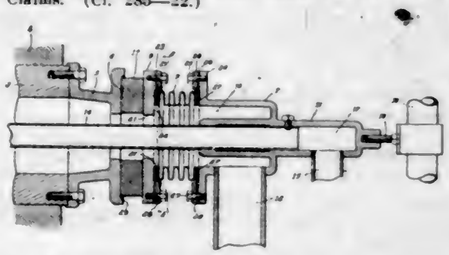
$$CH_3(CH_2)7-\underset{I}{C}=\underset{I}{C}-(CH_2)11-COO-CH_2CH\begin{matrix}CH_3\\CH_3\end{matrix}$$

which is a limpid oil solidifying at 14° C. containing 39.2 per cent of iodin and being a useful iodin preparation in medicine.



1,688,170. HOISTING APPARATUS. CARL ZETTERLUND, Chicago, Ill. Filed Aug. 20, 1925. Serial No. 51,500. 23 Claims. (Cl. 187—2.)

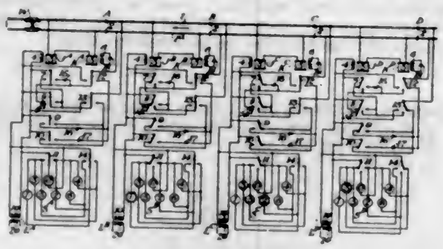
18. In a hoist of the class described, the combination with a plurality of elevator platforms adapted to be alternately raised and lowered, of reversing mechanism



for raising and lowering said elevator platforms comprising a drive shaft, a drum adapted to be driven by said drive shaft, a ring gear secured to said drum, gears loosely mounted on said drive shaft and meshing with said ring gear, and means controlled by the movement of said elevator platforms for alternately engaging said gears with said drive shaft.

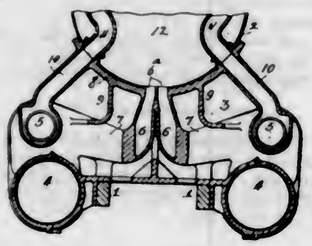
1,688,171. TRAP COVER AND CLAMP. HARRY G. ZIMMERMAN, Philadelphia, Pa. Filed June 8, 1927. Serial No. 197,440. 1 Claim. (Cl. 137—76.)

1. A trap comprising a U-shaped section having an opening therein, a convex closing plate adapted to lie over said opening to effectively close the latter, said plate having at least one concentric line of relative weakness on which the plate may be fractured to decrease the diameter, and a clamp for securing the plate in closing position including a trap-embracing member, a bar anchored by said embracing member, and having end parts adapted to be broken away to decrease the length thereof, and a screw threaded in the bar and adapted to bear against the said plate.



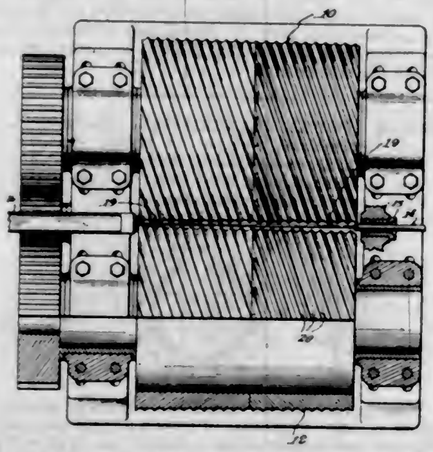
1,688,172. STEAM FITTING FOR JOURNALS OF ROTARY STEAM CYLINDERS OR THE LIKE. ALONZO ALDRICH and EARL E. BERRY, Beloit, Wis., assignors to Beloit Iron Works, Beloit, Wis., a Corporation of Wisconsin. Filed Nov. 24, 1924. Serial No. 751,942. 16 Claims. (Cl. 285—22.)

1. In combination, a hollow rotary journal, a steam supply conduit connected to said journal through the agency of a bearing part for maintaining a steam tight joint, means including a bellows-like element resisting the action of the steam pressure tending to unseat said bearing part, means responsive to the steam pressure for urging the bearing part against its seat, and a single means to back up both of said means arranged to be adjusted to vary the normal tension on said bellows element.



1,688,173. RAILWAY SIGNALING. GEORGE W. BAUGHMAN, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 26, 1926. Serial No. 144,267. Renewed Mar. 19, 1928. 4 Claims. (Cl. 246—34.)

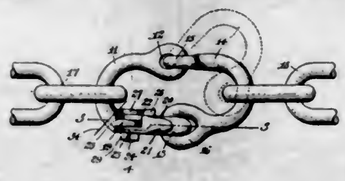
1. In combination, two electro-responsive devices, the first of which is responsive to uni-directional current but not to full wave alternating current, and the second of which has two windings and is selectively responsive to the relative phases of currents therein, means for constantly supplying one winding of said second device with alternating current of fixed phase, and means for supplying the said first device and also the second winding of said second device with full wave alternating current of normal or reverse relative polarity or with only the



positive or only the negative half waves of alternating current of normal or reverse relative polarity.

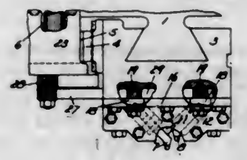
1,688,174. LOCOMOTIVE CYLINDER STRUCTURE. HARRY A. F. CAMPBELL, Philadelphia, Pa. Filed Nov. 18, 1927. Serial No. 234,174. 2 Claims. (Cl. 105—44.)

1. A locomotive cylinder structure, having valve-chests; a saddle on which a boiler is located; internal exhaust passages; and outside steam pipes extending from the saddle to the valve-chests and made integral therewith.



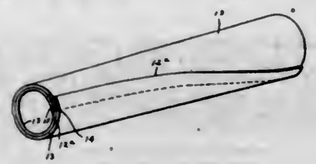
1,688,175. FORGING BALLS FROM LONG BARS. ABELL CANDA, Cranford, N. J. Filed Aug. 17, 1925. Serial No. 50,879. 2 Claims. (Cl. 80—23.)

1. A method of forging balls, which consists in axially rolling a heated metal bar and grooving it progressively from one end into a connected series of elements which each have a configuration of two frusto-conical surfaces joined at their bases by a cylindrical surface, subjecting



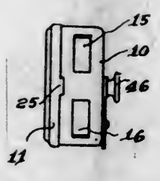
the metal to a kneading action by a plurality of centripetal pressures and resisting said pressures by an oppositely directed resultant centripetal pressure, severing the metal at the grooves into separate elements, subjecting the elements to a spiral rolling motion and simultaneously compacting and shaping them into true spherical bodies.

1,688,176. CONNECTER. JOHN CLARK, Buffalo, N. Y. Filed July 11, 1927. Serial No. 204,789. 7 Claims. (Cl. 24—241.)



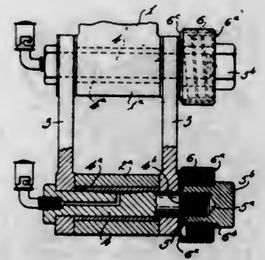
1. A connecter having a hook, a keeper to close said hook, a pivot bolt extending through said keeper and through said hook in rear of the terminal thereof and having a notch formed therein in line with said keeper, said keeper having a reflex stud and the terminal of said hook having an opening to receive said stud, and means to rotate said pivot bolt through a portion of a revolution to bring the notch thereof so as to face toward the terminal of said hook or in an opposite direction.

1,688,177. BROACH MECHANISM. HIRAM D. CROFT, Springfield, Mass., assignors to Perkins Machine and Gear Company, Springfield, Mass., a Corporation of Massachusetts. Filed Mar. 31, 1927. Serial No. 179,960. 11 Claims. (Cl. 90—33.)



1. In mechanism of the class described, a holder, broaches in said holder, and means alternately to retract and advance said broaches, in straight courses between parallel planes at the top and bottom of said broaches, out of and into the cutting field.

1,688,178. TUBING. CARL B. DREVITSON, Somerville, Mass. Filed Apr. 28, 1926. Serial No. 105,144. 5 Claims. (Cl. 29—182.)



1. A resilient tube comprising a scrolled oblong blank of thin resilient sheet metal, the length of which is substantially equal to the length of the tube, and metallic bonding material interposed between limited portions of the convolutions of the scroll to maintain the latter in tubular form, and leave other portions of the convolutions free from positive connection with each other, one longitudinal edge portion of the blank overlapping a portion of a convolution of the scroll and being united to the latter by the bonding material to form a longitudinal lap joint extending from end to end of the tube.

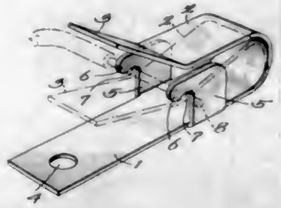
1,688,179. HAND SIGNAL LIGHT. HERMAN G. ESSMAN, New York, N. Y. Filed Oct. 24, 1925. Serial No. 64,620. 2 Claims. (Cl. 177—329.)

1. A hand signal lamp comprising a casing having a substantially oblong chamber, a substantially circular chamber and a constricted portion between said chambers, a light supporting element disposed in said constricted portion formed of sheet metal and comprising two spaced integrally connected plates having registering apertures, and wings having frictional engagement with the walls of the casing.

1,688,180. VEHICLE-SPRING SHACKLE. THOMAS F. FERRY, Cleveland, Ohio. Filed Oct. 17, 1923. Serial No. 668,976. 3 Claims. (Cl. 267—54.)

1. The combination with a spring shackle mechanism, comprising a frame and spring members terminating in eyes, shackle links, bolts connecting the links, said bolts having a threaded end portion extending through the links a sufficient distance to receive a nut, of a shackle unit for such mechanism, including a nut having a threaded bore to engage the threaded portion of said bolt, and a shouldered head portion, a spring disposed between the shouldered head and the shackle link and telescoping cups enclosing said spring, one of said cups being adapted to be engaged by said shouldered head portion of the nut, whereby the spring will be compressed upon tightening of the nut.

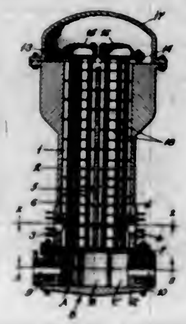
1,688,181. SCREW DRIVER. CHARLES F. FINK, Baltimore, Md., assignor, by mesne assignments, to Commonwealth Bank of Baltimore, Baltimore, Md., a Body Corporate. Filed Feb. 11, 1926. Serial No. 87,622. 3 Claims. (Cl. 145—52.)



2. In combination in a screw driver, a shank member having a bore and a single laterally facing opening, a handle connected to one end of said shank member, a tubular casing connected to the other end of said shank, a pair of spring blades secured to said casing and having surfaces to grip the walls of the kerf of the screw, a spreader member in said casing comprising a rod having

one end turned laterally and projecting through said single opening and the other end being pointed and adapted

to spread the blades, and a screw nut threaded on the shank to engage the turned end to advance the spreader.



1,688,182. TERMINAL CONNECTER. GUY W. FITZGERALD, Union, Iowa, assignor of one-half to Harmon C. Shear, Waterloo, Iowa. Filed Apr. 14, 1926. Serial No. 101,998. 1 Claim. (Cl. 173—259.)

A connecter formed of a strip of spring metal formed into a loop, one loop side of the connecter having two tongues formed of lateral extensions of this loop side which are bent to project from opposite edge portions of this loop side toward the other loop side and spaced apart to permit this other loop side to be moved therebetween toward and from the first loop side, each of said tongues having a hook continuation at its upper portion extending along the connecter and below which said other loop side may be depressed into a position to permit a wire crossing and moved along said other loop side to be held between this other loop side and the lower edges of said hook continuations, edge portions of the tongues being presented for engagement with the conductor applied thereto and the tongues being rigid in their relation to such conductor by virtue of their formation.

1,688,183. HEAT INTERCHANGER. OLIVE E. FRANK, Buffalo, N. Y., assignor to O. E. Frank Heater & Engineering Co., Inc., Buffalo, N. Y., a Corporation of New York. Filed Dec. 6, 1927. Serial No. 238,102. 2 Claims. (Cl. 257—226.)

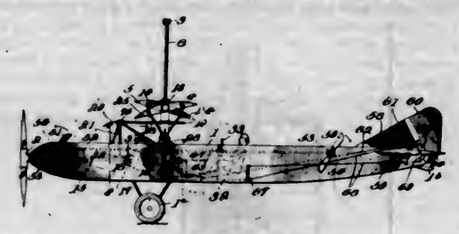
1. A heat interchanger comprising a shell composed of at least two sections removably secured together and delimiting a heat exchange chamber, two tube nests in said chamber providing a path for the flow of one of the fluids, the shell being formed with grooves along its longitudinal margins, and a baffle plate interposed between the tube nests prescribed a path of flow for the other fluid and having its longitudinal marginal edges arranged in said grooves whereby the path of flow of said other fluid is sealed along said marginal edges of the baffle and the

baffle centered and held in position and wherein, upon the removal of at least one section of the shell, the baffle may be freely removed.

1,688,184. HANDLING CANE JUICE. ERNEST EDWARD HARTMANN, New York, N. Y., assignor to Petree & Dorr Engineers, Inc., New York, N. Y., a Corporation of Cuba. Filed June 15, 1926. Serial No. 116,079. 7 Claims. (Cl. 127—43.)

1. In the extraction of sugar cane juice by successively crushing and macerating sugar cane, defecating the extracted products and returning the defecation mud to the milling circuit, the improvement which consists in stirring the bagasse to increase the surface area of bagasse particles brought into contact with the insoluble portion of the mud.

1,688,185. VALVE. GEORGE EDGAR HAZARD, Rochester, N. Y., assignor to Kellogg Manufacturing Company, Rochester, N. Y. Filed May 21, 1927. Serial No. 193,162. 4 Claims. (Cl. 251—119.)

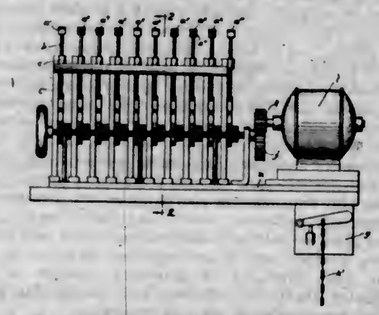


1. In combination with a plate valve adapted for reciprocation, a cage therefor having guide grooves in its ends adapted to receive the ends of said valves, and liners shaped to fit said grooves and pressed into the same to protect the grooves from wear.

1,688,186. AIR VEHICLE. IRA B. HUMPHREYS, Denver, Colo. Filed Feb. 6, 1924. Serial No. 690,960. 2 Claims. (Cl. 244—15.)

1. An aircraft comprising a body portion having an upwardly projecting mast, a collar surrounding the said mast, wings adjustable at opposite angles projecting laterally from opposite sides of the collar, the mast projecting above the said collar, and braces extending from the upper

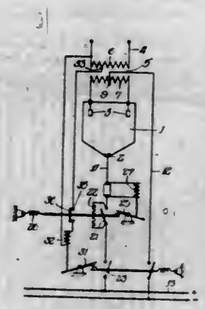
portion of the mast with their outer ends journaled intermediately to the said wings to permit them being



turned, and an engine adapted to be connected with the said wings, for the purpose described.

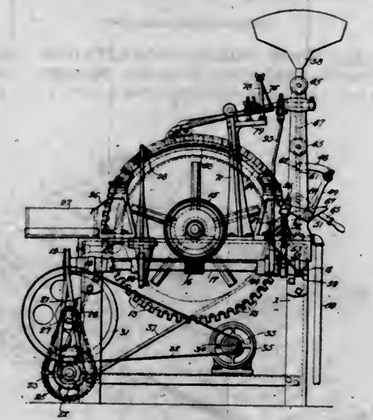
1,688,187. PADLOCK. ARTHUR C. JACKSON and WALDEMAR KROLL, Philadelphia, Pa., assignors, by mesne assignments, to The Yale & Towne Manufacturing Company, Stamford, Conn., a Corporation of Connecticut. Filed May 3, 1923. Serial No. 636,399. 4 Claims. (Cl. 70—105.)

1. The combination in a padlock, of a casing having a body portion, a cap plate and back plate; and a shackle adapted to the casing, said casing having a rib projecting into the space between the arms of the shackle, the cap plate and back plate having portions extending on each side of the shackle at one side of the casing and conforming to the shape of the shackle.



1,688,188. FINGER-EXERCISING MACHINE. JOSÉ VICTOR JUGO, Buenos Aires, Argentina. Filed Mar. 4, 1926. Serial No. 92,188. 6 Claims. (Cl. 272—67.)

2. In an exercise machine, in combination, a plurality of supports, arms upon which the supports are carried, a rotatable shaft transverse to the arms, eccentric devices carrier with the shaft and selectively actuating the arms and clutching mechanism between the eccentric devices and the shaft.

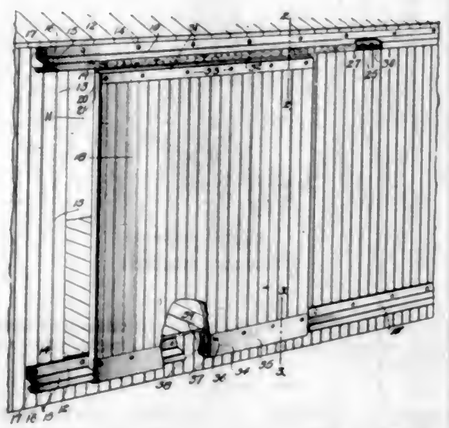


1,688,189. RECTIFIER SYSTEM. ERWIN KERN, Wettingen, Switzerland. Filed Aug. 10, 1927, Serial No. 211,988, and in Germany July 26, 1926. 3 Claims. (Cl. 175—363.)

1. In a rectifier system, a rectifier, direct current leads from said rectifier, a first circuit breaker in said leads, a second circuit breaker in said leads, a tripping mechanism, a tripping coil for said first circuit breaker, a tripping coil for said second circuit breaker, and a resistor bridging

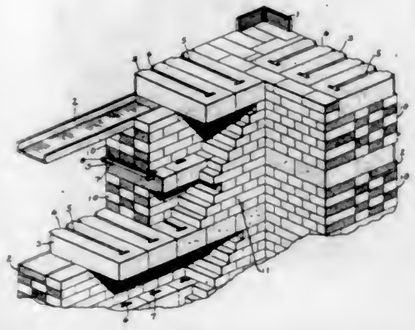
said first circuit breaker, the tripping of said second circuit breaker being actuated by the current through said bridging resistor.

1,688,190. MACHINE FOR FORMING GLASS VIALS. ROBERT H. KOENIG, Haddon Heights, N. J., assignor to Ruth Glass Company, Conshohocken, Pa., a Corporation of Pennsylvania. Filed June 4, 1926. Serial No. 113,768. 19 Claims. (Cl. 49—7.)



1. In a machine of the character described, the combination with a continuously advancing conveyer for tubular glass blanks comprising a series of parallel disks having substantially aligned peripheral recesses adapted to receive said blanks, a burner located adjacent the path of the blanks when advanced by said disks and adapted to heat the blanks intermediate their ends, and means for drawing the blanks apart at the heated section including movable elements adapted to engage the tops of the blanks as they are advanced by said conveyer.

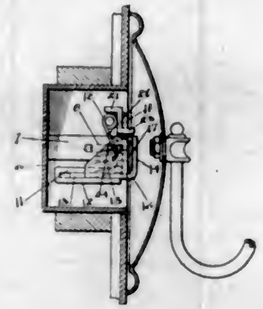
1,688,191. CAR-DOOR HANGER. JOHN D. KUHN, Lawrence, Kans. Filed May 20, 1926. Serial No. 110,399. 1 Claim. (Cl. 16—94.)



In combination with a door frame and door, a bracket including a wall portion attached to the lower portion of the the door frame, extended downwardly and outwardly and terminating in an inwardly directed runway portion, a bracket including a portion attached to the lower portion of the door, having its lower edge inturned beneath the

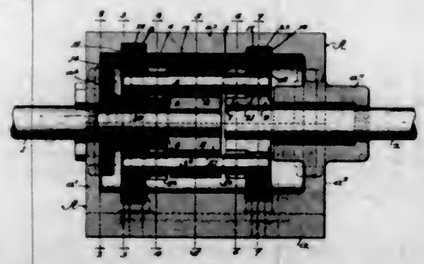
first named bracket and upturned adjacent the door frame and terminating in a runway portion extended outwardly

over the corresponding portion of the frame bracket, and a bearing member interposed between the runway portions of the respective brackets.



1,688,192. FIRE-WALL CONSTRUCTION. MICHAEL LIPTAK, St. Paul, Minn. Filed Nov. 26, 1926. Serial No. 150,941. 8 Claims. (Cl. 72—102.)

1. A wall having a permanent portion comprising a plurality of superposed channel irons, extending lengthwise of the wall, rows of fire brick laid upon the irons as headers and projecting at the inner side of the wall to form shelves, each header element having an I-shaped depression extending lengthwise and each header having an I-shaped bar loosely engaged in a corresponding I-shaped depression, and bricks filling the space between the headers and overlying the depressions.

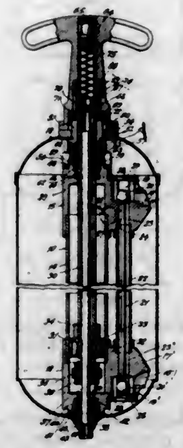


1,688,193. FIXTURE BRACKET. GEORGE N. LITTLETON, Portland, Oreg. Filed Dec. 14, 1926. Serial No. 154,820. 1 Claim. (Cl. 240—85.)

In a fixture bracket, a stationary member having a vertical portion, a slide supported upon said vertical portion, a slidable member having a horizontal portion adapted to move in said slide, and a vertical portion upon the outer end thereof; wings upon said slidable member spaced apart from said vertical portion thereof to receive a fixture crossbar therebetween, and a spring mounted upon said

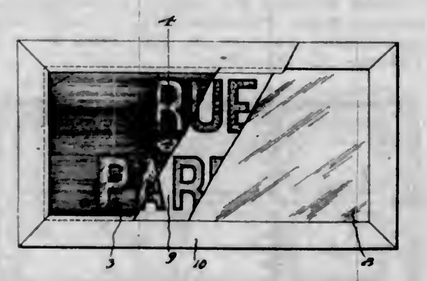
stationary member and coacting with said slidable member to hold the latter either in extreme outer position or extreme inner position.

1,688,194. DIFFERENTIAL-POWER TRANSMISSION DEVICE. JAMES W. LYONS, Oak Park, Ill. Filed June 25, 1928. Serial No. 287,021. 13 Claims. (Cl. 74—34.)



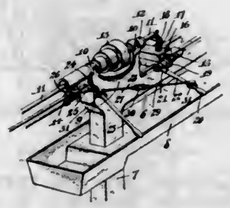
1. In a differential power transmission device, the combination of rotatable members mounted in axial alignment with each other, comprising a first member adapted to be power driven and a second member, transmission shafts mounted in spaced relation to said rotatable members so as to permit planetary movement thereof about said rotatable members and also rotation on their own axes, means rendered operative by rotation of said first rotatable member for imparting planetary rotation to said transmission shafts about said rotatable members and also on their own axes, constructed and arranged to permit movement of said transmission shafts outwardly relatively to said rotatable members under centrifugal force, intermeshing gears on said transmission shafts and said second rotatable member, and means rendered operative by centrifugal force produced by planetary rotation of said transmission shafts for effecting and maintaining pitch-line engagement of said gears in operation.

1,688,195. FIRE EXTINGUISHER. PETER G. MACGREGOR, Pequannock, N. J., assignor to Pyrene Manufacturing Company, Newark, N. J., a Corporation of Delaware. Filed Oct. 6, 1925. Serial No. 60,708. 8 Claims. (Cl. 299—98.)



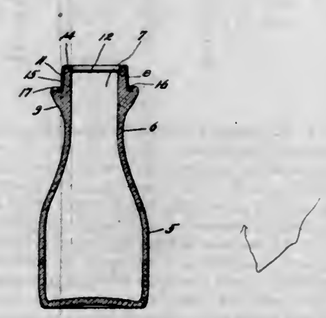
1. In a fire extinguisher, a liquid receptacle, a head having an opening through which communication with the receptacle is afforded when the extinguisher is operated, a piston-operating member projecting through said head, an operating handle slidably connected to said piston-operating member, means for locking said handle to said head, sealing means rigidly fixed to said piston-operating

member and adapted, when said handle is locked to said head, to close said opening and thereby sever the communication which is afforded through said head when the extinguisher is operated, and resilient means adapted to cooperate with said handle and said piston-operating member when said handle is locked to said head to exert a longitudinal thrust upon said piston-operating member and thereby urge said sealing means into intimate engagement with said head.



6. In a fire extinguisher, a liquid receptacle having a head, a pump arranged within said receptacle and comprising a pump tube and a reciprocating piston-operating member projecting through said head, a stripper through which said piston-operating member is adapted to reciprocate, said stripper being confined between and maintained in engagement with said head and said pump whereby said pump is held against longitudinal movement upon outward movement of said piston-operating member, said stripper being provided with a deflecting wall inclined with respect to said piston-operating member and terminating adjacent said pump in a spaced relation thereto to remove said liquid from said piston-operating member and deflect the removed liquid back into the liquid supply upon outward movement of said piston-operating member.

1,688,196. PLASTIC DISPLAY. MARCEL MASSON, Vincennes, France. Filed June 21, 1926, Serial No. 117,628, and in France May 29, 1926. 6 Claims. (Cl. 41—24.)

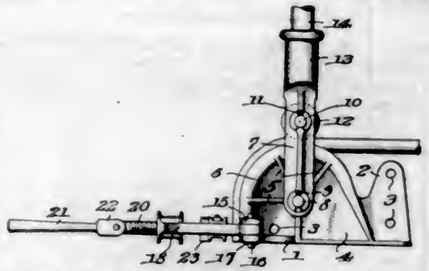


1. The method of producing displays of plastic material which comprises embossing the plastic material with heated shaping means and simultaneously cutting to the desired configuration, and then coloring the plastic material.

1,688,197. MECHANISM FOR OPERATING SCREW MACHINES AND THE LIKE. GODFRIED J. MAYER, Buffalo, N. Y. Filed June 26, 1925. Serial No. 39,735. 8 Claims. (Cl. 82—2.)

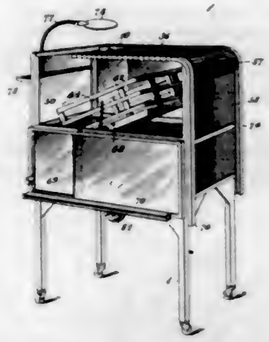
1. In a screw-machine or the like having two operating parts, two operating levers separately operable for manipulating said operating parts, and a rigid connection between said operating levers having universal and adjustable connection with and along said levers.

1,688,198. BOTTLE AND CLOSURE. ELWIN E. MCGILL, Kansas City, Mo. Filed May 10, 1926. Serial No. 108,045. 1 Claim. (Cl. 215—80.)



A bottle having its mouth formed with an annular cap seat or depression, the neck of the bottle having an external enlargement spaced some distance below said mouth and formed with an annular groove, said neck being tapered between said enlargement and the mouth of the bottle, and a cap closure member having its central portion depressed or counter-sunk to fit against said cap seat or depression and its outer portion embracing the neck of the bottle between its mouth and said enlargement, the margin of said member being formed with a lip seated in said groove.

1,688,199. PIPE VISE AND BENDER. ALBERT H. MEIER, Evansville, Ind. Filed Jan. 24, 1927. Serial No. 163,244. 2 Claims. (Cl. 153—46.)

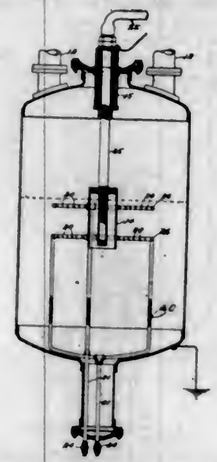


1. In a pipe, rod, conduit, or tube bender, a body having a form over which the pipe, rod, conduit, or tube may be

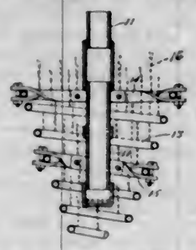
bent, said body also having a base and a bracket angularly disposed in relation to the base, either the base or the

bracket adapting the body to be secured to a bench or other object.

1,688,200. INCLOSED BED FOR PREMATURE AND FEEBLE INFANTS. HERBERT J. W. MORGENTHALER, Brooklyn, N. Y.; Anna Robbins Morgenthaler executrix of said Herbert J. W. Morgenthaler, deceased. Filed July 17, 1924. Serial No. 726,618. 8 Claims. (Cl. 128—1.)



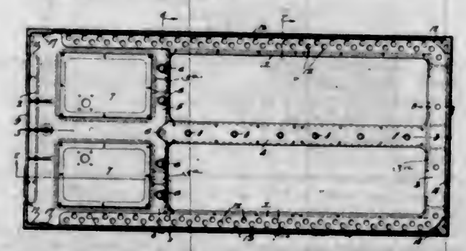
1. An enclosed bed construction for premature and feeble infants, comprising a closure, means for producing a circulation of air through said closure, a bed mounted within the closure, said closure having an adjustable section and means for preventing the complete closure of said section to leave a permanent opening at the head end of said bed.



6. An enclosed bed construction for premature and feeble infants, comprising a casing, a bed mounted in the upper portion of said casing in position to leave a main air passage from the lower to the upper portion of the casing at the foot end of the bed, means providing an opening in the casing at the head end of the bed, a humidifier located in the portion of the casing below the bed and comprising a tank, a wick substantially impervious to the passage of air currents extending from said tank in a horizontal direction below the bed and spaced from the same, and a source of heat located below the wick whereby the heated air below the wick rises into contact with the wick, then is deflected laterally by the wick and passes upwardly through the passage at the foot end of the bed, over the bed, and then outwardly through the opening in the casing at the head end of the bed, part of the heated air passing between the wick and the bed on its way to said passage.

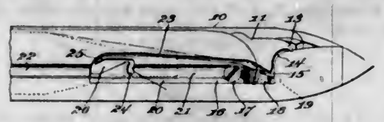
1,688,201. ELECTRIC STEAM BOILER AND METHOD OF OPERATING THE SAME. NEWITT J. NEALL, Brookline, and RALPH W. CHADBOURN, Melrose, Mass., assignors to Oxford Paper Company, New York, N. Y., a Corporation of New York. Filed Nov. 5, 1924. Serial No. 747,970. 3 Claims. (Cl. 219—40.)

2. In an electric boiler, an electrode about which is a region of active steam formation, an inlet orifice adjacent said electrode for introducing fresh water near the region of active steam formation without allowing it to mingle with the contents of the remainder of the boiler, and a discharge orifice for withdrawing the produced concentrate on its formation from said region while excluding it from mixing with the incoming fresh water.



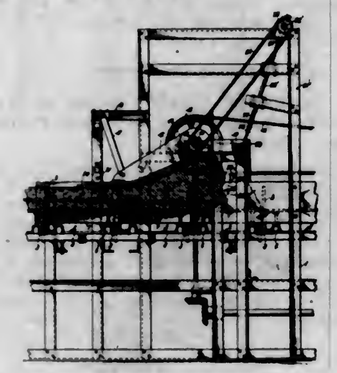
1,688,202. ELECTRODE FOR ELECTRIC BOILERS. NEWITT J. NEALL, Brookline, and RALPH W. CHADBOURN, Melrose, Mass., assignors to Oxford Paper Company, New York, N. Y., a Corporation of New York. Filed Nov. 5, 1924. Serial No. 747,971. 4 Claims. (Cl. 219—40.)

4. The improved electrode for electric steam boilers comprising a hollow central member for the introduction of water and a pipe connecting at one end with the said central member and bent into conical helical form said pipe being provided with orifices for the emission of feed water.



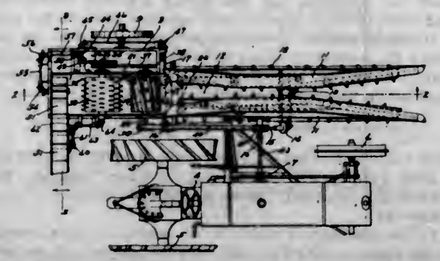
1,688,203. FIRE-BOX FOUNDATION RING. LAWRENCE L. NEERE, Woodbury, N. J., assignor to The Baldwin Locomotive Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 29, 1926. Serial No. 84,661. 5 Claims. (Cl. 122—369.)

1. A fire-box foundation ring made as an integral casting, and having longitudinal hollow side members; hollow



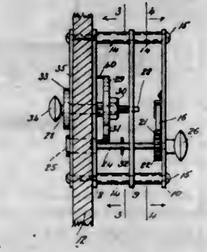
end members; a hollow longitudinal central member communicating with the end members; and a transverse hollow member intersecting the central longitudinal member and communicating with the side members.

1,688,204. SHUTTLE. JONAS NORTHROP, Hopedale, Mass., assignor, by mesne assignments, to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 8, 1927. Serial No. 166,699. 3 Claims. (Cl. 139—223.)



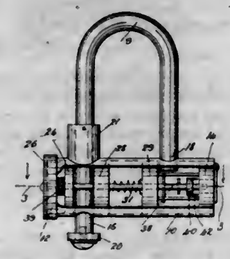
1. A shuttle for weft replenishing looms of the bobbin changing type consisting of a shuttle body provided with a thread block of the usual slotted type and a thread exit located near the center of the shuttle, and a thread passage for leading the thread from the shuttle block to the thread exit.

1,688,205. MOLDING APPARATUS. JAMES M. PHILLIPS and HENRY D. PHILLIPS, Stanford, Ky., assignors to Phillips Machine Company, Stanford, Ky., a Corporation of Kentucky. Filed May 8, 1926. Serial No. 107,712. 13 Claims. (Cl. 25—99.)



1. In a molding machine, the combination with molding devices, of a main surface tamping device for tamping material thereon, an auxiliary internal tamping device coacting with said material for substantially eliminating voids in the tamped material on said molding devices.

1,688,206. ENSILAGE HARVESTER WITH CORN-SHELLING DEVICE. INGELBERT E. ROSHOLT, Minneapolis, Minn. Filed Jan. 30, 1924. Serial No. 689,576. 8 Claims. (Cl. 56—16.)

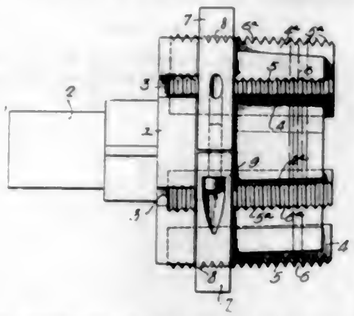


1. In an ensilage harvester, the combination with an ensilage cutter, of means for cutting the stalks from the ground and delivering the same to the ensilage cutter and a corn sheller receiving the cut stalks from said ensilage cutter, means for separating the shelled corn from the ensilage, and means for causing said several instrumentalities to simultaneously perform their respective functions.

1,688,207. DOOR LOCK. AMEDEO DEL ROSSO, Chicago, Ill., assignor of one-half to Emil Del Rosso, Chicago, Ill. Filed May 2, 1927. Serial No. 188,159. 4 Claims. (Cl. 70—53.)

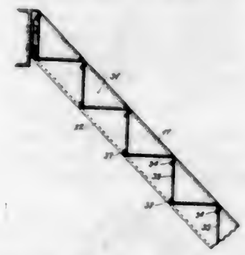
1. In a lock, a frame, a key shaft journaled in the frame and provided with a lateral projection between its ends, a slidable lock bolt for engaging with a keeper, means for sliding the lock bolt when the key shaft is revolved, a locking shaft journaled in the frame and arranged parallel to the key shaft, a locking disk secured to the locking shaft inside the frame with its periphery adjacent to the key shaft and having a notch adapted to be placed opposite the key shaft to permit the insertion of a key to engage with the said projection, and a combination device arranged outside the frame and set by revolving the locking shaft.

1,688,208. PADLOCK. AMEDEO DEL ROSSO, Chicago, Ill., assignor of one-half to Emil Del Rosso, Chicago, Ill. Filed May 19, 1927. Serial No. 192,573. 10 Claims. (Cl. 70—113.)



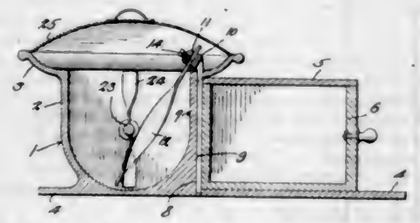
1. In a padlock, a case, a hasp having a spindle which is slidable and rotatable in holes in the sides of the case and having an end portion which interlocks with the case, a locking bolt mounted on the axis of the case and normally engaging with the said spindle, said locking bolt being provided with a projection for operating it, a locking shaft journaled in the case parallel to the locking bolt, a locking disk secured on the locking shaft with its periphery adjacent to the locking bolt and having a notch adapted to be placed opposite the locking bolt to permit the insertion of a key to operate the locking bolt, and a combination device arranged outside the case and operatively connected with the locking shaft.

1,688,209. TAP. JOHN R. SAYLOR, Pottstown, Pa.; Elizabeth E. Saylor, executrix of John R. Saylor, deceased, assignor to Pottstown Machine Company, Pottstown, Pa., a Corporation of Pennsylvania. Filed Apr. 22, 1922. Serial No. 556,102. 2 Claims. (Cl. 10—141.)



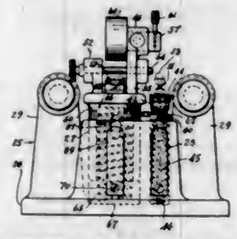
1. The combination in a tap, of a body portion; a series of bits secured to the body portion; alternate bits arranged

to cut one set of threads, the other bits being arranged to cut threads in the spaces between the threads cut by the first mentioned bits, the teeth of each bit being of V-shape at



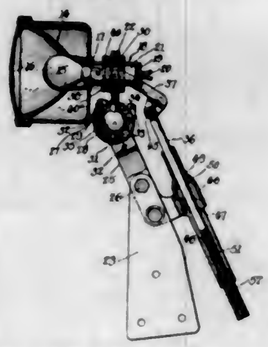
the base thereof and also of a greater depth than the theoretical full thread being cut so as to leave gullets at the base of the teeth for the free escape of the chips produced in cutting.

1,688,210. STAIR, LADDER, AND THE LIKE. WALLACE W. SMITH and VERNON B. TREVELLYAN, Chicago, Ill., and NELSON J. JEWETT, Jewel Station, Va. Filed Nov. 3, 1926. Serial No. 145,984. 9 Claims. (Cl. 189—43.)



1. A structure of the class described comprising side supporting members and tread members connecting said supporting members and integral therewith at a portion of each of the ends of the tread members, said members being formed from a continuous blank by slitting and distortion only so that substantially no material of the blank is discarded.

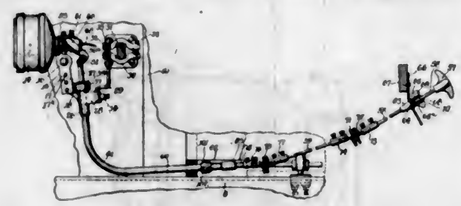
1,688,211. BREAD MIXER. GEORGE SOLARZ, Gallitzin, Pa. Filed Sept. 22, 1926. Serial No. 137,037. 1 Claim. (Cl. 259—109.)



In a device of the class described, a receptacle having a wall provided with a substantially vertical socket, a single removable standard mounted at its lower end directly in the socket in the wall, a transverse head mounted intermediate its ends on the upper end of the standard and having a transverse seat, a blade disposed at an angle to the vertical and extended downwardly into the receptacle, the blade being adjustable in the direction of its length in the seat, a securing device engaging the blade and the head and holding the blade for longitudinal adjustment as aforesaid, and a beater journaled in the receptacle and including a blade located at the side of the blade on the standard, the blade being held in the seat of the standard against lateral swinging movement, thereby to prevent the blade of the standard from engaging the blade of the beater.

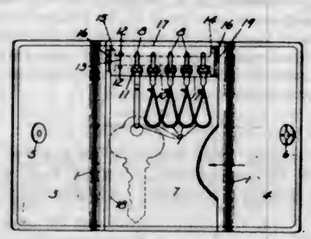
1,688,212. METHOD AND APPARATUS FOR RESURFACING WORN OR PITTED SURFACES. ADRIAN O. VAN DERVORT, Troy, N. Y. Filed Feb. 24, 1925. Serial No. 11,377. 11 Claims. (Cl. 51—59.)

1. A device comprising means for guiding a movable surfacing member with its active surface in a constant plane; and spring pressed means for yieldably holding a contact arm at a constant angle to said surface and for yieldably pressing the contact face of said arm toward said active surface but with less force in order that such constant angle may not be varied.



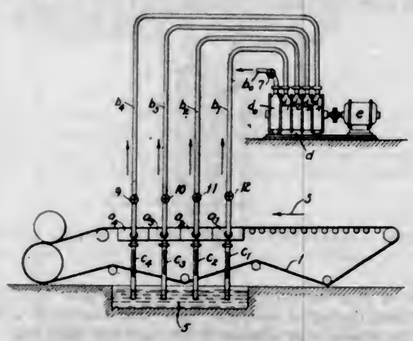
1,688,213. DIRIGIBLE LIGHT. LESTER M. WALDEN, Chicago, Ill. Filed July 28, 1924. Serial No. 728,690. 14 Claims. (Cl. 240—61.)

1. The combination with a dirigible light, of a stationary bracket, a ball mounted in said bracket to turn on a transverse horizontal axis and also upon a shifting upright axis, a lamp, a member rigid with said ball and with said lamp, an operating rod, and means pivotally connecting said rod with said member upon opposite sides of the axis of the lamp whereby a twisting motion imparted to the rod causes the member to swing on its upright axis and a longitudinal movement imparted to the rod causes the member to swing on its transverse horizontal axis.



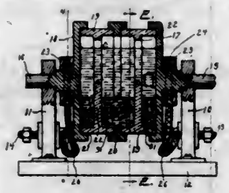
1,688,214. DIRIGIBLE LIGHT FOR MOTOR VEHICLES AND THE LIKE. LESTER M. WALDEN, Chicago, Ill. Filed May 29, 1925. Serial No. 33,753. 3 Claims. (Cl. 240—61.)

1. The combination with a motor vehicle having a chassis frame and a radiator at the forward end of the frame; of a lamp, means for supporting the lamp for up and down and lateral motion at a point forwardly of the radiator a substantial distance above the chassis frame, a bent tube having an uprightly disposed upper end portion fastened to said lamp-supporting means, means for supporting the lower rear end of said tube adjacent the chassis frame with the



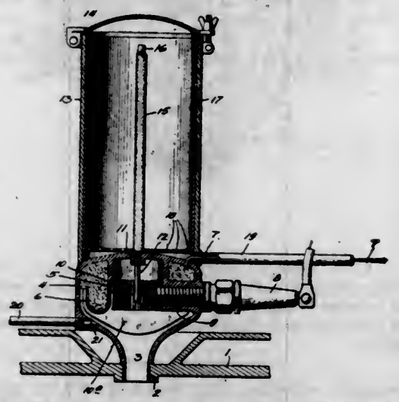
tube bent inwardly at a point immediately rearward of the radiator, and operating means for the lamp including a flexible shaft enclosed within said tube.

1,688,215. KEY CASE. WILLIS H. WEISSBROD, Greenfield, Mass. Filed Jan. 18, 1927. Serial No. 161,740. 5 Claims. (Cl. 150—40.)



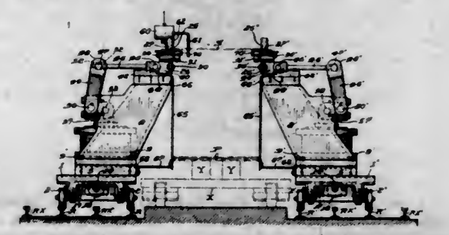
1. In a key case, a back, a perforated reenforcing sheet attached to said back, rings in the perforations in said sheet and projecting behind the same, a straight flexible thong passing through said rings behind said sheet, said thong having an intermediate portion with parallel edges, which is the portion that passes through the rings, and end portions beyond said rings that are wider than said intermediate portion, and said thong being of uniform thickness to render the same equally flexible throughout, and securing means for said end portions.

1,688,216. APPARATUS FOR WITHDRAWING AIR FROM SUCTION BOXES. MAX WENZEL, Muldenstein, near Bitterfeld, Germany. Filed July 7, 1928, Serial No. 290,933, and in Germany Oct. 29, 1926. 5 Claims. (Cl. 92—51.)



1. Suction apparatus for paper machines comprising in combination, suction boxes, a multi-stage vacuum pump and means communicating between separate stages of the pump and separate suction boxes.

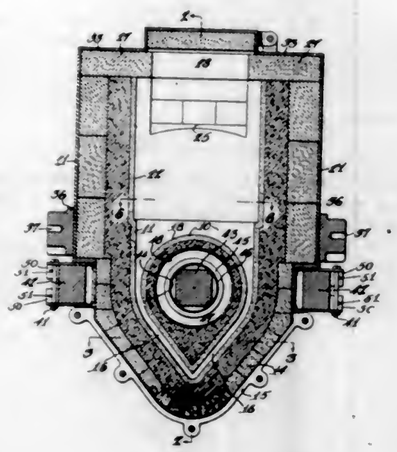
1,688,217. FLUID-POLE ELECTRIC SWITCH. JAMES WHALEN, Omaha, Nebr. Filed Oct. 15, 1926. Serial No. 141,752. 4 Claims. (Cl. 200—152.)



1. In an electric switch, a pole-forming composition consisting of a large number of separate small bodies of solid metal of high electrical conductivity, in combination with liquid metal connecting the bodies of solid metal interstitially and sufficient in quantity to make the mass as a whole substantially fluid.

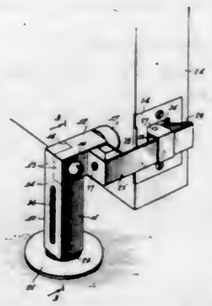
1,688,218. INTERNAL-COMBUSTION ENGINE. WILLIAM WHEELER, Brooklyn, N. Y. Filed Feb. 11, 1924. Serial No. 691,929. 7 Claims. (Cl. 123—25.)

1. The combination, with an internal combustion engine, of an auxiliary chamber in communication therewith, moisture reception and collecting means located within and open to said chamber, and means for supporting a spark plug with its sparking points located within said chamber.



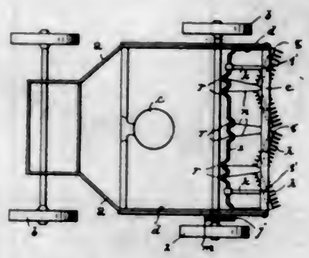
1,688,219. MACHINE FOR PILING SHEETS, PLATES, AND THE LIKE. JOHN D. WILLIAMS, Niles, Ohio. Filed June 3, 1926. Serial No. 113,523. 11 Claims. (Cl. 214—6.)

1. A machine of the class described comprising a pair of laterally spaced rails adapted to receive and afford vertical support to the lateral edges of a sheet as it is moved longitudinally between them, means for supporting the rails, means for adjusting the distance between



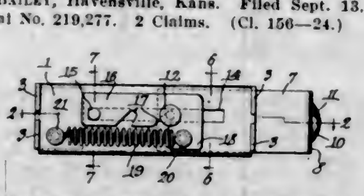
the rails, and means actuated by the moving sheet when it attains a predetermined position with respect to the rails operative to move the rails simultaneously horizontally outward in opposite directions to thereby withdraw their support from the sheet and allow it to fall vertically.

1,688,220. FURNACE LINING AND METHOD OF MAKING SAME. JAMES R. WYATT, Camden, N. J., assignor to The Ajax Metal Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 1, 1923. Serial No. 672,073. 15 Claims. (Cl. 266—15.)



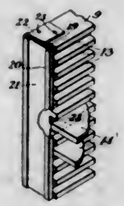
1. In an induction electric melting furnace, a furnace casing, rammed heat insulation therein and an inner lining adapted to hold the molten content of the furnace, resting upon the heat insulation and low in heat insulating quality.

1,688,221. COMBINATION DOOR STOP AND HOLDER. CHARLES J. ABBEY, Skowhegan, Me. Filed Mar. 6, 1928. Serial No. 259,471. 2 Claims. (Cl. 292—77.)



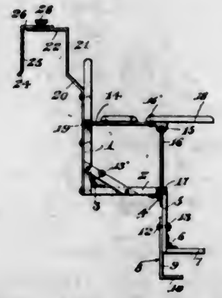
1. In a device of the class described, a flexible member adapted to be rigidly connected at one end, a cam on the other end of said member, and a roller carried by said member behind said cam, said cam serving for flexing said member when pressure is applied thereto by the edge of a door, and said roller being so positioned as to enter a recess in the edge of the door to releasably hold the door open.

1,688,222. HORSE-DRAWN RAKE. CARL CHRISTIAN ANDERSEN, Vierne Mark Pr. Gamby, Denmark. Filed July 23, 1926, Serial No. 124,389, and in Denmark Nov. 28, 1925. 3 Claims. (Cl. 56—375.)



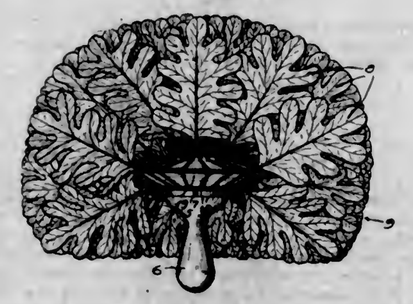
1. A raking machine comprising in combination a main frame, running wheels thereon, rearwardly extending supports, a plurality of holders pivotally mounted on said supports for movement in a horizontal plane, rake teeth carried by said holders, a crank shaft, means for rotating the crank shaft by the running wheels of the raking machine, and connecting rods connected to the crank shaft and to the ends of said holders for moving said holders in a horizontal plane.

1,688,223. SHADE AND CURTAIN BRACKET. ELMER M. BAILEY, Havensville, Kans. Filed Sept. 13, 1927. Serial No. 219,277. 2 Claims. (Cl. 156—24.)



1. A device of the class described comprising first and second frame-engaging members connected for right-line sliding movement, the second member having a keeper, a pivot element mounted for right-line sliding movement on the first member, a latch mounted to swing on the pivot element and engageable with the keeper, and a spring connection between the latch and the first member.

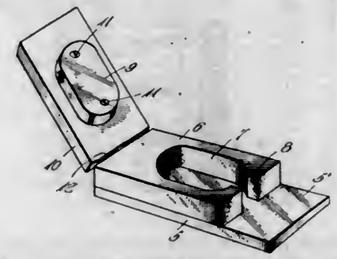
1,688,224. CASE FOR MUSIC RECORDS. HARRY J. BELL, Waynesboro, Pa. Filed Sept. 9, 1927. Serial No. 218,508. 3 Claims. (Cl. 312—10.)



1. A case for music records and the like, comprising a casing having an open side, partitions detachably located in the casing and removable through the open side, and retainers for the partitions permanently mounted on the edges of the casing, the said retainers being provided with movable means for holding said partitions in operative position.

1,688,225. COLLAPSIBLE AUXILIARY SEAT. BILL JOSEPH BELOHLAVEK, San Antonio, Tex. Filed July 23, 1927. Serial No. 207,956. 1 Claim. (Cl. 155—79.)

A collapsible chair for suspension from a seat chair back comprising a chair back member, means secured on one side of said back member for suspending same on the seat back, a seat hingdly secured to the opposite side of the back member in a manner to be swung upwardly into opposed relation with respect to said back member, a hanger hingedly secured to the underside of the seat near the forward edge thereof whereby said hanger may be folded to lie in opposed relation to the seat on the underside thereof, an adjustable support carried on the rear side of the hanger and comprising a shank having an elongated opening adapted to receive a fastening device for adjustably securing the support to the hanger, and a right angularly disposed foot portion on the lower end of said shank, and a foot rest hingedly secured to the forward side of the hanger and adapted to be folded upward into opposed relation with respect to said hanger.

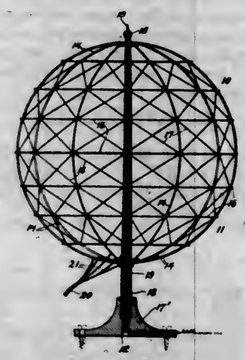


1,688,226. MASSAGE IMPLEMENT. DAVID BERGER, Philadelphia, Pa. Filed Feb. 29, 1928. Serial No. 257,993. 6 Claims. (Cl. 128—62.)

1. In a massage implement, a holder embodying a hollow metal shell having a circular series of radial leaf-stem receiving slots, said slots having enlarged portions forming entrance openings for the enlarged ends of the leaf stems.

1,688,227. PRESS. HENRY BERNIER, Easthampton, Mass. Filed Mar. 7, 1927. Serial No. 173,574. 4 Claims. (Cl. 107—15.)

1. A press comprising an open topped receptacle to receive the material to be compressed, said receptacle having a lateral passage which extends horizontally from the interior to the exterior of said receptacle and also extends vertically from the bottom through the upper side of said receptacle, and a movable pressing member downwardly insertible into the upper end of said receptacle, said passage permitting discharge of excess material as the pressing member is operated and also facilitating the use of a blade to sever the excess material from the cake formed in



the receptacle as well as permitting horizontal insertion of the blade under the cake to remove the latter from the receptacle.

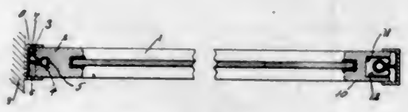
1,688,228. PROCESS FOR MANUFACTURING ALBUMIN PREPARATIONS. ALBERT BUSCH, Brunswick, Germany, assignor to Johann A. von Wülfing, Berlin, Germany. Filed Dec. 18, 1924. Serial No. 756,841. 7 Claims. (Cl. 260—9.)

4. The water soluble substantially neutral albuminous reaction product of casein and an alkali metal silicate.

1,688,229. ANTENNA. RAGNVALD ENGEBRETSEN, Brooklyn, N. Y. Filed Dec. 3, 1924. Serial No. 753,730. 1 Claim. (Cl. 250—33.)

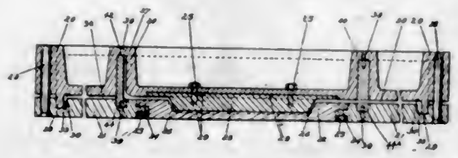
An antenna comprising a plurality of spaced arcuate members arranged in globular formation and having their ends converging toward each other and fixedly connected together, spaced annular bands extending circumferentially about said arcuate shaped members and fixedly connected thereto, cross wires connecting intersecting portions of said members and said bands and fixed thereto, and lead-in wires joined to the respective arcuate shaped members.

1,688,230. WALL CONSTRUCTION. WILLIAM A. FANNING, Chicago, Ill. Filed Mar. 7, 1928. Serial No. 259,785. 3 Claims. (Cl. 72—102.)



1. A wall construction comprising outer courses of oblong blocks having a width equal to the thickness of the wall, a length twice the width and a thickness one-half the width, said blocks being laid in courses alternately sidewise and edge wise; and inner courses of oblong blocks having a length equal to the width of said first mentioned blocks, a width one-half the length and a thickness one-

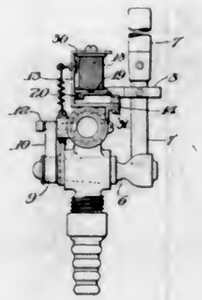
one-half the width, laid endwise between said sidewise courses, most of said inner blocks being laid with their



widths exposed, but some being turned edgewise to break joints or provide space for rafters or the like.

1,688,231. WINDOW CONSTRUCTION. ALBERT H. FISHER, East Cleveland, Ohio, assignor of one-half to Delbert M. Stafford, Lakewood, Ohio. Filed May 17, 1928. Serial No. 278,398. 12 Claims. (Cl. 189—72.)

1. A window construction comprising a pair of guide members supported on the frame and sash respectively, said guide members having interlocking engagement with each other and means between one of said guide members and its point of support adapted to compensate for irregularities of adjustment.



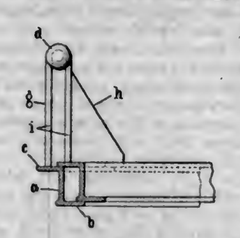
1,688,232. MEANS FOR MOLDING RUBBER DRAINING BOARDS FOR SINKS. JAMES PAUL HARKIN, Thornbury, Australia. Filed July 2, 1926. Serial No. 120,162. 10 Claims. (Cl. 18—42.)

1. Means for forming drain boards of rubber or the like, comprising two molds having registered openings to form a sink opening and provided with means for forming in the upper surface of the board drain grooves leading to said opening, and means associated with the molds whereby to form right hand, left hand, or even hand boards.

1,688,233. AUTOMATIC CUT-OFF FOR STOP COCKS. ANTON HASLINGER, Rockledge, Philadelphia, Pa. Filed Oct. 5, 1927. Serial No. 224,192. 3 Claims. (Cl. 137—161.)

1. In a device for the purpose indicated the combination with a movable member having a gravity pawl, of an armature and a support for pivotally supporting the armature, the support having a shoulder with which the gravity pawl engages for retaining the member in one position, an electric circuit including electro-magnets, and means thermostatically controlled and in the circuit for energizing the magnets to attract the armature, which disengages

the pawl from the shoulder and permits the release of the member.

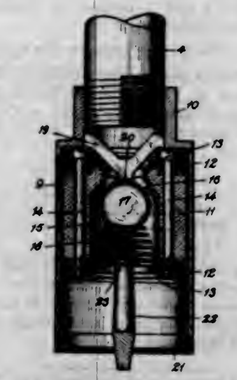


1,688,234. CARBIDE-LAMP HOLDER. CONRAD HENNECK, Frisco, Colo. Filed Aug. 6, 1926. Serial No. 127,646. Renewed Sept. 7, 1928. 1 Claim. (Cl. 248—41.)

A miner's lamp support which is designed to rest at an angle between a side wall and the floor of a mine, comprising a pair of spaced parallel members having offset ends, providing feet, spaced transverse strips connecting the members and each of said strips having a central opening therethrough for the reception of the hook of a lamp, said spaced members being adapted to receive between and have their confronting edges contact with the rear portions of the font of the lamp to prevent swinging of the lamp when arranged upon the support.

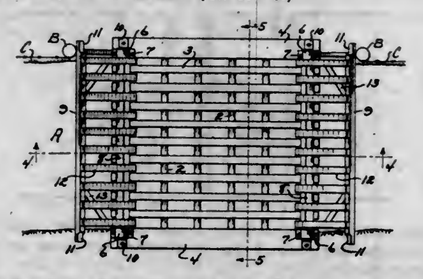
1,688,235. HINGE FOR CASEMENT WINDOWS. RALPH WALTER HOPE, Edgbaston, Birmingham, England, assignor to Henry Hope and Sons, Limited, Birmingham, England. Filed Feb. 23, 1927, Serial No. 170,376, and in Great Britain Mar. 5, 1926. 1 Claim. (Cl. 189—69.)

A hinged casement structure comprising a fixed flanged casement frame and a movable flanged casement frame associated therewith, each of said frames having slots in one of its flanges, a bracket having a plurality of projections cooperating with the slots in the fixed casement frame, a second bracket having projections cooperating with the slots in the movable casement frame, said projections being welded to and terminating substantially



flush with the back of said flanges, and a pivot pin connecting said brackets.

1,688,236. FOUNTAIN PEN. CHARLES W. HOAN, Seattle, Wash. Filed Mar. 24, 1928. Serial No. 264,478. 1 Claim. (Cl. 120—42.)

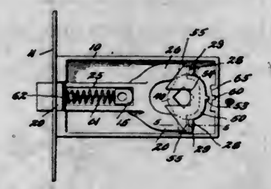


In a fountain pen, the combination with a barrel, a tip threadedly secured in one end of the barrel and having a tapered end terminating in a penetrating point disposed centrally of the barrel at the tip receiving end thereof, said tapered end having converging bores disposed in communication at their inner ends, a spoon received in said tip and being formed with a groove adapted to communicate with the communicating ends of the bores, a cap threadedly secured to the opposite end of the barrel, a cartridge having one end closed and a relatively thin wall for the opposite end thereof, and said cartridge being adapted to be positioned in said barrel and moved by the cap to cause the penetrating point to penetrate the thin wall to allow for the flow of fluid in the cartridge through the bores and groove of the spoon.

1,688,237. TANK PUMP. ANTON JONCHA, Maywood, Ill., assignor to Oil Products Appliance Co., Maywood, Ill., a Corporation of Illinois. Filed Jan. 18, 1928. Serial No. 247,643. 15 Claims. (Cl. 221—80.)

9. A foot valve for liquid dispensing pumps, including a valve proper, and a piston carrying such valve, said piston being movable without valve release to compensate for increase in the volume of the liquid column above it when the pump is idle.

1,688,238. STOCK BARRIER AND CROSSING. JOHN C. KAMAS, Bellville, Tex. Filed Aug. 13, 1927. Serial No. 212,753. 1 Claim. (Cl. 39—5.)

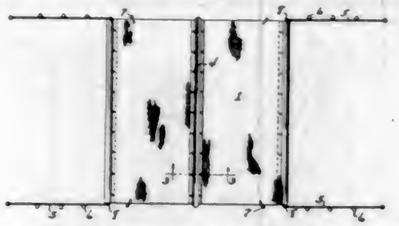


A barrier and crossing of the character described comprising a pair of base supports, cross pieces bridging the base supports and having their ends secured thereto, parallel bars secured in spaced relation with respect to each other and to said cross pieces, strips secured to the ends of said cross pieces and in parallelism with said bars, a sectional rack, side members included in said sectional rack, one side member of each section being substantially semi-circular in cross section and being hingedly secured adjacent the ends of said strips, angle plates secured to the strips and being engageable with the ends of the semi-circular in cross section side members to prevent longitudinal movement thereof, the other side members having reduced ends engageable with the strips, bars secured to said side members in spaced relation and arranged thereon in a manner whereby they will be disposed between the bars first mentioned when the sections are arranged in one position and converging braces bridging some of the bars.

1,688,239. CONTINUOUS PROCESS OF ORNAMENTING FLOOR COVERINGS. CHARLES O. KARPF, New York, N. Y. Filed Mar. 21, 1927. Serial No. 177,214. 1 Claim. (Cl. 41—26.)

The process of forming a floor covering which consists in applying to a waterproof flexible felt base of the flooring type a sealing coat of paint, which coat is smooth and flat, then applying to the sealing coat a decoration in ink from an etched plate having a wide mesh screen, then before the ink is dry reversely bending the flexible body so as to blend out the effects of the screen, and finally covering the body with a transparent wear coating.

1,688,240. DEAD LOCKING LATCH. HENRY W. KEIGWIN, Mount Vernon, N. Y. Filed Nov. 29, 1927. Serial No. 236,467. 14 Claims. (Cl. 292—169.)

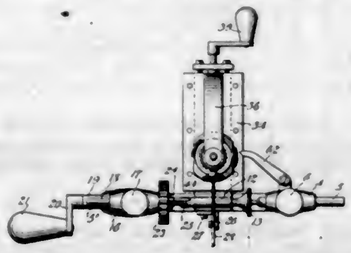


1. In a latch bolt, a bolt, a spindle composed of independently movable sections, a bolt operating device on each section, one of said devices being slidable on its section.

1,688,241. WEATHER SHIELD. RICHARD S. LAFOON, Richmond, Va. Filed Oct. 24, 1927. Serial No. 228,428. 3 Claims. (Cl. 156—15.)

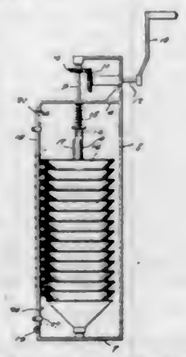
1. A weather shield for bridging the space between two structures, comprising a flexible sheet sloping from

its edges to its center, a gutter of rigid material at the center of the sheet, rods connected with the edges of the



sheet and flexible members connected with the ends of the rods and adapted to be attached to parts of the structures.

1,688,242. PAPER-TOWEL CABINET DISPOSER. FRANK LAWRENCE and VIRGIL FRANCIS HALLIBURTON, Tulsa, Okla. Filed Aug. 13, 1926. Serial No. 129,040. 1 Claim. (Cl. 312—60.)



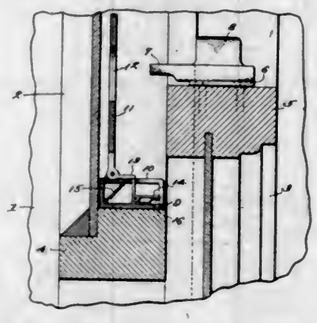
In a paper towel cabinet of the character described, a cabinet structure comprising a rear wall, side walls having substantially V-shaped notches opening at the forward edges thereof, top and bottom walls, closure doors for the upper and lower portion of the front side of the cabinet with the adjacent ends of the doors spaced from each other forming an intermediate opening adjacent said notches at the front side of the cabinet, a pair of downwardly inclined walls extending transversely of the cabinet from the front and rear sides thereof adjacent the lower end of the upper door, with adjacent edges spaced from each other and an angle strip extending transversely of the cabinet between the forward edges of the side walls adjacent the upper end of the lower door.

1,688,243. MACHINE FOR ROUNDING GEAR WHEELS. JESUS LOPEZ LIMERES, Habana, Cuba. Filed June 15, 1927. Serial No. 199,050. 2 Claims. (Cl. 90—3.)

1. A machine for rounding gear wheels, comprising a base, a pair of arms extending upwardly from said base, one of said arms having a single journal box and the other an upper and lower journal box, a sliding shaft mounted in said upper journal box, a second sliding shaft mounted in the journal box of the opposite arm, means for locking said shafts against sliding movement, a power shaft mounted in said lower journal box, a crank connected to said power shaft, a gear wheel rigidly secured to said power shaft, a gear wheel rigidly mounted on the shaft mounted in said upper journal box, said gear wheel meshing with the first mentioned gear wheel, a pin extending from said second mentioned gear wheel, a cutter shaft rotatably supported by the first two mentioned shafts, a pin extending from said cutter supporting shaft, said pin extending into the path of movement of the pin carried by said gear wheel whereby when said gear wheel is rotated the cutter shaft will be rotated, a cutter mounted on said cutter shaft, means for clamping said cutter rigidly to said cutter shaft, a carriage for supporting a gear wheel, means for centering the gear wheel on said carriage, and means for moving the carriage so that the gear wheel thereon will be brought into operative position in respect to said cutter whereby when said crank is rotated the cutter will function to cut the gear wheel.

1,688,244. CLEANER FOR SKIMMING DISKS OF CREAM SEPARATORS. CARL MOLSTAD, Newfolden, Minn. Filed July 1, 1927. Serial No. 202,898. 7 Claims. (Cl. 15—97.)

1. In an apparatus of the class described, a rotatably mounted shaft adapted to carry a plurality of skimmer disks, means connected with said shaft for the operation thereof, and a plurality of cleaner arms extending between said disks and arranged in cleaning position with the surfaces thereof.

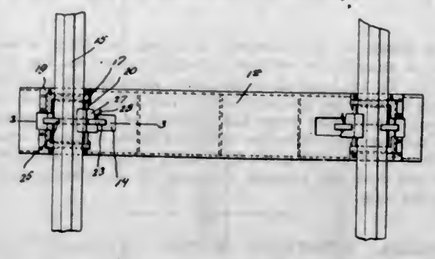


1,688,245. REMOVABLE EMANATION SEED. JOSEPH MUIR, New York, N. Y., assignor to The Radium Emanation Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 2, 1926. Serial No. 133,239. 13 Claims. (Cl. 174—177.)

1. As a new article of manufacture, a seed closed at its ends and containing radium emanation, for intratumoral radiation of diseased tissue, and adapted to be buried in the tissue by a seed implanter, said seed having a withdrawal member attached thereto.

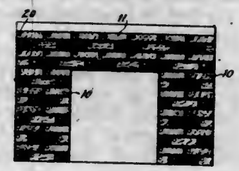
1,688,246. SASH FASTENER. DORIS I. PLATT, Rapid City, S. Dak. Filed Sept. 28, 1926. Serial No. 138,254. 1 Claim. (Cl. 292—336.)

A sash fastener including a casing adapted to be secured upon the lower rail of an upper sash and having its front and its top side open to form an entrance, an operating element adapted to be secured upon the upper rail of a lower sash with a portion projecting therefrom over the rail of the upper sash and having an upstanding lug, a latch plate pivoted to the casing in line with and above the opening formed in the top thereof and formed with an opening to receive said lug, a short arm projecting from the pivoted end of the latch plate at a right angle to the latch plate, a spring normally urging the latch plate into horizontal position with the arm extending down-



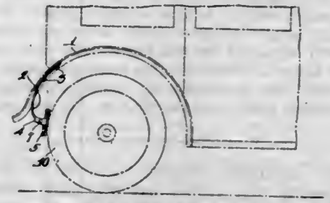
wardly into said casing and the plate extending across the rail of the lower sash and about the lug, a trip pivoted within the casing and having arms extending at right angles to each other, one of which is adapted to engage under the arm of the latch plate and releasably hold the latter in a vertical position and the other adapted to be engaged by the operating element when the sashes are closed, and a spring normally holding the trip in an operative position.

1,688,247. ALLOY AND ITS APPLICATION TO THE MANUFACTURE OF ELECTRICAL CONDUCTORS. WILLOUGHBY STATHAM SMITH, Newton Poppleford, HENRY JOSEPH GARNETT, Sevenoaks, and JOHN ANCEL HOLDEN, Gilden Park, England. Filed Jan. 6, 1927, Serial No. 159,497, and in Great Britain July 10, 1926. 12 Claims. (Cl. 75—1.)



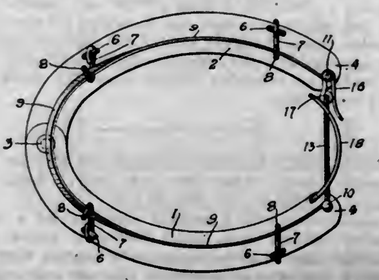
1. An alloy free from carbon composed of 6 to 17% iron, 1 to 5% aluminum, 1 to 5% of a fourth metal for increasing the electrical resistance and selected from a group comprising chromium, molybdenum, tungsten, vanadium, or silicon and the balance nickel.

1,688,248. METAL RAILWAY TIE. DANIEL O. SNYDER, Muncy, Pa. Filed Nov. 8, 1927. Serial No. 231,880. 4 Claims. (Cl. 238—285.)



1. In a railway structure of the class described, a hollow sheet metal tie provided with an elongated opening, a cushioning block extending transversely across the tie and opening, means for fastening said block to the tie, a rail resting on said cushioning means, and a rail clamp for fastening the rail to the cushioning means, said rail clamp having portions extending up through the opening in said tie.

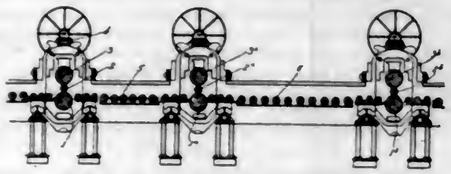
1,688,249. MEANS FOR DISPLAYING SAMPLES. BERNARD F. STENZ, New York, N. Y., assignor to Simplex Sampling Association, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 20, 1927. Serial No. 162,404. 3 Claims. (Cl. 35—16.)



1. A rectangular display card or slab having upon one surface thereof a facsimile representation in shape, color and texture of one surface of a rectangular architectural building unit, and a marginal extension along two adjacent angularly disposed edges of said representation to simulate mortar, the other angularly disposed marginal edges of the facsimile representation being coincident with the corresponding marginal edges of the card or slab.

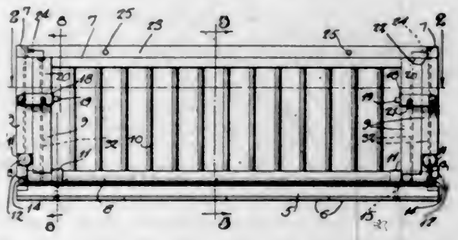
1,688,250. PROTECTING GUARD FOR TIRES. HARRY P. THOMPSON, Philadelphia, Pa. Filed Dec. 31, 1926. Serial No. 158,356. 1 Claim. (Cl. 280—158.)

A protecting tire guard, comprising a resilient hanger for suspension from a fender of an automobile, the lower end of the hanger curving downwardly and slightly forwardly toward the rear portion of the rear wheel of the automobile, the extremity of the hanger terminating in forks, a guard shoe curved in cross section to conform to the transverse curvature of the tire on the wheel and curved concentric with the wheel, the rear face of the guard having rearwardly projecting spaced arms straddling the arms of the fork, a pivot passing through the arms of the fork of the rearwardly projecting arms of the guard shoe, two sets of resilient means consisting of coiled springs mounted upon the pivot, said coil springs having terminal extensions cooperating with the hanger and the rear face of the guard shoe, to retain the shoe in substantial position concentric to the tire, the engaging face of the shoe having angularly disposed ribs for deflecting foreign matter from the tread of the tire.



1,688,251. HORSESHOE. ANDREW TRAKALO, The Pas, Manitoba, Canada. Filed Aug. 18, 1927. Serial No. 213,845. 1 Claim. (Cl. 168—22.)

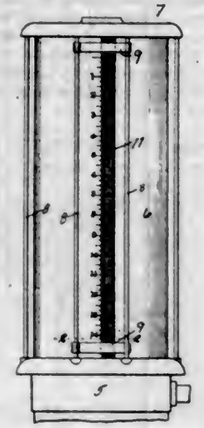
In a horseshoe of the type described, a shoe formed of side sections hinged together at their forward ends, links carried by the upper sides of the sections, vertical



posts at the rear ends of the sections, a metallic strap threaded through the upper ends of the links and anchored at their ends to the posts, and a link attached at one end to one of said posts, and a spring clasp carried by the other end of the last-named link and detachably engaging the other post to retain the shoe on a hoof.

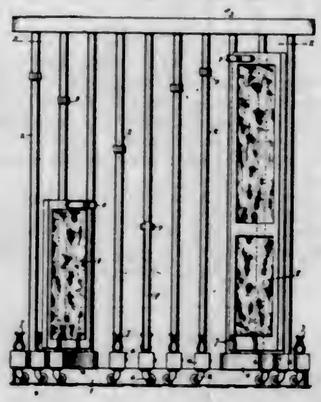
1,688,252. PLATE MILL AND PROCESS OF ROLLING HOT METAL. JOHN B. TYTUS, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Apr. 11, 1925. Serial No. 22,272. 2 Claims. (Cl. 80—35.)

2. A plate mill of the character described, comprising a plurality of stands of rolls, each having a driven, lower, large diameter roll, a central, small diameter idler roll, and a top larger diameter, and screw controlled roll, said stands arranged to act successively on the piece, said rolls being so constructed and operated as to present progressively less convexity of opening, through which the piece must pass, from the first to the last stand.



1,688,253. FOLDING CRATE. ALONZO W. WAGONER, Hammonville, Ky. Filed May 20, 1927. Serial No. 192,950. 2 Claims. (Cl. 217—47.)

1. In a folding crate, a bottom wall, end and side walls respectively hinged to the bottom wall upon horizontal pivots disposed in different horizontal planes, said end and side walls embodying rectangular frames having end rails, and means to snugly embrace adjacent end rails at the corners of the crate to releasably clamp the same together and hold the end and side walls in unfolded vertical position, each of said end rail clamping means embodying a plate and a hasp pivoted on opposite sides of an end rail of one wall and a swinging keeper loop engageable across the inner side of the adjacent end rail of the adjacent wall and hinged to the pivoted plate, said hasp having an extension tongue releasably engageable by said keeper loop.

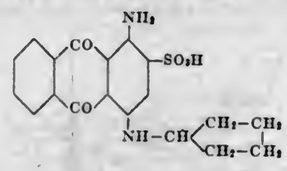


1,688,254. PRICE GAUGE. CHARLES W. WALLER, Fort Klamath, Oreg. Filed Oct. 24, 1927. Serial No. 228,440. 1 Claim. (Cl. 40—63.)

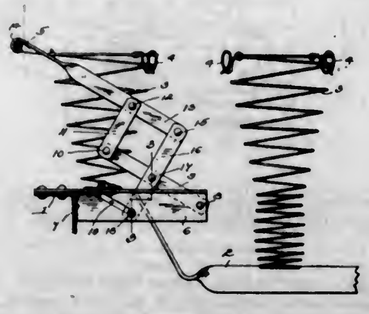
In combination with a gasoline pump having a visible dispensing cylinder upon which indicia is placed, of a price gauge adapted to be supported in contact with said cylinder, a pair of rods positioned adjacent said cylinder and spaced therefrom, said rods being parallel to said price gauge and slidable clips vertically movable on said rods, said clips having a curvature corresponding to the curvature of said dispensing cylinder and adapted to

engage said price strip for the purpose of holding said price strip against said dispensing cylinder at a point between said rods.

1,688,255. DISPLAY DEVICE FOR SCREENS. LOUIS WASCH, Mahanoy City, Pa. Filed July 19, 1927. Serial No. 206,977. 1 Claim. (Cl. 211—13.)



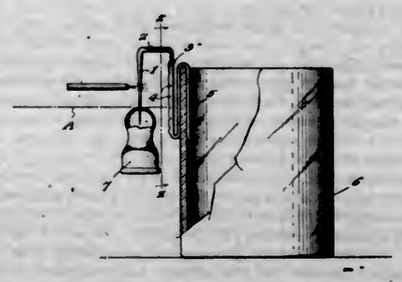
A device of the character described, including a base bar, a plurality of vertical cylindrical posts on the base bar, a top bar secured by the posts, arms having openings therein receiving the posts and swinging freely therefrom, supporting devices under the free ends of the arms, means on the arms to receive the lower end of the screen or other device, and a clamp on each post adjustable vertically on the post and adapted to clamp an article supported by the arm.



1,688,256. DYESTUFFS OF THE ANTHRAQUINONE SERIES. KLAUS WEINAND, Cologne-Flittard, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 23, 1927, Serial No. 242,282, and in Germany Dec. 20, 1926. 8 Claims. (Cl. 260—60.)

4. As a new product 1-amino-4-pentamethyleneamine-anthraquinone-2-sulfonic acid, which crystallizes in blue needles, being soluble in water with a blue coloration, dyeing

wool exceedingly pure, blue shades, fast to light and having in a free state most probably the formula:



1,688,257. BEDSPRING BRACE. JACOB B. WHITE, Columbus, Ohio. Filed May 6, 1926. Serial No. 107,233. 4 Claims. (Cl. 5—262.)

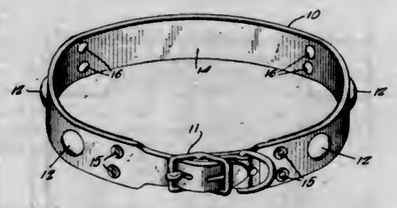
1. In a bed spring, a rigid lower frame, a spaced upper frame, springs interposed between said frames for resiliently spacing the latter, a transversely extending bracket rigidly connected with said lower frame, a pair of cross links, pivoted to each other at a point intermediate the length, one of said links having the lower end thereof connected by a fixed pivot with said bracket, the other of said links having its lower end connected with said bracket by a pin and slot connection, an upwardly and angularly extending arm having the upper end thereof engaged with said upper frame, the lower end of said arm being pivotally connected with the upper end of the link having the pin and slot connection with said bracket, and a relatively short link connection between an intermediate part of the length of said arm and the upper end of the link having the fixed pivot connection with said bracket.

1,688,258. BOTTLE-NIPPLE PERFORATOR. ERVIN A. YOUNG, Wadsworth, Ohio. Filed July 18, 1927. Serial No. 206,605. 3 Claims. (Cl. 164—119.)

1. A device of the class described comprising a needle, a resilient hook carried by the needle for engagement with a support, and a shank disposed between the needle and hook and having graduations thereon, said needle adapted to be placed in penetrating engagement with a nipple at a point corresponding with a graduation.

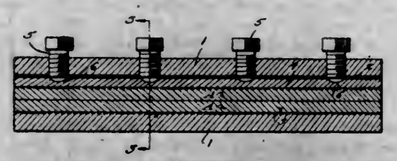
1,688,259. LIGHT FILTER. FRANZ ZERNIK, Wurzburg, Germany. Filed Apr. 27, 1925, Serial No. 26,292, and in Germany May 8, 1924. 7 Claims. (Cl. 167—9.)

1. Light filters containing hydroxy-quinoline sulphonic acids as efficacious substances.



3. Light filters containing as efficacious substances derivatives of the hydroxy-quinoline sulphonic acids in which a hydro-carbon radical has been substituted for the hydrogen of the hydroxyl.

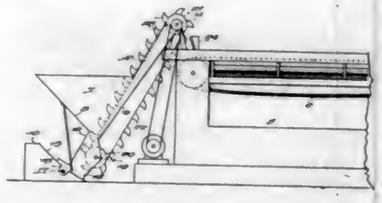
1,688,260. AUTOMATIC NAIL-FEEDING DEVICE FOR NAILING MACHINES. EMILE ALIBERT, Paris, France. Filed Dec. 12, 1925, Serial No. 75,091, and in France Dec. 12, 1924. 3 Claims. (Cl. 1—16.)



3. A nail feeding mechanism for nailing machines comprising a plurality of race ways, means for feeding nails therefrom including U-shaped members for cooperation with the race ways, bars carrying said U-shaped members, cover plates for holding said members on said bars, means for securing said U-shaped members to either one of the bars, a groove formed in the bottom portion of each of said U-shaped members, abutments disposed at the ends of said grooves, ejectors slidable in said grooves and spring held in engagement with said abutments, and having lateral grooves, closing abutments for said race ways received in said lateral grooves, and adjustable therein, and means for retaining said closing abutments in their adjusted positions.

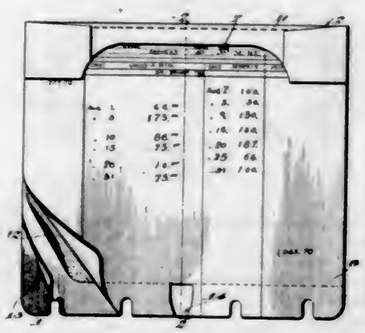
1,688,261. ANIMAL COLLAR. GEORGE R. BRANNER, Daytona, Fla. Filed Aug. 4, 1927. Serial No. 210,599. 3 Claims. (Cl. 119—106.)

1. In an animal collar, a copper lining, copper rivets extending through the collar and lining to secure the latter in place, and rounded heads upon the ends of the rivets with the heads extending beyond the face of the lining for contact with the neck of an animal.



1,688,262. BELT CLAMP. ALONZO ROBERTSON BRUCE, Mexia, and ED T. THORNTON, Wortham, Tex. Filed Sept. 8, 1927. Serial No. 218,332. 1 Claim. (Cl. 24—37.)

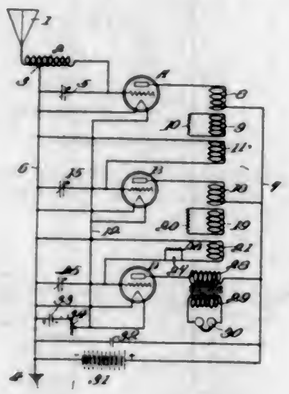
A belt fastener comprising a body of substantially circular shape in cross section and having a rectangular socket therein which opens out through one face of the body, said body also having threaded holes therein, the inner ends of which communicate with the socket, bolts



threaded in said hole, a plate in the socket having recesses therein for receiving the ends of the bolts, a pair of longitudinally extending ribs on the outer face of said plate for engaging a belt end placed in the socket and a longitudinally extending rib on that wall of the socket which is opposite the wall through which the bolts pass and against which the other belt end bears, the rib on the wall being centrally arranged with respect to the ribs on the plate.

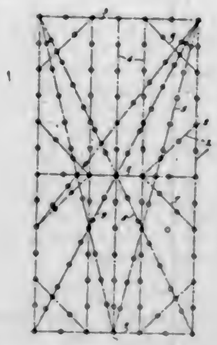
1,688,263. FEEDING MEANS FOR GRADING APPARATUS. WILLIAM P. BULLARD, Albany, Ga. Filed Mar. 27, 1924. Serial No. 702,396. 3 Claims. (Cl. 198—55.)

1. In apparatus of the character set forth, means for feeding nuts comprising a holding hopper, an inclined upwardly moving conveyor extending upwardly from the hopper and having its upper delivery end permanently positioned to deliver to nut receiving mechanism, said hopper and the lower end of the conveyor being both adjustable to different positions with relation to the delivery end, to vary the inclination of the conveyor.



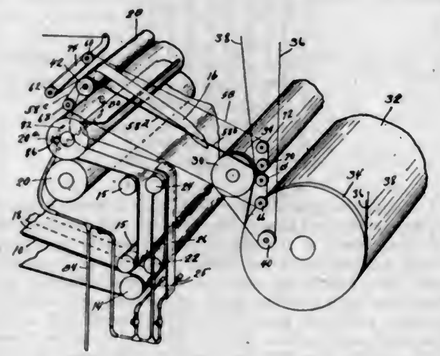
1,688,264. HOLDER FOR LEDGER SHEETS. JOHN CARROLL CARPENTER, Oswego, Kans. Filed Oct. 1, 1926. Serial No. 138,945. 3 Claims. (Cl. 282—29.)

1. As an article of manufacture, a manifolding backing sheet having a down-turned top and adjacent side ears lapped thereover to form therewith a pocket, the lower edge of the down-turned top between its sides being cut back to form a sighting opening, and a carbon sheet being permanently mounted at its upper end within said pocket.



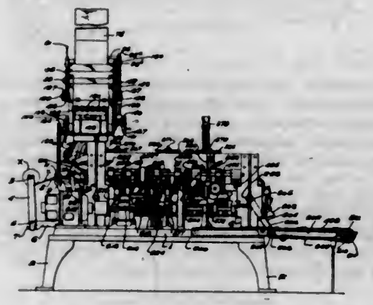
1,688,265. RADIOCIRCUITS. RALPH A. CLARKE, Worcester, Mass., assignor to Standard Radio Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 18, 1925. Serial No. 9,988. 3 Claims. (Cl. 179—171.)

1. In a radio frequency amplifying system, a plurality of three-electrode electron discharge repeaters with output and tuned input circuits, transformers electro-magnetically coupling the output and input circuits of successive repeaters, an untuned tertiary winding in said transformers inter-



posed between the primary and secondary windings, and a resistance short-circuiting said tertiary winding.

1,688,266. ELECTRICAL COMPOUND LETTER. BRADFORD D. COFFEY, Jersey City, N. J. Filed Aug. 17, 1925. Serial No. 50,771. 1 Claim. (Cl. 40—30.)

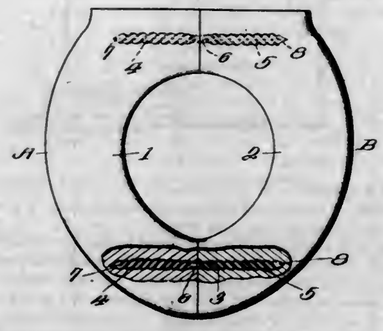


A compound letter for electric signs comprising a plurality of series of lamp members, each series being arranged in a straight line, said series of lamp members including a plurality of vertical rows of lamp members, a horizontal row of lamp members at the top and bottom, a horizontal row at the center, a pair of diagonal rows of lamp members, one of said diagonal rows extending from one corner to the opposite corner at the opposite end and the other diagonal row of lamp members connecting the remaining corners, said diagonal rows of lamp members converging at the center of the letter, a straight row of lamp members adjacent each corner of the letter positioned diagonally across the respective corners, a pair of rows of lamp members forming a V extending from the two upper corners to the central lamp member at the lower end of the letter, a pair of V-shaped rows of lamp members at the center with their apexes extending at right angles to the vertical, and an inclined row of lamp members extending from one of the upper corners of the letter at an angle downwardly to the opposite side of the letter and passing through a lamp member half-way between said opposite side and the center of the letter.

1,688,267. PAPER MAKING. HERVEY G. CRAM, Millinocket, Me., assignor to Great Northern Paper Company, Millinocket, Me., a Corporation of Maine. Filed Aug. 19, 1927. Serial No. 214,191. 15 Claims. (Cl. 92—40.)

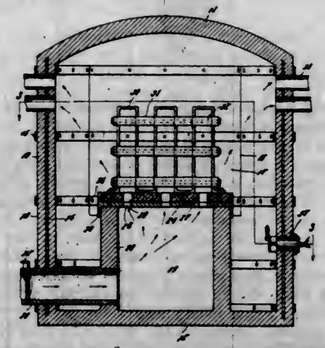
1. The method of guiding the paper web of a paper making machine from the press through the drier which consists in engaging the paper web at the press by a carrier device, conducting the paper web by said carrier device from the press to the drier and delivering it automatically to the engagement of a second carrier device at the drier, and carrying the paper web by said second carrier device through the drier and around the drier rolls thereof.

1,688,268. BAG MAKING AND FILLING MACHINE. JOHN T. DALTON, Durham, N. C., assignor of one-half to Richard H. Wright, Durham, N. C. Filed Aug. 19, 1927. Serial No. 214,165. 30 Claims. (Cl. 226—53.)



5. A packaging machine of the class described comprising weighing mechanism for weighing and delivering charges of the material to be packaged, means for advancing a strip of bag making material past a position to received the weighed charges successively, means for sewing said strip longitudinally during its advance, means for severing said strip transversely to form bag sections, travelling grippers operative to engage the severed bag sections to advance them and each rotatable on an axis transverse to the direction of advance to bring the several edges to the respective bag section successively into a predetermined position, and means for sewing the severed edges of each bag section when brought into said position.

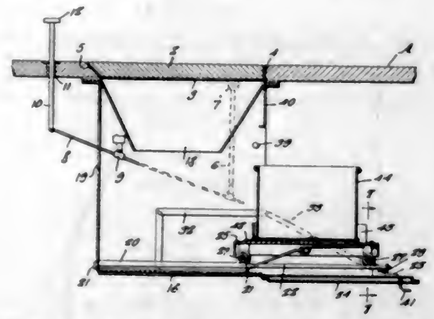
25. In a machine of the class described, the combination of means for advancing bag sections, sewing means operative successively on the bag sections during their advance, tag feeding means including a reciprocatory tag delivery member, and a rotatable member carrying grippers operative to receive tags from said delivery member and to advance them to the sewing means to be stitched thereby and thus attached to the respective bag sections.



27. In a machine of the class described, the combination of means for supplying a strip of bag making material, means for supplying charges of material to said strip at intervals in its length, means for severing said strip at points between said charges, means for closing the free edges of the bag sections, individual gripper units guided to travel in a path to advance the strip and the bag sections cut therefrom, and a revoluble screw extending parallel to the path of travel of the gripper units and cooperative therewith to advance them, the portion of said screw which cooperates with the gripper unit which has passed the point where the strip is severed having an increased pitch to accelerate the speed of travel of such unit and thereby separate it from the next following gripper unit.

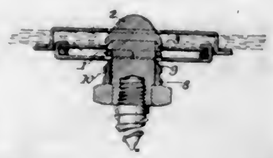
1,688,269. THREADED CONNECTING MEMBER. EDWARD L. DELANY, Brooklyn, N. Y., and RICHARD PAUL CHARLES, Bristol, Va., assignors to Delany Realty Corporation, Brooklyn, N. Y. Filed Feb. 10, 1925. Serial No. 8,278. 1 Claim. (Cl. 85—42.)

A threaded connecting member comprising a central smooth portion, right and left hand coarse wood threaded portions on opposite sides of the central smooth portion, and each threaded portion having a series of threads of such a pitch that the connecting member is caused to rotate and cut its own threads by pressure only in the members to be connected.



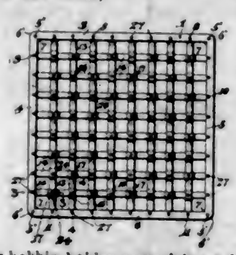
1,688,270. ELECTRIC AIR-HEATING FURNACE. WILLIAM DOHERTY, West Philadelphia, Pa. Filed Sept. 27, 1926. Serial No. 138,012. 2 Claims. (Cl. 219—34.)

1. In a heater of the character described, a casing provided near its top with a plurality of radially extending outlet pipes, an upstanding chamber member within the central



lower portion of the casing, a cold air inlet pipe extending thru one side of the casing into said chamber member, a metal cover on said chamber member having a plurality of holes therein, a refractory top on said cover having holes registering with said first named holes, and heating means mounted above and supported upon said chamber structure and including a serpentine resistance member arranged in upright position and secured upon said refractory top with its alternate convolutions located above and registering with said holes.

1,688,271. REFUSE RECEIVING AND HANDLING APPARATUS. SPENCER E. FINCH, Bailey, N. C. Filed Sept. 15, 1927. Serial No. 219,770. 6 Claims. (Cl. 220—1.)

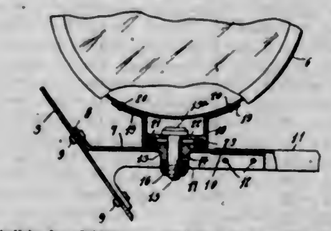


1. An apparatus of the character described comprising a housing, a closure for the top of said housing, a system of levers for actuating said closure, a door for the front wall of said housing, tracks arranged in the bottom of said housing, rods carried by said door and tracks respectively, a carriage mounted for movement on said tracks and rods, means between said door and carriage for moving the latter in and out of said housing, a receptacle carried by said carriage, and a funnel shaped member depending from the top of said housing in a manner to overlie the receptacle when the carriage is disposed within the housing.

1,688,272. SPRING-PRESSURE BUTTON. LOUIS FOULETIER, Grenoble, France. Filed May 14, 1926, Serial No. 109,184, and in France July 7, 1925. 1 Claim. (Cl. 24—211.)

In a spring pressure button, the combination of a cup-shaped member comprising an aperture formed at its centre and adapted to be fastened to on of the two pieces to be buttoned together, a spring disposed in said cup-shaped member, a stud provided with a head and a shank, adapted to be fastened to the second of the pieces to be buttoned together, and to be inserted into the aperture in the said cup-shaped member, the buttom of the head having formed therein a recess serving as an abutment for contact with the said spring, a ring whose diameter at least equals that of the said head and is slidable on the said shank, said ring comprising adjacent the head a beveled edge adapted to engage the said recess in the head and thus to cause the said spring to expand whereby the latter may slide upon the said head when the said cup-shaped member is drawn upon the same and an annular groove formed in the periphery of said ring.

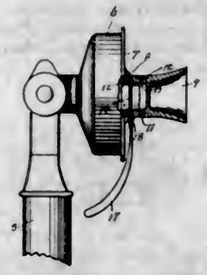
1,688,273. SPOOL HOLDER. GEORGE D. HAWLEY, Lowell, Mass. Filed Apr. 27, 1927. Serial No. 186,989. 8 Claims. (Cl. 242—130.)



1. A spool or bobbin holder comprising a frame, a pair of oppositely disposed sets of spaced strips positioned against the inner face of the frame and extending completely across the opening formed thereby, each of said strips provided with alternately disposed upset and depressed portions, the upset portions being spaced from the depressed portions, said upper portions being of inverted U-shape and said depressed portions being U-shape, the strips of one set extending through the upset and depressed portions of and abutting the strips of the other set, stationary retainer elements extending through and projecting from the abutting portions of the strips of said sets for securing said strips together, and stationary retainer elements extending through the ends of the strips and the body of the frame for securing them together and further projecting from the frame.

1,688,274. TESTING OR DEMONSTRATING APPARATUS. BRYCE HAYNES, New York, N. Y. Filed May 27, 1927. Serial No. 194,744. 5 Claims. (Cl. 209—112.)

5. A device for demonstrating the rolling qualities of spherical objects comprising a putting board having substantially horizontal surface provided with a centrally disposed outlet adjacent one end thereof to receive objects having accurate rolling qualities and side outlets to receive balls having inaccurate rolling qualities, and means associated with the other end of the board for rolling the objects upon the transverse center of the board and towards the opposite end and outlet, and at such a speed that the objects having accurate rolling qualities will be directed into the centrally disposed outlet.

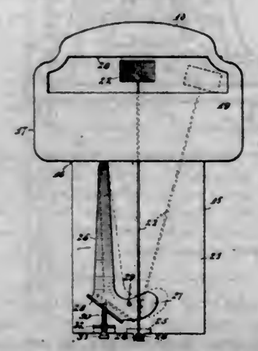


1,688,275. DIRIGIBLE HEADLIGHT. JULMER HELSTROM, Virginia, Minn. Filed Nov. 5, 1925. Serial No. 67,029. 1 Claim. (Cl. 240—61.)

A dirigible headlight, comprising a mounting consisting of a circular hollow standard, outwardly and upwardly curved ears adapted to engage a headlight casing to support it on the standard, a plate arranged within the

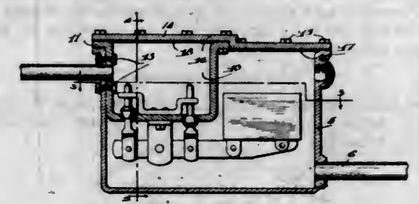
standard intermediate of the ends thereof, means engaging said plate for mounting said standard and the headlight casing for rotation, an anti-friction bearing engaging said plate and supporting the standard, said bearing being enclosed by the standard below the plate, and an arm extending radially from the standard and adapted for actuation to rotate the standard.

1,688,276. TELEPHONE ATTACHMENT. ZEDDIE E. JONES, San Francisco, Calif. Filed Feb. 12, 1927. Serial No. 167,773. 4 Claims. (Cl. 179—188.)



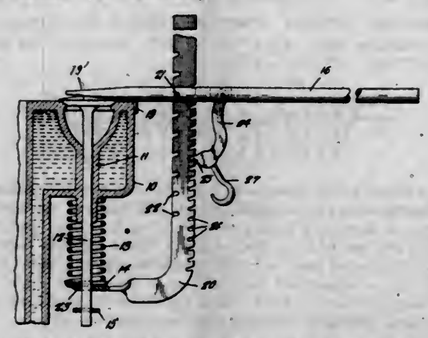
1. In combination with a telephone transmitter having a face plate and mouth piece, of a cylindrical member adapted to be secured between the face plate and mouth piece, a member including an upper portion diametrically extending through said cylindrical member and pivoted therein, a disc secured to said upper portion for partial rotary movement in a horizontal plane in said cylindrical member, and a handle formed with said upper portion whereby the disc may be moved to close said cylindrical member and means for normally retaining said disc in open position.

1,688,277. DIFFERENTIAL-FLOTATION PROCESS FOR MIXED SULPHIDE ORES. KOJIRO KAWAMURA, Tokyo-Fu, Japan, assignor of one-half to Yoshimatsu Yokoyama, Kanazawa, Japan. Filed Jan. 18, 1926. Serial No. 82,125. 1 Claim. (Cl. 209—167.)



The process of differentially floating ores comprising adding crude commercial anhydrous chromic acid with alkali to neutralize sulphuric acid therein to a pulp containing a mixture of sulphide minerals, said chromic acid being added in quantity sufficient to inhibit flotation of cupriferous and ferric sulphides without affecting zinc sulphide, and then subjecting the mixture to flotation.

1,688,278. ADVERTISING DEVICE FOR DISPENSING MACHINES. JOHN EDWIN KENKEL, Great Falls, Mont. Filed Feb. 3, 1927. Serial No. 165,639. 5 Claims. (Cl. 40—138.)

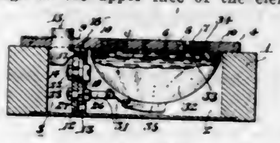


1. An advertising device comprising a casing having a face for advertising matter, a flexible member secured at one end to said casing, an object at the free end of the flexible member adjacent said face, said object movable with the flexible member when the latter is flexed, to attract attention to said face, the object being moved alternately in opposite directions when the flexible member is flexed, and means for flexing said flexible member.

1,688,279. LIQUID-SUPPLY TANK. WILLIAM S. LOCKE, Portland, Oreg., assignor of one-half to Portland Realty and Trust Co., Portland, Oreg., a Corporation of Oregon. Filed Nov. 26, 1927. Serial No. 235,965. 5 Claims. (Cl. 137—104.)

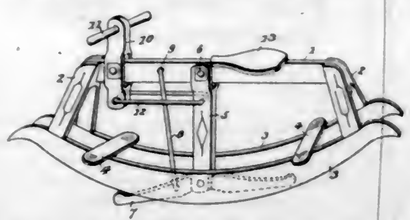
4. In a liquid supply tank, a main reservoir having an outlet, a second reservoir mounted therein having communication with a source of liquid supply and provided with a plurality of outlet openings in its bottom, a bracket depending from said bottom, a lever pivoted intermediate its ends to the bracket, vertically movable valves movable towards and away from the openings and having operative connection with the lever, a float carried by the lever to actuate the valves to open and closed position incident to the rise and fall of the float, and guides for causing the valves to move in a true vertical position.

1,688,280. VALVE LIFTER. DONALD G. LUDINGTON, Masontown, Pa. Filed Dec. 6, 1926. Serial No. 152,953. 2 Claims. (Cl. 29—86.3.)



1. A valve lifter, comprising an operating lever, adapted to be engaged upon the top of the valve, an L-shaped lifting member, adapted for engagement with the valve spring seat, one edge of said lifter member being provided with a series of notches and said operating lever having a transverse element selectively engageable with said notches, the other edge of said L-shaped lifting member being provided with a series of notches, and a retaining dog, pivotally suspended from the operating lever and detachably engageable with a selective one of the second named series of notches.

1,688,281. INKING ATTACHMENT. WILLIAM MACDONALD, Dennison, Ohio. Filed Sept. 23, 1927. Serial No. 221,569. 5 Claims. (Cl. 101—114.)

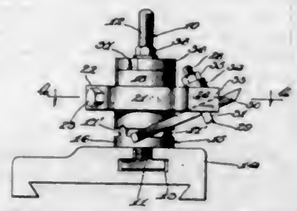


1. An inking attachment for an impression element of that type provided with openings for the passage of ink to its upper face, an open top flexible receptacle adapted to be secured to the lower face of said element and com-

municating with the openings in the element and providing an ink reservoir, means connected with said receptacle for contracting it to force a supply of ink through said openings to the upper face of the element, and an

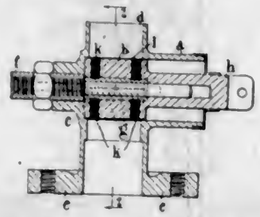
actuating element for extension through the impression element and shifted in one direction by a part of a printing press to provide for the operation of said means to contact the receptacle.

1,688,282. ROCKER TOY. LOGAN L. MALLARD, Norfolk, Va. Filed Mar. 30, 1926. Serial No. 98,544. 9 Claims. (Cl. 272—53.)



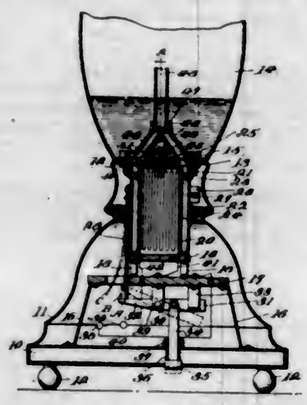
1. A toy of the class described comprising a body including rockers, a double ended floor pressure member pivoted on said body and suspended between said rockers, the ends of said floor pressure member being alternately engageable with the floor and means for manually actuating said floor pressure member.

1,688,283. DOUGH CUTTER. FERDINAND MATZELLE, Saginaw, Mich. Filed Oct. 27, 1926. Serial No. 144,606. 1 Claim. (Cl. 157—51.)



A dough cutter comprising a flexible bar, a handle-bracket slidably mounted on each end of said bar and releasably secured thereto, a handle secured to each bracket parallel with the bar and in offset relation thereto, blades formed with elongated substantially horizontal cutting edges and having an apertured block integral with each blade to slidingly receive the bar, and a set screw for clamping the block in variously adjusted positions along the bar.

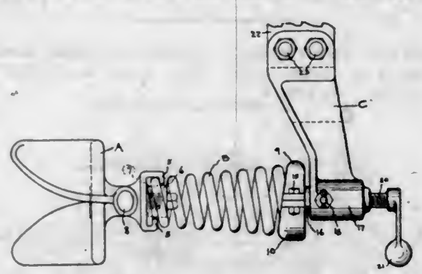
1,688,284. TOOL HOLDER. RUDOLPH MILECZ, Hoboken, N. J., assignor to Julius Gluck, New York, N. Y. Filed July 8, 1927. Serial No. 204,383. 5 Claims. (Cl. 82—36.)



1. A tool holder comprising a bolt, a base member on said bolt, a nut threaded to said bolt and bearing against said base member, a tool holding unit seated on said base member, means for removably holding said tool holding unit seated on said base member embodying a washer on said bolt bearing against said tool holding unit, a nut threaded to said bolt and bearing against said washer, and co-acting means between said base member and said tool holding unit for properly aligning said tool holder unit with said base member, said co-acting means including spaced lugs rising from said base member and corresponding notches on said tool holder unit for receiving the respective lugs.

1,688,285. CARBURETOR. MATTHEW PURVIS and THOMAS LEE, Plymouth, England. Filed June 29, 1926, Serial No. 119,399, and in Great Britain May 25, 1926. 2 Claims. (Cl. 261—44.)

1. A carburetor for internal combustion engines comprising in combination a jet tube through which the fuel may issue laterally, an air inlet pipe across which said jet tube extends, a piston surrounding said jet tube, a cylinder within which said piston is slidable and an axially split sleeve surrounding said piston and making fluid-tight contact wth the wall of said cylinder.

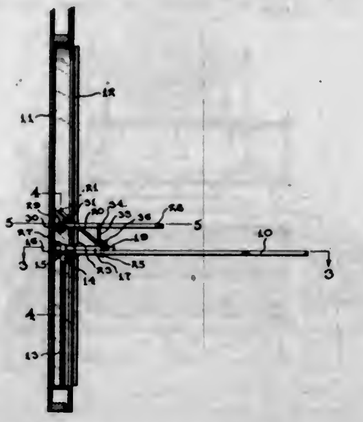


1,688,286. ELECTRIC HEATING VESSEL. LUDWIG REICHOLD, Winsted, Conn., assignor to The Fitzgerald Mfg. Company, Torrington, Conn., a Corporation of Connecticut. Filed June 11, 1926. Serial No. 115,262. 18 Claims. (Cl. 219—43.)

1. In a liquid heating vessel, a reservoir, an outer cup communicating with said reservoir, an inner cup cooperating with said outer cup to define an annular liquid well, an annular electric heating element located within said inner cup, and means to hold said element closely against the inner side wall of said well.

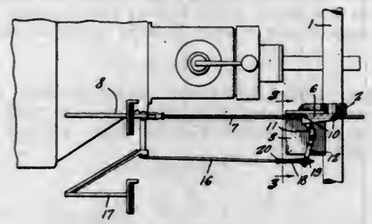
1,688,287. AUTOMATIC TRAIN-PIPE COUPLING. JOSEPH ROBINSON, New York, N. Y. Filed July 1, 1921, Serial No. 481,966. Renewed Jan. 3, 1927. 11 Claims. (Cl. 285—58.)

1. In an automatic train pipe connector, a bracket having a chamber extending into the same from the front thereof, a member extending from the front of the bracket rearwardly into said chamber, a coupling head, yielding means connected to said head and to the front end of



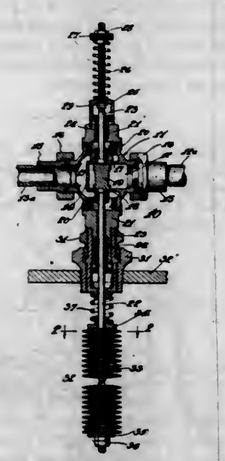
said member for supporting the head in front of the bracket, and means for moving said member in said chamber.

1,688,288. PUDDING CLOTH AND THE LIKE. LOUIS GERALD ROGERS, Croydon, England. Filed Oct. 11, 1926, Serial No. 141,015, and in Great Britain Oct. 12, 1925. 4 Claims. (Cl. 53—2.)



1. A pudding cloth made from a flat piece of fabric, a peripheral binding thereto, a tape within said binding whereby the cloth can be tied to a basin, means whereby said tape is prevented from accidentally becoming withdrawn from the binding, a short strap adjacent the center of the cloth and a double row of substantially circular stitchings attaching the strap near its ends to the cloth and reinforcing the cloth at the center whereby after the cloth is attached upon a basin a pull upon the strap tends to tighten the cloth upon the basin.

1,688,289. FOLDING IRONING BOARD. STEPHEN F. SLAWSKI, Culver City, Calif. Filed Oct. 26, 1926. Serial No. 144,282. 1 Claim. (Cl. 68—10.)

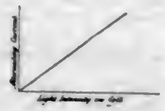


A folding ironing table comprising a board having a transverse plate with which the board is pivotally connected at its forward end for angular adjustment in a horizontal plane, a rocker bar connected with said plate and provided with trunnions at its extremities, slides with which said trunnions are engaged, guide members having grooves traversed by the slides, and a folding supporting member connected with the plate at a point remote from the rocker bar and having pivotal mountings in the guide members.

1,688,290. BRAKE LOCK. CHARLES A. SMITH and WALTER G. BOWERS, Barberton, Ohio. Filed Aug. 8, 1927. Serial No. 211,527. 2 Claims. (Cl. 74—83.)

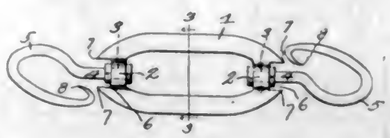
1. In a motor vehicle, a wedge member attached to the brake rod which is attached to the brake pedal, a supporting member on which the wedge member slides, a cam member for forcing the wedge member against a part of the supporting member and means for operating the cam member by the depression of the clutch pedal.

1,688,291. TEMPERATURE CONTROLLER. ENOCH THEANDER, Brooklyn, N. Y. Filed Dec. 5, 1927. Serial No. 237,903. 6 Claims. (Cl. 236—101.)



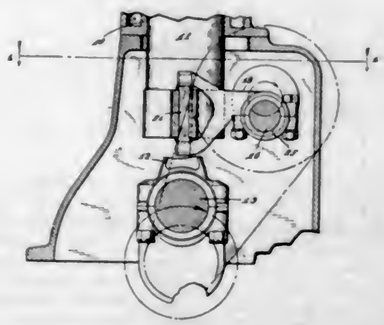
1. In a thermostatic valve having a slidable valve element normally held in an open position, a slidable actuating rod connected to said valve element, spaced stops mounted on said actuating rod, and a thermal unit mounted on said rod and interposed between said stops, said thermal unit including a plurality of separate thermal elements being restricted from lineal movement.

1,688,292. SYSTEM OF MODULATING CARRIER CURRENTS. ALLAN WEAVER, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 7, 1925. Serial No. 13,925. 12 Claims. (Cl. 178—6.)



1. In combination, a photoelectric cell, means to apply a carrier current electromotive force to its terminals, means

to apply to the cell a light varying in a determinate manner whereby the current through the cell is a corresponding

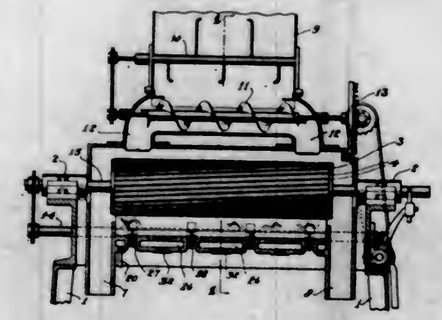


modulated carrier current, an output circuit, and adjustable means in said output circuit to make the magnitude of the output vary directly or inversely as the light as desired.

1,688,293. DOUBLE-SWIVEL HOOK. CASSIUS M. C. BARRETT, Coupeville, Wash. Filed Sept. 9, 1925, Serial No. 55,316. Renewed Aug. 14, 1928. 1 Claim. (Cl. 59—95.)

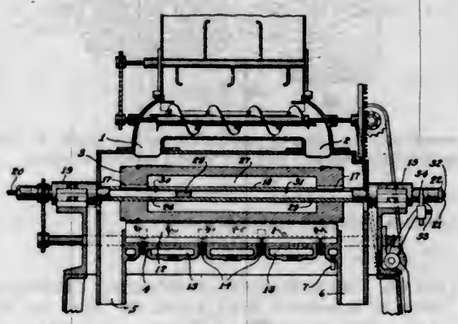
A double swivelled hook for rigging, said hook comprising a body member having an opening therethrough thereby allowing a line to be attached thereto, hooks at opposite ends of the body member, shanks carried by said hooks in axial alinement and rotatably mounted in bearings in the ends of the body member, arms carried by the ends of the body member at opposite sides of the shanks, thereby forming recesses, collars on said shanks within the recesses, said hooks terminating in inwardly extending hooks disposed adjacent the outer ends of the arms when the hooks are in the plane of the body member.

1,688,294. INTERNAL-COMBUSTION ENGINE. JULES HALTENBERGER, Indianapolis, Ind., assignor to Jules Haltenberger, Incorporated, Indianapolis, Ind., a Corporation of Indiana. Filed Apr. 29, 1927. Serial No. 187,428. 13 Claims. (Cl. 123—81.)



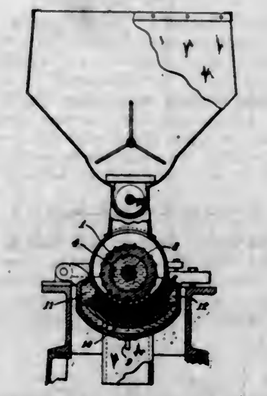
1. In an internal combustion engine, the combination of a cylinder, a piston reciprocable therein, a sleeve-valve surrounding said piston, a rotatable valve-operating shaft, an eccentric on said shaft, a boss on said sleeve, said boss being provided with a hole parallel to the sleeve axis, and a sleeve connecting rod for connecting said sleeve and said eccentric said connecting rod including a pin rigid with the remainder of the rod and receivable in the hole in said boss, said connecting rod and boss having co-operating surfaces for transmitting thrusts axially of said sleeve, such thrust surfaces on said connecting rod being located within the axial limits of said boss.

1,688,295. CYSTOSCOPE. THORVALD MALJGREN, Rochester, N. Y. Filed Dec. 16, 1927. Serial No. 240,552. 4 Claims. (Cl. 128—7.)



1. In a surgical instrument, a tube adapted for insertion within a body orifice, an instrument adapted for insertion within said tube, a plug portion on said instrument, and a portion on said tube having a bore of a size to fit said plug portion, one of said portions having threads exteriorly thereof and the other of said portions having a clamping nut associated therewith for engagement with said threads whereby said instrument is secured within said tube.

1,688,296. ROTARY CUTTER. LOUIS E. PARENT, Claremont, N. H., assignor to Claremont Waste Manufacturing Company, a Corporation of New Hampshire. Filed Apr. 29, 1927. Serial No. 187,570. 37 Claims. (Cl. 83—6.)



1. The combination with a flock cutter having a knife carrying concave bed, of water circulating means for the latter maintaining a cooling flow close to the bases of the knives therein.

1,688,297. ROTARY CUTTER. LOUIS E. PARENT, Claremont, N. H., assignor to Claremont Waste Manufacturing Company, a Corporation of New Hampshire. Filed May 3, 1927. Serial No. 188,458. 12 Claims. (Cl. 83—6.)

1. In a rotary cutter, a cutter carrying cylinder, a cooperating concave bed, socket means receiving said bed, and means for maintaining a circulation of cooling water through both said cylinder and said socket means.

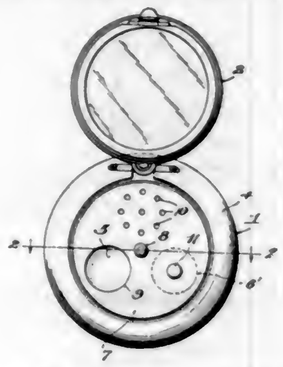
1,688,298. ROTARY CUTTER. LOUIS E. PARENT, Claremont, N. H., assignor to Claremont Waste Manufacturing Company, a Corporation of New Hampshire. Filed May 3, 1927. Serial No. 188,459. 15 Claims. (Cl. 83—6.)

1. In a rotary cutter comprising a cylinder and bed, means for maintaining a flow of cooling fluid longitudinally of the cylinder, and means for circulating cooling fluid through the bed having the point of maximum cooling of the bed between the ends of the cylinder and cooling streams flowing from said point to opposite ends of the bed.

1,688,299. VALVE. LUTTRELL H. STUART, Chicago, Ill. Filed Aug. 28, 1926. Serial No. 132,244. 7 Claims. (Cl. 123—188.)

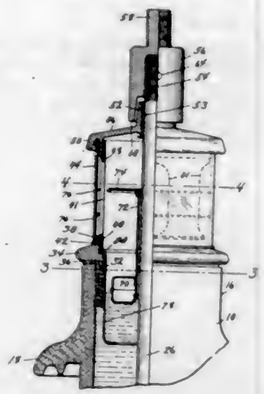
1. A valve for engines comprising a casing having intake and exhaust ports, a slide valve having intake and exhaust ports arranged side by side and adapted for registration with said first named ports, one of the ports in said casing being in advance of the other, and a supplemental valve controlling the flow of fuel through said intake ports.

1,688,300. PROCESS OF MAKING HOLLOW ARTICLES. GEORGE DONALD WELTY, Cleveland, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 2, 1924. Serial No. 729,683½. 12 Claims. (Cl. 148—21.)



1. The method of making an annular metallic article which comprises subjecting the inner and outer surfaces of a circumferentially continuous annular metallic article in a mechanically unrestrained condition respectively to heat treatments differing in degree thereby setting up internal compression strains near one surface in excess of similar strains near the other surface, and then slitting the article in a lengthwise direction for at least a part of its length.

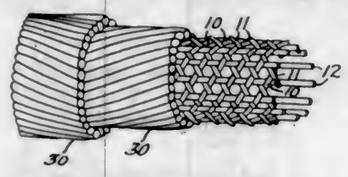
1,688,301. VANITY CASE. FRANK M. WOJCIECHOWSKI, North Attleboro, Mass., assignor to Marathon Company, Attleboro, Mass. Filed Dec. 29, 1927. Serial No. 243,241. 4 Claims. (Cl. 132—83.)



1. In a vanity case, a body having a dished bottom and an inwardly curled rim, a cover hinged to the body and engageable within the rim, a disk of less diameter than that of the body having a central opening and a flanged marginal edge which latter seats on and is secured to the dished botton of the body to form a powder compartment in conjunction therewith, and which disk underlies said rim

to form a puff holding compartment in conjunction with the rim, and a rotary control disk pivoted to the first named disk, and having an opening adapted to register with the

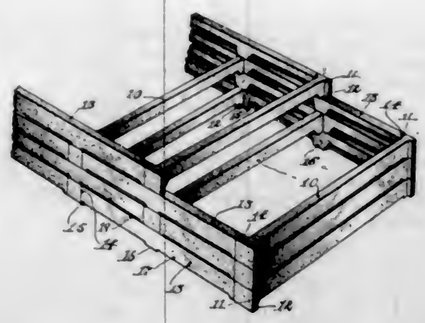
opening of the first named disk and further having a forminated area also adapted to register with the opening of the first named disk.



1,688,302. OIL-FILLED INSULATING BUSHING. GEORGE A. BURNHAM, Saugus, Mass., assignor to Conduit Electrical Manufacturing Corporation, South Boston, Mass., a Corporation of Massachusetts. Filed July 23, 1926. Serial No. 124,535. 9 Claims. (Cl. 116—118.)

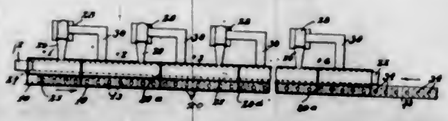
5. An insulating bushing comprising an outer open top porcelain tube adapted to contain a body of oil to some level beneath the top thereof, a metal cylinder having cutaway portions connected with and disposed on the open top of said porcelain tube, a glass cylinder concentric with said metal cylinder, an axial stud disposed within said porcelain tube, an annular float surrounding said stud and adapted to be buoyed up by the oil within said tube, and fluid-level indicating-means governed by said float arranged for vertical movement on said stud and having a component which is visible within said metal cylinder.

1,688,303. FLEXIBLE ELECTRIC CONDUCTOR. HAMILTON C. CARPENTER, Elizabeth, N. J., assignor to American Copper Products Corporation, New York, N. Y., a Corporation of Delaware. Filed July 25, 1925, Serial No. 46,099. Renewed Aug. 8, 1928. 3 Claims. (Cl. 173—13.)



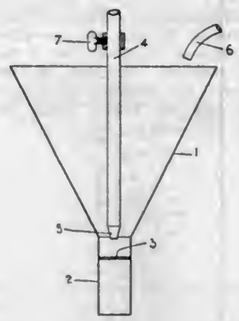
1. A hollow core cable comprising a plurality of wires that progress around the hollow core at an angle to the longitudinal axis, a plurality of wires that progress around the first mentioned wires and at a similar angle but in opposite direction thereto, a plurality of longitudinal wires

woven into the cable by passing alternately under the first mentioned wires and over the second mentioned wires.



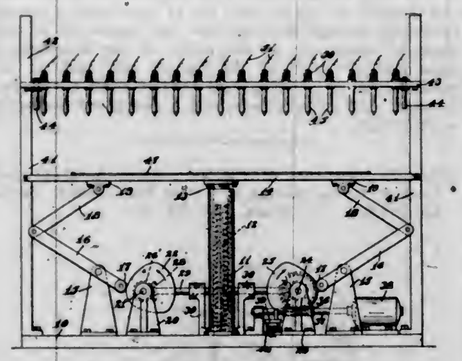
1,688,304. [WITHDRAWN.]

1,688,305. REENFORCED CONCRETE CRIBBING. JOHN M. FITZGERALD, River Forest, Ill. Filed Oct. 30, 1925. Serial No. 65,729. 4 Claims. (Cl. 61—47.)



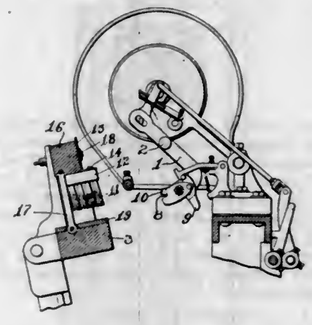
3. A concrete cribbing unit comprising an elongated substantially rectangular body portion having depending body spacer portions, and a relatively narrow curtain portion of less depth than said spacer portions extending longitudinally of said body portion between said spacer portions.

1,688,306. METHOD OF DRYING BRICK AND TUNNEL THEREFOR. CLAUD E. FULLER, New York, N. Y., assignor to New York Brick Handling Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 23, 1927. Serial No. 186,108. 2 Claims. (Cl. 34—46.)



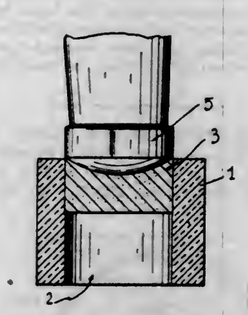
1. An improved dryer for brick and the like comprising a tunnel open top and bottom, an air heating chamber arranged parallel thereto, means for heating said chamber, a plurality of blowers spaced apart from the tunnel, and connected thereto, said blowers being so arranged with respect to said tunnel and said heating chamber as to cause a downward movement of heated air through a plurality of points in a tunnel simultaneously and means for reheating the air prior to each downward movement.

1,688,307. APPARATUS FOR REMOVING LARGE-SIZED PARTICLES AND AGGREGATES FROM CERTAIN FINELY-DIVIDED POWDERS AND THE LIKE. GEORGE GALLIE and BENJAMIN DAWSON PORRITT, London, England, assignors to The Research Association of British Rubber and Tyre Manufacturers, Croydon, England. Filed Mar. 20, 1926, Serial No. 96,330, and in Great Britain Oct. 7, 1925. 4 Claims. (Cl. 209—273.)



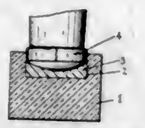
1. A separator for powdered material, comprising a funnel for the material, an outlet pipe depending vertically from the bottom of the funnel, a sieve for the material secured in the outlet pipe between its ends, and a jet pipe for fluid arranged in the funnel with its outlet end at the entrance to the outlet pipe, the orifice of the jet pipe being proportioned to deliver a relatively bulky and forcible jet upon the material being treated and operating to agitate the material and fluid in the upper part of the outlet pipe and to force the material through the sieve.

1,688,308. ELECTRICAL AREA-MEASURING DEVICE. DANA E. HARDING, Melrose, Mass., assignor to Harding Engineering Company, East Boston, Mass., a Corporation of Massachusetts. Filed Mar. 14, 1927. Serial No. 175,223. 2 Claims. (Cl. 33—123.)



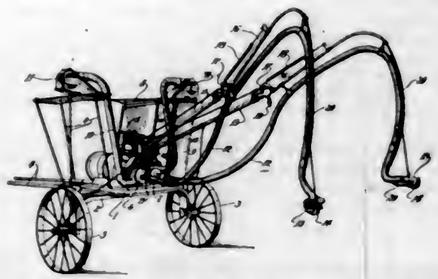
1. An improved electrical area measuring instrument comprising a plurality of parallelly arranged yieldingly mounted conducting pins, an electrical indicating instrument, electrical connections extending from each of said pins to said instrument, a vertically movable platform electrically connected with said instrument, said vertically movable pins operating individually to influence the indicating instrument only when in engagement with the vertically movable platform.

1,688,309. WEFT-REPLENISHING LOOM. SIMEON S. JACKSON, Hyde Park, Mass., assignor to The Stafford Company, Boston, Mass., a Corporation of Massachusetts. Filed July 31, 1925. Serial No. 47,259. 3 Claims. (Cl. 139—260.)



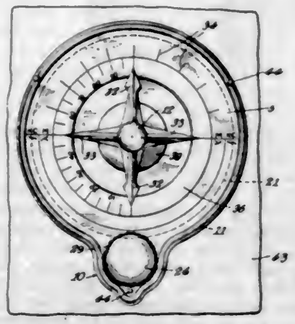
1. In a loom in which replenishment is effected prior to complete exhaustion of the weft-supply within the working shuttle, the combination with the lay, and a shuttle-feeler having a weft-parter mounted upon it, of a weft-holder mounted above the path of the shuttle upon the lay between the selvage-warps and the shuttle-box at the side of the loom at which replenishment is effected and having bristles extending downward into the said path, in position with relation to the path of the shuttle to catch the weft-thread between the selvage of the cloth being woven and the shuttle-box mouth, to prevent the weft-thread from kinking in the regular working of the loom and to hold it in position for engagement by the said weft-parter.

1,688,310. DEVICE FOR CHALKING CUE TIPS. JOHN O. MILLER, Chicago, Ill., assignor to The Brunswick-Balke-Collender Co., Chicago, Ill., a Corporation of Delaware. Filed July 9, 1927. Serial No. 204,593. 4 Claims. (Cl. 273—18.)



1. A cue chalking device comprising a holder of relatively soft resilient material having a cylindrical bore of substantially the diameter of a cue tip, said bore being open at each end, a piece of chalk of substantially the diameter of a cue tip snugly fitted in said bore, longitudinal movement of said chalk in the bore being resisted by the close fit in the resilient material of said holder, one end of said chalk terminating substantially at one end of said bore, the other end of the body of chalk being exposed through the other end of said bore, whereby the chalk may be fed through said holder by pressure against one end.

1,688,311. DEVICE FOR CHALKING CUE TIPS. JOHN O. MILLER, Chicago, Ill., assignor to The Brunswick-Balke-Collender Co., Chicago, Ill., a Corporation of Delaware. Filed July 9, 1927. Serial No. 204,594. 3 Claims. (Cl. 273—18.)

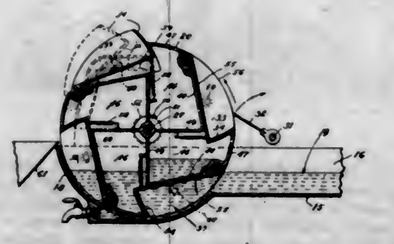


1. A cue chalking device comprising a holder of relatively soft resilient material having a cylindrical chamber of substantially the diameter of a cue tip and adapted to receive the latter snugly, a piece of chalk having substantially the diameter of a cue tip snugly fitted in said chamber, the chamber having a transversely directed wall formed to support the piece of chalk against movement in one direction, the chalk being held by the close fit in the resilient material against movement through the open end of the chamber.

1,688,312. COTTON-HARVESTING MACHINE. OSCAR ONSRUD, Chicago, Ill., assignor to L. L. Valentine, Chicago, Ill. Filed Sept. 13, 1926. Serial No. 135,058. 3 Claims. (Cl. 56—13.)

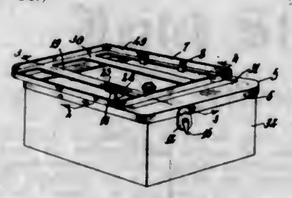
1. In a cotton harvesting machine, a long flexible suction conduit fixed at one end and having an air-driven picker head at the other end, a hollow swinging boom supporting the conduit to permit the picker head to be moved over a considerable area, the boom being hollow to constitute a storage and pressure-equalizing reservoir, means for introducing air under pressure into the boom, and means for delivering air from the boom to the picker head.

1,688,313. ADJUSTING DEVICE. LOUIS G. PACENT, Winfield, N. Y., assignor to Pacent Electric Company, New York, N. Y., a Corporation of New York. Filed May 9, 1925. Serial No. 29,173. 15 Claims. (Cl. 74—7.)



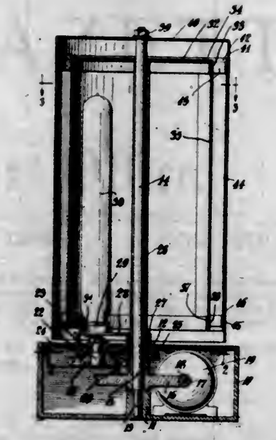
1. An adjusting device comprising front and back plates having flanged rims telescopically engaged to form a thin flat case, a collar rotatably held to said plates and provided with means for securing same to the shaft of an instrument to be adjusted, indicating means on said collar traversing the front plate of the case, a friction disc carried by the collar within the case and an operating member journaled in the front plate of the case and having a friction wheel within the case engaged with the disc of the collar.

1,688,314. DISPENSING APPARATUS. SHERWOOD HINDS, Richmond Heights, Mo., assignor to St. Louis Pump & Equipment Company, St. Louis, Mo., a Corporation of Missouri. Original application filed Jan. 28, 1921, Serial No. 440,796. Divided and this application filed May 13, 1922. Serial No. 560,576. 1 Claim. (Cl. 221—103.)



In apparatus of the class described, in combination, a housing, a rack provided with a lug, means for moving the rack, a member mounted on the housing and adapted to be sealed thereon and having an apron protecting an aperture therein against weather, a shaft mounted on said member and carrying one or more separately adjustable intermediate stops adapted selectively to engage the lug of said rack, an adjustable stop mounted on the member and adapted to engage said lug of said rack, a handle projecting through said aperture and connected to said shaft to rotate one or the other of the intermediate stops into the path of the lug on said rack as desired, means for securing said housing upon a cylinder, a piston within the cylinder and a piston rod connected to said rack.

1,688,315. FRYING MACHINE. EMIL A. DENE and JOHN E. TITUS, Chicago, Ill. Filed Dec. 6, 1924. Serial No. 754,322. 15 Claims. (Cl. 53—7.)



1. In a frying machine, a non-endless channel for hot-oil or cooking-fats, a rotating vertical wheel having marginal pockets adapted to dip into the oil at the lower part of the wheel to lift the oil out of the channel and adapted to empty the oil when rotated to the upper portions of the wheel, and said wheel having means for removing cooked material from the oil, and means for returning the oil emptied from the wheel back into the channel.

1,688,316. SLIDING AUTOMOBILE SEAT. HARRY R. DE VEAU, Stamford, Conn., assignor to Deray Manufacturing Corporation, Dover, Del. Filed Oct. 3, 1925, Serial No. 60,161. Renewed July 31, 1928. 4 Claims. (Cl. 155—14.)

1. In a device of the character described, a supporting frame adapted to be secured to the seat box of an automobile, an upper frame slidably mounted thereon, a rotatable adjusting screw mounted on the said supporting frame, a threaded member engaging the said adjusting screw and secured to the upper frame by means of binding screws which fit within perforations in the said frame and engage threaded holes of the said member, the aforesaid perforations being connected in longitudinal alignment by slots in the frame structure, and the said binding screws having portions of reduced diameter adapted to pass through the said slots, and also having capped extremities which prevent them from being completely withdrawn from the structure, means for the attachment of a cushion, or the like to the said upper frame, and means to rotate the aforesaid adjusting screw.

1,688,317. ADVERTISING DEVICE. GUSTAV MARSCHALL, Far Rockaway, N. Y. Filed Aug. 5, 1927. Serial No. 210,782. 1 Claim. (Cl. 40—33.)

An advertising device comprising a base having a motor therein, an upright shaft extending above said base driven by said motor, a sleeve encircling said shaft, means actuated by said motor to rotate said sleeve intermittently, a cylinder spaced concentrically and supported by said sleeve, said cylinder having a plurality of equal upright divisions, each division being translucent and of a different color, a lighting means in said cylinder, a second cylinder spaced concentrically from the first cylinder, said second cylinder having an opaque wall in which transparent figural designs are formed, and means on said shaft to rotate said second cylinder.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 375—No. 4. TUESDAY, OCTOBER 23, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adjudicated Patents.

(C. C. A. Ill.) The Kohler patent, No. 1,124,673, for feeding paper to printing presses, claims 3, 4, 5, 6, 9, 10, 11, 12, and 24 *Held* valid and infringed. *Cline Electric Mfg. Co. v. Kohler*, 27 F. (2d) 638.

(C. C. A. N. Y.) The Claude patent, No. 1,125,476, for system of illumination by luminous tubes, claim 2 *Held* valid and infringed. *Claude Neon Lights v. H. Mackett & Son*, 27 F. (2d) 702.

(C. C. A. N. Y.) The McMichael patent, No. 1,127,660, for covering method and apparatus for transporting concrete through pipe by pneumatic pressure, claims 2, 4, 6, 17, 21, 22, 28, 34, and 35 *Held* valid and infringed. *Concrete Mixing & Conveying Co. v. Powers-Kennedy Contracting Corporation*, 27 F. (2d) 668.

(C. C. A. N. Y.) The Claude patent, No. 1,191,495, for method of separating neon from gases with which mixed, *Held* invalid. *Claude Neon Lights v. H. Mackett & Son*, 27 F. (2d) 702.

(C. C. A. N. Y.) The Osteen patent, No. 1,195,976, for improvements in cameras, *Held* invalid. *Osteen v. Ansco Photoproducts*, 27 F. (2d) 688.

(D. C. Calif.) The Hopkins patent, No. 1,271,527, for sound-regulating machine, claims 29 and 30 *Held* invalid. *Lektophone Corporation v. Rola Co.*, 27 F. (2d) 758.

(D. C. Calif.) The Hopkins patent, No. 1,271,529, for tympanum of acoustic device, *Held* not infringed. *Id.*

(C. C. A. N. Y.) The Hill patent, No. 1,310,698, for plaited paper cup having curled rim, *Held* valid and infringed. *Tulip Cup Corporation v. Ideal Cup Corporation*, 27 F. (2d) 717.

(C. C. A. Mass.) The West patent, No. 1,343,600, for improvement in printer's table to determine alinement of proof sheets, *Held* valid and infringed. *West v. Premier Register Table Co.*, 27 F. (2d) 653.

(C. C. A. Ill.) The Wahl patent, No. 1,487,189, for hair clipper, claims 2, 5, and 23 *Held* valid. *N. E. Norstrom Electric Mfg. Co. v. Wahl*, 27 F. (2d) 685.

(C. C. A. N. Y.) The Koehler patent, No. 1,509,674, for process and apparatus for consuming flue impurities, *Held* valid. *Akme Flue v. Aluminite Flexible Flue Cap. Co.*, 27 F. (2d) 736.

(C. C. A. N. Y.) The Richardson and Coggeshall patent, No. 1,530,200, for conduits to contain electrical wiring in office buildings, claims 3, 7, and 20 *Held* not infringed. *Fibre Conduit Co. v. Bankameric Corporation*, 27 F. (2d) 708.

(C. C. A. N. J.) The Humphreys and McCarthy patent, No. 1,630,085, for indented "molded inlaid linoleum," *Held* valid and infringed. *Armstrong Cork Co. v. W. & J. Sloane Mfg. Co.*, 27 F. (2d) 644.

Patent Appeals in the Court of Appeals of the District of Columbia—November Call.

U. S. Patent Office, *Washington, Oct. 13, 1928.*

This office is to-day in receipt of a letter from the clerk of the Court of Appeals of the District of Columbia reading as follows (see notice in Gazette of October 16, 1928, 375 O. G. 475):

The court has instructed me to advise you that there will be 20 cases on the patent appeals docket assigned for hearing on the second Monday of November next.

The notices required by Rule XXII of the court of appeals will be sent to the parties in due course.

THOMAS E. ROBERTSON,
Commissioner.

Condition of Applications Under Examination at Close of Business October 12, 1928.

(Total number of applications awaiting action, excluding Trade-Mark Division, 112,740; Trade-Mark Division, 1,796. Oldest new case, Dec. 14, 1927; oldest amended, Dec. 19, 1927. The dates given are 1928 except where † indicates 1927.)

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

IN RE NYMAN.

No. 2,054. Decided May 7, 1928.

PATENTABILITY—VARIABLE CONDENSERS.

A variable condenser differing from those of the prior art in that the scale is arranged in accordance to frequencies instead of wave lengths *Held* unpatentable since "the relation of wave length and frequency of oscillations is so elemental in the art that the adaptation of a scale from one method of designation to the other is merely a matter of calculation, and does not rise to the dignity of invention."

APPEAL from the Commissioner of Patents. Affirmed.

Mr. Wm. F. Nickel and *Mr. Samuel Ostrolenk* for Nyman.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

MARTIN, *C. J.:*

Appellant's application for a patent contained six claims, of which claims 1, 4, 5, and 6, have been refused by concurring decisions of the tribunals of the Patent Office.

The invention relates to variable condensers for use in radio receiving sets. Claims 1 and 4 are illustrative, and read as follows, to wit;

1. An electric condenser having separated electrically conductive elements, said elements being capable of relative movements, each element having a curved side and a substantially straight side, the curved side being such and the elements being so mounted that the capacity of the condenser can be altered to produce a change of frequency which is always directly proportional to the degree of such movement.

4. An electric condenser having separated electrically conductive elements capable of relative linear movement, one or more of said elements having one or more sides so curved and the elements being so mounted that the capacity of the condenser can be altered to produce a corresponding change in frequency which is directly proportional to the degree of such movement.

The references relied upon are Lewis, 1,478,342, December 18, 1923; Sass, 1,514,733, November 11, 1924; and Principles of Radio Communication by Morecroft, pp. 794–795. To these may be added the references relied upon in the associated and similar appeal No. 2,055, as follows to wit; Marriott, 978,605, December 13, 1910; Donle, 1,240,958, September 25, 1917; Cherpeck, 1,520,329; December 23, 1924; Page (French) 527,974, November 4, 1921; Boyer (French) 564,836, January 12, 1924; and Isenthal (British) 153,858, November 18, 1920.

The references unmistakably disclose the construction herein set out by the appellant, to wit, an electrical condenser having a plurality of conductive plates insulated from each other, mounted so as to be movable edgewise and also in a direction normal to their surfaces, and the plates shaped so as to be suitable for adjusting the capacity of the condenser.

Appellant, however, contends that the scale in his condenser is arranged according to frequency instead of wave length, and in a manner which discloses a patentable improvement over the prior art. This is said to be accomplished by a different curvature of the movable plates, so calculated that equal changes in frequency will be obtained by equal adjustments of the dial, thereby eliminating the crowding upon the dial which is said to be characteristic of the straight line wave length condenser, and enabling a "listener in," with uniform ease and accuracy, to "tune in" broadcasting stations over the entire broadcasting range.

It is noted by the Commissioner that it has become the custom to classify broadcasting stations according to frequency or oscillations per unit of time, instead of wave length in meters as formerly; that this has necessitated a recalibration of condensers and a redesigning and remarking of them accordingly. And the Commissioner finds that the applicant discloses no more than such mathematical calculations and reshaping of the condenser plates as to obtain the variation of capacity which is required in connection with variations in frequency, and which permits of a uniform marking on the dial or scale. The Commissioner adds,

It being old to shape the overlapping plates of a condenser so the movements of the movable member equal distances, which are indicated by equally spaced markings throughout the scale, will vary the capacity in accordance with uniform variations in wave length, it is deemed clear there was involved no inventive concept to shape the overlapping parts of the condenser plates according to a mathematical calculation based upon the unit of frequency, rather than wave length, so these plate movements of uniform distances, which are indicated, as before, at equally spaced markings on the scale, will vary the capacity according to uniform variations in frequency. Except for this change in the shape of the plates to vary the capacity according to a new basic unit, the structure of the condenser does not differ from that disclosed in the references.

In our opinion the Commissioner's conclusion is correct. The relation of wave length and frequency of oscillations is so elemental in the art that the adaptation of a scale from one method of designation to the other is merely a matter of calculation, and does not rise to the dignity of invention.

The decision of the Commissioner of Patents is affirmed.

Court of Appeals of the District of Columbia.

IN RE NYMAN.

No. 2,055. Decided May 7, 1928.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

MARTIN, *C. J.:*

The application for a patent, herein involved, relates to variable condensers for use in radio receiving sets. The controlling questions in the case are substantially identical with those decided in Appeal No. 2,054, 375 O. G., 719, relating to a similar application by the same party. Consistently with the conclusions reached by the court in that case, the decision of the Commissioner of Patents appealed from in this case is affirmed.

Court of Appeals of the District of Columbia.

IN RE BERRY.

No. 2,966. Decided June 4, 1928.

PATENTABILITY—INVENTION—SUBSTITUTION OF MATERIAL.

A joint for a rotary steam drier, including therein a member made in whole or in part of graphite, *Held* unpatentable where the prior art showed a similar joint having a similar member made of a material requiring lubrication, it being old in the art to form packing rings of a material containing graphite which would act as a lubricant.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. A. M. Belfield, Mr. J. H. Milans, Mr. C. T. Milans, and *Mr. Samuel E. Darby* for Berry.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

VAN ORSDEL, *J.*:

This appeal is from the decision of the Commissioner of Patents denying patentability to claims 1 to 5 and 13 to 15 inclusive. Claims 1 and 5 illustrate the alleged invention of applicant as follows:

1. The combination with a rotary steam drier and an inlet therefor, of a joint between the same comprising a joint device composed in whole or in part of carbon or graphite.

5. The combination with a rotary steam drier and an inlet therefor of a joint device for said members made in whole or in part of graphite, and spring means tending to exert pressure to produce and maintain a tight joint, said spring means being at the end of the inlet.

The references relied upon are: Smith, 1,420,454, June 20, 1922; Emmett, 811,833, February 6, 1906; Getts, 784,785, March 14, 1905; Copeland, 1,329,348, January 1920; Dodge 730,349, June 9, 1903; McLean, 1,082,890, December 30, 1913.

The device in issue relates to a steam joint in a rotary drier. The drying cylinder rotates against the fixed part of the inlet and steam is supplied by a pipe while the exhaust steam and condensate escapes by an outlet pipe. A washer is placed between the rotating and fixed parts. This washer is described as composed of "carbon or graphite, or some composition of one or the other, or some material impregnated with one or the other." It is also stated that the ring possesses lubricating qualities.

The patent to Smith discloses the same construction of rotary cylinder and fixed inlet with a packing ring between the moving parts. The packing ring, however, in Smith, is such as to require outside lubrication. Smith's patent discloses means for supplying oil to the bearings. Thus it appears that the only difference between Smith and applicant is the material employed for the packing ring.

We are of opinion that the alleged invention of applicant is fully and completely anticipated by the prior art. The patents to Emmett, Dodge, and Copeland, show a packing ring of the same material used by applicant; and in the Emmett specification it is stated that—

> it is found that packing-rings of carbon, usually containing a certain amount of graphite to act as a lubricant, are durable and efficient if the pressure between the surfaces is not too great.

The decision of the Commissioner is affirmed.

Patent Suits.

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,387,886, Goodrum and Clausen, Telephone system, decided August 14, 1928, claims 7, 8, 9, and 11.

Pat. 1,550,568, R. T. Pollock, Process and apparatus for treating hydrocarbon oils, decided September 14, 1928, claim 1.

Pat. 1,582,665, E. E. Berry, Friction drive for driers, decided September 10, 1928, claims 1, 2, and 4.

Pat. 1,620,148, L. L. Williams, Display stand, decided August 31, 1928, single claim.

Pat. 1,647,503, T. W. Case, Reproducing amplifier, decided September 11, 1928, claims 1 and 2.

Pat. 1,669,466, C. C. Hansen, Mounting for rock drills, decided September 14, 1928, claim 1.

Final decision in interference has been rendered against the following trade-mark:

T. M. 40,563, Medical compound, C. P. J. Bryant, Kansas City, Mo. Registered June 9, 1903. Decided October 4, 1928.

Disclaimers.

REIS. 16,749.—*Robert L. Holliday*, New York, N. Y. MANUFACTURE OF A FINELY-DIVIDED DRY SOAP PRODUCT. Patent dated September 27, 1927. Disclaimer filed October 9, 1928, by the assignee, *Industrial Spray Drying Corporation*.

Hereby enters this disclaimer to certain of the process claims of the above identified reissue patent, namely, claims 1, 2, 3, and 4, excepting when in the process claimed the step of preparing the soap stock involves adding water to the ordinary soap of regular commercial manufacture for preparing the soap in the form of a free-flowing liquid stock so that it may be sprayed into the form of fine drops.

1,506,783.—*Howard F. Snyder*, Newton, Iowa. WASHING-MACHINE TUB. Patent dated September 2, 1924. Disclaimer filed October 6, 1928, by the assignee by mesne assignments, *The Maytag Company*.

Hereby enters this disclaimer to those claims of the specification of said Letters Patent which are as follows:

"10. In a washing machine tub provided with a recess in a wall thereof, a substantially disc shaped agitator seated in said recess and adapted to be turned therein, the operative surface of said agitator being formed to engage the materials to be washed and forming substantially a continuation of the aforesaid wall of the tub.

"11. In a washing machine tub provided with a recess in the bottom wall thereof, a substantially circular shaped agitator seated in said recess and adapted to be turned therein, the operative surface of the agitator being formed to engage the materials to be washed and forming substantially a continuation of the aforesaid wall of the tub.

"12. In a washing machine tub provided with a recess in the bottom wall thereof, a substantially disc shaped agitator seated in the recess and adapted to be turned therein, the operative surface of the agitator being formed to engage the materials to be washed and forming substantially a continuation of the aforesaid wall of the tub.

"13. In a washing machine tub provided with a downwardly sloping recess in the bottom wall thereof and upwardly extending bars projecting upwardly from the bottom of the tub into said recess, a shaft extending through said bar, a substantially disc shaped agitator seated in said recess and adapted to be turned by said shaft, the operative surface of the agitator being formed to engage the materials to be washed and extending for a substantial distance substantially parallel to the bottom of the said recess."

1,577,033.—*Mark B. Kerr*, Rosebank, N. Y. AUTOMATIC TELEPHONE-EXCHANGE SYSTEM. Patent dated March 16, 1926. Disclaimer filed October 4, 1928, by the assignee, *Western Electric Company, Incorporated*.

Hereby enters this disclaimer to the said claims of said Letters Patent which are in the following words to wit:

"8. In a telephone exchange system, a calling line, a called office, a first selective switch, a second selective switch, a first group of trunks extending from said first selective switch, a second group of trunks extending between said second switch and said called office, a mechanism accessible in common to a plurality of selective switches for controlling the operation thereof, means under control of said mechanism for selecting a particular trunk in said first group of trunks and for testing the trunks of said second group of trunks, and means effective when all the trunks in said second group are busy for releasing said particular selected trunk and automatically selecting a different trunk in said first group of trunks.

"9. In a telephone exchange system, a calling office, called offices, a first selective switch, a second selective switch, a plurality of groups of trunks extending from said first switch, another plurality of groups of trunks extending between said calling office and said called offices, means for selecting a trunk in a particular one of said first mentioned groups, means for testing all trunks in a particular one of said second groups, and means effective when all the trunks of the latter group are busy for releasing the first selected trunk and for selecting a second trunk in a different one of said first plurality of groups of trunks.

"10. In a telephone exchange system, a calling office, called offices, a first selective switch, a second selective switch, a plurality of groups of trunks bearing certain numerical designations and extending from said first switch, each group bearing a different numerical designation, another plurality of groups of trunks extending between said calling office and said called offices, means for selecting a trunk in a particular one of said first mentioned groups, means for testing all the trunks in a particular one of said second mentioned groups, and means effective when all the trunks of the latter group are busy for releasing the first selected trunk and for selecting a trunk bearing a different numerical designation in another of said first plurality of groups of trunks."

1,000,556.—*William H. Matthies*, Hackensack, N. J. STRAIGHTFORWARD TRUNKING SYSTEM. Patent dated September 21, 1926. Disclaimer filed September 29, 1928, by the assignee, *Western Electric Company, Incorporated*.

Hereby enters this disclaimer to the said claim of said Letters Patent which is in the following words, to wit:

"5. In a trunking system, incoming trunks, a smaller number of outgoing trunks, switching means associated with each incoming trunk and responsive to the seizing thereof for hunting for and connecting the seized incoming trunk with an idle outgoing trunk, means for transmitting a busy signal to any incoming trunk when seized responsive when all of said outgoing trunks are engaged by other incoming trunks, means for discontinuing the busy signal to said seized incoming trunk if any of the outgoing trunks become idle while said incoming trunk is still seized and means for continuing the trunk hunting movement of the corresponding switching means of said seized incoming trunk after the busy signal is discontinued and until the idle outgoing trunk is found."

1,621,804.—*Fred K. Murphy* and *Roy W. Retterer*, Indianapolis, Ind. FLUID-OPERABLE LUBRICATOR AND FEEDER FOR ENGINES. Patent dated March 22, 1927. Disclaimer filed October 6, 1928, by the patentees.

Hereby disclaim in the before mentioned Letters Patent claims 4, 5, and 6 thereof, since these should have been issued in Patent No. 1,620,911 in view of the decision in the *National Electric Company* v. *Automatic Company*, 15 Fed. (2d) 257, and by reason of the allowance of the same identical claims in the application for reissue of said Patent No. 1,620,911, and your petitioners specifically disclaim these claims in Patent No. 1,621,804 from the date of the granting of the reissue of Patent No. 1,620,911 upon application Serial No. 297,205, and your petitioners also request that this disclaimer be entered and be published in the same OFFICIAL GAZETTE and on the same day as the reissue patent is granted and published.

1,645,017.—*Carl Georg Munters* and *Baltzar Carl von Platen*, Dala-Jarna and Ystad, Sweden. ABSORPTION REFRIGERATING APPARATUS. Patent dated October 11, 1927. Disclaimer filed September 28, 1928, by the assignee, by mesne assignments, *Electrolux Servel Corporation*.

Hereby enters this disclaimer to claim 5 of the aforesaid patent which is in the following words, to wit:

"5. In absorption refrigerating apparatus, the combination of a generator, an absorber, a condenser and an evaporator connected so as to form closed circulating systems for the cooling agent and the absorption liquid, including a conduit within the generator in communication with the absorber and means wholly within the generator to control flow through said conduit in response to variations of liquid level in the generator."

TRADE-MARKS

OFFICIAL GAZETTE, OCTOBER 23, 1928.

[VOL. 375. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

Raw or Partly-Prepared Materials.

Ser. No. 261,114. ELOF HANSSON, Gottenborg, Sweden. Filed Feb. 3, 1928.

No claim is made to the exclusive use of the word "Brand" shown in the drawing.

For Paper Pulp.

Claims use since Aug. 18, 1927.

Ser. No. 266,902. WEISSMAN, LICHTENSTEIN & SCHERTZER, New York, N. Y. Filed May 23, 1928.

TEESHON

For Lambskins.

Claims use since April, 1927.

Ser. No. 267,958. INLAND CONSOLIDATED COAL CORPORATION, Chicago, Ill. Filed June 13, 1928.

"BLACK BIRD"

For Coal.

Claims use since May 21, 1928.

Ser. No. 269,253. PEALE, PEACOCK AND KERR OF NEW YORK, New York, N. Y. Filed July 7, 1928.

PNEUMO

GRAVITY

For Coal.

Claims use since July 1, 1925.

Ser. No. 270,974. OLD BEN COAL CORPORATION, Chicago, Ill. Filed Aug. 13, 1928.

For Coal.
Claims use since July 28, 1928.

CLASS 2.

Receptacles.

Ser. No. 270,220. THE ADAMS BAG COMPANY, Chagrin Falls, Ohio. Filed July 21, 1928.

NuNamel

For Polished Paper Sacks and Bags Employed to Contain Flour and Analogous Material.
Claims use since Jan. 1, 1920.

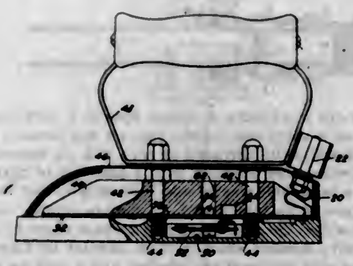
REISSUES

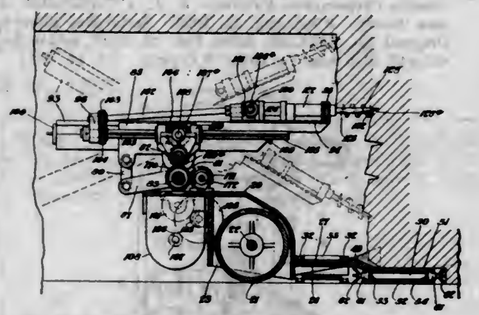


OCTOBER 23, 1928.

17,106. SPRING MOTOR. CAP B. COLLINS, New York, N. Y. Filed Jan. 15, 1926. Serial No. 81,568. Original No. 1,480,668, dated Jan. 15, 1924, Serial No. 360,887, filed Feb. 24, 1920. Renewed June 18, 1923. 30 Claims. (Cl. 185—37.)

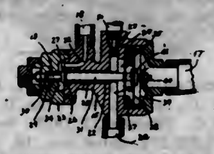
1. In an appliance of the character described, the combination of a casing composed of registering sections formed to overlap one another at their meeting edges and capable of rotation relatively to one another, a spring-motor carried by one of said sections, a shaft rotated by the unwinding of the spring of said motor, governing means to render the speed of rotation of said shaft substantially constant, and means to effect winding of the motor upon relative rotation of said sections, substantially as described.

17,107. SADIRON. JOHN ALBY SPENCER, Revere, Mass., assignor to Spencer Thermostat Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Mar. 5, 1926. Serial No. 92,605. Original No. 1,491,363, dated Apr. 22, 1924, Serial No. 571,802, filed June 29, 1922. 12 Claims. (Cl. 219—25.)



1. A sadiron comprising a pointed base member, a heater assembly comprising substantially flat heater strips connected at one end in a substantially triangular formation and superimposed above the base member, a substantially circular thermostatic assembly received in a recessed portion of the base member and spaced rearwardly from the pointed end of the base, a weight member superimposed upon the heater assembly and serving to maintain the thermostatic control within the recess, and means for connecting the weight member to the base.

17,108. METHOD OF MAKING CONTACT TIPS. WALTER W. BROWN, Erie, Pa., assignor to General Electric Company, a Corporation of New York. Filed Sept. 10, 1928. Serial No. 305,084. Original No. 1,672,706, dated June 5, 1928, Serial No. 81,130, filed Jan. 13, 1926. 3 Claims. (Cl. 200—166.)



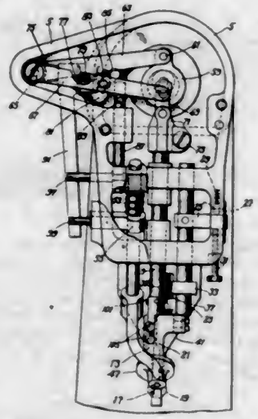
1. The process of making contact tips out of cold copper stock which consists in forcing a forming tool at spaced intervals into a copper bar of predetermined dimensions to flow the metal into the shape of a plurality of partially formed interconnected contact tips, then punching a cavity in the reverse side of each of said tips and inserting a fastening member therein, separately pressing the said tips about the inserted end of the fastening member associated therewith and finally severing the contact tips.

17,109. APPARATUS FOR MINING. FREDERICK B. MILLER, Scottdale, Pa. Filed Sept. 1, 1928. Serial No. 303,589. Original No. 1,643,000, dated Sept. 20, 1927, Serial No. 126,260, filed July 31, 1926. 12 Claims. (Cl. 262—9.)

11. In a mining machine having a main frame, a carriage mounted for vertical swinging movement relative to said main frame, a plurality of picking bars mounted on said carriage, means for moving said carriage forward under a constant torque to force said bars against the material being mined, and means for exerting a series of rapid blows against said picking bars to drive said bars into the material to be mined.

17,110. FLUID-OPERABLE LUBRICATOR AND FEEDER FOR ENGINES. FRED K. MURPHY and RAY W. RETTERER, Indianapolis, Ind. Filed Aug. 3, 1928. Serial No. 297,205. Original No. 1,620,911, dated Mar. 15, 1927, Serial No. 41,771, filed July 6, 1925. 7 Claims. (Cl. 184—55.)

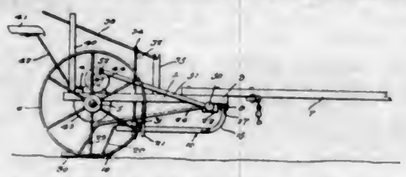
4. In a lubricating system for fluid operable engines, the combination with a source of high pressure fluid and a source of lower pressure fluid, of a pressure lubricator,



a fluid operable turbine therefor, and a distributor connected to the lubricator and the high pressure fluid source including means differentially subjected to both fluid pressure sources.

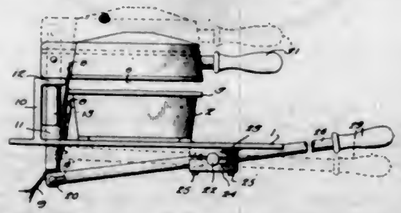
17,111. BELT CONNECTER. WENDELL A. NOURIE, Kankakee, Ill. Filed Feb. 9, 1927. Serial No. 167,019. Original No. 1,527,063, dated Feb. 17, 1925, Serial No. 706,971, filed Apr. 16, 1924. 1 Claim. (Cl. 24—123.)

A belt connecter comprising a pair of members each composed of a bar or the like which is substantially flat throughout the greater part of the length and includes sharp end portions, this bar having a loop formed of a portion which is round in cross section and disposed at a greater distance from one end than the other so that one of said end portions extends beyond the other, each of such end portions being bent at an angle in such relation that the ends can be passed into opposite sides of thebelt at different points along the belt, said end portions being bendable for clinching against the belt, substantially as shown, each of said members being formed with a bent portion at opposite sides of the opening of the loop, so the said opening will be restricted when the belt connecter is closed and clinched against the belt, substantially as shown.



17,112. LINING-TRIMMING MACHINE. ARCHIBALD C. SMITH, Rochester, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 11, 1928. Serial No. 299,081. Original No. 1,618,235, dated Feb. 22, 1927, Serial No. 657,442, filed Aug. 14, 1923. 9 Claims. (Cl. 12—51.)

1. A machine for severing a portion of the lining of a shoe which projects beyond an edge of the upper thereof having, in combination, a work support adapted to enter the shoe so as to support the upper from the inside thereof and to permit the shoe to be moved with respect to it, said work support comprising a rotatable shear member, a lining cutter co-operating with the shear member, and means for operating the cutter.



17,113. COTTON CHOPPER. JOSEPH L. PARKS, deceased, Henderson, N. C., by John L. Parks, jr., administrator, Henderson, N. C. Filed Jan. 7, 1928. Serial No. 245,247. Original No. 1,570,277, dated Jan. 19, 1926, Serial No. 47,799, filed Aug. 3, 1925. 12 Claims. (Cl. 97—18.)

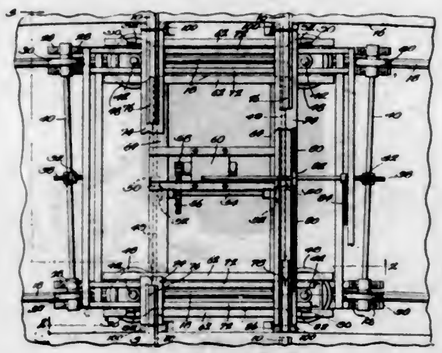
1. A cotton chopper comprising a main wheel frame, a supplemental frame pivotally supported below the main frame and adapted for vertical movement, ground engaging guide shoes carried by the supplemental frame, an elongated arm, a chopping blade carried by the rear end thereof, a socket member arranged on the forward end of the main frame, a ball shaped head carried by the forward end of said

arm, and disposed within said socket, an arm extending laterally from the ball shaped head through the opposite side of the socket, and means for actuating said last mentioned arm to effect the oscillatory movement of the arm and the chopping blade thereby.

17,114. TOASTING OR COOKING APPARATUS. FRANK H. CHANDLER, Danville, Ill., assignor to C. V. Champion & Company, Danville, Ill., a Corporation of Illinois. Filed Aug. 29, 1927. Serial No. 216,322. Original No. 1,609,694, dated Dec. 7, 1926, Serial No. 111,439, filed May 24, 1926. 18 Claims. (Cl. 53—5.)

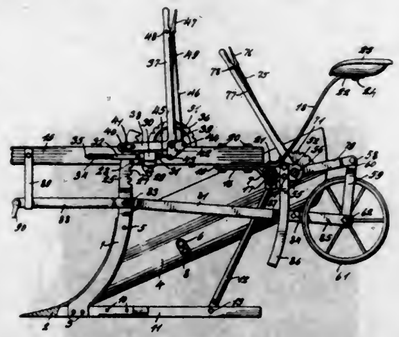
8. A device of the character described comprising a pair of upper and lower cooking plates, means for supporting said plates for and during relative bodily vertical movement directly toward and away from each other, and actuating means for effecting such movement, one of said plates being mounted to swing toward and away from the other plate.

17,115. VALVE. OLIN F. RUSSELL, Los Angeles, Calif. Filed Apr. 6, 1927. Serial No. 181,576. Original No. 1,611,611, dated Dec. 21, 1926, Serial No. 115,649, filed June 12, 1926. 6 Claims. (Cl. 251—8.)



1. A valve comprising a nipple having a long running thread and a valve seat at one end, an end member internally and externally threaded at each end, an internal annular valve member provided with a plurality of ports and carrying a removable washer and a detent provided between the washer and its holder, an intermediate annular member provided with a chamber forming a by-pass around the end of said valve member when open, an annular lip formed on one end of said intermediate member, and a packing nut to co-operate with the lip to enclose a packing.

17,116. DROP-PIT MECHANISM FOR UNWHEELING LOCOMOTIVES. OSCAR L. COFFEY, Harvey, Ill., assignor to Whiting Corporation, Harvey, Ill., a Corporation of Illinois. Filed Sept. 10, 1928. Serial No. 305,085. Original No. 1,564,828, dated Dec. 8, 1925, Serial No. 1,518, filed Jan. 10, 1925. 49 Claims. (Cl. 104—32.)



1. In mechanism of the class described, the combination with means passing a wheeled vehicle over the ground, a pit

below it having wheel tables each equipped with means detachably latching it across the pit, and a track in the bottom of the pit passing under said tables, of a trolley travelable along said track, a table elevating carriage, engageable with and separable from a table, on and reciprocal vertically above the trolley, and movable between a position where it

engages and lifts a table high enough so its latching mechanism may be released and a position low enough so that the trolley with said table and the wheeled load therein may move along said track under one other such wheel table, and mechanism for raising and lowering said carriage comprising a motor fixedly mounted on and movable vertically with the table-engaging carriage.

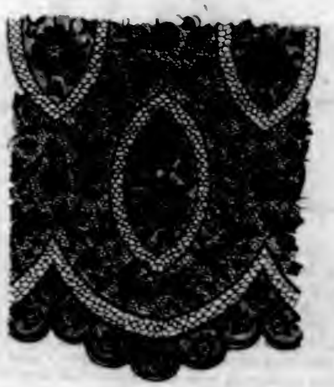
17,117. DITCHING PLOW. SCOTT O. MARTIN, Denver, Colo. Filed Apr. 27, 1928. Serial No. 273,409. Original No. 1,648,236, dated Nov. 8, 1927, Serial No. 143,920, filed Oct. 25, 1926. 4 Claims. (Cl. 37—98.)

1. A ditching plow comprising, in combination, two shares having one end connected with a vertically extending beam member and extending at an angle from each other, a transverse brace rod connecting the shares and holding them in spaced relation, a one piece tongue having its rear end connected with the transverse brace, means for connecting the beam directly with the tongue, a pair of wheels operatively connected with the shares, said wheels being located between the shares at a point to the rear of the transverse brace and means for securing the wheels to the brace.

DESIGNS

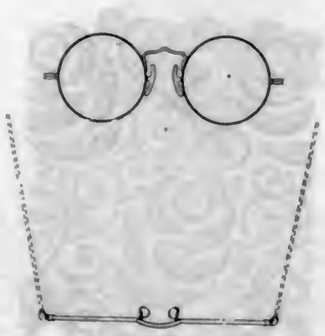
OCTOBER 23, 1928.

76,658. POKER-SET STAND. ALBERT P. BALL, Detroit, Mich. Filed Dec. 9, 1926. Serial No. 19,988. Term of patent 3½ years.



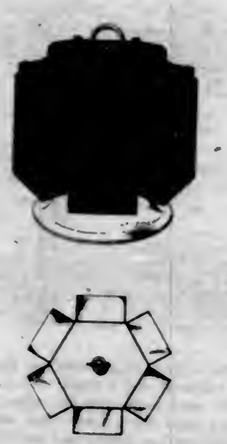
The ornamental design for a poker set stand as shown.

76,659. LACE. BEN A. BALL, Pawtucket, R. I., assignor to American Textile Company, Inc., Pawtucket, R. I., a Corporation of Rhode Island. Filed July 3, 1928. Serial No. 27,366. Term of patent 7 years.



The ornamental design for lace, substantially as shown.

76,660. LACE. BEN A. BALL, Pawtucket, R. I., assignor to American Textile Company, Inc., Pawtucket, R. I., a Corporation of Rhode Island. Filed July 3, 1928. Serial No. 27,367. Term of patent 7 years.

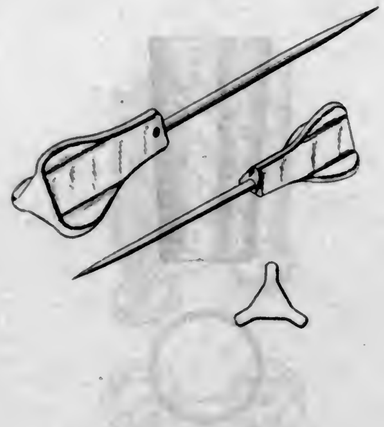


The ornamental design for lace, substantially as shown.

76,661. SPECTACLE FRAME. SAMUEL E. BOUCHARD, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed June 18, 1928. Serial No. 27,181. Term of patent 7 years.

The ornamental design for a spectacle frame substantially as shown.

76,662. COMBINED GUM AND PACKAGE-CONFECTION CASE. LLOYD W. BUCHENAU and STEPHEN N. BLEWETT, Stockton, Calif. Filed Apr. 16, 1928. Serial No. 26,355. Term of patent 14 years.

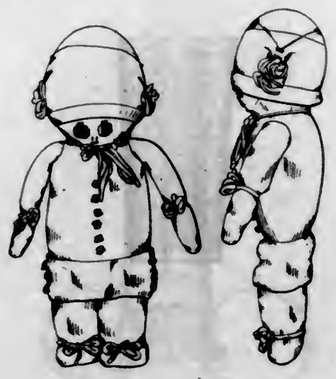


The ornamental design for a combined gum and package-confection case, as shown.

76,663. COAT. KATHERINE E. BERNS, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 1, 1928. Serial No. 27,662. Term of patent 3½ years.

The ornamental design for a coat substantially as shown and described.

76,664. ICE PICK. CLEMENT E. CHASE, Wayne, Pa. Filed Sept. 17, 1926. Serial No. 19,096. Term of patent 7 years.

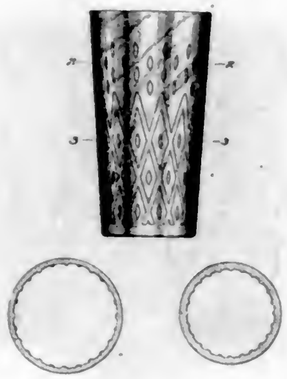


The ornamental design for an ice pick as shown.

76,665. BOTTLE OR SIMILAR CONTAINER. LEON A. DANCO, Rockville Center, N. Y., assignor to McKesson & Robbins, Incorporated, Bridgeport, Conn., a Corporation of Connecticut. Filed July 28, 1928. Serial No. 27,613. Term of patent 14 years.

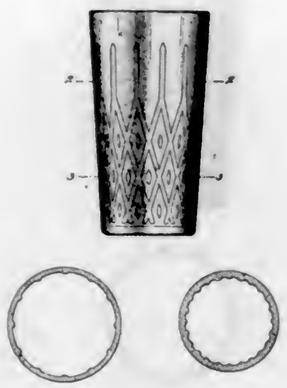
The ornamental design for a bottle or similar container substantially as shown.

76,666. DOLL. CECILIA E. DAVEY, Culver City, Calif. Filed June 13, 1927. Serial No. 22,414. Term of patent 7 years.



The ornamental design for a doll, as shown.

76,667. DRINKING GLASS. HALLER H. DAWSON, Clarksburg, W. Va., assignor to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed Dec. 29, 1927. Serial No. 24,686. Term of patent 7 years.

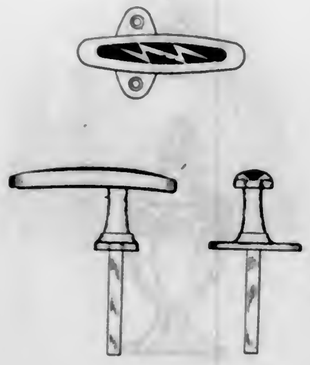


The ornamental design for a drinking glass, as shown.

76,668. DRINKING GLASS. HALLER H. DAWSON, Clarksburg, W. Va., assignor to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed Feb. 1, 1928. Serial No. 25,113. Term of patent 7 years.

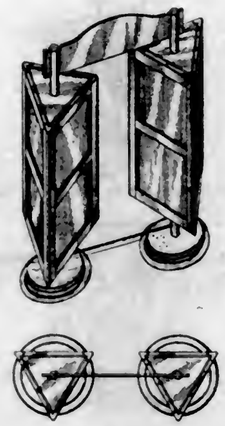
The ornamental design for a drinking glass, as shown.

76,669. DRINKING GLASS. HALLER H. DAWSON, Clarksburg, W. Va., assignor to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed Feb. 1, 1928. Serial No. 25,115. Term of patent 7 years.



The ornamental design for a drinking glass, as shown.

76,670. DRINKING GLASS. HALLER H. DAWSON, Clarksburg, W. Va., assignor to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed Feb. 1, 1928. Serial No. 25,118. Term of patent 7 years.

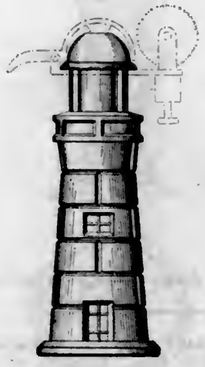


The ornamental design for a drinking glass, as shown.

76,671. AUTOMOBILE DOOR HANDLE OR SIMILAR ARTICLE. WILLIAM C. DEVEREAUX, Detroit, Mich. Filed Apr. 5, 1926. Serial No. 17,179. Term of patent 3½ years.

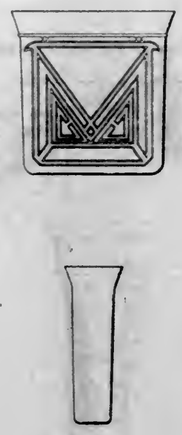
The ornamental design for an automobile door handle or similar article, as shown.

76,672. DISPLAY STAND. ERVIN R. ELLIS, Washington, D. C., assignor of three-fifths to Goldberg Brothers Company, Inc., Richmond, Va. Filed Feb. 27, 1928. Serial No. 25,602. Term of patent 3½ years.



The ornamental design for a display stand, as shown.

76,673. GOBLET. MINOS L. FLETCHER, Nashville, Tenn. Filed Aug. 2, 1928. Serial No. 27,669. Term of patent 7 years.



The ornamental design for goblet as shown.

76,674. BODY FOR A PORTABLE CIGARETTE AND CIGAR LIGHTER. IRVING FLORMAN, New York, N. Y. Filed Feb. 21, 1928. Serial No. 25,510. Term of patent 3½ years.

The ornamental design for a body for a portable cigarette and cigar lighter, as shown and described.

76,675. EDIBLE CONTAINER. DAVID GERBER, Baltimore, Md. Filed Aug. 10, 1928. Serial No. 27,765. Term of patent 3½ years.

The ornamental design for an edible container as shown.

76,676. ICE-CREAM CONE. DAVID GERBER, Baltimore, Md. Filed Aug. 10, 1928. Serial No. 27,766. Term of patent 3½ years.

The ornamental design for an ice cream cone as shown.

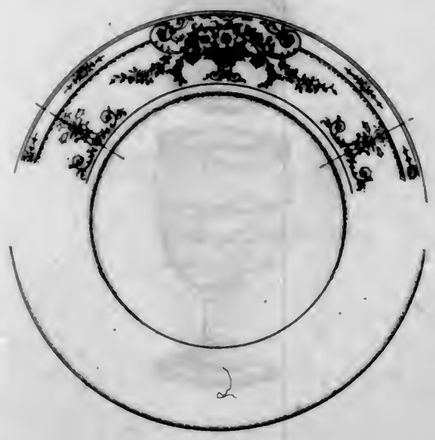
76,677. ICE-CREAM CONE. DAVID GERBER, Baltimore, Md. Filed Aug. 10, 1928. Serial No. 27,768. Term of patent 3½ years.

The ornamental design for an ice cream cone as shown.

76,678. ICE-CREAM CONE. DAVID GERBER, Baltimore, Md. Filed Aug. 10, 1928. Serial No. 27,769. Term of patent 3½ years.

The ornamental design for an ice cream cone as shown.

76,679. ICE-CREAM CONE. DAVID GERBER, Baltimore, Md. Filed Aug. 10, 1928. Serial No. 27,770. Term of patent 3½ years.



The ornamental design for an ice cream cone as shown.

76,680. ICE-CREAM CONE. DAVID GERBER, Baltimore, Md. Filed Aug. 10, 1928. Serial No. 27,771. Term of patent 3½ years.

The ornamental design for an ice cream cone as shown.

76,681. DISH OR SIMILAR ARTICLE. WILLIAM P. GRAHAM, New York, N. Y. Filed June 5, 1928. Serial No. 26,997. Term of patent 7 years.

The ornamental design for a dish or similar article substantially as shown and described.

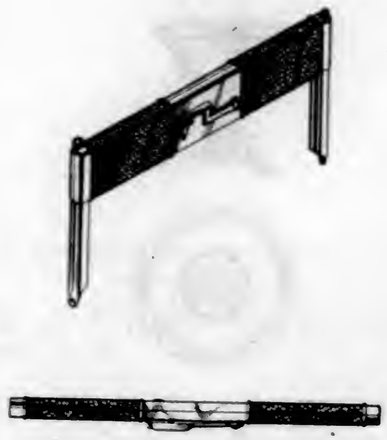
76,682. TABLE OR SIMILAR ARTICLE. JOSEPH JOHN HEYMAN, Chicago, Ill., assignor to Milano Furniture Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 12, 1928. Serial No. 26,300. Term of patent 3½ years.

The ornamental design for a table or similar article as shown.

76,683. TABLE OR SIMILAR ARTICLE. JOSEPH JOHN HEYMAN, Chicago, Ill., assignor to Milano Furniture Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 13, 1928. Serial No. 26,309. Term of patent 3½ years.

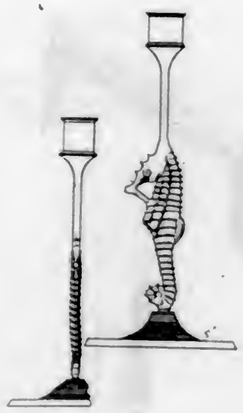
The ornamental design for a table or similar article as shown.

76,684. TABLE OR SIMILAR ARTICLE. JOSEPH JOHN HEYMAN, Chicago, Ill., assignor to Milano Furniture Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 16, 1928. Serial No. 26,351. Term of patent 3½ years.



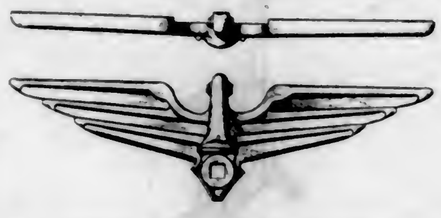
The ornamental design for a table or similar article as shown.

76,685. BAG FRAME. WILLIAM C. HIERING, Newark, N. J., assignor to J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed June 8, 1928. Serial No. 27,052. Term of patent 3½ years.



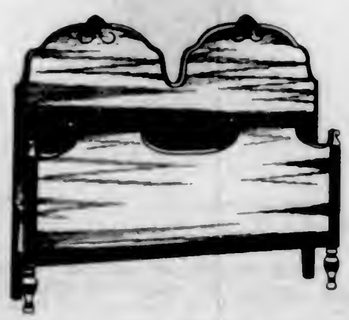
The ornamental design for a bag frame as shown.

76,686. BAG FRAME. WILLIAM C. HIERING, Newark, N. J., assignor to J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed June 8, 1928. Serial No. 27,053. Term of patent 3½ years.



The ornamental design for a bag frame as shown.

76,687. ARTISTIC BRONZE CANDLESTICK OR SIMILAR ARTICLE. EDWARD T. HURLEY, Cincinnati, Ohio. Filed Mar. 12, 1928. Serial No. 25,801. Term of patent 7 years.



The ornamental design for an artistic bronze candlestick or similar article as shown.

76,688. CLAMP FOR VEHICLE BUMPERS. HERBERT S. JANDUS and CHARLES E. RASMUSSEN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,071. Term of patent 14 years.

The ornamental design for a clamp for vehicle bumpers, substantially as shown.

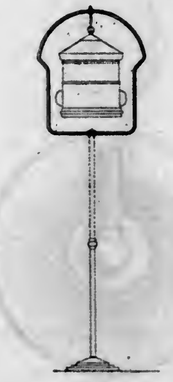
76,689. BEDSTEAD. GEORGE C. JORGENSEN, Red Wing, Minn. Filed Dec. 10, 1927. Serial No. 24,448. Term of patent 3½ years.

The ornamental design for a bedstead, as shown.

76,690. STOCKING. NATHANIEL JUDSON, New York, N. Y. Filed June 6, 1927. Serial No. 22,348. Term of patent 14 years.

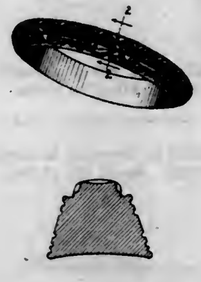
The ornamental design for a stocking, substantially as shown and described.

76,691. RING. CHARLES HUBERT LEE, Los Angeles, Calif., assignor of one-half to Leigh J. Monson, Fargo, N. Dak. Filed May 21, 1928. Serial No. 26,778. Term of patent 7 years.



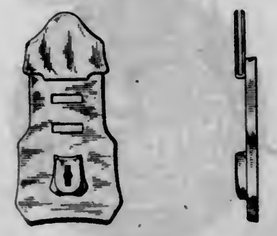
The ornamental design for a ring, as shown.

76,692. LOOP FOR BIRD-CAGE STANDS. LEWICKI J. LEON, West Chicago, Ill. Filed Dec. 12, 1927. Serial No. 24,450. Term of patent 14 years.



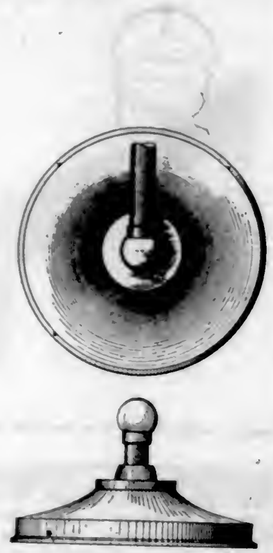
The ornamental design for a loop for bird cage stands, as shown.

76,693. LOOP FOR BIRD-CAGE STANDS. LEWICKI J. LEON, West Chicago, Ill. Filed Dec. 12, 1927. Serial No. 24,451. Term of patent 14 years.



The ornamental design for a loop for bird cage stands, as shown.

76,694. FINGER RING. MAX LEPOW, Newark, N. J., assignor to The H. A. Wilson Company, Newark, N. J., a Corporation of New Jersey. Filed May 19, 1928. Serial No. 26,771. Term of patent 3½ years.

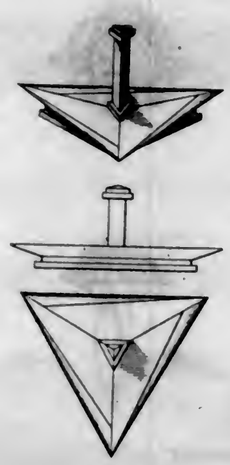


The ornamental design for a finger ring, as shown.

76,695. BRIEF-CASE LOCK OR SIMILAR ARTICLE. MITCHELL LEVENTHAL, Brooklyn, N. Y. Filed Nov. 18, 1927. Serial No. 24,200. Term of patent 7 years.

The ornamental design for a brief case lock or similar article as shown.

76,696. PEDESTAL DOME FOR PERMANENT-HAIR-WAVING MACHINES. WALTER E. LIPPERT, Hewlett, N. Y., assignor to Samuel Bonat & Bro., New York, N. Y., a Copartnership. Filed Nov. 18, 1927. Serial No. 24,199. Term of patent 14 years.

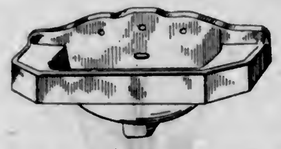


The ornamental design for a pedestal dome for permanent hair waving machines, as shown.

76,697. CAMP STOVE. STANLEY MAJEWSKI, Chicago, Ill. Filed Aug. 11, 1928. Serial No. 27,794. Term of patent 3½ years.

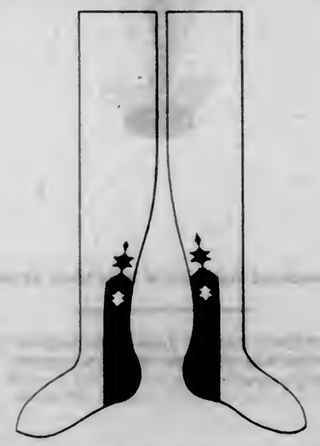
The ornamental design for a camp stove, as shown.

76,698. SANDWICH TRAY OR SIMILAR ARTICLE. ROBERT E. MCELDOWNEY, New Martinsville, W. Va., assignor to New Martinsville Glass Mfg. Co., New Martinsville, W. Va., a Corporation of West Virginia. Filed July 25, 1928. Serial No. 27,579. Term of patent 3½ years.



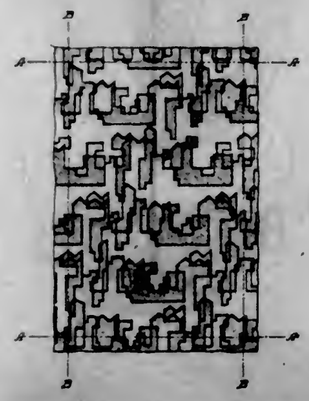
The ornamental design for a sandwich tray or similar article, as shown.

76,699. CONSOLE BOWL OR SIMILAR ARTICLE. ROBERT E. MCELDOWNEY, New Martinsville, W. Va., assignor to New Martinsville Glass Mfg. Co., New Martinsville, W. Va., a Corporation of West Virginia. Filed July 25, 1928. Serial No. 27,580. Term of patent 3½ years.



The ornamental design for a console bowl or similar article, as shown.

76,700. LAVATORY BOWL. CHARLES B. NASH, Pittsburgh, Pa., assignor to Standard Sanitary Manufacturing Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 21, 1928. Serial No. 25,520. Term of patent 14 years.

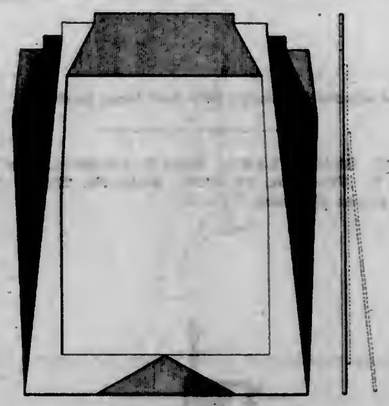


The ornamental design for a lavatory bowl, substantially as shown.

76,701. STOCKING. ERNST OSCAR NEBEL, Philadelphia, Pa., assignor to Oscar Nebel Co., Inc., Hatboro, Pa., a Corporation of Pennsylvania. Filed Dec. 9, 1927. Serial No. 24,420. Term of patent 7 years.

The ornamental design for a stocking substantially as shown.

76,702. COVER PAPER OR THE LIKE. WILLIAM B. PITTS, New York, N. Y., assignor to Whiting-Patterson Company, Inc., a Corporation of Pennsylvania. Filed June 23, 1928. Serial No. 27,244. Term of patent 3½ years.



The ornamental design for cover paper or the like as shown and described.

76,703. ADVERTISING PEDESTAL. ETHEL L. POST, Los Angeles, Calif., assignor to Mutual Orange Distributors, Redlands, Calif., a Corporation of California. Filed June 25, 1928. Serial No. 27,273. Term of patent 14 years.

The ornamental design for an advertising pedestal, as shown.

76,704. PICTURE FRAME OR SIMILAR ARTICLE. LOUIS W. RICE, New York, N. Y., assignor to Bernard Rice's Sons, Inc., New York, N. Y., a Corporation of New York. Filed May 18, 1928. Serial No. 26,752. Term of patent 7 years.

The ornamental design for a picture frame or similar article, as shown.

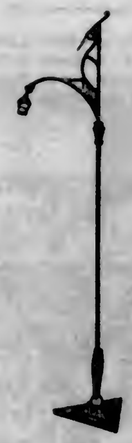
76,705. CLOCK DIAL. MORRIS SALINGER, New York, N. Y., assignor of one-half to Emanuel D. Stein, New York, N. Y. Filed Feb. 11, 1928. Serial No. 25,409. Term of patent 14 years.

The ornamental design for a clock dial as shown.

76,706. FLOOR LAMP. JOHN B. SALTERINI, New York, N. Y. Filed Aug. 22, 1928. Serial No. 27,922. Term of patent 3½ years.

The ornamental design for a floor lamp, as shown.

76,707. BRIDGE LAMP. JOHN B. SALTERINI, New York, N. Y. Filed Aug. 22, 1928. Serial No. 27,923. Term of patent 3½ years.



The ornamental design for a bridge lamp, as shown.

76,708. TABLE LAMP. JOHN B. SALTERINI, New York, N. Y. Filed Aug. 22, 1928. Serial No. 27,924. Term of patent 3½ years.

The ornamental design for a table lamp, as shown.

76,709. BRIDGE LAMP. JOHN B. SALTERINI, New York, N. Y. Filed Aug. 22, 1928. Serial No. 27,925. Term of patent 3½ years.

The ornamental design for a bridge lamp, as shown.

76,710. TABLE LAMP. JOHN B. SALTERINI, New York, N. Y. Filed Aug. 22, 1928. Serial No. 27,926. Term of patent 3½ years.

The ornamental design for a table lamp, as shown.

76,711. RADIATOR CAP. WILLIAM SCHNELL, Detroit, Mich., assignor to Ternstedt Manufacturing Co., Detroit, Mich., a Corporation of Michigan. Filed June 21, 1928. Serial No. 27,211. Term of patent 7 years.

The ornamental design for a radiator cap as shown.

76,712. AUTOMOBILE FRONT END DECORATION. ROBERT G. SEALS and EDWARD N. C KUNTZ, St. Louis, Mo. Filed Jan. 23, 1928. Serial No. 25,003. Term of patent 7 years.

The ornamental design for an automobile front end decoration as shown.

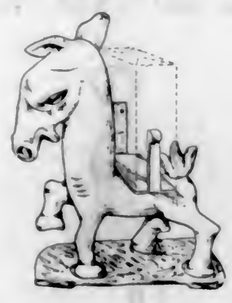
76,713. FAUCET. SHERMAN SMITH, Pittsburgh, Pa., assignor to Standard Sanitary Manufacturing Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 21, 1928. Serial No. 25,501. Term of patent 14 years.

The ornamental design for a faucet, substantially as shown.

76,714. FAUCET. SHERMAN SMITH, Pittsburgh, Pa., assignor to Standard Sanitary Manufacturing Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 21, 1928. Serial No. 25,507. Term of patent 14 years.

The ornamental design for a faucet, substantially as shown.

76,715. COMBINATION LIGHT FIXTURE AND SPEAKER. FRED A. STANDIFORD, Kansas City, Mo. Filed Aug. 27, 1928. Serial No. 27,975. Term of patent 7 years.

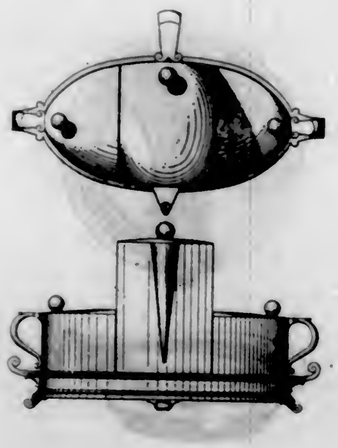


The ornamental design for a combination light fixture and speaker, as shown.

76,716. PIPE HOLDER OR SIMILAR ARTICLE. MITTELDORFER STRAUS, New York, N. Y. Filed Aug. 22, 1928. Serial No. 27,914. Term of patent 3½ years.

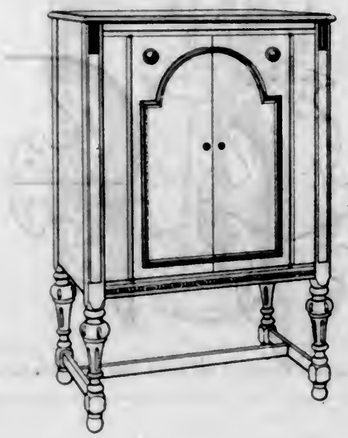
The ornamental design for a pipe holder, or similar article, as shown.

76,717. CIGARETTE HOLDER. MITTELDORFER STRAUS, New York, N. Y. Filed Aug. 22, 1928. Serial No. 27,915. Term of patent 3½ years.



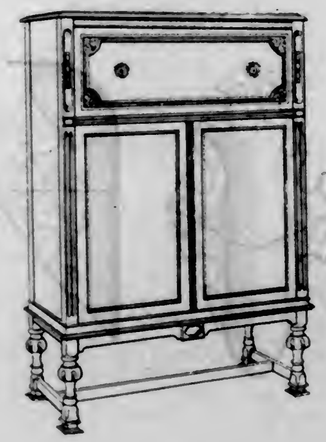
The ornamental design for a cigarette holder, or similar article, as shown.

76,718. CIGARETTE HOLDER OR SIMILAR ARTICLE. MITTELDORFER STRAUS, New York, N. Y. Filed Aug. 22, 1928, Serial No. 27,916. Term of patent 3½ years.



The ornamental design for a cigarette holder, or similar article, as shown.

76,719. TABLE SET. JEAN G. THEOBALD, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Aug. 1, 1928. Serial No. 27,657. Term of patent 7 years.



The ornamental design for a table set as shown.

76,720. CABINET FOR RADIORECEIVERS. JAMES TILLOTSON, Jr., Jamestown, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed June 11, 1927. Serial No. 22,395. Term of patent 7 years.

The ornamental design for a cabinet for radioreceivers as shown.

76,721. CABINET FOR RADIORECEIVERS. JAMES TILLOTSON, Jr., Jamestown, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed June 11, 1927. Serial No. 22,396. Term of patent 7 years.

The ornamental design for a cabinet for radioreceivers as shown.

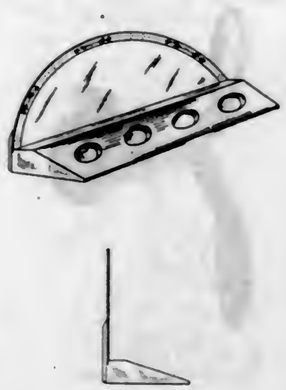
76,722. BRIDGE MEMBER FOR AN OPHTHALMIC MOUNTING. JOHN I. TWOMBLY, Providence, R. I., assignor to Universal Optical Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 1, 1928. Serial No. 25,628. Term of patent 14 years.

The ornamental design for a bridge member for an ophthalmic mounting, substantially as shown and described.

76,723. DRAPERY-POLE BRACKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,256. Term of patent 3½ years.

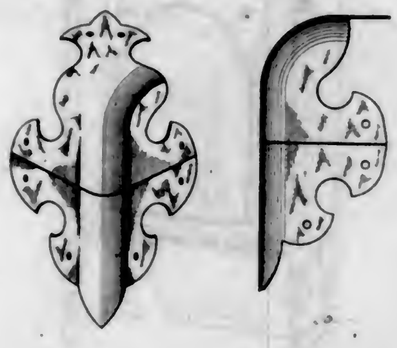
The ornamental design for a drapery pole bracket, as shown.

76,724. DRAPERY-POLE BRACKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed May 24, 1928. Serial No. 26,843. Term of patent 3½ years.



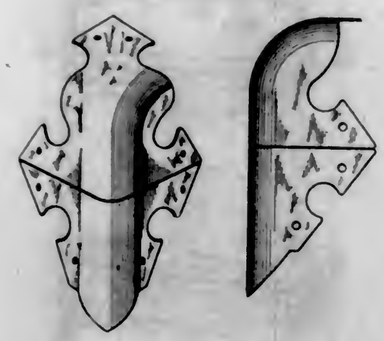
The ornamental design for a drapery pole bracket, as shown.

76,725. NARROW WOVEN TRIMMING. CHARLES S. WACKERMAN, Bridgeport, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 23, 1928. Serial No. 27,240. Term of patent 3½ years.



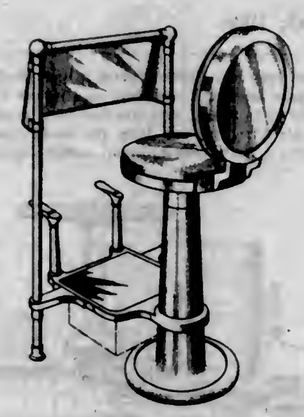
The ornamental design for narrow woven trimming substantially as shown.

76,726. COSMETIC DISPLAY STAND. HERMAN WALDMAN, Chicago, Ill. Filed Aug. 14, 1928. Serial No. 27,815. Term of patent 3½ years.



The ornamental design for a cosmetic display stand, as shown.

76,727. CORNER PIECE FOR A TRUNK OR SIMILAR ARTICLE. EMIL ZAVITOVSKY and CHRISTIAN J. LINS, Milwaukee, Wis., assignors to McKane-Lins Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 7, 1928. Serial No. 27,037. Term of patent 7 years.



The ornamental design for a corner piece for a trunk, or similar article, as shown.

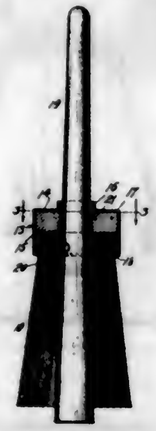
76,728. CORNER PIECE FOR A TRUNK OR SIMILAR ARTICLE. EMIL ZAVITOVSKY and CHRISTIAN J. LINS, Milwaukee, Wis., assignors to McKane-Lins Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 7, 1928. Serial No. 27,038. Term of patent 7 years.

The ornamental design for a corner piece for a trunk or similar article, as shown.

76,729. SHOE-SHINING SEAT. HERMAN E. SCHULSE, New York, N. Y., assignor to H. E. Schulse, Inc., a Corporation of New York. Filed June 5, 1928. Serial No. 26,993. Term of patent 14 years.

The ornamental design for a shoe shining seat as shown.

76,730. STOCKING. WALTER E. ZANDER, Philadelphia, Pa., assignor to Schletter & Zander, Inc., Frankford, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 13, 1926. Serial No. 19,719. Term of patent 14 years.



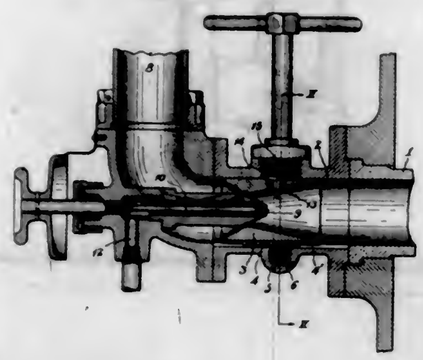
The ornamental design for a stocking, as shown.

PATENTS

GRANTED OCTOBER 23, 1928.

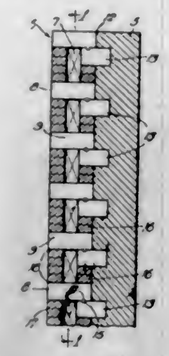
1,688,318. BRUSH. ANDREW ALBRIGHT, Jr., Miami Beach, Fla. Filed June 9, 1926. Serial No. 114,673. 2 Claims. (Cl. 15—204.)

1. In a brush of the character described, the combination of a one piece sheet metal cap, comprising an apertured top, a skirt, and a neck which extends from the aperture in the top, a non-metallic plug in the cap, bristles having their butts cemented together and disposed in the skirt of the cap, a metallic ring tightly secured on the cemented butts of the bristles and provided with holes, the plug being located between the cap-top and the cemented butts, a tapering handle, the larger end of which extends within the butts and tightly fits the aperture and the neck and wedges the cemented butts of the bristles in the cap, the neck providing an extended bearing surface throughout for the handle, and fastening nails extending through the skirt, the holes in the ring, the cemented butts and into the handle.



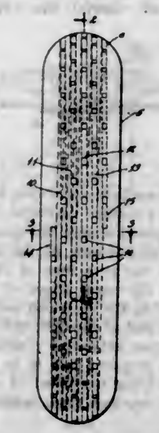
1,688,319. COOKING MOLD. AMBER ALLIS, Milwaukee, Wis. Filed June 27, 1927. Serial No. 201,796. 6 Claims. (Cl. 53—7.)

1. A cooking mold comprising a conical foraminous body having an open base, and a handle arranged above said base.



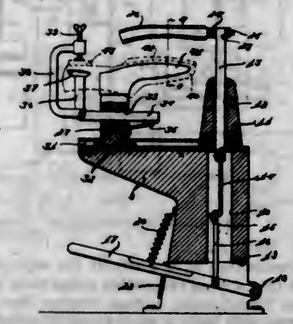
1,688,320. MIXING DEVICE FOR OIL-GAS APPARATUS. ALVIN J. BASSETT, Milwaukee, Wis., assignor to The Bruce Macbeth Engine Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 12, 1925. Serial No. 68,543. 2 Claims. (Cl. 158—76.)

1. In a mixing device for oil-gas apparatus, the combination of a mixing tube; a Venturi-tube mounted therein, said Venturi-tube being formed with a rack portion; a co-operating gear engaging said rack and means for driving said gear so as to adjust said Venturi-tube in said mixing tube; an air pipe opening into the small end of said Venturi-tube; a valve-controlled oil nozzle extending into



said Venturi-tube within said air pipe, said mixing and Venturi-tubes being provided with registering apertures; and a closure for the aperture in the mixing tube, said latter aperture being of larger diameter than the registering aperture of said Venturi-tube.

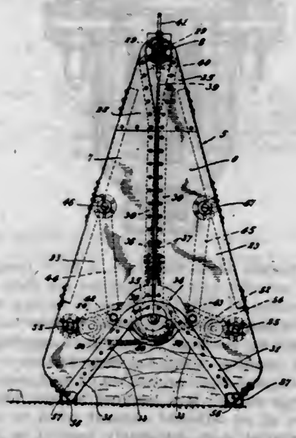
1,688,321. AIR-COOLED FURNACE-WALL CONSTRUCTION. LYLE STOCKTON ABBOTT, Chicago, Ill. Filed Mar. 7, 1927. Serial No. 173,412. 5 Claims. (Cl. 72—102.)



1. An air cooled furnace wall of the character described consisting of an outer section made of brick-like elements, an inner section of brick-like elements of refractory material and spaced from said outer section, and means forming cross-ties between said sections and dividing the space between said sections into a plurality of horizontal ducts connected in series, said means comprising rows of brick-like elements at spaced intervals throughout the height of said wall, alternate rows terminating short of opposite ends of said wall to connect said ducts, said outer wall having means therein interlocking with said cross-ties to prevent them from moving away from said outer wall.

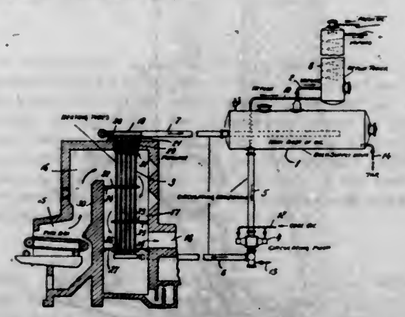
1,688,322. TIRE. ANDREW ALEXANDER, New York, N. Y. Filed Sept. 1, 1926. Serial No. 132,947. 1 Claim. (Cl. 152—16.)

In a tire of the class described, a strip of rigid material imbedded in the tread portion of the tire and in spiral arrangement circumferentially thereof, the coils of said strip being in spaced relation and separated by the rubber body in said tread portion and the separate windings of said strip having integral and outwardly projecting members arranged in a circumferentially and transversely spaced relation with reference to the tread position of the tire and with the outer faces of said members exposed through and lying flushly with the tread portion of the tire.



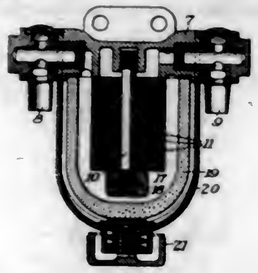
1,688,323. SHOE PRESS. JOSEPH AMICO, Detroit, Mich. Filed Dec. 29, 1927. Serial No. 243,265. 4 Claims. (Cl. 12—38.)

1. A shoe press of the class described, comprising; a supporting standard; a last supporting member mounted on said standard; a last on said last supporting member; a heel engaging member projected through a slot formed in said last supporting member and movable inwardly and outwardly therefrom; means mounted movably on said standard for clamping a sole against said last; and screw operated means for pressing the heel against said heel engaging member.



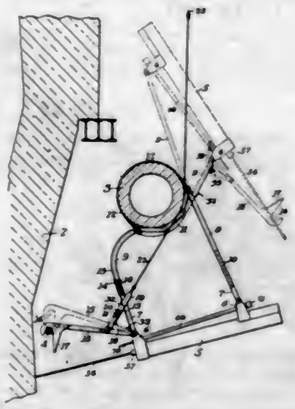
1,688,324. BUCKET. HERBERT S. ATKINSON, East Orange, N. J., assignor to The Hayward Company, New York, N. Y., a Corporation of New York. Filed Nov. 6, 1925. Serial No. 67,239. 11 Claims. (Cl. 37—184.)

1. In a bucket, the combination of a plurality of bowl sections pivotally mounted with respect to each other, operating mechanism suspended within said bucket, a support for said operating mechanism, flexible means for raising and lowering said operating mechanism, flexible members adapted to co-act with said operating means having connection therewith and said support, and pivotal means connecting said bowl sections to the opposite sides of said support.



4. In a bucket, the combination of a pair of pivoted bowl sections, pivoted to permit a relatively large leverage to said sections, anti-digging means comprising transverse runners having their bottom surfaces flush with the cutting edges of said bowl sections, winding means suspended within said bucket and flexible means for closing said sections during the descent of said winding means.

1,688,325. ART OF CRACKING HYDROCARBONS. JOHN B. BELL, deceased, Brooklyn, N. Y., by Lola R. Bell, executrix, Brooklyn, N. Y., assignor to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed Jan. 22, 1925. Serial No. 3,985. 4 Claims. (Cl. 196—59.)

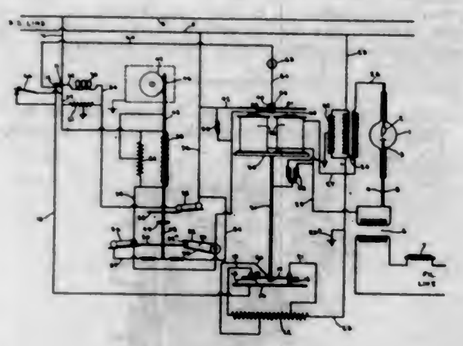


2. The improvement in the operation of externally heated pressure stills for cracking hydrocarbon oils, which comprises circulating oil from a bulk supply drum to the lower end of vertically arranged heating tube and thence upwardly through the heating tubes and back to the bulk supply drum from the upper end of the heating tubes, heating the oil to the cracking temperature in the heating tubes by passing hot products of combustion from a fire-box first in contact with the upper end of the heating tubes and thence downwardly over the heating tubes, and preventing direct radiation from the fire-box to all parts of the heating tubes, whereby uniform distribution of the heat absorption is promoted and the oil is brought to the maximum cracking temperature as it leaves the upper end of the heating tubes and is discharged to the bulk supply drum.

1,688,326. FILTER. ANTONIN BOULADE, Lyon, France, assignor to Societe du Carburateur Zenith, Lyon, France, a Corporation of France. Filed Sept. 16, 1925. Serial No. 56,651. 2 Claims. (Cl. 210—165.)

1. As an article of manufacture, a filter comprising a body having an inlet and an outlet for the fluid to be filtered, a plurality of filtering elements having annularly extending filtering surfaces and substantially radially extending supporting portions, providing an opening through the elements adapted, when the elements are assembled, to form an internal chamber, certain of said elements having projections on one face adapted to abut against the plane surface of an adjacent element when in assembled relation, a central stem detachably secured to said body and cooperating with the supporting portions of said elements for maintaining the elements in proper cooperative relation, said stem having an enlargement thereon for preventing accidental removal of the elements therefrom when the stem and elements are removed from said body, clamping means for the elements on said stem, and a closure forming a chamber around said elements.

1,688,327. FURNACE-TAPPING MACHINE. EDGAR E. BASSIUS, Pittsburgh, Pa. Filed Nov. 26, 1924. Serial No. 752,361. 12 Claims. (Cl. 266—42.)

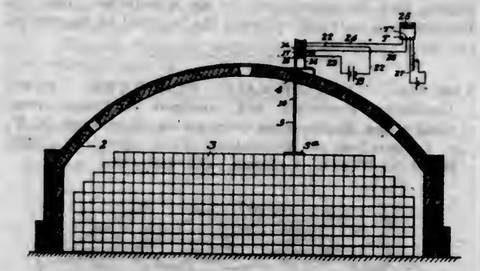


3. Blast furnace tapping apparatus, comprising a rotatable drill, suspension means therefor comprising a plurality of links pivotally connected adjacent the end and arranged to permit the drill to be swung into substantially horizontal tapping position or into substantially vertical inoperative position, means carried by said apparatus remote from the drill and entirely rearwardly of said links for imparting continuous rotation thereto with the drill in any position, and means for protecting said last-mentioned means from the heat of the furnace being tapped, substantially as described.

1,688,328. BELT BUCKLE. JOHN B. FREYSINGER, New Britain, Conn., assignor to Kriecher's Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 28, 1926. Serial No. 157,435. 2 Claims. (Cl. 24—163.)

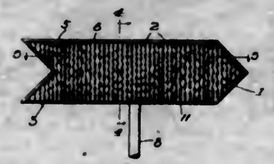
1. A belt buckle comprising a frame having an opening subdivided by a bar, a tongue mounted on the said frame bar and adapted to extend across the opening with one end overlying the frame at one side of the opening, a pair of ears extending from the rear face of the frame bar and lying inwardly from the outer edges of the frame, and a gripping bar mounted in the ears and cooperating with the frame bar to grip the end of the belt, this gripping bar having an operating portion extending toward one edge of the frame bar when the gripping bar is in effective position, the said portion overlying the point of attachment of the tongue to the frame bar but lying within the outlines of the frame bar.

1,688,329. VACUUM-TUBE-EVACUATING APPARATUS. ARTHUR A. GROTHE, Chicago, Ill. Filed Apr. 22, 1925. Serial No. 25,033. 12 Claims. (Cl. 250—34.)



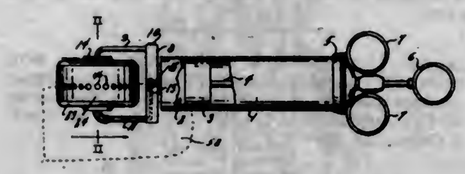
4. The combination with a circuit for supplying energy to a vacuum tube during evacuation comprising a main line to a step-up transformer, a high tension line from said transformer to said tube, a time actuated relay automatically terminating the admission of energy to said tube, a signal for indicating increase in the vacuum in said tube, and manually controlled means for increasing the volume of energy admitted to said tube, of an armature adapted to be actuated by the energy flowing through said tube to control said means for terminating the flow of current to said tube.

1,688,330. APPARATUS FOR MEASURING THE SHRINKAGE OF MATERIALS. FRANKLIN W. GUNTHER and GEORGE P. FISHER, Ottawa, Ill., assignors to National Fire Proofing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 15, 1925. Serial No. 50,402. 5 Claims. (Cl. 177—351.)



1. The combination with a material-drying chamber, of a rod projecting into said chamber and movable in accordance with variations in the dimensions of the material

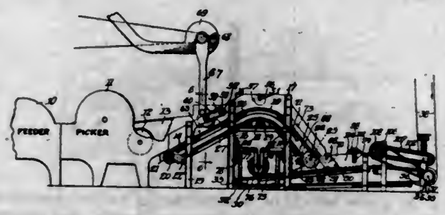
therein, and indicating means cooperating with said rod and enabling the determination of the amount of move-



ment thereof, said indicating means including a resistance circuit, and means for varying the resistance therein, substantially as described.

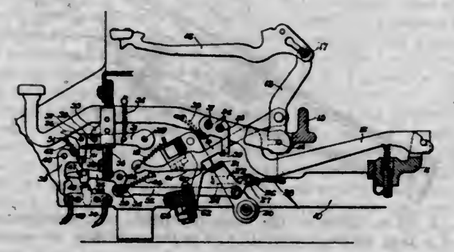
1,688,331. ROAD SIGN OR SIGNAL. SAMUEL E. W. HAINES, Berkeley, Calif. Filed Oct. 24, 1923. Serial No. 670,611. 1 Claim. (Cl. 88—1.)

In a signal of the class described, a plate of transparent material having a plane reflecting back surface and a fluted front surface, the signal being adapted to disperse therefrom a beam of light fan-shaped in a substantially horizontal plane when the plate is positioned vertically with the flutes thereof vertical and at a desired point in the road.



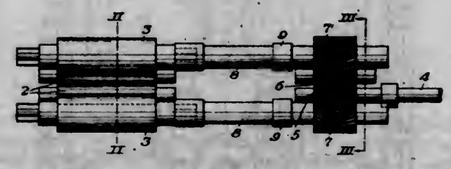
1,688,332. ANÆSTHETIZING. JOHN B. HECK, Jr., and JOSEPH J. SWEENEY, Toledo, Ohio. Filed June 27, 1927. Serial No. 201,583. 6 Claims. (Cl. 128—215.)

1. A local anæsthetic administering tool comprising a handle, a traveling carrier movable as to the handle, a hypodermic needle positioned by the handle and as to which the carrier is movable, and actuating connections from the carrier for reciprocating the needle as to the carrier.



1,688,333. PROCESS AND APPARATUS FOR MAKING COMPOSITE MATTRESSES. JACOB H. HIRSCH, Atlanta, Ga., and JOHN F. GAIL, Evanston, Ill., assignors to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 23, 1925. Serial No. 58,211. 4 Claims. (Cl. 19—145.)

1. Apparatus for making composite mattresses, comprising a lower travelling apron for supporting and propelling a layer of felted fiber, and an upper travelling apron arranged to deliver a continuous body of filling material upon the surface of the felted fiber layer, carried by said lower apron, and at a point intermediate of the length of said lower apron, said aprons, rearwardly of said delivery

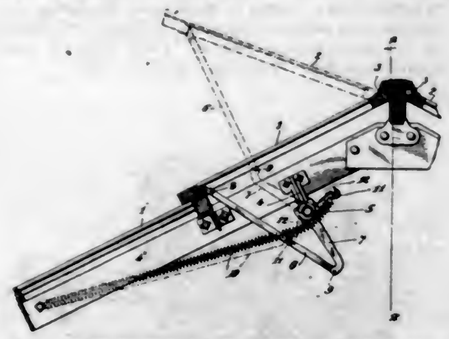


point, being spaced apart a sufficient distance to accommodate a roll which serves as a supply source for said under layer.

1,688,334. POWER-ACTUATING MECHANISM FOR TYPEWRITERS. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed June 27, 1925 Serial No. 39,935. 10 Claims. (Cl. 197—14.)

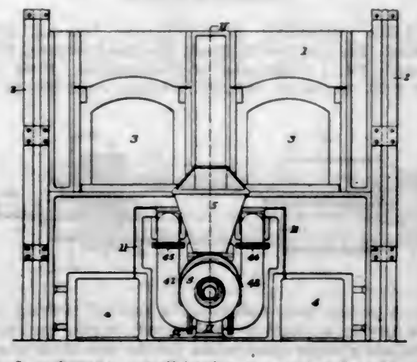
1. In a typewriter having key levers and type bars, the combination with an oscillating driver, an electrical device for operating said driver, means controlled by any one of a plurality of key levers for closing the circuit of said electrical device, said closing means including a spring-closed switch, trigger mechanism for holding said switch open, and a member common to a plurality of key levers and mechanically operable thereby for tripping said trigger mechanism to permit said switch to close.

1,688,335. ROLLING MILL. LORENZ-IVERSEN, Pittsburgh, Pa., assignor to Mesta Machine Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 5, 1926. Serial No. 127,296. 2 Claims. (Cl. 80—38.)



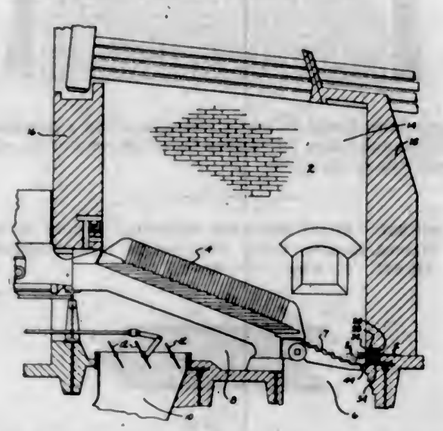
1. A rolling mill, comprising a pair of working rolls each having a plurality of positively driven backing-up rolls, and a single drive means for the several backing-up rolls.

1,688,336. BATTERY SEPARATOR. WILLIAM L. KANN, Pittsburgh, Pa.; The Bank of Pittsburgh, N. A., administrator of said William L. Kann, deceased. Filed Nov. 15, 1927. Serial No. 233,383. 4 Claims. (Cl. 136—149.)



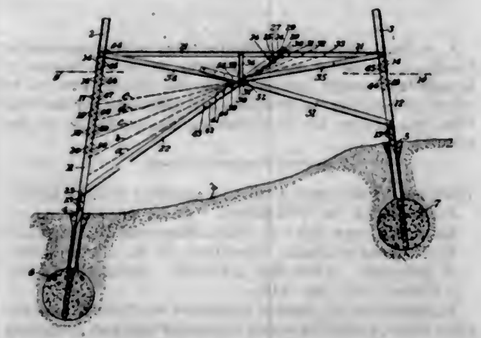
1. As a new article of manufacture, a battery separator made of a wood of the Myristicaceæ family, and having characteristics suitable for battery separators.

1,688,337. SASH OPERATOR FOR GREENHOUSES. THOMAS EDWARD KING, Westfield, N. J., assignor to Hitchings & Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Nov. 4, 1924. Serial No. 747,730. 4 Claims. (Cl. 268—24.)



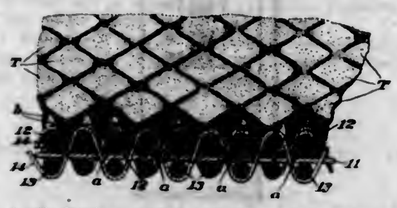
1. In a device of the class described, the combination of a sash frame, a plurality of sashes movably connected thereto, a toggle connected to each sash, a shaft, each toggle being operated by said shaft to raise and lower said sashes, a rock-arm on said shaft, at each sash, an elongated spiral spring for each sash and being secured at one end to said frame and at the other end to said rock-arm, said rock-arm being so positioned as to carry said spring into inoperative position when said sash is closed and to carry it into operative position as said shaft is operated to open the sash.

1,688,338. STOKER. OLIVER P. LUETSCHER, Pittsburgh, Pa. Filed Mar. 13, 1922. Serial No. 543,221. 3 Claims. (Cl. 110—47.)



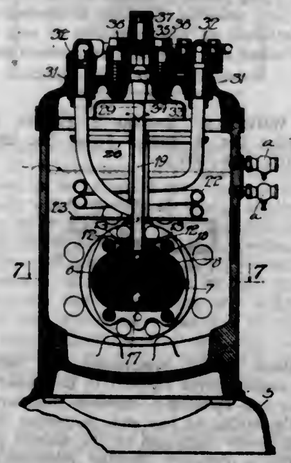
1. In a furnace, a wall having an opening therethrough, a stoker extending through the opening into the furnace, the stoker having a retort, and a tuyère along the edge of the retort, the stoker having an opening from the interior to the exterior of the furnace through which the tuyère may be introduced to or withdrawn from the furnace as a unit and without the removal of the stoker.

1,688,339. FURNACE-WALL STRUCTURE. EDWIN LUNDGREN, Frederick, Md., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 22, 1925. Serial No. 57,811. 4 Claims. (Cl. 110—81.)



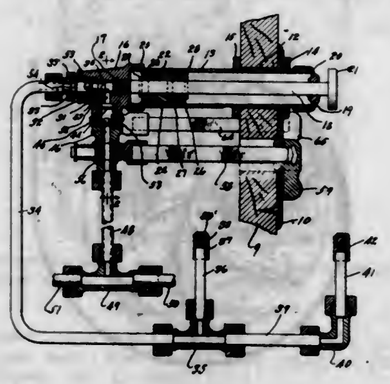
1. A furnace chamber having at least one of its walls provided with an inwardly opening channel horizontally arranged and at least one of the two adjacent walls provided with an opening in alinement with said channel, a spray pipe extending through said opening and channel and removable therefrom, a housing enclosing said pipe, made in sections and inserted in said channel, each section having a longitudinally extending opening in its inner wall spaced a distance from the upper edge thereof, and a face plate removably inserted in said wall directly beneath said housing and forming a part of the inner side of said wall, said face plate and housing sections having engaging portions for detachably holding the housing in place.

1,688,340. ADJUSTABLE LEG EXTENSION FOR TOWERS. IRA W. MARSHALL, Pittsburgh, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Jan. 17, 1925. Serial No. 3,067. 1 Claim. (Cl. 189—21.)



A structural tower having a plurality of legs and a leg foundation for each leg, a leg extension between one leg and its foundation and connected to each, a diagonally extending bracing element connected to said leg extension at one of its ends and having its other end connected with a cross girt between the two legs, a vertical member on the cross girt, diagonals extending from each leg adjacent the cross girt to the vertical member, and another diagonal connected with the other leg and with the said vertical member.

1,688,341. WOVEN PILE FABRIC. HOWARD MASON, Saxonville, Mass. Filed Oct. 1, 1927. Serial No. 223,403. 5 Claims. (Cl. 139—403.)

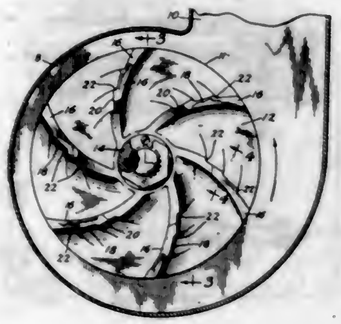


1. A pile fabric provided with diamond shaped pile tufts that blend together to produce a herring-bone design in the face of the pile and formed of pile warp threads woven in the fabric so that each pile forming loop is secured to the ground fabric by two soft elastic weft threads lying within the loop and the loops formed by two adjacent pile warp threads being arranged in staggered relation, weft threads laid at the back of the fabric to correspond in number to the first mentioned weft threads, stuffer warp threads laid between the two sets of weft threads, and a single binder thread laid between each pair of pile forming threads and arranged to permit the tuft forming threads to spread laterally and assume a diamond-shape that causes the tufts to blend together to form a clearly discernible herring-bone design in the face of the fabric.

1,688,342. PUMP FOR REFRIGERATING APPARATUS. CHARLES L. MCCUEN, Chicago, Ill., assignor, by mesne assignments, to Frigidaire Corporation, a Corporation of Delaware. Filed Jan. 17, 1920. Serial No. 352,039. 10 Claims. (Cl. 230—141.)

1. In a refrigerating apparatus, the combination with a pump chamber and the pump therefor, of a removable cover for the chamber, cooling coils attached to and depending from the cover, a plate forming a support for the coils, means attached to the cover for supporting the plate, and a drip plate also supported by said means intermediate said first plate and the cover.

1,688,343. COMBINATION PRIMER, FUEL ECONOMIZER, AND HUMIDIFIER. OTTO G. MOLL, Detroit, Mich. Filed Jan. 16, 1926. Serial No. 81,672. 1 Claim. (Cl. 123—25.)



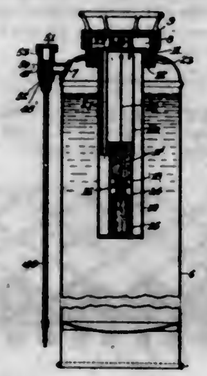
In a device of the class described adapted for use on internal combustion engines having an intake manifold, comprising: ejector nozzles communicating with said manifold; a delivery pipe communicating at one end with said nozzles; a head connected to said delivery pipe at the opposite end, said head having a plurality of passages formed therein in communication with said delivery pipe; a cylinder communicating with said passages; a piston slidably mounted in said cylinder; a piston rod connected to said piston and extending at one end exteriorly of said cylinder and projecting beyond said piston at the opposite end, said opposite end being tapered to form a needle valve, a portion of said opposite end intermediate said piston and said needle valve forming portion being threaded into said head; a water conduit connected to a suitable source of water supply and communicating with passages in said head; a fuel conduit connected to a suitable source of fuel supply and communicating with said passages in said head, said head having an air passage communicating with the atmosphere, the needle valve forming portion of said rod being adapted, upon a threading of said rod in said head, for controlling communication of said delivery pipe with said sources of fuel, and water supply and the air.

1,688,344. WINDSHIELD ATTACHMENT. ERNST MUNTWYLER, Lucerne, Switzerland. Filed Feb. 21, 1927, Serial No. 169,752, and in Switzerland Feb. 25, 1926. 2 Claims. (Cl. 20—40.5.)

1. The combination with the transparent windshield pane of an automobile or like automotive vehicle, of an observation device secured upon the outer face of said pane in the normal field of vision of the driver, said device comprising a hollow body of transparent material presenting an outer convexly curved moisture shedding face, and means arranged on the concaved side of said body for interiorly heating said body.

1,688,345. CENTRIFUGAL FAN. JOHN MURSCH, and CHARLES F. SCHUTTE, Utica, N. Y., assignors to Buffalo Hammer Mill Corporation, Buffalo, N. Y., a Corporation of New York. Filed Aug. 16, 1927. Serial No. 213,238. 9 Claims. (Cl. 230—134.)

1. In a centrifugal advancing mechanism, a rotatable fan formed with a series of radially outwardly directed blades provided on their forward faces with stepped surfaces.

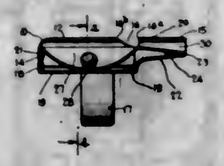


1,688,346. SYSTEM OF ELECTRICAL TRANSMISSION. GIUSEPPE MUSSO, Habana, Cuba. Filed Nov. 17, 1922. Serial No. 601,526. 8 Claims. (Cl. 179—1.)

1. The method of transmitting electric energy by impressing electric impulses on an external circuit having different characteristics from those of the initial impulses, which consists in converting a substantial portion of the energy of a periodic electromotive force circulating in a local circuit at one end of a transmission line into transmission impulses in the form of non-circulating potential energy impressed on the transmission line preventing the circulating charging current of the initial impulse in said local circuit passing on said transmission line, and discharging said impulses to earth at the opposite end of the transmission line utilizing the discharge of said impressed potential impulses through receiving apparatus.

1,688,347. FIRE EXTINGUISHER. GEORGE T. PEARSONS, New York, N. Y. Filed June 28, 1920. Serial No. 392,224. 31 Claims. (Cl. 169—32.)

1. In a fire extinguisher, a liquid container having an outlet above the normal liquid level, an opening in said container having a removable cover, a gas generator supported within the liquid container in substantially axial alignment with said opening, said generator having an outlet which opens therefrom to the exterior thereof at a point located above the normal liquid level of said container in the normal position thereof, gas generating materials in said generator held in a separated condition in the normal inoperative position of the extinguisher and operable to unite when the container is inverted to create



a gas and place the liquid in the container under fluid pressure to eject the liquid from said container.

1,688,348. WHISTLE. EDWARD R. PETRIE, New York, N. Y. Filed Sept. 24, 1926. Serial No. 137,428. 8 Claims. (Cl. 116—137.)

2. A whistle of the class described comprising a hollow body, a mouthpiece portion at one end of said body and opening thereinto, and a mounting ring or loop comprising relatively adjustable arc-shaped members, said ring or loop being pivotally supported in connection with the whistle body whereby said body is adjustable thereon, another mouthpiece at the other end of said body, and means for dividing said body into independent sound chambers.

1,688,349. WHISTLE. EDWARD R. PETRIE, New York, N. Y. Filed Oct. 6, 1927. Serial No. 224,344. 13 Claims. (Cl. 116—137.)

2. A whistle device comprising two independently formed box-shaped parts adapted to be placed one within the other and forming a chamber therebetween, each of said parts having at one end, projecting lip portions forming the mouth piece end of the whistle device, said device having a discharge opening communicating with said chamber, and means for coupling said parts together to prevent accidental displacement and permitting of the separation of said parts at will for cleaning and other purposes, said coupling means being of tongue and groove construction to provide a seal between the separate parts to prevent the escapement of air therebetween, in the operation of the whistle.

1,688,350. METHOD OF MOLDING. CLIFTON D. PETTIS, New York, N. Y. Filed Mar. 13, 1925. Serial No. 15,360. 16 Claims. (Cl. 22—192.)

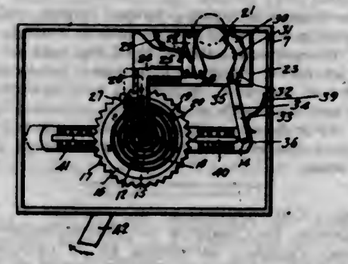
1. In the method of casting, the step consisting of applying to a molding surface a mixture of fire clay with silica, and thereafter applying oil to said surface and said mixture.

1,688,351. PROCESS FOR THE PRODUCTION OF UNSYMMETRICAL ARSENO COMPOUNDS. JOHANNES PFLEGER, Frankfort-on-the Main, and AUGUST ALBERT, Munich, Germany. Filed Nov. 29, 1924, Serial No. 752,948, and in Austria Apr. 12, 1923. 6 Claims. (Cl. 260—15.)

1. Process for the production of unsymmetrical arsenic compounds which consists in reducing arsenic compounds with carbonyl groups of the general formula:

$$-As-Aryl-\overset{X}{\underset{}{}}\text{carbonyl group}$$

together with arsenic compounds of the general formula

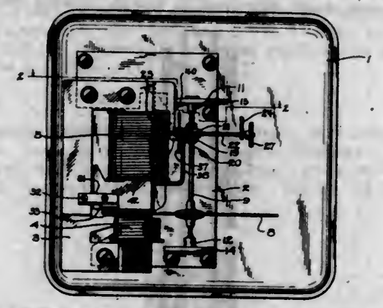


$$-As-Ary'\langle^{X}_{Y},$$

wherein X stands for H, halogen, OR (R being H or an acyl group), NO_2, NH_2,

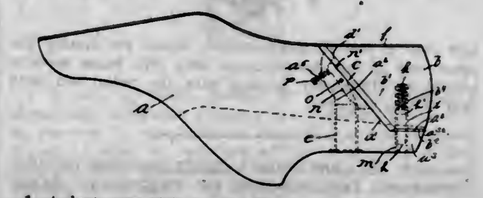
$$NH.CH_2COOH,\ SO_3H,\ COOH,$$

Y for H, $C\langle^{O}_{H}$, $C\langle^{O}_{CH_3}$, $C\langle^{NOH}_{H}$, $C\langle^{N-NH_2}_{H}$.



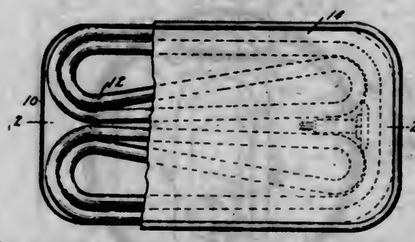
1,688,352. DISPENSER FOR LUBRICATING OILS. SYLVESTER JOSEPH POCOCK, St. Marys, Ontario, Canada, assignor of one-half to John Knox Richardson, St. Marys, Ontario, Canada. Filed Sept. 27, 1926. Serial No. 138,072. 11 Claims. (Cl. 194—67.)

1. In an oil dispenser, the combination with the operating shaft of the dispenser, of a casing having a coin slot and into which the aforesaid shaft extends, a disc secured to the shaft within the casing, a stop adjustable circumferentially upon the disc, means movable longitudinally for locking the disc and shaft from rotation in the dispensing direction and permitting the rotation in the reverse direction, means operated by the insertion of a coin in the coin slot for releasing such locking means to permit the disc and shaft to operate in the dispensing direction and adapted to grip and hold the coin, and means actuated by the stop as the disc is rotated in the dispensing direction for releasing the coin.



1,688,353. MECHANISM FOR DRIVING AND CONTROLLING ELECTRICITY METERS. RICCARD PUDELKO, Zug, Switzerland, assignor to Landis & Gyr A.-G., a Joint Stock Company of Switzerland. Filed Apr. 11, 1927, Serial No. 182,949, and in Switzerland Apr. 20, 1926. 5 Claims. (Cl. 171—264.)

1. An electricity meter mechanism including in combination registering mechanism, a meter coil and its core, means driven thereby for driving the registering mechanism, a meter disc driven by the meter coil and core and connections whereby the meter disc controls the speed



of the driving means for the registering mechanism proportionately to the power consumption.

1,688,354. DIVIDED LAST. GEORGE M. RAY, Newton Center, Mass. Filed Nov. 12, 1926. Serial No. 148,057. 8 Claims. (Cl. 12—135.)

1. A last comprising separable heel and forepart sections having oppositely disposed transverse faces of separation extending obliquely from the last bottom adjacent the rear end of the shank portion rearwardly towards the top and then horizontally, in approximate parallelism with the heel portion of the bottom, to the back end of the last, and means movable to lock said sections against separation when in normal relation.

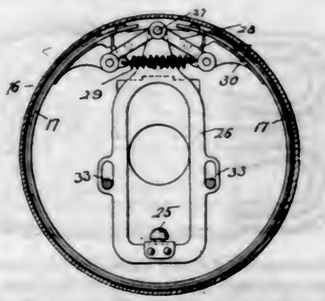
1,688,355. MEANS AND METHOD FOR PRESERVING PRODUCTS FORMED OF RUBBER. THOMAS M. RECTOR, Rutherford, N. J., assignor to Vitapack Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 8, 1924. Serial No. 748,550. 2 Claims. (Cl 206—46.)

1. In combination, a closed rubber article containing an atmosphere composed substantially of inert gas, a sealed container enclosing the rubber article, and an atmosphere of inert gas surrounding the rubber article within the container.

1,688,356. APPARATUS FOR DRAINING LAND. FREDERICK S. ROMNEY, New York, N. Y. Filed Oct. 20, 1925. Serial No. 63,802. 3 Claims. (Cl. 166—5.)

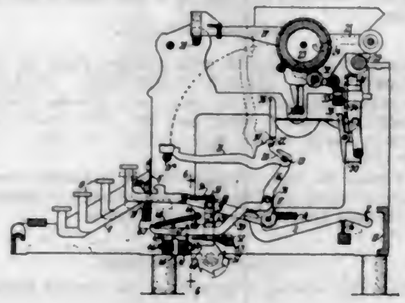
1. An apparatus for draining land embodying, in combination, a shell composed of a plurality of sections, each perforated substantially over its entire area, a point hav-

ing a connection with the lower end of the shell, an imperforate pipe supported axially within said shell sections and spaced therefrom to provide between the pipe



and shell a suction compartment, means for closing the upper end of this compartment, said pipe being movable axially to alternately connect with the point and with said suction chamber.

1,688,357. SULPHUR OF A HIGH DEGREE OF DISPERSION AND PROCESS OF PREPARING SAME. HANS SCHRADER, Essen-Bredeney, and HAROLD SCHOELLER, Essen, Germany. Filed Aug. 14, 1924, Serial No. 731,997, and in Germany Aug. 16, 1923. 3 Claims. (Cl. 23—227.)

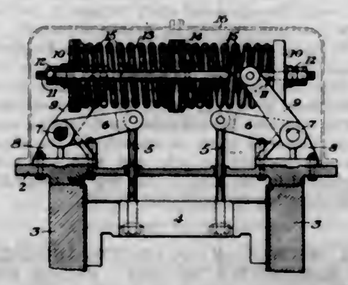


1. Process for the production of sulphur of a high degree of dispersion which consists in dispersing sulphur vapors by means of a gas comprising ammonia, and separating the sulphur from the resulting fume.

1,688,358. VEHICLE BRAKE. FREDERIC W. SLACK, Cleveland, Ohio, assignor, by mesne assignments, to The Peerless Motor Car Corporation, Cleveland, Ohio, a Corporation of Virginia. Filed Apr. 14, 1924. Serial No. 706,319. 7 Claims. (Cl. 188—194.)

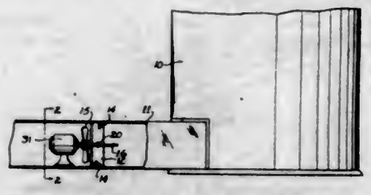
3. In combination with a vehicle having a movable steering wheel, a king pin upon which the steering wheel is mounted to turn, a brake drum carried by the wheel, a brake member for engaging the drum, a brake applying member having an operating part adjacent the axis of the king pin, and means positioned within the drum and connecting said brake applying member to said brake member so as to compensate for mis-alignment between the operative end of said brake applying member and the axis of the king pin.

1,688,359. TYPEWRITING MACHINE. HERBERT H. STEELE, Lynbrook, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 18, 1926. Serial No. 136,230. 35 Claims. (Cl. 197—17.)



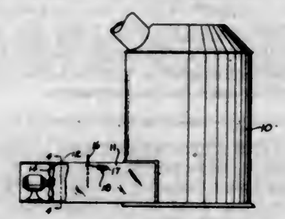
1. In a typewriting machine, the combination of a type-bar mechanism, a disconnected key-lever, a coupler mounted upon the key-lever and connectible with a part of the type-bar mechanism when the key-lever is depressed, and a constantly revolving power-device operative to convey a throw to the depressed coupler to actuate the type-bar, the coupler being self-releasing from said power-device, and the key-lever and type-bar mechanism being returnable to normal position independently of the revolving power-device.

1,688,360. PROCESS OF WELDING. GEORGE N. STEIGERWALD, Philadelphia, Pa., assignor to The Union Trust Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 23, 1923. Serial No. 627,117. 5 Claims. (Cl. 219—10.)



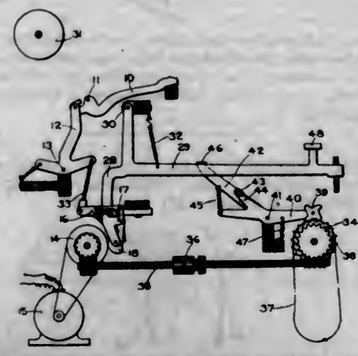
5. The process of welding ferrous articles which comprises placing the articles in substantial contact, welding a seam between said articles along the path of contact thereof whereby to integrally unite said articles, permitting the metal of said seam to solidify, and subsequently retracing said seam with a carbon arc with sufficient heat to melt the surface thereof and to relieve internal stresses and improve the characteristics of the metal of the body of said seam.

1,688,361. COUNTERBALANCE. HOWARD H. TALBOT, Pittsburgh, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 16, 1923. Serial No. 657,697. 5 Claims. (Cl. 74—71.)



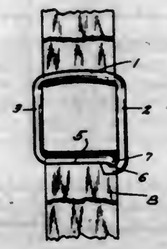
1. A counterbalance including an arm and a connection thereon to the object to be counterbalanced, whereby a load moment is set up, an arm and a spring connected thereto, the arms being adapted to vary in effective length, whereby the counter-moment is maintained substantially equal to the load moment.

1,688,362. HEATING AND VENTILATING APPARATUS. ALBERT R. TEARE, Lakewood, Ohio, assignor to James C. Miles, Cleveland, Ohio. Filed Jan. 23, 1928. Serial No. 248,627. 6 Claims. (Cl. 126—110.)



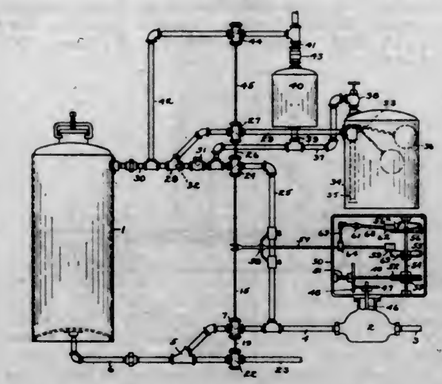
1. The combination of a heating chamber having an air inlet thereto, a fan and a damper associated with the inlet, an electric motor for operating the fan, a switch in the motor circuit, a member for actuating the damper, and means for preventing closing of the switch until the member is moved a predetermined amount in one direction.

1,688,363. HEATING AND VENTILATING APPARATUS. ALBERT R. TEARE, Lakewood, Ohio, assignor to James C. Miles, Cleveland, Ohio. Filed Jan. 26, 1928. Serial No. 249,571. 3 Claims. (Cl. 126—110.)



1. In combination with the heating chamber of a hot air furnace having an air inlet conduit leading thereto, of a motor driven fan associated with the conduit and arranged for forcing air under pressure through the conduit into the heating chamber, said conduit having an opening admitting air into that portion between the fan and heating chamber, and a closure for said opening, said closure embodying means operative to maintain it in open position against pneumatic pressure of the fan but inoperative to open it against said pneumatic pressure.

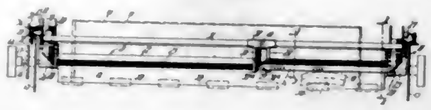
1,688,364. AUTOMATIC TYPEWRITER. RUSSELL G. THOMPSON, Rochester, N. Y., assignor to North East Appliances, Inc., Rochester, N. Y., a Corporation of New York. Filed Dec. 3, 1926. Serial No. 152,484. 1 Claim. (Cl. 197—20.)



In an automatic typewriter, the combination of a series of key levers, a series of printing instrumentalities corresponding to said key levers but independent thereof, a series of power-operable actuators connected with the respective printing instrumentalities and selectively controlled by said key levers, a key on each key lever whereby the lever may be manually moved to throw the corresponding actuator into operation, and power actuated mechanism operable automatically upon the key levers to move them in a predetermined sequence.

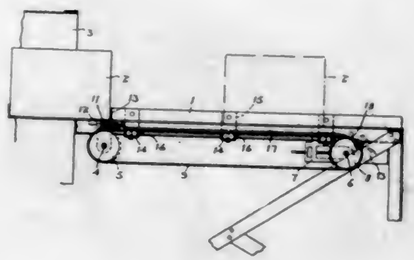
1,688,365. BALE-TIE BUCKLE. JAMES A. TODD, Attalla, Ala., assignor to Compress Buckle Company, Fort Worth, Tex., a Corporation of Texas. Filed May 10, 1926. Serial No. 108,002. 9 Claims. (Cl. 24—26.)

1. A bale tie buckle formed of bent wire forming a closed end, sides and inturned free members adapted to be received in the bight of the bale tie and normally spaced to form the open end of the buckle, one of said members being substantially shorter than the other and adapted to sustain at its end adjacent to a buckle side the load strain on the longer tie engaging member when in service.



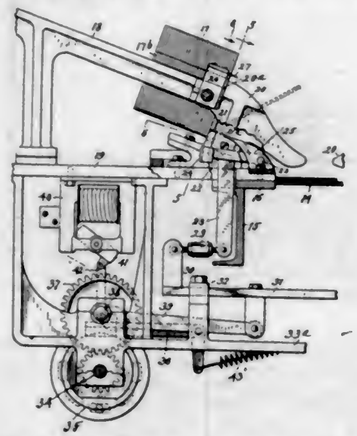
1,688,366. WATER-SOFTENING DEVICE. JOSEPH J. TOMKINSON, Fort Wayne, Ind. Filed Sept. 30, 1926. Serial No. 138,668. 2 Claims. (Cl. 210—24.)

1. The combination of a main tank having water softening materials therein, a conduit adapted to admit water to be softened to the main tank, a conduit for the discharge of softened water from said tank, a conduit for the discharge of waste products from said tank, a branch conduit communicating with the first named conduit and with the main tank, a brine tank, a conduit leading from the brine tank and communicating with the branch conduit through which brine is adapted to flow under the influence of water flowing in the branch conduit, an auxiliary



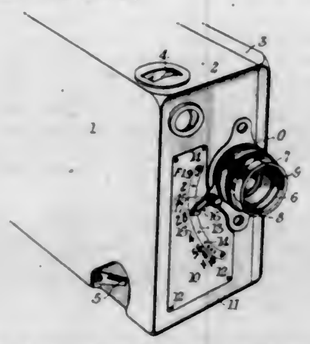
tank having water softening materials and a discharge conduit for softened water, a conduit communicating with the branch conduit and with both the auxiliary tank and the brine tank, valves to contol the several conduits, pivoted means having connection to the valves for operating them simultaneously, and means to actuate the pivoted means comprising a revoluble cam engaging the pivoted means adapted to permit the same to rock in one direction to cause the valves to operate to close off the inlet of water to be softened and the soft water discharge and open the other conduits, means to rock the pivoted means in the opposite direction to reverse the movement of said valves and means driven by the water flowing into the main tank and operatively connected to the cam and to the last mentioned means.

1,688,367. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed July 23, 1925. Serial No. 45,530. 23 Claims. (Cl. 197—153.)



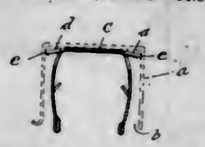
23. In a typewriting machine, the combination with a carriage, typing elements, and ribbon-fields of different characteristics, of a ribbon-field reverser movable with the carriage and movable independently along the carriage to predetermine the point when the reversal of the ribbon-fields shall take place, said ribbon-field reverser being operative to present in longitudinal alignment different fields of the ribbon, whereby two different colors may be typed upon the same line of print within typing areas predetermined by the setting of the ribbon-field reverser.

1,688,368. BOTTLE-CRATE FEED MECHANISM. CHARLES W. WALKER, Toronto, Ontario, Canada, assignor to Walker-Wallace Limited, Toronto, Canada. Filed Apr. 15, 1926. Serial No. 102,326. 3 Claims. (Cl. 198—170.)



1. In a bottle crate feed mechanism, the combination with flapped crate guides adapted to receive and slidably support the crates, of a pair of endless belts arranged adjacent to said guides, an angle bar hinged'y supported between said belts, and a fixed guide arranged parallel with said crate supporting guides adapted to engage the lower flange of the angle bar to hold the other flange in a vertical crate engaging position throughout the longitudinal travel of the endless belts, said fixed guide being adapted to release the angle bar allowing it to swing backward free of engagement with the crate at the end of the longitudinal movement.

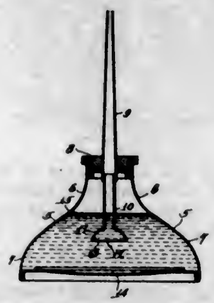
1,688,369. AUTOMATIC FEED MECHANISM. ALFRED R. WILLARD, East Cleveland, Ohio, assignor to Willard Storage Battery Co., Cleveland, Ohio, a Corporation of West Virginia. Filed Mar. 26, 1926. Serial No. 97,552. 19 Claims. (Cl. 198—20.)



1. In a feed mechanism for supplying grids and the like to a machine or device for operating thereon, a conveyor for the grids, two feed magazines, and means for supplying the grids alternately from the two magazines.

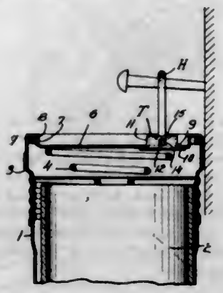
1,688,370. LENS ATTACHMENT FOR PHOTOGRAPHIC APPARATUS. OTTO WITTEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 11, 1928. Serial No. 245,904. 24 Claims. (Cl. 95—2.)

1. In photographic apparatus, the combination with a mount including an adjustable diaphragm, of an attachment adapted to engage the mount, and means on the attachment adapted to engage the diaphragm to prevent adjustment thereof.



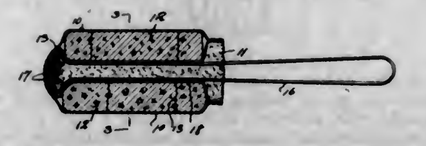
1,688,371. WINDOW-GLASS CHANNEL. EDWIN W. M. BAILEY, Amesbury, Mass. Filed June 30, 1927. Serial No. 202,650. 6 Claims. (Cl. 296—44.5.)

1. A sheet metal window glass channel for a window casing groove, composed of a base and two sides and having a pair of tongues formed therewith and projecting oppositely



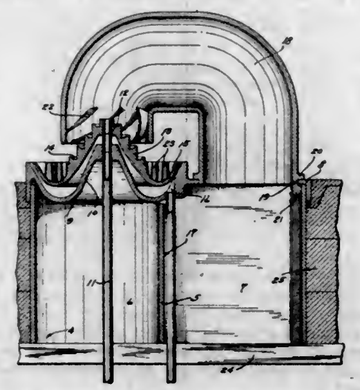
from the base beyond the sides in position for yieldable engagement with the sides of a casing groove as the channel is forced towards the bottom thereof.

1,688,372. OILER. EDWIN H. BARKER, Moylan, Pa. Filed Dec. 1, 1925. Serial No. 72,441. 5 Claims. (Cl. 221—48.)



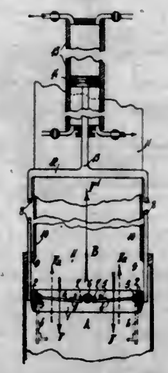
1. In an oil can, a can body in combination with a closure for the body, a spout passing through the closure and an extension from the spout in fluid communication therewith, terminating at a height from the bottom corresponding approximately with the horizontal plane which separates the interior capacity of the can into equal volumes.

1,688,373. BATTERY HAND LAMP. HERBERT F. BEEBE, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed Apr. 25, 1927. Serial No. 186,398. 7 Claims. (Cl. 240—10.5.)



2. In a hand lamp, the combination of a battery casing, a cap secured to one end of said casing, a central depression in the end of said cap, a member rotatably secured within said depression near one side thereof, a hook hingedly secured to said member, and means on the wall of said depression opposite said member for releasably retaining said hook within said depression.

1,688,374. BATH MITT. ALFRED W. BELFRY, Detroit, Mich. Filed Nov. 19, 1927. Serial No. 234,465. 2 Claims. (Cl. 15—227.)

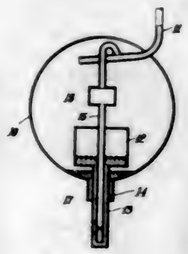


1. A bath mitt formed of an outer layer of Turkish toweling, a lining and pads of spongeous material inserted between the lining and the outer layer of the material on each face of the bath mitt.

1,688,375. OIL BURNER. CLARENCE A. BERKINS, Minneapolis, Minn. Filed Oct. 18, 1926. Serial No. 142,395. 4 Claims. (Cl. 158—91.)

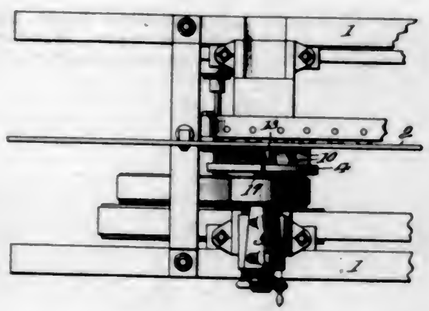
1. An oil burner comprising a base provided with an air passage and offset therefrom with an annular bowl, of an oil delivery pipe extended axially through said bowl, a generating cone supported by the upper end of said oil delivery pipe, the latter serving to deliver oil to the top of said cone, and a supplemental annular bowl formed integral with said generating cone, said generating cone and supplemental bowl being spaced from said lower bowl.

1,688,376. SYSTEM OF PROPULSION FOR SHIPS. MAXIME AUGUSTE LÉON BIDOIRE, Paris, France. Filed July 16, 1926, Serial No. 122,848, and in Germany Aug. 17, 1925. 2 Claims. (Cl. 115—31.)



1. In a system of propulsion for ships, in combination, a frame mounted for reciprocation in a water conduit formed in the ship, a pair of shutters pivotally mounted at opposite sides of the frame extending towards each other and having their free ends spaced, a stop for the shutters comprising a rod extending parallel to the axis of the shutters and having lateral projections adapted to engage the free ends of the shutters, and means for rotating the rod on its axis whereby said projections can be brought opposite either side of the free ends of said shutters.

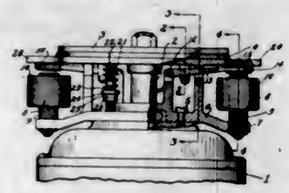
1,688,377. EVAPORATOR FOR REFRIGERATING APPARATUS. LAWRENCE BRUEHL, Brooklyn, N. Y., assignor to Gas Refrigeration Corporation, Scranton, Pa., a Corporation of Delaware. Filed Jan. 4, 1927. Serial No. 158,845. 8 Claims. (Cl. 62—118.)



1. An evaporator for an absorption refrigerating system including a main evaporator vessel, a gas outlet conduit, and a compartment enclosed within said vessel whereby

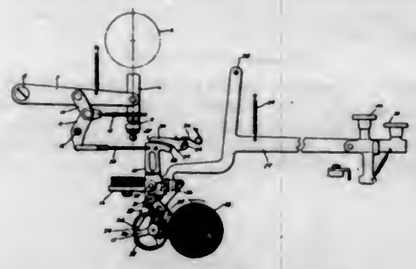
the compartment is protected from direct heat interchange with the medium surrounding said vessel, said

compartment having restricted communication with the lower part of said vessel and open communication with said conduit.



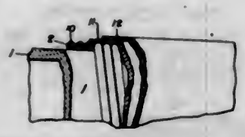
1,688,378. BUFFER FOR MACHINES FOR FINISHING FLOORING. ELMER C. DITTMAR, Williamsport, Pa., assignor to The Cromar Company, Williamsport, Pa., a Corporation of Pennsylvania. Filed Sept. 14, 1921. Serial No. 500,657. 8 Claims. (Cl. 51—193.)

1. A buffing wheel for wood finishing machines comprising a hub having a disk provided with a marginal flange, the face of said hub being provided with an annular rib spaced from the flange provided with radial grooves, a series of wiping devices disposed in said grooves, segmental locking members disposed within said annular rib and adapted to engage said wiping devices, wiping devices arranged between the segments of said segmental members and means for engaging the outer wiping devices for forcing the same into engagement with the segmental members for holding said wiping devices in position.



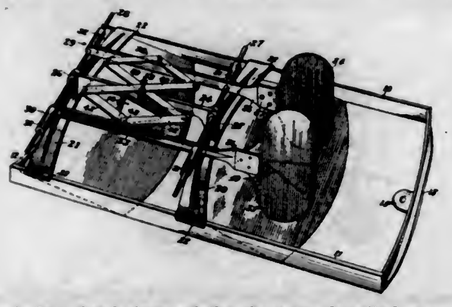
1,688,379. ELECTRICALLY-RELEASED BRAKE. JOHN W. DODD, Brookline, Mass., assignor to George T. McLauthlin Company, Boston, Mass., a Corporation of Rhode Island. Filed June 3, 1925. Serial No. 34,522. 5 Claims. (Cl. 188—171.)

5. In combination with a rotary shaft, of a disk fixed to said shaft, a plate on each side of said disk relatively movable axially of said shaft to clamp and release said disk therebetween, means for holding one of said plates against rotation, pins extending from said plate through the other of said plates beyond the periphery of said disk, springs surrounding said pins and bearing between abutments thereon and said other plate and acting to press said plates toward each other, electromagnetic devices carried by said other plate, levers pivoted to said plate and having armatures for said devices, said levers



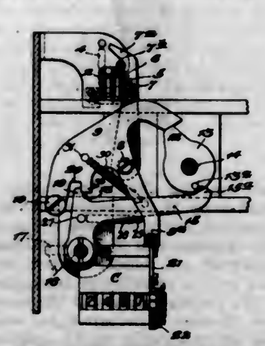
bearing on the said pins and removed by the energization of said devices to force said plates apart to release said disks, and means for limiting the swing of said levers in the opposite direction.

1,688,380. POWER MECHANISM. FARNUM F. DOBBEY, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 18, 1924. Serial No. 756,809. 11 Claims. (Cl. 197—17.)



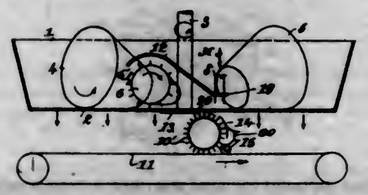
11. In a typewriter or the like, the combination, with a part to be moved, and a manually-operable key, of a power-driven mechanism operable intermittently; means, controlled by said key, for throwing the power-mechanism into operation at each depression and again at each return of the key; and connections, between the power-mechanism and said part, for controlling movements of said part in opposite directions at successive operations of the power mechanism.

1,688,381. ELECTRICAL RESISTANCE. HARRY MELVILLE DOWSETT, Colchester, and HERBERT BENJAMIN TILLEY, Chelmsford, England, assignors to The Radio Corporation of America, New York, N. Y. Filed June 16, 1925, Serial No. 37,461, and in Great Britain June 17, 1924. 5 Claims. (Cl. 201—64.)



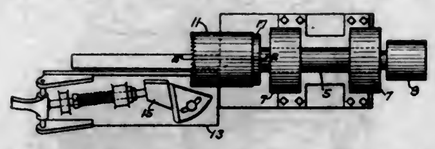
3. The process of manufacturing an electrical resistance unit which consists in winding an enamelled wire covered with absorbent material about a body of refractory material, impregnating the resistance unit so formed with enamel and stoving it at a temperature between 130° C. and 170° C. and subsequently applying a second coating of enamel to the resistance unit and stoving it at a temperature between 230° and 270° C.

1,688,382. SINUS HEAD CLAMP. DAVID M. GHRIST, Glendale, Calif. Filed Oct. 18, 1927. Serial No. 226,836. 6 Claims. (Cl. 250—34.)



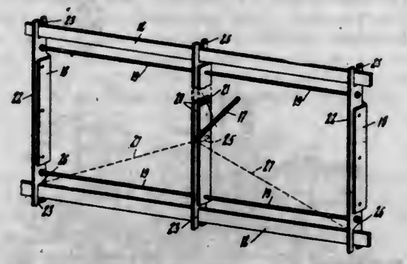
1. In a head clamp of the character described, a supporting frame, a pair of head supporting plates carried by said frame, and a head clamping element associated with said frame and operable to clamp a head disposed on either of said supporting plates.

1,688,383. INITIAL-CHARGE-INCREASING MECHANISM. JULIUS GLUCK, New York, N. Y., assignor, by mesne assignments, to Ohmer Fare Register Company, Dayton, Ohio, a Corporation of New York. Filed Feb. 1, 1923. Serial No. 616,367. 11 Claims. (Cl. 235—30.)



1. An initial charge increasing mechanism for flag controlled taximeters including in combination with a fare drum and the operating wheel therefor, of an actuator for moving said wheel through an arc sufficient to move the fare drum ahead one numeral, and manually actuated means for operating said actuator including an operator's knob on the outside of the meter casing and means for locking said knob after being once manipulated until the flag of the meter has been again reset.

1,688,384. APPARATUS FOR SOFTENING, REFINING, AND CLEANING ENTANGLED AND SHORT-FIBER MATERIAL. EMIL GMINDER, Reutlingen, Germany. Filed Feb. 23, 1926, Serial No. 90,165, and in Germany Feb. 23, 1925. 8 Claims. (Cl. 19—65.)

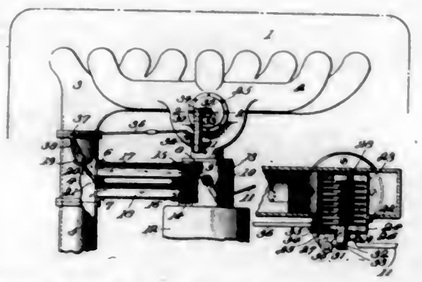


1. Apparatus for softening, refining and cleaning entangled and short fiber material, comprising a container adapted to receive the fiber material, a rotary heavy body adapted to be revolved in pressing contact with the fiber material, and means for turning and entangling the fiber material.

1,688,385. WOODWORKING MACHINE WITH TUBULAR CUTTER. NICHOLAS L. GULLIFORD, Peabody, Mass., assignor to Gregory & Read Company, Lynn, Mass., a Corporation of Massachusetts. Filed Mar. 19, 1926. Serial No. 96,042. 7 Claims. (Cl. 12—47.)

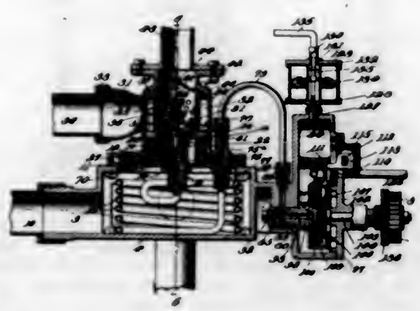
1. In a machine of the class described, in combination with a tubular saw, a mounting therefor adapted to be received within the same and having means expansible into gripping relation to the interior of the saw, said mounting also comprising an end plate forming a wall across the interior of the tube and cutters mounted on said plate.

1,688,386. WINDSHIELD CLEANER. PATRICK J. HALLORAN, Boston, Mass. Filed May 8, 1928. Serial No. 276,045. 3 Claims. (Cl. 15—251.)



1. A windshield cleaner comprising horizontally extending parallel upper and lower tracks in fixed relation to a windshield frame, a rock-shaft journaled in a bearing above the windshield pane, a crank arm oscillatable by the rock-shaft; an oblong grid reciprocable in a rectilinear path by oscillating movements of the crank arm, and provided with a plurality of wipers bearing on the windshield pane, said grid including a middle cross-bar, wiper-carrying end cross-bars, each cross-bar being provided at its ends with runner portions slidably engaged with the tracks, and tie-rods connecting the cross-bars and maintaining the middle cross-bar midway between the end cross-bars; and connecting means adapted to impart reciprocating movements from the crank-arm to the grid, said means including a terminal on the swing end of the crank-arm, and abutments on the middle cross-bar with which said terminal is slidably engaged, said connecting means being located midway between the end cross-bars, so that the weight of the grid is distributed and frictional resistance to reciprocating movements of the grid on the tracks is reduced to a minimum.

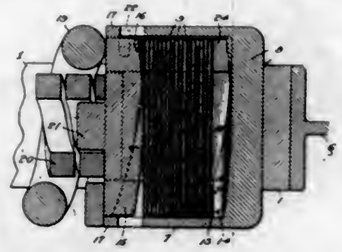
1,688,387. THERMOSTATIC HEAT CONTROL FOR INTERNAL-COMBUSTION ENGINES. WALTER G. HEGINBOTTOM and JACOB RICHARD FRANCIS, Flint, Mich. Filed Sept. 17, 1920. Serial No. 411,009. 1 Claim. (Cl. 123—122.)



An internal combustion engine having an exhaust pipe, intake manifold and charge forming device connected thereto, a heater arranged to heat the charge in its passage from the charge forming device to the engine, a cup disposed in the induction pipe, a cover for closing said cup having a tubular nipple, a valve disposed in the ex-

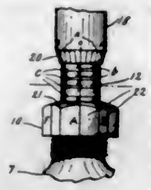
haust pipe, a thermostat disposed in said cup having a stem working in said tubular nipple, a bearing formed on the cover of said cup, a vertical shaft mounted in said bearing, a bifurcated arm fixed on said shaft having a

connection with the stem of said thermostat and an adjustable connection between said shaft and said valve for regulating the temperature of the charge delivered to the internal combustion engine.



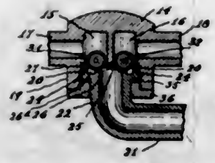
1,688,388. CHARGE-FORMING DEVICE FOR INTERNAL-COMBUSTION ENGINES. GEZA HORVATH, Highland Park, Mich. Filed Nov. 3, 1919. Serial No. 335,342. 18 Claims. (Cl. 123—133.)

1. A charge forming device for internal combustion engines comprising a housing provided with open sides, said housing being provided with an outlet, plates secured to the open sides of said housing having exhaust pipes connected thereto through which the exhaust gases of the engine are adapted to pass, a fuel container arranged within said housing, a plate arranged over the top of said housing provided with a stem having fuel passages communicating with the fuel container, a casting arranged over said plate having an air chamber and provided with a tubular portion forming a mixing chamber, a valve seated upon the upper end of said stem, means for adjusting said valve and a disk nozzle arranged over said stem having a plurality of jets.



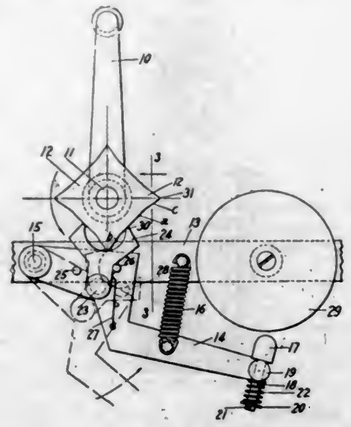
1,688,389. DRAFT GEAR. BYERS W. KADEL, Baltimore, Md., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed Dec. 13, 1923. Serial No. 680,410. 20 Claims. (Cl. 213—22.)

1. A shock absorbing mechanism for railway draft rigging involving a housing having an interior portion concaved to form a spring deflecting surface, a plurality of spring plates mounted in said housing and adapted to be flexed respectively on lines extending diagonally across said plates, and means for transmitting the deforming forces to said plates, said means including a follower having a convex face adjacent the outermost of said plates, and springs engaging said follower, one of said springs being wound to relatively low stress to form a relatively solid



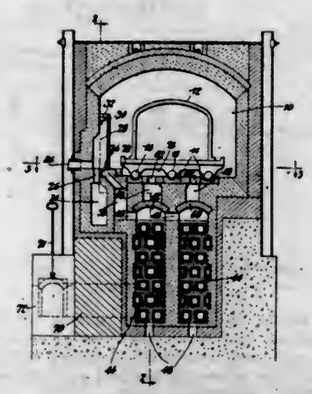
member for directly transmitting the forces to the plates, and the other of said springs being wound to a high stress for taking the initial shocks and effecting the release of the gear.

1,688,390. GRADUATED VALVE. LUIGI LANZA, Oakland, Calif. Filed July 5, 1927. Serial No. 203,321. 3 Claims. (Cl. 116—125.)



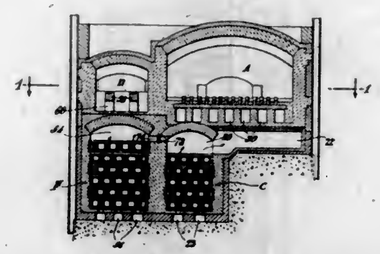
3. In a valve provided with a stem having a valve member thereon and being in a screw-threaded relation to the valve body, a gland having virtually concentrically thereon a tubular member and being adjustably connected with the valve body, the tubular member being longitudinally provided with a plurality of indicating marks, extending over the juncture portion of the member with the gland and over the sides of the latter, and also being annularly provided with indicating marks equidistantly spaced from one another in correspondence with the threads on the valve stem; and a tubular element adjustably attached to the stem so as to be adapted to rotate freely around the gland member, the tubular element having spaced indicating marks circumferentially thereon, so that, by the relation of the respective longitudinal mark and the annular marks on the gland member, the closed position of the valve member, or the degree of valve opening, may be accurately indicated.

1,688,391. FAUCET. JOHN MAGAZZINI, New York, and FRANCIS J. DOWD, Suffern, N. Y. Filed Apr. 12, 1927. Serial No. 183,084. 10 Claims. (Cl. 277—20.)



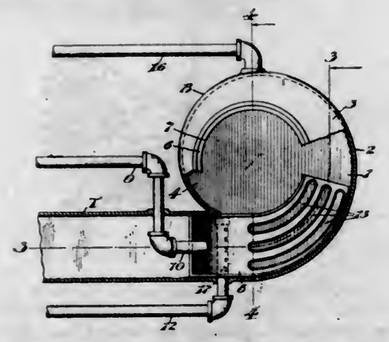
9. In a device of the kind described, a valve casing having chambers provided with outlet valves including ball valve members, and a combined discharge nozzle and valve actuating means cooperating with said ball valve members.

1,688,392. BELL-RINGING MECHANISM. THOMAS C. MALEY, Dayton, Ohio, assignor to Ohmer Fare Register Company, Dayton, Ohio, a Corporation of New York. Filed June 28, 1926. Serial No. 119,064. 7 Claims. (Cl. 116—167.)



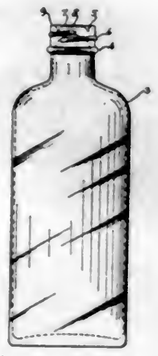
7. In a bell ringing mechanism, a rotatable cam, a lever, a detent carried by said lever and serving as a tripping mechanism, a bell, a beliclapper carried by said lever, means whereby said detent is tripped and said lever urged rapidly toward said bell, means whereby the motion of said lever is arrested before the clapper reaches the bell, and spring means to permit said clapper to touch said bell and to cause said clapper to then be withdrawn from contact with said bell.

1,688,393. FURNACE. FORREST WILLIAM MANKER, Jackson Heights, N. Y., assignor to The Surface Combustion Company, Inc., Toledo, Ohio, a Corporation of New York. Filed Sept. 12, 1925. Serial No. 55,930. 6 Claims. (Cl. 263—28.)



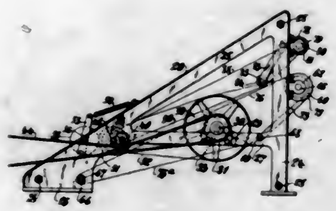
6. The combination with a heating chamber, of a work-holding carriage within the chamber, means for confining said carriage to a path of travel which is nearer one side wall of the chamber than the other, a wall extending upwardly from the floor of the heating chamber in spaced relation to that side of the chamber which is the more remote from said carriage, said wall terminating short of the roof of said chamber and constituting with the adjacent side wall a combustion chamber, and means for entering combustible gases into the combustion chamber.

1,688,394. SHEET AND PAIR HEATING FURNACE. FORREST WILLIAM MANKER, Jackson Heights, N. Y., assignor to The Surface Combustion Company, Inc., Toledo, Ohio, a Corporation of New York. Filed Sept. 12, 1925. Serial No. 55,931. 4 Claims. (Cl. 263—17.)



2. In a furnace, the combination of a heating chamber having an opening in one end wall over which combustible gases may be entered into the chamber and having a work-door in the other end wall, means for conducting the products of combustion from the chamber and beneath the floor thereof comprising a conduit extending transversely beneath the floor and opening into the chamber at the corners on either side of the work-door, branch conduits leading from said conduit toward the opposite end of the chamber, a recuperator through which the products of combustion flow before passing to the stack, and conduits leading from the recuperator to and through the end wall over which the combustible gases pass whereby air preheated by the recuperator may mingle with said gases to support secondary combustion thereof.

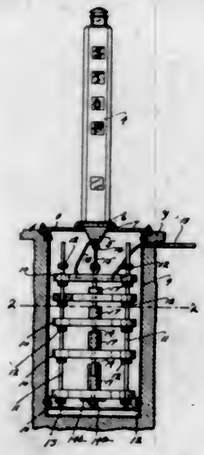
1,688,395. OIL BURNER. SIDNEY E. MEYERS, Buffalo, N. Y., assignor, by direct and mesne assignments, to Melco Engineering Corporation, a Corporation of New York. Filed May 29, 1924. Serial No. 716,659. 3 Claims. (Cl. 158—28.)



1. An oil burner comprising a chamber having a helically curved vertical wall adapted to cause the flame to whirl and after leaving the burner to spread, a top wall provided with a circular fuel discharge opening arranged co-axially with the axial point of origin of said vertical wall, an oil vaporizing element so arranged in said chamber that it is raised by the radiated heat of the mixture burning in said chamber to oil vaporizing temperature, said vaporizing element being located at one end of the helically curved wall, means for depositing oil on said vaporizing element and an air trunk communicating with said chamber and extending tangentially thereto and arranged to direct the current of air over the vaporizing element to produce a scrubbing action on the same.

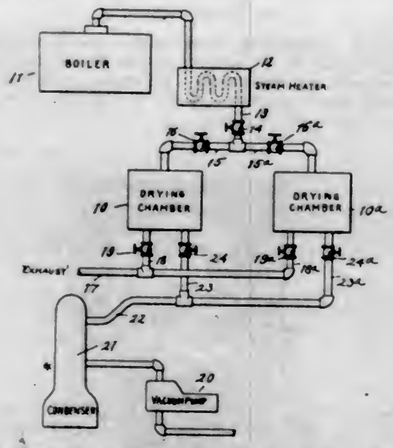
1,688,396. BOTTLE. JAMES MORRISON, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 4, 1925. Serial No. 48,079. 4 Claims. (Cl. 215—31.)

1. A bottle comprising a neck portion having a transverse wall at its outer end, said wall formed with a restricted aperture and an annular groove concentric with the aperture in the outer face of the wall, the outer wall of said groove being of higher elevation than the remaining portion surrounding the aperture.



1,688,397. DELIVERY APPARATUS. HERBERT W. ORNDOFF, New Orleans, La., assignor to The E. V. Benjamin Company, Inc., New Orleans, La., a Corporation of Louisiana. Filed Sept. 30, 1926. Serial No. 138,699. 3 Claims. (Cl. 198—165.)

1. In a delivery apparatus the combination of a delivery belt, a moving clamping band making an angle with the delivery belt to form a nozzle shape space, a pair of clamping pulleys one bearing on the other adjacent to said belt and band, means to rotate one of said pulleys and pliable means to hold the second pulley against the rotating pulley.

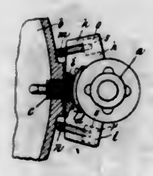


1,688,398. TRAFFIC SIGNAL. JOHN RANK, Minneapolis, Minn., and HENRY RANK, Pontiac, Mich. Filed Dec. 11, 1926. Serial No. 154,118. 7 Claims. (Cl. 40—145.)

1. In a traffic signal, the combination with a post set for rocking movements to and from an upright normal position, and a plurality of downwardly pulling elements arranged in a series for accumulative action and certain of which are normally inactive but which, when brought into action, aid in moving said post backward to its upright position, and connection to said post operative

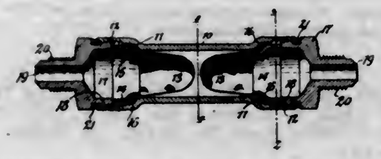
on said downwardly pulling elements to progressively bring the same into action when said post is rocked from its upright position.

1,688,399. STORAGE-BATTERY PLATE AND METHOD OF PERMANIZING THE SAME. WILLARD L. REINHARDT, East Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Oct. 11, 1922, Serial No. 593,905. Renewed Mar. 9, 1928. 8 Claims. (Cl. 136—19.)



1. The method of permanizing storage battery plates, which comprises treating the plates with a solution which when dry will leave a moisture excluding coating on the plates, and then subjecting the plates to the heating action of a highly heated inert gas.

1,688,400. LOCK FOR RADIATOR VALVES AND THE LIKE. WILLIAM K. SIMPSON, Waterbury, Conn., assignor to Hoffman Specialty Company, Waterbury, Conn., a Corporation of Illinois. Filed Dec. 16, 1926. Serial No. 155,326. 9 Claims. (Cl. 137—122.)

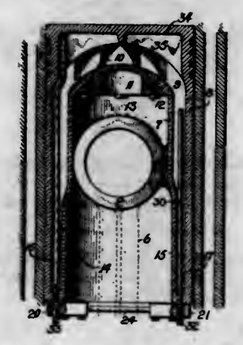


3. The combination of a supporting structure and an article having a screw threaded nipple entering and engaged with said supporting structure, a locking block

arranged between said article and structure, set screws mounted in the block arranged to be forced against an adjacent surface of the supporting structure, the blocks being arranged to apply the reaction of said screws against

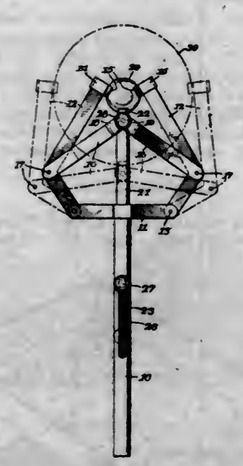
the article and having means interposed in the path of a part of said article which is eccentric to the axis of its screw threaded nipple for resisting independent rotation of the article.

1,688,401. STRAINER. FRANKLIN G. SLAGEL, Buffalo, N. Y., assignor to Fedders Manufacturing Company, Inc., a Corporation of New York. Filed July 5, 1927. Serial No. 203,305. 1 Claim. (Cl. 210—164.)



A strainer comprising a tubular casing having an inlet and an outlet and an internal annular shoulder, a cup shaped screen arranged in said casing, a tapering collar secured to the edge of said screen and having an annular shoulder facing the shoulder of said casing, a bushing engaging said collar and having a screw connection with said casing, and a washer interposed between the shoulders of said collar and said casing.

1,688,402. VENDING MACHINE. LANDON D. SMITH, Chicago, Ill., assignor to National Vending Service Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 28, 1924. Serial No. 709,365. 15 Claims. (Cl. 194—63.)

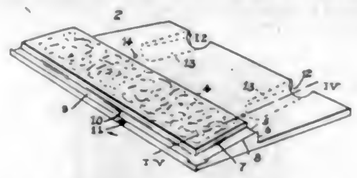


1. A vending machine comprising a casing adapted to contain material to be vended, a coin actuated discharge mechanism for discharging the material therefrom, and two coin returning devices adapted to act on the same coin for returning the coin to the customer.

1,688,403. PISTON FOR INTERNAL-COMBUSTION ENGINES. ELMER A. SPERRY, Brooklyn, N. Y., assignor to Sperry Development Company, Dover, Del., a Corporation of Delaware. Filed Jan. 14, 1922. Serial No. 529,314. 11 Claims. (Cl. 123—176.)

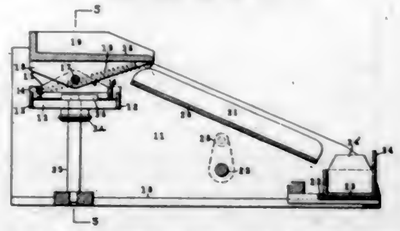
1. In combination, a piston adapted to reciprocate within a cylinder, a chamber within said piston and filled with fluid, a second cylinder in said chamber and a plunger in said secondary cylinder for causing circulation of the fluid.

1,688,404. LABORATORY APPARATUS. RUDI STARK, Chicago, Ill., assignor to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 29, 1927. Serial No. 187,580. 8 Claims. (Cl. 294—31.)



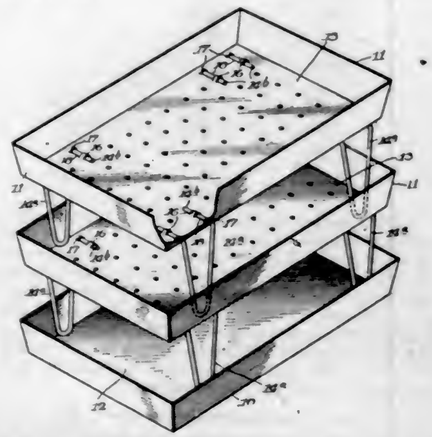
1. In a device of the class described, a tubular staff having a lengthwise slot, a cross bar on the upper end of the staff, a pair of levers fulcrumed to the cross bar on opposite sides of the staff, a gripping finger carried by each lever, a toggle connecting the levers above the cross bar and having a knee joint aligned with the staff, a third gripping finger carried by the toggle, a rod slidable in the staff and connected with the toggle, a spring urging the rod out of the staff, and an operating pin for the rod projecting through the slot in the staff.

1,688,405. WALL-VENEERING MATERIAL. WASHINGTON A. STOEHR, Reserve Township, Allegheny County, Pa. Filed Oct. 2, 1926. Serial No. 139,120. 12 Claims. (Cl. 20—5.)



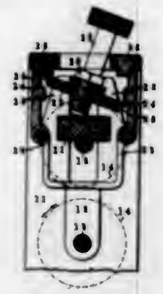
1. A sliding element for a wall comprising a backing plate having the lower portion of its front surface provided with an outward extending block portion to simulate

a building unit such as a brick, and the backing plate being provided with narrow portions at the end and along a horizontal side of the brick simulating the mortar bond



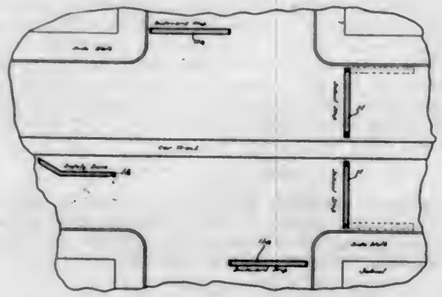
between adjacent building units, the outer face of the block portion being disposed in a plane diverging upwardly from the general plane of the backing plate.

1,688,406. PACKAGING MACHINE. LEVERETT W. TIFFANY, Winsted, Conn. Filed June 4, 1924. Serial No. 717,678. 8 Claims. (Cl. 163—8.)



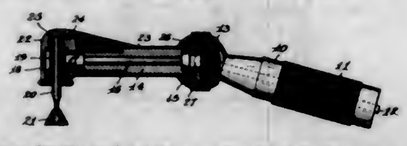
1. A packaging machine, including a hopper adapted to receive a mass of promiscuously disposed articles, means for vibrating said hopper to arrange the articles with their bodies substantially parallel to each other and to effect a discharge of said articles from said hopper, a tray adapted to receive said discharged articles, and means for vibrating said tray to rearrange the articles within the body of the same, said tray and hopper being vibrated in different directions.

1,688,407. OAT SPROUTER. JOSEPH WASTAK, Chicago, Ill. Filed Feb. 28, 1927. Serial No. 171,389. 6 Claims. (Cl. 47—14.)



1. An oat sprouter comprising a drip pan and a number of sprouter pans adapted to be placed one above the other to form tiers, each sprouter pan having a plurality of readily removbale legs adapted to extend into the next lower pan for a support, or to be removed so that all of the pans can be nested.

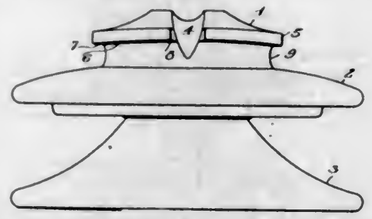
1,688,408. AUTOMATIC RELEASE FOR WRINGERS. WILLIAM WARNER BROWN, Oak Lane, Pa., assignor, by mesne assignments, to H. W. Butterworth & Sons Company. Filed Apr. 26, 1923. Serial No. 634,708. 12 Claims. (Cl. 68—32.)



1. In a wringer, in combination, a rotatable roll mounted in a wringer frame, a roll co-operating with said first roll and being mounted for rotary movement and for translatory movement laterally of the wringer frame upon occurrence of an abnormal load, means for holding said rolls in co-operative relationship, and means actuated by the lateral translatory movement of said movable roll, to release said roll holding means.

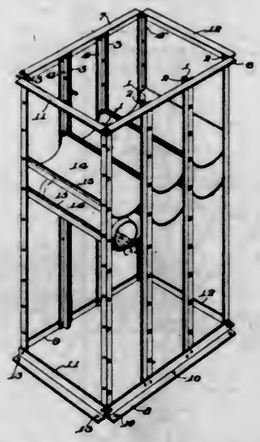
1,688,409. STREET SIGNAL FOR VEHICULAR TRAFFIC. JOHN A. CAMPBELL, Los Angeles, Calif. Filed May 2, 1925. Serial No. 27,460. 10 Claims. (Cl. 94—1.5.)

1. A flexible strip having an appreciable ridge forming thickness, and composed of wear resistant material provided with beveled edges; and means at the ends thereof for the removable attachment of said strips to a pavement.



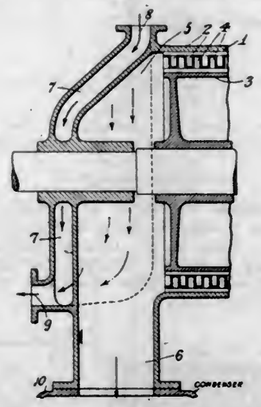
1,688,410. QUADRANGLE. HERMAN E. S. CHAYES and AUGUST P. JURGENSEN, New York, N. Y., assignors to Chayes Dental Instrument Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 21, 1925. Serial No. 10,775. 1 Claim. (Cl. 32—11.)

In a dental tool holder, an elongated body portion having a drive journaled therein, an enlarged head member at one end of the body portion, a tool-holding chuck journaled in the head member and extending substantially at right angles to the axis of the body portion, the head



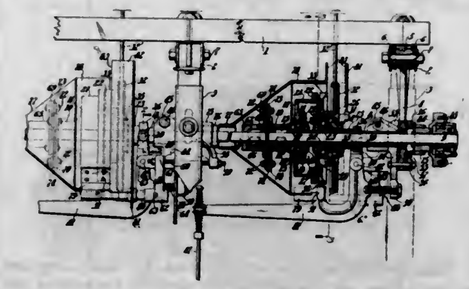
member being provided with an opening in its rearward face, a longitudinally movable sleeve member enclosing said body portion and provided with a forked locking device at its forward extremity, said locking device entering said opening to engage and lock a tool in said chuck, a flange at the rear extremity of the body portion, and a spring enclosing the body portion between said flange and the rearmost extremity of said sleeve, said spring acting normally to press the sleeve forwardly into locking position.

1,688,411. ELECTRICAL INSULATOR. WILLIAM S. COOK, Parkersburg, W. Va. Filed Aug. 3, 1923. Serial No. 655,428. 1 Claim. (Cl. 173—318.)



A turned insulator having a circular head and a circular skirt below the same of much greater diameter, the head being provided on its top with a transverse line wire groove in the vertical axis of the insulator and being further provided with an encircling circular flange forming a side wire groove between itself and the skirt, said flange being upwardly curved from points at the sides of the line wire groove to a point in alignment with the latter and intersecting the plane thereof.

1,688,412. GOLF-BAG RACK. EDWARD A. DARBY, Philadelphia, Pa. Filed July 13, 1927. Serial No. 205,292. 4 Claims. (Cl. 211—126.)

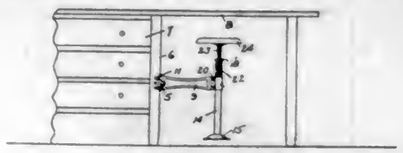


4. In a golf bag rack, the combination of a series of vertical tiers of rack elements, each element comprising a segment of a cylinder and having both its lateral and end edge portions reversely folded closely upon its body portion to reinforce the same against distortion, and each corner of each element being perforated through a reinforced portion of multiple thickness, angle-irons perforated in one flange and connecting the said elements of each tier, and means extending through the perforations of said elements and said angle-irons to secure the elements and angle-irons together, and the angle irons of adjacent tiers of a series being connected by the same means that connect said elements and angle-irons together.

1,688,413. METHOD OF AND APPARATUS FOR INCREASING THE VACUUM OF TURBINES. ALBERT DELAS, Paris, France, assignor to Delas Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 19, 1920, Serial No. 417,990, and in France Nov. 22, 1919. 3 Claims. (Cl. 60—95.)

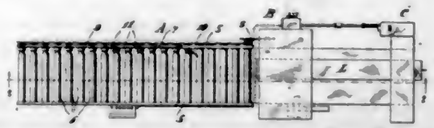
3. In combination, a condenser, a vapor-actuated turbine provided with means for conveying its exhaust to said condenser, and means forming a cooling jacket around at least a portion of said first named means, the inner wall of said jacket being of metal of comparatively high heat conductivity.

1,688,414. POWER TRANSMITTER. GEORGE M. EAMES, Bridgeport, Conn., and IRVING F. WEBB, Elizabeth, N. J., assignors to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed May 27, 1925. Serial No. 33,261. 12 Claims. (Cl. 192—110.)



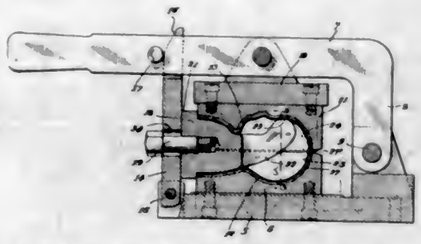
1. In a driving device for power-tables, a driving shaft, a hanger, a bearing-sleeve sustained by said hanger and embracing said shaft, a driving clutch-member journaled upon said bearing-sleeve and secured upon said shaft for rotation therewith, a driven clutch-member rotatably supported upon said bearing-sleeve, means for shifting the driven clutch-member lengthwise of said bearing-sleeve into operative engagement with said driving clutch-member, and means provided on said bearing-sleeve for preventing the transmission of the thrust of said shifting means to said driving shaft.

1,688,415. ADJUSTABLE STOOL. MARTIN FOX, Chicago, Ill., assignor to The Seng Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 6, 1925. Serial No. 7,232. 3 Claims. (Cl. 155—81.)



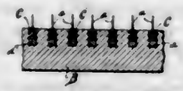
1. A stool comprising a hollow stem, a threaded collar member at the upper end thereof, a seat having a threaded stem adjustable in the collar member, a movable sup-

port comprising a sleeve in which the hollow stem is vertically slidable and a spring surrounding the hollow



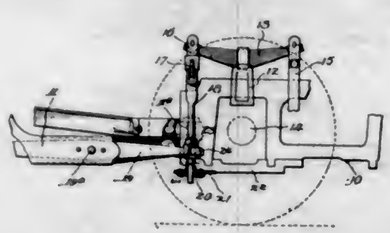
stem above the sleeve and engaging it and the collar tending to raise the stool with respect to the collar.

1,688,416. LUMBER FEEDING AND MANIPULATING MEANS. LEO J. GRUBMAN, Belle Harbor, and EDWIN A. GODLEY, New York, N. Y. Original application filed Mar. 26, 1923, Serial No. 627,595. Divided and this application filed May 9, 1924. Serial No. 711,974. 10 Claims. (Cl. 198—33.)



9. In a lumber feeding mechanism comprising means for supporting and conveying a board in a vertical plane, and means independent of the conveying means and caused by the movement of the board to automatically dispose said board in a horizontal plane without interruption of the continued feeding movement of the board.

1,688,417. MOLDING APPARATUS. LEO J. GRUBMAN, Belle Harbor, N. Y. Filed Dec. 16, 1925. Serial No. 75,678. 7 Claims. (Cl. 18—19.)

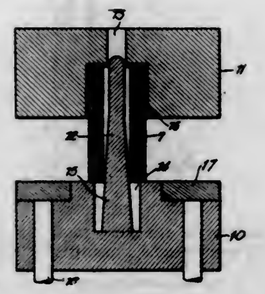


1. A molding apparatus consisting of stationary and movable mold sections, means for movably supporting the material to be molded, and means for operating the movable mold section to close the mold and simultaneously move said material supporting means to its final position relative to the mold sections, said means consisting of a pivoted lever carrying the movable mold section, and a pin fixed in said lever to coact with cam surfaces of the material support.

1,688,418. SAW CARD. WILLIAM L. HANCOCK, Dallas, Tex., assignor to The Murray Company, Dallas, Tex., a Corporation of Texas. Filed Sept. 1, 1927. Serial No. 216,916. 2 Claims. (Cl. 19—97.)

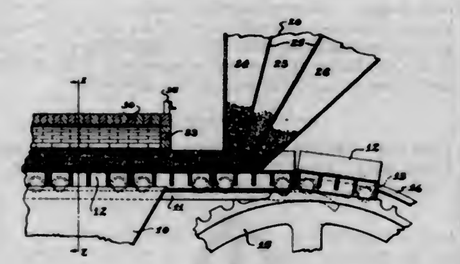
1. As a new article of manufacture, a saw card, comprising a non-metallic base, said base being provided on one face with a multiplicity of parallel slots; saw lengths set in said slots; a cement sheet filling the unoccupied outer part of the slots and securing the saws in the slots.

1,688,419. LOCOMOTIVE EQUALIZER RIGGING. CLARENCE B. HARRISON, Lima, Ohio, assignor to The Ohio Steel Foundry Company, Lima, Ohio, a Corporation of Ohio. Filed Sept. 15, 1927. Serial No. 219,580. 2 Claims. (Cl. 105—82.)



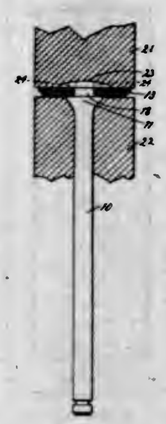
1. In a locomotive, a main frame, and a trailer truck pivotally connected for horizontal movement relative thereto, a pair of equalizer bars carried by said truck, equalizer rigging carried by said main frame including a pair of vertically disposed hangers guided for vertical movements on said frame, and connecting means permitting limited movement of each of said truck equalizer arms relative to their respective hangers in a direction substantially tangential to the pivotal axis of said truck.

1,688,420. PUMP BLEEDER. ARTHUR ROBINSON HEGAN, Dover, Del. Filed Jan. 21, 1928. Serial No. 248,439. 3 Claims. (Cl. 137—34.)



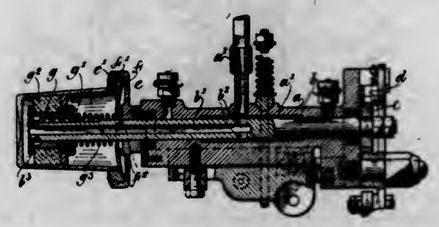
3. In combination, a pump casing having an opening; a U-shaped bracket having its extremities straddling the pump casing and provided with a straight bight portion; a stopper for insertion within the opening to close the same; a lever of angular contour with respect to its length pivotally mounted at the angle upon said bight portion; means for mounting the stopper on the end of one arm of the lever; and a U-shaped guide member fixed to the side of the pump casing, said guide having spaced sides extending perpendicularly from the said side and tangent to the lever, and said guide member provided with a bight portion spaced from the side of the casing to prevent the end of the other arm of the lever from striking the casing.

1,688,421. MAKING HUBS AND THE LIKE. HENRY S. HOLMES, New York, N. Y., assignor to Thomas E. Murray, Brooklyn, N. Y. Filed June 4, 1927. Serial No. 196,451. 3 Claims. (Cl. 29—174.)



1. The method of making a wheel hub having a longitudinal tapered bore which consists in forming a tubular blank with a welded longitudinal joint and forging such blank to form the cylindrical external shape and the tapered bore.

1,688,422. PROCESS OF TREATING EARTHY MINERALS. REED W. HYDE, Summit, N. J., assignor to Dwight & Lloyd Metallurgical Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 4, 1925. Serial No. 20,763. 7 Claims. (Cl. 22—4.)

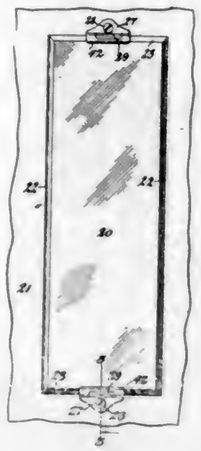


1. The continuous process of calcining finely divided alkaline earth carbonate material out of direct contact with solid fuel which consists in arranging said material in a previous moving layer in which the coarser particles are superimposed upon the finer particles, continuously passing currents of heated gases down through the entire portion of the layer undergoing calcination, whereby the heated gases are caused to contact with the coarser particles before the finer particles and the entire layer is heated to a temperature above the dissociation temperature of the carbonate and below the fusion temperature of the material to calcine the carbonate.

1,688,423. METHOD OF MAKING VALVES. ROBERT JARDINE, Detroit, Mich., assignor to Rich Tool Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 20, 1924. Serial No. 757,233. 4 Claims. (Cl. 29—156.7.)

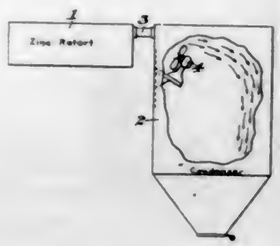
1. A method of securing valve heads to valve stems which consists in heating said stem, securing a head thereon while in an unheated condition by clamping the same between a shoulder and head formed on said stem while the same is hot, heating said stem and head and pressing said head and shoulder toward each other.

1,688,424. HOLDER FOR GLASSWARE, ETC. EDWARD J. KIEFER, Kew Gardens, N. Y. Filed Apr. 25, 1925. Serial No. 25,736. 8 Claims. (Cl. 51—253.)



1. A holder for hollow articles, comprising a flexible, flanged receiver, means for causing the sides of the flange to diverge outwardly normally, means to support the receiver, and means to press the article against the receiver to cause the flange sides to converge outwardly to cause the flange to grip the edge of the article.

1,688,425. FASTENER FOR GLASS PLATES. WILLIAM LA HODNY and FRANK X. KISITZ, Buffalo, N. Y., assignors to Standard Mirror Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed May 27, 1924, Serial No. 716,256. Renewed Sept. 17, 1927. 4 Claims. (Cl. 16—1.)



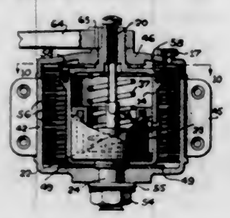
1. A fastening for securing a glass plate having a notch in its edge, to a support, comprising a clip having

a base adapted to be secured to said support and arranged parallel with said plate, and a hook flange rising from

said base and having a part adapted to engage the notch of said plate and a part adapted to overhang the front side of said plate.

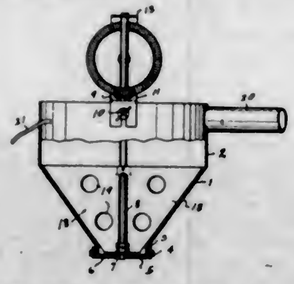
1,688,426. METHOD AND APPARATUS FOR PRODUCING ZINC DUST. FRANKLIN P. LANNON, Jr., Sand Springs, Okla., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 1, 1927. Serial No. 165,227. 11 Claims. (Cl. 266—19.)

1. The method of producing zinc dust in a state of minute subdivision from zinc fumes which comprises circulating the zinc fumes vigorously and rapidly to cool them quickly to a point considerably below the vaporizing temperature whereby the zinc particles are solidified as they are incipiently condensed and formed.



1,688,427. MEANS FOR DETERMINING THE AREA AND ANGLE OF OPENINGS IN PERFORATED SPRAY HEADS. KURT K. LEDIG, Newark, N. J., assignor to American Platinum Works, Newark, N. J., a Corporation of New Jersey. Filed Jan. 7, 1925. Serial No. 1,124. 5 Claims. (Cl. 73—51.)

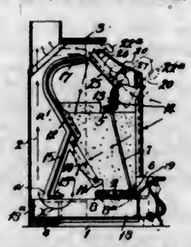
1. An apparatus for ascertaining the uniformity of the combined area of a group of orifices in a plurality of perforate objects, comprising a liquid holding tank, object engaging heads adapted to be supplied with liquid from said tank, means for engaging one of the objects to each head to receive liquid therefrom, individual receiving tanks one for each object tested, and float controlled means



associated with each receiving tank for indicating the reception of a predetermined quantity of liquid therein.

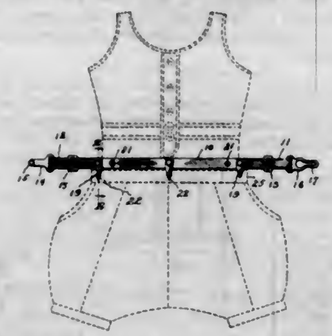
1,688,428. DOOR CHECK AND CLOSER. PORTER S. MORGAN, Norwalk, Conn., assignor to Morgan Blodgett Morgan, Inc., New York, N. Y., a Corporation of New York. Filed July 19, 1922. Serial No. 576,041. 28 Claims. (Cl. 16—53.)

1. A door closing and checking device, comprising in combination, closing mechanism, checking mechanism operatively connected therewith to retard its closing movement and automatically to terminate its retarding action prior to the conclusion of said closing movement, said checking mechanism lying within said closing mechanism.



1,688,429. STRAINER. WILLIAM BADISON MURDEN, Newark, N. J. Filed Feb. 2, 1926. Serial No. 85,418. 3 Claims. (Cl. 210—151.)

1. A strainer including a receptacle whose walls are foraminated, a foraminated adjustable bottom for said receptacle having a central bearing, a removable bridge carried by the receptacle and having bearings aligned with

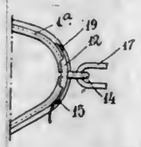


said bottom bearing, a paddle shaft rotatably mounted in said bearings, paddles on said shaft, the upper portion of the outer edges of said paddles being forwardly curved, said bridge also having bearings in substantially right angular alignment with respect to said shaft, a crank shaft in said last named bearings, operatively connected with and adapted to drive the paddle shaft.

1,688,430. OPEN-FRONT FIREPLACE STOVE FOR BURNING COKE. JOHN SWITZER OWENS, London, England. Filed Feb. 3, 1927, Serial No. 165,633, and in Great Britain Feb. 6, 1926. 7 Claims. (Cl. 126—126.)

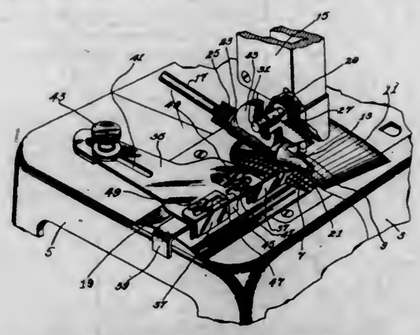
1. An open front fire place stove including an outer casing, a fuel chamber in said casing, a fire-box in said casing disposed for receiving fuel from said chamber, a back flue extending in said casing at the rear of said chamber and fire-box, a top flue in said casing above said chamber, means for passage of draft from the rear of the fire box to said back flue, means for passage of draft from the front of the fire-box to said top flue, and means for passage of draft from below the fire box to said back flue.

1,688,431. DETACHABLE BAND FOR GARMENTS. ROSS M. G. PHILLIPS, New Haven, Conn., assignor of one-third to Samuel Muhlfelder and one-third to William Schoenberger, New Haven, Conn. Filed May 12, 1927. Serial No. 190,861. 2 Claims. (Cl. 241—9.)



1. A detachable band for garments, comprising a bond, a tape member having one end permanently affixed to one side of said band and the other end of said member detachably affixed to the other side of said band for separably securing one or more garments thereto.

1,688,432. BUMPER. CLARENCE E. PRYOR, Elizabeth, N. J. Filed June 24, 1925. Serial No. 39,223. 5 Claims. (Cl. 293—55.)

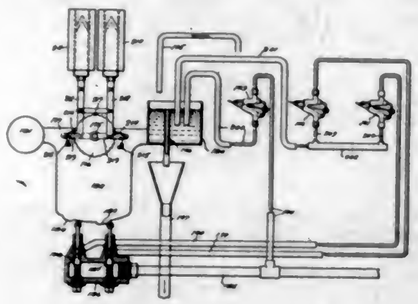


1. A bumper comprising a plurality of substantially vertically aligned bumper bars, the ends of said bumper bars being rearwardly bent and means for securing the bent ends respectively of the lowermost bar to a body portion of the uppermost bar and the bent ends of the uppermost bar to a body portion of the lowermost bar.

1,688,433. GOGGLES. GIUSEPPE RATTI, Turin, Italy. Filed Mar. 23, 1925, Serial No. 17,821, and in Italy Mar. 27, 1924. 1 Claim. (Cl. 2—14.)

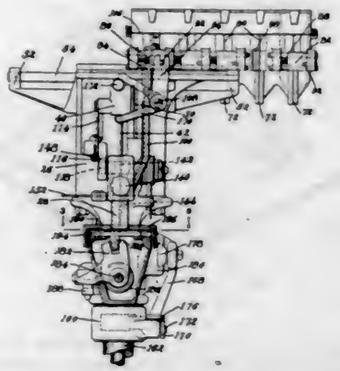
In a goggle comprising, for each eye, a frame for supporting a screen, said frame including a split sleeve having a groove in its front and wherein said screen is engaged, a slotted connecting member carried by one of the ends of said split sleeve, said connecting member being adapted to overlap the otner or second end of said split sleeve, cooperating means on said connecting member and said second named end of said split sleeve for their interengagement and an eye-shaped key pivoted on the first-named end of said split sleeve, said eye-shaped key passing through the slot of said connecting member and being adapted to take a position in which it locks said connecting member in engagement with said second end of said split sleeve, said eye-shaped key serving for attachment of the fastening means of the goggle.

1,688,434. SKIVING MACHINE. EUGENE J. RAY, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 12, 1922. Serial No. 606,446. 8 Claims. (Cl. 69—9.5.)



1. A machine of the class described having, in combination, a knife, a pair of rolls for advancing a piece of work to the knife, a gage for guiding the work by engagement with the edge thereof, said gage being adjustable toward and from the rolls and having a double tapered end extending between said rolls to a point close to the bite thereof, and a stop adapted to contact with a stationary part of the machine to prevent the gage from being pushed into contact with the rolls.

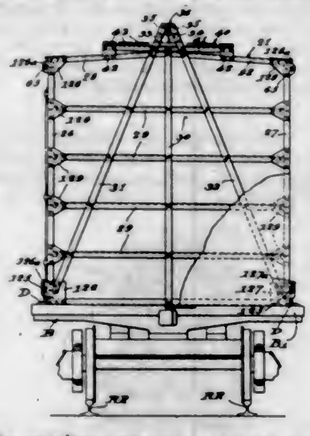
1,688,435. OIL-BURNING APPARATUS. MARC RESEK, Cleveland Heights, and JOHN ALGER DAHLSTROM, East Cleveland, Ohio, assignors to Perfection Stove Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 24, 1925. Serial No. 39,236. 17 Claims. (Cl. 158—36.)



1. In oil burning apparatus, the combination of a burner of the injector type, a steam generator subjected to the heat of the burner flame, pressure actuated means operated by steam from the generator for maintaining the pressure

therein substantially constant, a conduit leading from the steam generator to the burner, an oil tank, an oil reservoir having an overflow that drains into said tank, a pump operated by steam from the generator for pumping

oil from the tank to the reservoir, and thermostatically controlled means subjected to the heat produced by the apparatus for changing the relation between the burner and the oil level in the reservoir.

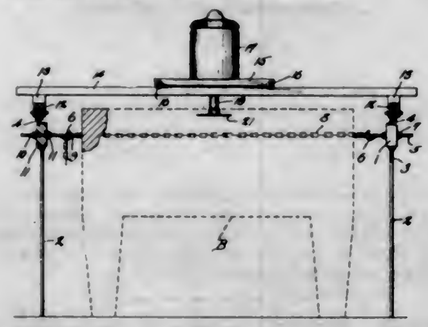


1,688,436. FASTENING-INSERTING MACHINE. WILLIAM THOMAS BUCKINGHAM ROBERTS, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 13, 1922, Serial No. 600,497, and in Great Britain Dec. 5, 1921. 31 Claims. (Cl. 1—18.)

1. A machine of the class described having, in combination, a vertically movable head, a work support, a throat member carried by the head for engaging work on the support and for positioning a fastening, means carried by the head to insert the fastening, and means for raising and lowering the head of the machine a relatively short distance between the insertion of successive fastenings and for raising it a relatively greater distance to facilitate the insertion and removal of the work.

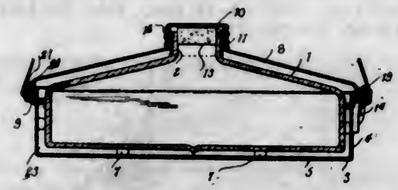
1,688,437. SECTIONAL CAR CONTAINER. ROBERT T. ROMINE, Mount Clemens, Mich. Filed June 15, 1927. Serial No. 199,100. 5 Claims. (Cl. 105—366.)

1. A shipping container comprising a load supporting floor and side walls, structural angle bars embracing opposite edges of the floor and having horizontal flanges extending beneath the floor, diverging tie bars at opposite



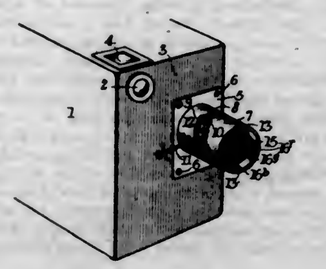
sides of the container connected to said angle bars, and a transverse lifting bail connecting the upper ends of said tie bars.

1,688,438. MAKING MALLEABLE-IRON CASTINGS. HARRY A. SCHWARTZ, Cleveland Heights, Ohio, assignor to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 23, 1926. Serial No. 156,761. 9 Claims. (Cl. 148—13.)



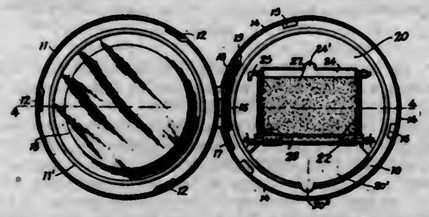
9. That improvement in the art of making malleable iron castings which comprises taking an iron casting produced in a sand mold and containing silicon in the amount normally found in a malleable iron, at a temperature above its critical point, cooling the iron rapidly from a temperature above such point to a temperature below that point, subjecting the casting to an annealing cycle which comprises reheating the casting to a temperature above the critical point, holding it at such temperature for a period of time sufficient to break down the cementite, then cooling to below the critical point.

1,688,439. SURFACE TRIMMER FOR MEAT BLOCKS. WARREN R. SMOUT, Albany, Wis. Filed Dec. 11, 1926. Serial No. 154,243. 1 Claim. (Cl. 144—2.)



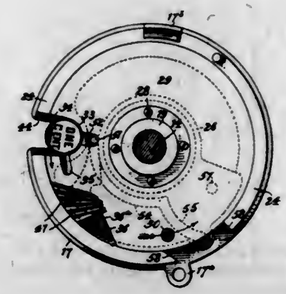
A machine of the class described including parallel side strips, separately adjustable fingers extending laterally therefrom for engagement with a side of a block to be trimmed, flexible, detachable and adjustable connections between the end portions of the side strips, a track including wheel supported heads detachably mounted and movable longitudinally of the respective side strips and rails connecting the heads, a carriage removably mounted on and movable longitudinally of the track, and a motor driven cutting element movable with the carriage.

1,688,440. THERMO FISH RECEPTACLE. CHARLES E. SODERMAN, Ishpeming, Mich. Filed Aug. 2, 1927. Serial No. 210,149. 2 Claims. (Cl. 215—12.)



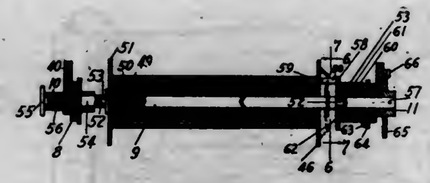
1. A device of the class described comprising an inner receptacle, an outer container including a bottom section and a body section having springs carried thereby for engagement with the inner receptacle, a cover for the inner receptacle, hingedly connected to the body section, said cover having a channel carried thereby, a packing fitted in the channel and having a ledge for engaging the upper edge of the body section when the cover is closed, and necks carried, respectively, by the inner receptacle and cover for interfitting engagement.

1,688,441. LENS-ATTACHMENT MOUNT FOR PHOTOGRAPHIC APPARATUS. DONALD H. STEWART, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 17, 1928. Serial No. 247,376. 16 Claims. (Cl. 95—2.)



1. In photographic apparatus the combination of an objective, a mount for the objective in which the objective is rotatably supported for focusing, means between the objective and mount for accomplishing a focusing movement by turning the objective in the mount, an attachment holder, and connections between the holder and the objective and between the holder and the mount for moving the attachment holder with the objective, and for preventing the attachment holder from turning.

1,688,442. POWDER BOX. JACOB STIRISS, New York, N. Y. Filed Jan. 20, 1928. Serial No. 248,248. 9 Claims. (Cl. 132—83.)

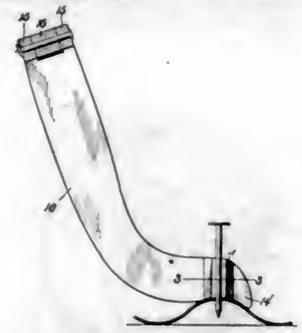


1. In a powder box, the combination of a box comprising a containing section and a lid, a hinge connecting the container section and the lid, and means adapted to lock the lid in closed position when the said container section and lid are rotated with relation to each other.

1,688,443. VENDING MACHINE. EDWIN G. WESSMAN, Easton, Pa., assignor to Individual Drinking Cup Company, Inc., Easton, Pa., a Corporation of Pennsylvania. Filed Mar. 17, 1925. Serial No. 16,127. 20 Claims. (Cl. 194—63.)

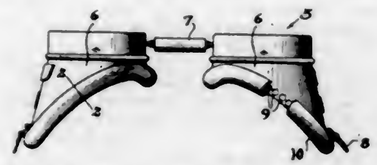
1. In a vending machine, a rotatable delivery part, and check controlled locking mechanism for said part including a rotatable disk to which said part is fixed against relative rotation, said disk being provided with a peripheral coin receiving and holding pocket, a detent to lock the disk from rotation in one direction and adapted to be held out of operative position by a coin in the pocket of the disk, and coin ejecting means comprising a member independent of the coin pocket, said member being supported on the disk to one side of the coin pocket thereof, and said member having a coin engaging portion extending laterally in the plane of the coin pocket of the disk and being movable relatively to the disk to move its coin engaging portion outwardly within the coin pocket toward the periphery of the disk to force a coin radially outward from the coin pocket of the disk, and actuating means for said member.

1,688,444. PAPER-TAKE-UP MECHANISM. ALBERT S. WHEELBARGER, Dayton, Ohio, assignor to Ohmer Fare Register Company, Dayton, Ohio, a Corporation of New York. Filed Jan. 17, 1927. Serial No. 161,038. 17 Claims. (Cl. 242—75.)



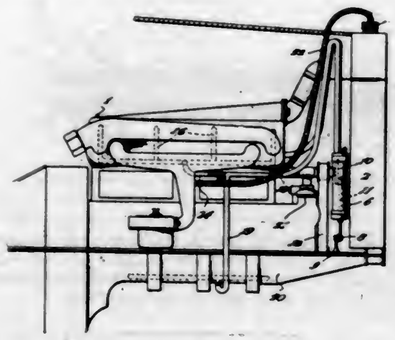
1. In a tensioning device, means whereby resistance is offered to the unrolling of a roll of paper for a predetermined number of revolutions thereof, and means thereafter offering a greater resistance to such unrolling.

1,688,445. NAIL HOLDER. ISAAC N. WILLIAMS, Folts, Ind. Filed June 23, 1927. Serial No. 200,886. 3 Claims. (Cl. 1—47.)



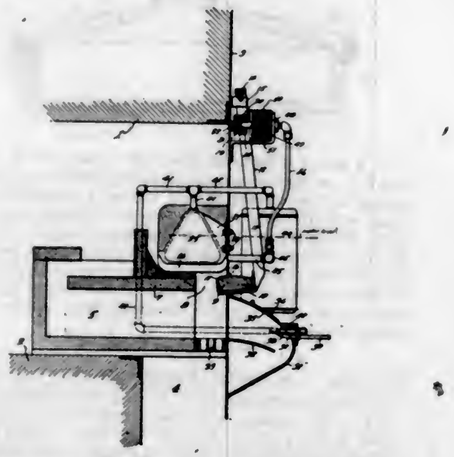
1. A device for holding nails to be driven through corrugated sheets comprising a pair of curved gripping jaws hinged at one end for limited pivotal movement; means at

the other end for grasping and holding a nail to be guided into the crest of a corrugation; and a curved edge asso-



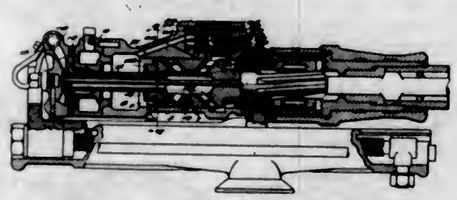
ciated with one of said jaws adapted to conform to the curvature of the corrugation and ensure centering the nail on the crest thereof.

1,688,446. GOGGLES. WILLIAM J. WRIGHTON, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed June 9, 1924. Serial No. 718,728. 1 Claim. (Cl. 2—14.)



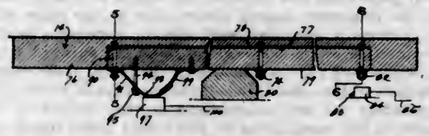
In a device of the character described, an eye cup having a series of transverse openings near its edge and spaced therefrom, a solid non-tubular soft binding having a slit portion from the edge inwardly past the center thereof pressed over the edge of the eye cup so that the opposite sides of the slitted portion of the binding contact through the openings in the eye cup, and an adhesive securing the contacting surfaces of the binding together.

1,688,447. DEVICE FOR COOLING GAS ENGINES. NELS J. BENSON, Geneva, Iowa. Filed May 2, 1927. Serial No. 188,312. 2 Claims. (Cl. 123—175.)



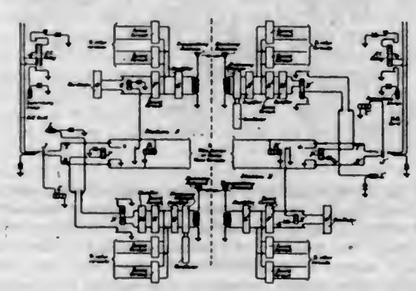
1. In combination with a gas engine, air pumps operable by the engine, manifolds in the water jacket of the engine and having branches carried thereby, and means for conducting air from the pumps into the manifold and branches for discharge from the branches into the water jacket.

1,688,448. FUEL-OIL BURNER. LEE S. CHADWICK, Shaker Heights Village, and MARC RESEK and JOHN ALGER DAHLSTROM, East Cleveland, Ohio, assignors to Perfection Stove Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 18, 1924. Serial No. 726,657. 14 Claims. (Cl. 158—73.)



1. In combination, a steam operated oil burner of the injector type wherein the oil flow is solely responsive to the flow of steam, a steam generator exposed to a source of heat, a conduit of constant capacity leading from the steam generator to the burner whereby the steam supply to the burner varies according to the steam pressure in the generator, means for conducting fuel oil to the burner, means for varying the amount of heat delivered to the generator thereby to control the steam pressure therein and consequently the amount of steam delivered to the burner, means constantly subjected to and operated by the variable steam pressure in the generator for actuating the last mentioned means, and further means of variable resistance opposing the action of said last mentioned means.

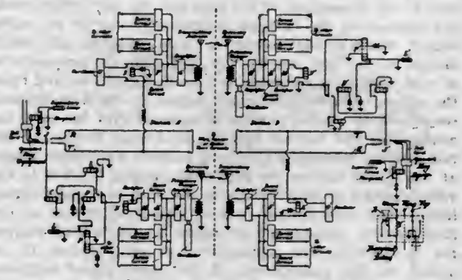
1,688,449. PNEUMATIC HAMMER. OMAR E. CLARK, Denver, Colo., assignor, by mesne assignments, to The Gardner-Denver Company, Quincy, Ill., a Corporation of Delaware. Filed June 30, 1924. Serial No. 723,363. 3 Claims. (Cl. 121—18.)



1. In a motor of the character described, the combination with a cylinder member having a piston chamber and a piston therein having an internal motive fluid supply chamber, of means for maintaining fluid under pressure in said chamber, said piston having spaced outlet ports from the chamber that alternately deliver fluid to the piston chamber on opposite sides of the piston and said ports being controlled by portions of the cylinder member, a supplemental passageway for motive fluid in the cylinder member having a port traversed by an outlet port of the piston, said supplemental passageway having an outlet port opening into the piston chamber on one side of the piston, and an exhaust port, and an automatic valve alternately opening an outlet port and exhaust port.

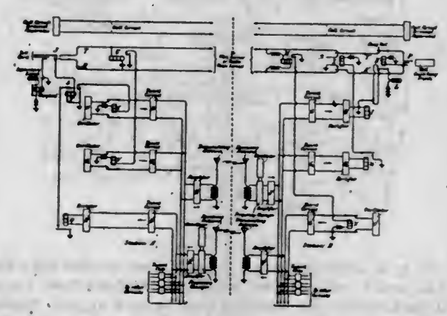
1,688,450. AUTOMATICALLY-OPERATED ORCHESTRAL DEVICE. WILLIE R. CORBETT, Paducah, Ky. Filed Oct. 1, 1923. Serial No. 665,991. 3 Claims. (Cl. 84—3.)

3. In a piano operated music producing apparatus the combination of a piano including strings, piano actions therefor, and keys for the piano actions, other musical instruments, and electric operating means for the other musical instruments, including circuits having switches carried by the piano keys, said switches each including a fixed contact and a resilient contact adapted to be maintained in engagement with its fixed contact to hold the circuit closed for a longer period of time than the time during which the hammer remains in engagement with the respective string of the respective piano keys.



1,688,451. TELEPHONE SIGNALING SYSTEM. CHARLES S. DEMAREST, Ridgewood, N. J., and OWEN H. LOYNES, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed May 19, 1926. Serial No. 110,249. 9 Claims. (Cl. 179—41.)

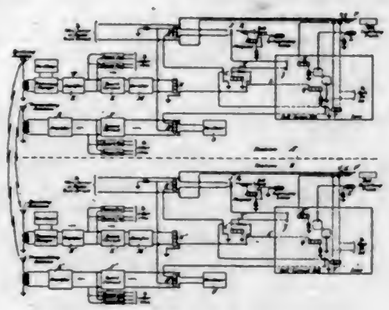
1. In a telephone system, two central office stations, a plurality of voice channels connecting said stations, means at each station for transmitting radio signals, means at each station for receiving radio signals, and at each station in association with each voice channel the following: signal announcing means, means for producing signaling current peculiar in frequency to that station and to the voice channel, means for tuning the radio signal receiving means at that station to the peculiar frequency produced at the other station and corresponding to the voice channel, automatic means, responsive to signaling operations at that station, for connecting the current producing means to the radio signal transmitting means at that station, and automatic means for operating the signal announcing means at that station in response to radio signals received from the other station.



1,688,452. TELEPHONE SIGNALING SYSTEM. CHARLES S. DEMAREST, Ridgewood, N. J., and OWEN H. LOYNES, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed May 19, 1926. Serial No. 110,250. 4 Claims. (Cl. 179—41.)

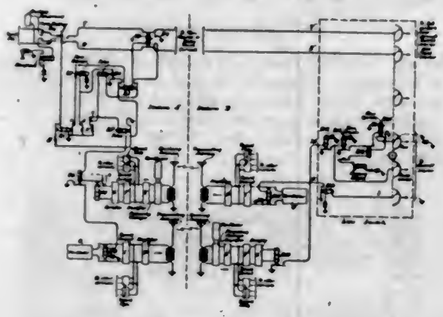
1. In a telephone system including two central office stations and a voice channel connecting said stations, means at each station for transmitting radio signals, means at each station for receiving radio signals, a cord at the first station for outgoing calls, a jack for outgoing calls, terminating the voice channel at the first station, a plug terminating the voice channel at the second station, a switching trunk associated with the voice channel at the second station, an annunciator at each station, a first means at the first station for producing signaling current of a first certain frequency, a second means at the first station for producing signaling current of a second certain frequency, a first means at the second station for tuning the signal receiving means at said station to the first frequency produced at the first station, a second means at the second station for tuning said signal receiving means to the second frequency produced at the first station, means at the second station for producing signaling current of a certain frequency, means at the first station for tuning the signal receiving means at said station to the frequency produced at the second station, automatic means at the first station, responsive to the connection of the cord and the jack, for connecting the first current producing means to the radio signal transmitting means at said sation, automatic means at the second station for annunciator at each station, a second annunciator at each station, automatic means at each station, responsive to ringing current introduced at that station, for operating the signal generating and transmitting means at that station, automatic means at each station for operating

the first annunciator at that station in response to an initial radio signal received from the other station, and automatic means at each station for operating the second annunciator at that station in response to a subsequent radio signal received from the other station.



1,688,453. TELEPHONE SIGNALING SYSTEM. CHARLES S. DEMAREST, Ridgewood, N. J., and OWEN H. LOYNES, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed May 19, 1926. Serial No. 110,251. 4 Claims. (Cl. 179—41.)

1. In a telephone system including two central office stations and a voice channel connecting said stations, means at each station for transmitting radio signals, means at each station for receiving radio signals, a cord at the first station for outgoing calls, a jack for outgoing calls, terminating the voice channel at the first station, a plug terminating the voice channel at the second station, a switching trunk associated with the voice channel at the second station, an annunciator at each station, a first means at the first station for producing signaling current of a first certain frequency, a second means at the first station for producing signaling current of a second certain frequency, a first means at the second station for tuning the signal receiving means at said station to the first frequency produced at the first station, a second means at the second station for tuning said signal receiving means to the second frequency produced at the first station, means at the second station for producing signaling current of a certain frequency, means at the first station for tuning the signal receiving means at said station to the frequency produced at the second station, automatic means at the first station, responsive to the connection of the cord and the jack, for connecting the first current producing means to the radio signal transmitting means at said sation, automatic means at the second station for



operating the annunciator at said station in response to a radio signal initiated in said first current producing means at the first station, automatic means at the second station, responsive to the connection of the plug and the switching trunk, for terminating the operation of said annunciator, automatic means at the second station, responsive to the connection of the plug and the switching trunk, for connecting the current producing means to the radio signal transmitting means at said station, automatic means at the first station for operating the annunciator at said station in response to a radio signal received from the second station, automatic means at the first station, responsive to ringing current introduced over the cord, for connecting the second current producing means to the radio signal transmitter at said station, automatic means at the second station for producing ringing current in the voice channel at said station in response to a radio signal initiated in said second current producing means at the first station, and automatic means at the second station for re-operating the annunciator at said station in response to the termination of the radio signal initiated by the first current producing means at the first station.

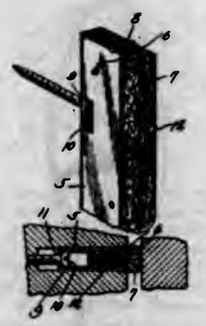
1,688,454. TELEPHONE SIGNALING SYSTEM. CHARLES S. DEMAREST, Ridgewood, N. J., and OWEN H. LOYNES, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed May 19, 1926. Serial No. 110,252. 2 Claims. (Cl. 179—41.)

1. In a telephone system including two central office stations and a voice channel connecting said stations, a cord at each station for outgoing calls, a cord at each station for incoming calls, a jack at each station for outgoing calls, a switching trunk associated with the inward cord at each station, a first annunciator associated with said inward cord at each station, a second annunciator associated with the outward cord at each station, means at each station for generating and transmitting radio signals, means at each station for receiving radio signals transmitted from the other station, automatic means at each station, responsive to the connection of the outward cord and the outward jack, for connecting the voice channel to the outward jack and simultaneously therewith operating the radio signal generating and transmitting means at that station to send an initial radio signal to the other station, automatic means at each station for operating the first annunciator at that station in rsponse to said initial radio signal received from the other station, automatic means at each station for terminating the operation of said first annunciator in response to the connection at that station of the inward cord and the switching trunk, automatic means at each station, responsive to the flow of direct current over the switching trunk at that station, for operating the radio signal generating and transmitting means at that station to send a responsive radio signal to the other station, automatic means at each station for operating the second annunciator at that station upon the reception of said responsive radio signal from the other station, automatic means at each station, responsive to the cessation and resumption of the flow of direct current over the switching trunk at that station, for terminating the operation of and re-operating, respectively, the radio signal generating and transmitting means at that station and the responsive second annunciator at the other station, automatic means at each station, responsive to the disconnection of the outward cord and the outward jack, for terminating the transmission of the initial radio signal from that station, and automatic means at each station for re-operating the first annunciator at that station in response to the termination of the initial radio signal received from the other station..

1,688,455. TELEPHONE SIGNALING SYSTEM. CHARLES S. DEMAREST, Ridgewood, N. J., and OWEN H. LOYNES, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed May 19, 1926. Serial No. 110,253. 4 Claims. (Cl. 179—27.)

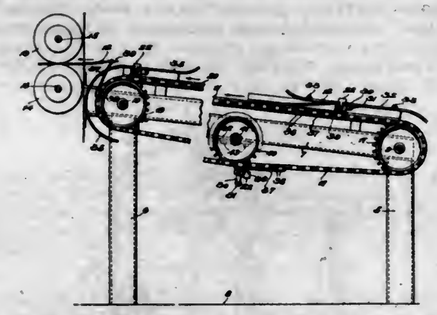
1. In a telephone system, a first central office station, a second central office station, a voice channel connecting said stations, signal announcing means at the first station, automatic line selecting and switching means at the second station, means at each station for generating and transmitting radio signals, means at each station for receiving radio signals transmitted from the other station, automatic means at the first station, responsive to primary signaling operations at said station, for operating the radio signal generating and transmitting means at said station to send an initial radio signal to the second station, automatic means at the second station, responsive to said initial radio signal received from the first station, for effecting a primary operation of the automatic selecting and switching means, automatic means at the second station, responsive to the termination of said primary operation of the selecting and switch means, for operating the radio signal generating and transmitting means at said station to send a responsive primary radio signal to the first station, automatic means at the first station for effecting a primary operation of the signal announcing means in response to said responsive primary signal received from the second station, automatic means at the first station, responsive to secondary signaling operations at said station, for operating the radio signal generating and transmitting means at said station to send a secondary radio signal to the second station, automatic means at the second station, responsive to said secondary signal received from the first station, for effecting a secondary operation of the selecting and switching means, automatic means at the second station, responsive to signaling operations at said station, for operating the radio signal generating and transmitting means at said station to send a secondary radio signal to the first station, and automatic means at the first station for effecting a secondary operation of the signal announcing means at said station in response to said secondary signal received from the second station.

1,688,456. COMBINATION DINING TABLE AND CABINET. CYRUS DOLPH, Preston, Ontario, Canada. Filed Nov. 1, 1926. Serial No. 145,576. 4 Claims. (Cl. 45—47.)



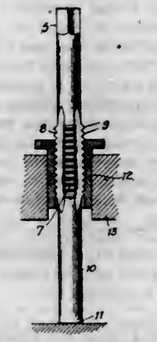
1. The combination with a table including a top, legs supporting the top and extension leaves hinged to the side edges of the top, of a plurality of cabinets revolubly mounted on the respective legs so as to swing inwardly underneath the table top or outwardly beyond the same, and means connected with the cabinets to support the adjacent ends of two table leaves in extended position when the cabinets are in their outer positions.

1,688,457. PROCESS FOR THE PRODUCTION OF THIN FILMS OF CELLULOSE DERIVATIVE. ARTHUR EICHENGRÜN, Charlottenburg, Germany, assignor to Celanese Corporation of America, a Corporation of Delaware. Filed Aug. 3, 1923, Serial No. 655,525, and in Germany Aug. 10, 1922. 14 Claims. (Cl. 18—57.)



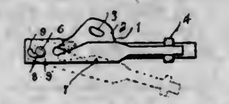
1. The process for the production of thin films of cellulose derivatives, especially of cellulose ethers and cellulose esters, which consists in spreading a solution of said cellulose derivative in a very thin layer upon a base comprising a cellulose derivative other than that used for the production of the film, to which has been added matter diminishing the adhesiveness of the dried film produced on evaporation of the solvent even if said film be of extreme thinness, said solution containing matter having no solvent action upon said base, removing said film when formed from said base, and rolling it into an endless band.

1,688,458. WEATHER STRIP. CLARENCE M. EVELETH, River Forest, Ill. Filed Dec. 1, 1927. Serial No. 237,072. 2 Claims. (Cl. 20—69.)



1. A weather strip including a metallic body portion having spaced side members formed with elongated openings, screws extending through the body portion, the heads of said screws being positioned within the elongated openings, to secure the screws to the body portion, to permit of rotary movement of the screws, and a felt strip secured to the body portion.

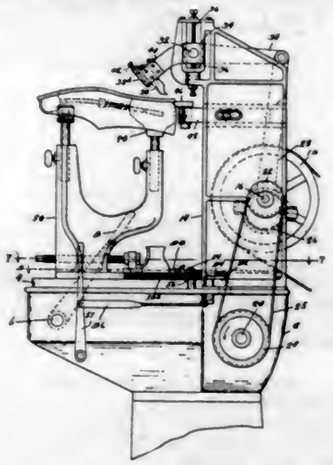
1,688,459. FEEDER FOR BLANK SCORING AND SLOTTING MACHINES. WILLIAM MORTON FORWARD, Battle Creek, Mich., assignor to Postum Company, Incorporated, Battle Creek, Mich., a Corporation of Delaware. Filed May 18, 1927. Serial No. 192,372. 18 Claims. (Cl. 271—45.)



1. The combination with means to be fed, and a table or the like over which a sheet is fed to said means, of a pusher member for pushing the sheet along said table, and a movable device on the pusher member adapted to be engaged over the rear edge portion of the sheet to insure that it will be pushed along the table by said pusher member.

1,688,460. EXTRACTOR FOR REMOVING BUSHINGS AND THE LIKE. EMMETT L. FOWLER, Washington, D. C., assignor of one-half to John S. Privott, Washington, D. C. Filed Dec. 14, 1927. Serial No. 240,009. 8 Claims. (Cl. 29—88.2.)

1. In extractors for bushings; a metal bar of uniform diameter throughout its length and having between its ends mutilated cutting threads above the surface of the bar having blunted and reduced-diameter threads at their lower end and separated by longitudinal grooves depressed below the surface of said bar.



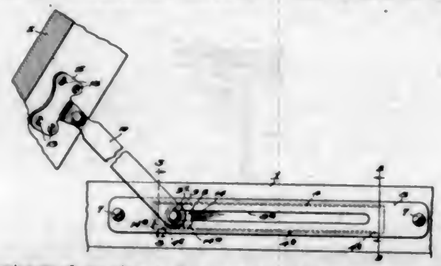
1,688,461. CHAIN CONNECTER. JAMES T. HUTTON, Farmington, N. Mex.. Filed Dec. 8, 1927. Serial No. 238,608. 1 Claim. (Cl. 24—242.)

A connecter for the terminals of chains of the class described, comprising a plate having a keeper carried thereby, a lever having a slot formed therein provided at its ends with lateral recesses, a stud carried by the plate for pivotally and slidably engaging said slot and capable of seating in the recesses for pivotal movement, said plate and lever having diagonally disposed open-ended slots

formed therein for receiving the links of a chain terminal, said lever being slidable relative to the plate for engagement with the keeper carried thereby.

1,688,462. MACHINE FOR AND METHOD OF HEEL-SEAT FITTING. RICHARD FRANCIS JOYCE, Haverhill, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 23, 1919. Serial No. 325,760. 68 Claims. (Cl. 12—17.)

1. In a heel-seat fitting machine, a shoe support, a trimming knife movable to enter the sole of a shoe carried by said support from the tread surface of the sole at an acute angle thereto, means for operating said knife to sever surplus material by a succession of cuts along the periphery of the heel-seat of the sole, said shoe support being movable to transfer the point of operation of the knife along the work, and a crease guide occupying a fixed position with respect to the path of movement of said trimming knife and adapted to enter the rand crease to support the edge of the sole and to protect the upper.

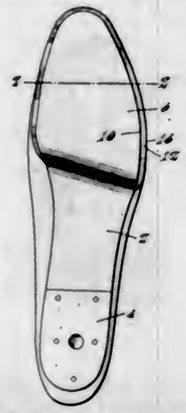


1,688,463. WEED AND VINE DESTROYER. OTTO KELM, Malcom, Iowa. Filed Oct. 6, 1926. Serial No. 139,924. 4 Claims. (Cl. 97—144.1.)

1. An apparatus for the purpose set forth comprising a frame, a rotatably mounted drum carrying a plurality of axially extending knives, dogs pivoted at their front ends on the frame in advance of the drum and extending rearwardly into the upper portion of the orbital path of the knives whereby their rear ends may abut the uppermost knife, releasing devices arranged below the dogs and in advance of the drum and upon which the free ends of the dogs rest, and means for actuating said releasing devices whereby to lift the dogs from the orbital path of the knives.

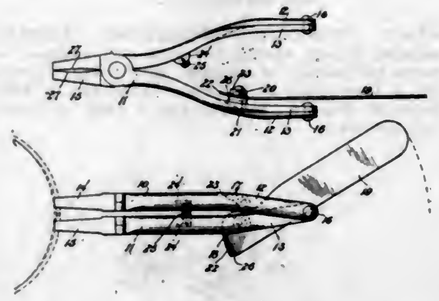
1,688,464. LID SUPPORT. ALBERT E. LANE, Mantua, N. J., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed Aug. 20, 1925. Serial No. 51,496. 8 Claims. (Cl. 217—60.)

1. A device of the class described comprising, in combination with a supporting body and a member mounted for movement relative to said body, a guide member having side walls one of which is shorter than the other, means slidably mounted between said walls and having frictional engagement therewith, a link secured to said



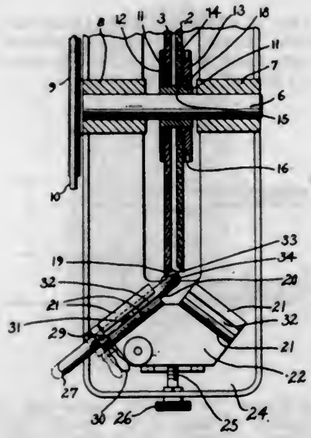
first-named member and said means, and resilient means interposed between the first-named means and the short wall for engaging the end of said short wall to yieldingly hold said first-named member in adjusted position.

1,688,465. CREAM-CAN-COVER HOLDER. DAVID J. LASSLE, Wishek, N. Dak. Filed Jan. 13, 1928. Serial No. 246,518. 4 Claims. (Cl. 220—55.)



1. A securing device for milk can tops including lateral sections, said lateral sections having loops formed adjacent to their ends, and having loops formed at their ends, bolts extending through the first mentioned loops to secure the sections around a milk can neck, a lever pivotally supported within the last mentioned loops, and hook members fitted over the upper end of a milk can top positioned in the neck, and said hook members adapted to be forced into engagement with the milk can top by the levers.

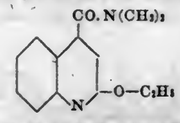
1,688,466. LAST. JOHN J. MAHLER, New York, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 18, 1924. Serial No. 738,426. 3 Claims. (Cl. 12—133.)



1. A last for use in the manufacture of stitchdown shoes having about its forepart a reentrant angle formed by plane surfaces between the side of the last and the bottom of the last.

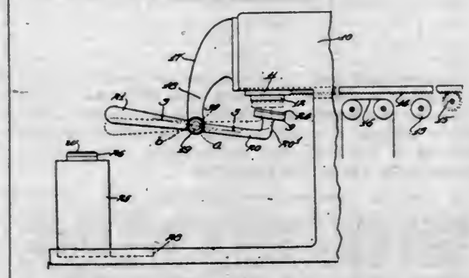
1,688,467. PISTON-RING TOOL. JOSEPH MATECHIK, Weatherly, Pa. Filed May 5, 1927. Serial No. 189,029. 4 Claims. (Cl. 29—86.4.)

1. A tool of the character described, comprising, in combination, two pairs of pliers connected together, and means for forcing and holding the active ends of the pairs apart, including a roller on one pair and a pivoted lever on the other pair engageable with said roller.



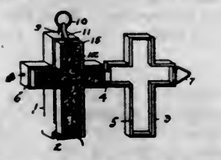
1,688,468. GRINDSTONE. ALBERT E. MAYNARD, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Dec. 4, 1926. Serial No. 152,554. 4 Claims. (Cl. 51—168.)

1. A bevelled edge grinding machine comprising a base, a shaft rotatably mounted on the base, a grindstone holding hub on the shaft, a sectional grindstone member on the hub having an angled grinding edge, a second sectional grindstone member movably mounted on the hub and having an angled grinding edge, the diameters of the adjacent faces of the grindstone members being shorter than those of the outer faces, means for locking the second grindstone member on the hub in spaced relation to the first grindstone member, guide way members on the base having truing tool guides parallel to the respective angled grinding edges of the grindstone members whereby each angled face of the grinding edges of the grindstones may be trued by a truing tool in the truing tool guide when the sections of the grindstones are separated and both sections locked with respect to the shaft.



1,688,469. DERIVATIVES OF QUINOLINE CARBOXYLIC ACIDS AND PROCESS OF MAKING SAME. KARL MIESCHER, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Apr. 19, 1927, Serial No. 185,067, and in Switzerland Apr. 30, 1926. 11 Claims. (Cl. 260—39.)

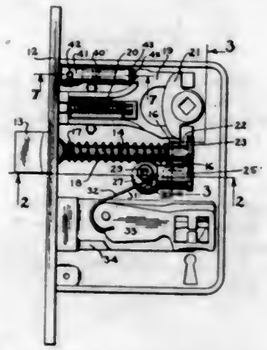
11. As a new product of the α-ethoxy-γ-quinoline carboxylic acid dimethylamide of the formula—



which forms colorless crystals of melting point 69° and is easily soluble in most organic solvents except in cold petroleum ether and likewise soluble in an excess of aqueous mineral acids, said product being useful in therapeutics.

1,688,470. PRINTING MACHINE. SKIDMORE O'HARA, Waltham, Mass., assignor to O'Hara Waltham Company, Waltham, Mass., a Corporation of Massachusetts. Filed July 8, 1927. Serial No. 204,271. 6 Claims. (Cl. 101—41.)

1. In a printing machine a die, a work support, a printing member mounted on an arm pivoted intermediate the die and the work support, a lever whereby the said arm may be swung on its pivot to move the printing member in a curved path in a vertical plane, said die and work support being so positioned that the lever is operative to press the printing member up against the die and to move the printing member around to position where it is operative to press the printing member down against the work on the work support.

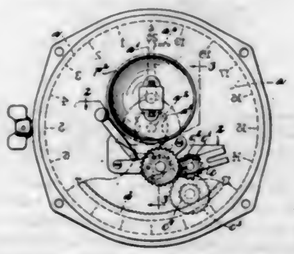


1,688,471. ROSARY CASE. MAURICE ROTHSTEIN, Johnstown, Pa. Filed Feb. 5, 1925. Serial No. 7,083. 1 Claim. (Cl. 206—19.

The combination of a cross-shaped hollow case having its front side open, the forward portion of the top, side and bottom walls of the case being reduced in thickness, a bifurcated lug projecting upwardly from the top wall of the case, said top wall having a slot therein extending from the lug to the forward edge of the reduced portion of said wall, an arm pivoted between the bifurcations of the lug and adapted to swing thereon in a vertical plane into the slot, projections upon opposite sides of the arm at its free end disposed in and closing the rear portion of the slot when the arm depends on its pivot, a rosary connected at one end to the free end of the arm and receivable by

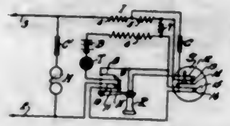
the case, a cross-shaped door hinged to one wall of the case, and a lateral flange on the door which, when the door is closed, engages the surface of the reduced portions of the walls of the case and covers the portion of the slot therein.

1,688,472. LATCH. JOHN H. SHAW, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn. Filed Mar. 30, 1923. Serial No. 628,755. 19 Claims. (Cl. 292—169.)



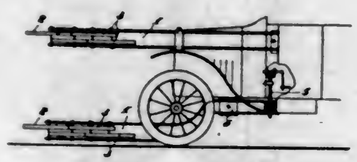
1. In a door latch, a case, a spring protracted latch bolt having a stem, a crosshead upon said stem, means to engage the crosshead to limit the protraction of the bolt, a plunger attached to said crosshead, a cylinder mounted in the latch case and adapted to receive the plunger when the bolt is protracted.

1,688,473. SHAFT FOR GOLF CLUBS AND THE LIKE. CHARLES B. SIPPEL, Chicago, Ill., assignor to Pyratone Products Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 8, 1928. Serial No. 260,005. 14 Claims. (Cl. 273—80.)



11. A golf club shaft embodying a core, a separate tubular protecting casing of nonmetallic, hard and flexible material encompassing the core, said casing being formed of a plurality of separate sections arranged end to end, the proximate ends of adjacent sections being disposed in close proximity to each other.

1,688,474. SIGNAL DEVICE FOR OIL-PUMP INDICATORS, ETC. EDWARD A. SLYE, Burnside, Conn., assignor to Veeder-Root Incorporated, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 21, 1928. Serial No. 255,931. 2 Claims. (Cl. 116—67.)



1. In an indicator for oil pumps, etc., the combination of a pointer, pump actuated mechanism for moving the pointer forward, a gong, a spring pressed signal hammer, a hammer operating cam, and operating means between the pump actuated mechanism and said cam including a ratchet and pawl connection, whereby said cam may have a movement independent of the pump actuated mechanism.

1,688,475. SUBSTATION TELEPHONE CIRCUITS. ARTHUR BESSEY SMITH, Evanston, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 5, 1924, Serial No. 684,486. Renewed July 5, 1928. 8 Claims. (Cl. 179—81.)

1. In a substation telephone set, a transmitter and local circuit therefor, an induction coil having a primary and two secondary windings the primary winding being connected in said local circuit, a resistance, a bridge across the two line conductors including in a series circuit said secondary windings and said resistance, a receiver and a condenser in series connected between one line conductor and the junction of said secondary windings, and a calling device having a pair of interrupter springs in series with one of said line conductors.

1,688,476. TRACK CLEARER FOR VEHICLES. JEAN VAN DE PUTTE, Assche, near Brussels, Belgium. Filed Dec. 20, 1927, Serial No. 241,425, and in Belgium Dec. 24, 1926. 2 Claims. (Cl. 293—49.)

1. A track-clearer for vehicles, comprising a frame member projecting in front of the vehicle and formed with two branches meeting at an angle ahead; a disc freely rotating about a vertical axis at the apex of the angle, a series of discs supported by each of said branches upon substantially vertical axes, said discs being capable of rotating freely in one direction only, namely in the direction ahead sidewards, all the discs overlapping each other in succession over a certain distance, substantially as described.

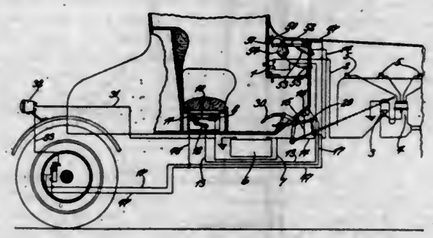
1,688,477. HAND TELEPHONE. OTTO WEEBER, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft Wernerwerk, Siemensstadt, near Berlin, Germany. Filed Sept. 11, 1925, Serial No. 55,651, and in Germany Jan. 22, 1925. 5 Claims. (Cl. 179—103.)

1. In a hand telephone, a receiver unit having terminals, a casing for receiving said unit, a cover for said casing to hold said unit in place, an element fastened to said casing,

means projecting from said element for making electrical contact with one terminal of said unit and additional means

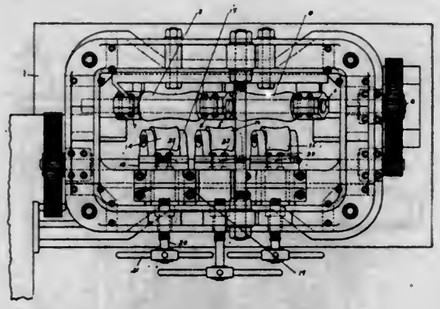
projecting from said element for holding said cover in place, said cover being held in place only by said additional means.

1,688,478. ELECTRICAL CONDENSER. ARTHUR J. WEISS, West Orange, N. J., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 13, 1927. Serial No. 160,887. 12 Claims. (Cl. 175—41.)



1. The method of treating a condenser body which comprises impregnating the same in a heated insulating compound, immersing the body while heated in another compound having a lower melting point, and cooling the body while so immersed.

7. A condenser body impregnated with an insulating compound throughout the greater portion thereof, and impregnated further with another compound throughout its remaining portions, said body being free from voids and having all interstices filled with compound.

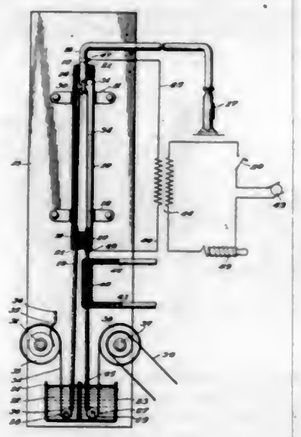


1,688,479. DEVICE FOR PREVENTING THEFT OF AUTOMOBILES ON HIGHWAYS. GEORGE A. WETTENGEL, St. Louis, Mo. Filed Mar. 14, 1924. Serial No. 699,387. 2 Claims. (Cl. 177—314.)

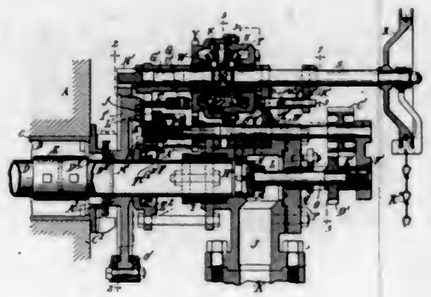
1. In a motor vehicle, the combination with the ignition circuit and the control switch therefor, an irreversible normally closed circuit breaking means in said circuit, a signal, means for intermittently operating said signal from the vehicle running gear including a relatively stationary part and means on said part movable into and out of engagement with a rotating part of the driving mechanism so as to cause said signal to operate intermittently in accordance with the travel of the vehicle and having means normally tending to move it into such engagement and means for normally holding the said means against such movement, said inter-

mittent operating means also including a device assuming an operative position upon a predetermined travel of the vehicle after the intermittent means is set into operation, means including an operating member adjacent the driver's position for releasing said holding means, and means set into operation when said device reaches its operating position to cause said irreversible circuit breaking means to open said ignition circuit.

1,688,480. STRAIGHTENING MACHINE. GEORGE A. WISE, Pittsburgh, Pa., assignor to Sutton-Abramsen Engineering Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 14, 1926. Serial No. 129,163. 12 Claims. (Cl. 153—60.)



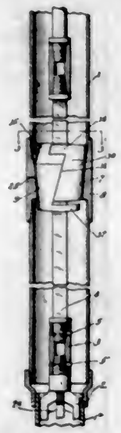
1. In a cross rolling machine for straightening round stock the combination of a contoured roll, means for driving said roll, an idle roll bracket mounted in opposition to said driven roll and adjustable angularly to vary the angle of crossing of the rolls, an idle roll in the bracket and independent means for tilting the idle roll in its bracket.



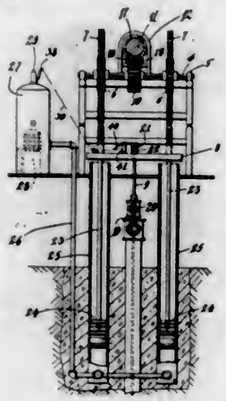
1,688,481. APPARATUS FOR PROCESSING WIRE. MINER MANLY AUSTIN, Waukegan, and CLARENCE W. BALKE, Highland Park, Ill., assignors to Fansteel Products Company, Inc., North Chicago, Ill., a Corporation of New York. Filed Sept. 26, 1927. Serial No. 222,188. 9 Claims. (Cl. 266—3.)

1. In apparatus for processing wire, a sealed chamber, means for exhausting gases from said chamber, means for

continuously passing a wire into and out of said chamber without breaking the seal and an electrical circuit including a portion of the means for exhausting gases and a portion of the means for passing the wire out of the chamber.



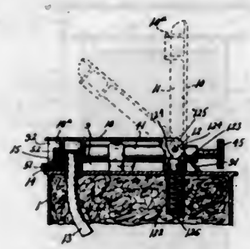
1,688,482. SOOT CLEANER FOR BOILERS. THEODORE M. BRUBACK, Du Bois, Pa. Filed Aug. 28, 1926. Serial No. 132,218. 11 Claims. (Cl. 122—392.)



1. In a soot cleaner, a cleaner element, a conduit for cleaning fluid, a valve controlling admission of said fluid to the cleaner element, and means for operating the valve and turning the cleaner element comprising a differential gear train.

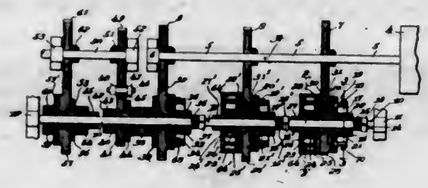
1,688,483. WELL MECHANISM. GROVER C. BUSHONG, Whittier, Calif. Filed Feb. 15, 1926. Serial No. 88,259. 8 Claims. (Cl. 103—202.)

1. The combination of a string of sucker rods and a member comprising axial sections having abutting edges adapted to radially expand or contract the member by relative axial movement between the sections, said member having a bore adapted to receive one of the sucker rods therethrough, and the bore and sucker rod having a cross-sectional shape preventing rotation while permitting reciprocation of the sucker rod relative to the sectional member.



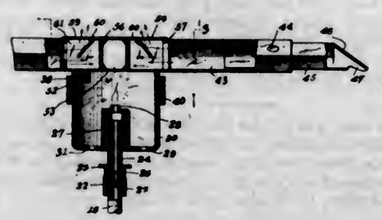
1,688,484. PUMPING APPARATUS. SAMUEL CLARK CARTER, Los Angeles, Calif., assignor of one-third to Anson Robinson and one-third to J. H. Carson, Los Angeles, Calif. Filed Apr. 27, 1926. Serial No. 104,888. 5 Claims (Cl. 103—206.)

1. In a long stroke pumping apparatus, the combination of a cross-head, yieldable means for securing the cross-head to a pumping rod, means for reciprocating the cross-head vertically, a piston secured to the cross-head, a cylinder mounted in position below the cross-head and in which the said piston is adapted to be reciprocated, means for supplying gas under pressure to the said cylinder, and signal actuating means secured to the cross-head and adapted to be actuated by the yieldable pump rod securing means in case of breaking of the pump rods.



1,688,485. VAPOR CIGAR LIGHTER. EDWARD FOSTER CLARK, North Attleboro, Mass., assignor, by mesne assignments, to Clark Lighter Co., Inc., North Attleboro, Mass., a Corporation of Maryland. Filed Apr. 23, 1927. Serial No. 186,120. 5 Claims. (Cl. 67—7.1.)

2. In a vapor cigar lighter, a fuel container; a wick and wick holder mounted upon the top end of the container; sparking means adjacent the wick; wind break side walls and one end wall mounted upon the top end of the container

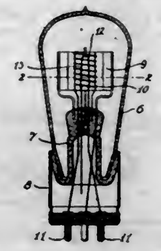


and enclosing the flame elements on three sides; a wind break pivoted on the end wall to shield the open top of the enclosure.

1,688,486. POWER-TRANSMISSION APPARATUS. ALBERT A. DENSMORE, Boston, Mass., assignor to Eclipse Machine Company, Elmira Heights, N. Y., a Corporation of New York. Filed June 10, 1920. Serial No. 387,841. 16 Claims. (Cl. 74—59.)

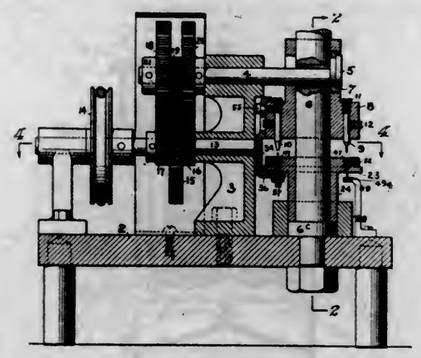
1. A change speed gear for automobiles comprising a plurality of drive gears and an individual clutch for each gear, the clutches being of the type permitting gradual engagement, and means for actuating each clutch by the associated gear.

1,688,487. GAS-BURNER IGNITER. WILLIAM F. DESTER, Newark, N. J., assignor to U. S. Tool Co., Inc., East Orange, N. J., a Corporation of New Jersey. Filed July 14, 1926. Serial No. 122,290. 7 Claims. (Cl. 158—115.)



1. In an automatic gas burner igniter, the combination with a plurality of gas collectors arranged over a portion of the burner openings, of a Bunsen burner used as a pilot, a chamber enclosing said burner, said burner having a supply pipe, a forked guide on said chamber straddling said pipe, means on said guide to adjust the height of said chamber on said burner, said chamber being unsecured, means for clamping said collectors to said chamber, and a receiver unit on said chamber into which all of said collectors lead, said unit and chamber being in communication.

1,688,488. MUFFLER. ALBERT F. DORMEYER, Chicago, Ill. Filed June 21, 1926, Serial No. 117,294. Renewed Mar. 19, 1928. 23 Claims. (Cl. 137—160.)

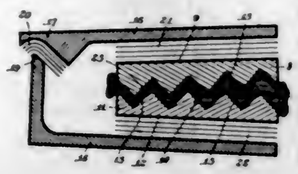


5. A muffler comprising a cylindrical shell, a web extending longitudinally thereof, and baffling elements struck out from the body of said web and projecting laterally from the opposite faces thereof, the edge of each element contacting with the inner periphery of the shell continuously from one diametrically opposed position therein to the other whereby the interior of the shell is divided into a series of baffling chambers.

1,688,489. VACUUM TUBE. EDGAR W. ENGLE, Lake Forest, Ill., assignor to Fansteel Products Company, Inc., North Chicago, Ill., a Corporation of New York. Filed Apr. 14, 1926. Serial No. 101,900. 1 Claim. (Cl. 250—27.5.)

In a vacuum tube for radio purposes, a filament and a support therefor, the end of said support being made of tantalum and being wound about said filament so as to be heated thereby and absorb traces of gases which may be present in the tube.

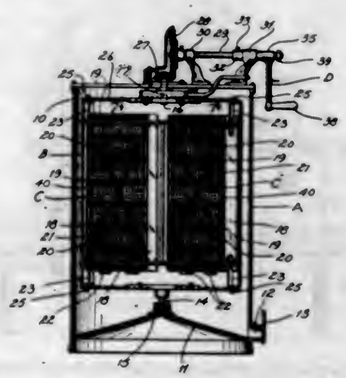
1,688,490. MACHINE FOR APPLYING SOLDER TO PINS. ALBERT E. GIBSON, Springfield, Pa., assignor to The Dentists' Supply Company, a Corporation of New York. Filed Sept. 24, 1924. Serial No. 739,574. 11 Claims. (Cl. 29—33.)



1. In a machine of the character stated, the combination of a reciprocating head, with a turret rotatable in a plane at right angles to the direction of reciprocation of the head, a plurality of female dies carried by the turret, a male plunger die and a hammer secured to and movable with the head and spaced at a greater distance apart than the dies on the turret, and magazine feeding means independ-

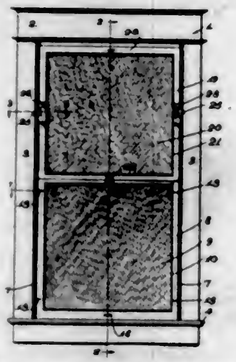
ent of the turret and spaced circumferentially to the turret intermediate of the plunger and hammer dies for feeding different articles to be united respectively to the female dies on the turret when adjusted to positions intermediate of the plunger die and hammer of the reciprocating head, and wherein further, the female dies are spaced 90° apart on the turret and at the same radial distance thereon, the plunger die and hammer are spaced 180° apart relatively to the axis of the turret, and the magazine feeding means comprise separate feeding tubes spaced 180° apart and respectively alternate with the plunger die and hammer.

1,688,491. MANUFACTURE OF MOLDED AND VULCANIZED RUBBER-CORK ARTICLES. RAOUL GRIMOIN-SANSON, Paris, and HERMAN DANIEL, Argenteuil, France. Filed Aug. 28, 1926, Serial No. 132,320, and in France Mar. 26, 1926. 2 Claims. (Cl. 106—23.)



1. A new article of manufacture consisting of a molded and vulcanized mixture of rubber, powdered cork, emery and a vulcanizing agent.

1,688,492. METHOD OF MAKING DENTAL RECORDS. RUDOLPH L. HANAU, Buffalo, N. Y. Filed June 3, 1925. Serial No. 34,718. 11 Claims. (Cl. 32—4.)

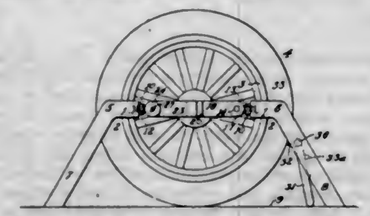


11. The method of registering jaw relations, which consists in applying wax to a denture or occlusal rim, in then biting into the wax to form impressions in the closing surface thereof, and in then forming the closing surface of said body of wax so as to contact throughout its entire length with its co-operating and determining element under no pressure.

1,688,493. CENTRIFUGAL HONEY EXTRACTOR. GEORGE Y. HARRY, Wapakoneta, Ohio. Filed Dec. 8, 1926. Serial No. 153,432. 2 Claims. (Cl. 210—65.)

2. In a device of the class described, a rotatable frame substantially rectangular in section; a pair of comb holders each having top-and-bottom angle-irons on one of its sides, each of said angle-irons having an indentation; set-screws adjustably mounted in said frame and arranged to engage said indentations, substantially as described.

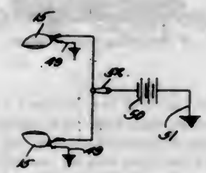
1,688,494. WINDOW SCREEN. HARRY A. HENDREN, Sacramento, Calif. Filed May 31, 1927. Serial No. 195,313. 2 Claims. (Cl. 156—14.)



1. A window screen comprising an upper and lower section normally maintained in vertical alinement one above the other to completely fill the window opening, vertical guide rods mounted at opposite sides of the window opening, and hinge members slidably mounted on the guide rods and pivotally connected to the upper section, whereby said section may be moved inwardly and then guided downwardly to occupy a position parallel to the said lower section.

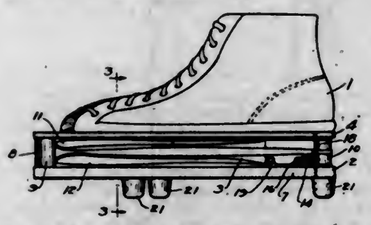
1,688,495. REED FOR LOOMS. FRITZ HOLLSTEIN, Hawthorne, N. J., assignor to John Grossgebauer, Paterson, N. J. Filed Sept. 3, 1927. Serial No. 217,320. 2 Claims. (Cl. 139—192.)

1. In a loom, a main reed, having immovable dents, in combination with a fore reed separate from and bodily movable in relation thereto and formed independently of said main reed and having horizontally flexible dents permanently spaced in fixed relation and corresponding in pitch to said immovable dents, and means for mounting said reeds upon the lay in spaced relation to each other, with said fore reed in front of said main reed.



1,688,496. DEVICE FOR PREVENTING THEFT OR UNAUTHORIZED USE OF AUTOMOBILES. JOHN HOLTZMAN, New York, N. Y., assignor of one-half to Benjamin Roman, New York, N. Y. Filed Sept. 15, 1921. Serial No. 500,869. 12 Claims. (Cl. 70—90.)

1. An anti-theft device for automobiles having means projecting beyond the periphery of the automobile wheel, means to secure the device to the felly of said wheel,

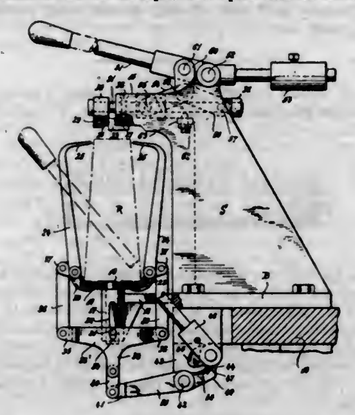


means to secure the device to the hub of said wheel, means to move said securing means parallelly to each other toward and away from each other for fitting the device to said wheel, and key operated mechanism to lock said securing means to each other.

1,688,497. AUTOMOBILE COMBINATION SIGNAL AND DIMMING LAMP. GEORGE K. HUNDLEY, Beckley, W. Va., assignor of one-half to James Hundley, Noblesville, Ind. Filed Feb. 17, 1923. Serial No. 619,674. 2 Claims. (Cl. 240—7.1.)

1. A fender light comprising a casing, a lamp within said casing, a reflector having the inner side thereof curved forwardly of and inwardly toward the lamp and terminating in the longitudinal axis of the lamp and having the outer side thereof terminating substantially in the transverse axis of the lamp, said reflector being positioned in said casing and spaced from the rear thereof and means for supporting said fender light, substantially as set forth.

1,688,498. SWIMMING SHOE. KARL OSCAR FREDRICK JACOBSEN, Seattle, Wash. Filed Sept. 13, 1926. Serial No. 135,065. 4 Claims. (Cl. 9—21.)

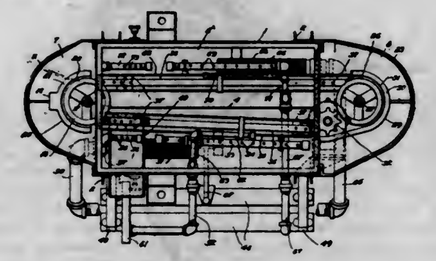


1. In a device of the class described a pair of blades pivotally supported at one end and adaptable to swing outward and to fold with one behind the other, and means for attaching them to the soles of the feet.

1,688,499. APPARATUS FOR CLOSING AND SEALING RECEPTACLES. ELLIS L. JONES, Long Island City, N. Y., assignor to Sealed Containers Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 19, 1927. Serial No. 227,162. 17 Claims. (Cl. 226—56.)

1. In apparatus for closing and sealing the open end of a receptacle of pliable material, an axially movable receptacle support, clamping jaws arranged in opposed and spaced relation to the receptacle support and having movement one relative to the other in a direction transverse to the movement of the support, means carried by the receptacle support to have movement toward and away from a receptacle on the support to collapse the open end thereof, and means operative to actuate said receptacle collapsing means and move the receptacle support to position the collapsed end of a receptacle on the support between the clamping jaws.

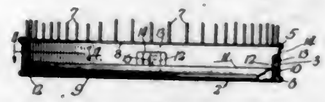
6. In apparatus for closing and sealing the open end of a receptacle of pliable material, a standard having laterally extended and vertically spaced projections, a receptacle support mounted in the lower standard projection to have movement toward and away from the upper projection, clamping jaws mounted in the upper projection one to have movement relative to the other transversely of the movement of the receptacle support, levers pivotally mounted at opposite sides of the receptacle support and between which levers a receptacle is adapted to be engaged upon the support, one arm of the levers being extended upward and said arms adapted to have movement toward and away from each other to collapse the open end of a receptacle



on the support, means to actuate the levers to impart receptacle collapsing movement thereto and in said position of the levers move the support to position the collapsed receptacle end between the jaws, and means to actuate the clamping jaws to secure a sealing member applied to the collapsed receptacle end.

1,688,500. METHOD OF PRODUCING PLASTIC AND MOLDABLE COMPOSITION. CARL KULAS, Leipzig, Germany. Filed Jan. 2, 1926. Serial No. 79,027. 2 Claims. (Cl. 18—47.5.)

1. The herein described method of producing a composition of matter for the purposes specified, consisting in mixing together dissolved resol and comminuted rubber, rapidly calendering the mass to expel volatile constituents therefrom and render it homogeneous, seasoning the mass at a moderate temperature maintained constant during the seasoning period, and finally drying the mass.



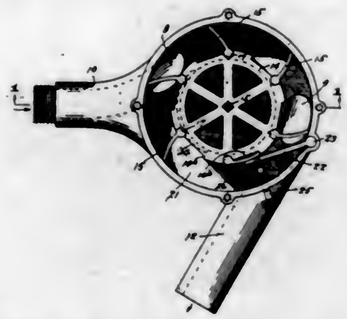
1,688,501. BOTTLE WASHING AND STERILIZING APPARATUS. OLAF LARSEN, Fort Atkinson, Wis., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 8, 1923. Serial No. 667,220. 5 Claims. (Cl. 141—7.)

1. Apparatus of the class described comprising a tank longitudinally divided into two compartments, means for washing bottles in one of said compartments, means for rinsing bottles in the other of said compartments, a pair of tables secured outwardly of the ends of said tank respectively and extending across the ends of said compartments, a sheave pivoted upon one of said tables, a second sheave pivoted upon the other of said tables, an endless

carrier operatively supported on said sheaves and having one run passing through one of said compartments and the other run passing through the other of said compartments, a series of spaced holders mounted on said carrier adapted to receive inverted bottles and convey said bottles through said compartments for operation thereupon by said washing means and said rinsing means, and means for operating said carrier.

1,688,502. BIRD CAGE. LEWICKI J. LEON, Chicago, Ill. Filed June 23, 1924. Serial No. 721,674. 1 Claim. (Cl. 119—17.)

A base for bird cages having a marginal wall and a separable bottom wall, said bottom wall having an upright marginal flange to extend into said marginal wall, arms carried by the bottom wall and projecting above said flange, pins carried by said arms, and keepers with bayonet slots carried by said marginal wall on the inside to receive said pins for releasably connecting the marginal and bottom walls together.



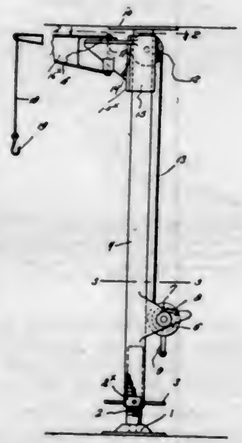
1,688,503. METHOD OF PRODUCING PHOSPHORUS CHLORIDE. CLAUDE G. MINER, Berkeley, Calif. Filed July 25, 1925. Serial No. 46,113. 5 Claims. (Cl. 23—205.)

1. A process of producing volatile phosphorus compounds from phosphate rock which comprises causing phosphate rock to react with a halogen salt of an alkali-metal in the presence of silica.

1,688,504. PROCESS OF PRODUCING ANHYDROUS ALUMINUM HALIDES AND NITROGEN BY-PRODUCTS. CLAUDE G. MINER, Berkeley, Calif. Filed June 28, 1926. Serial No. 119,233. 14 Claims. (Cl. 23—95.)

1. A process of manufacturing anhydrous aluminum halides which consists in passing an acid halide gas over aluminum nitride and a carbonaceous material at an elevated temperature.

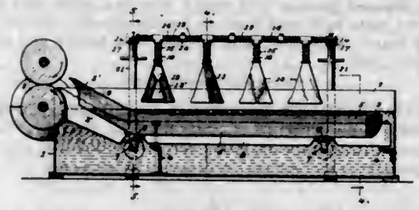
1,688,505. GREASE-MEASURING DEVICE. JACOB C. MULDER, Oakland, Calif. Filed Mar. 6, 1926. Serial No. 92,846. 1 Claim. (Cl. 73—37.)



A device of the character described comprising a casing having inlet and outlet openings, a rotatable paddle wheel in said casing and paddles pivoted to said wheel and extending from the periphery thereof to said casing and adjustable means in said casing beyond said outlet opening for varying the area of the passage between said casing and said wheel, said adjustable means comprising a plate pivotally mounted in said casing, a screw pivotally connected to said plate, said screw threadedly engaging said casing, and extending exteriorly thereof whereby the position of said plate may be adjusted exteriorly of the casing.

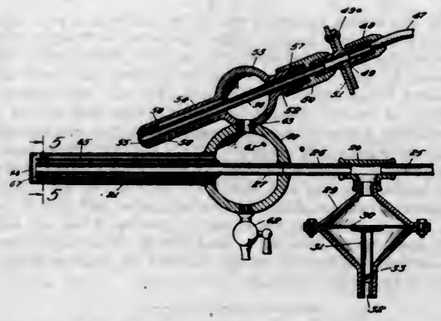
1,688,506. SAFETY CLASP FOR WATCH CHAINS. HENRY J. RIVERS, Attleboro, Mass. Filed May 6, 1927. Serial No. 189,385. 3 Claims. (Cl. 24—3.)

1. A clasp for joining the sections of a watch chain comprising pivoted upper and lower gripping jaw members for engaging the clothing, a spring for normally urging the jaw members together and an insignia member secured to the upper one of said gripping members and arranged to conceal the same, and said insignia member being provided with openings for receiving the end link of the chain sections.



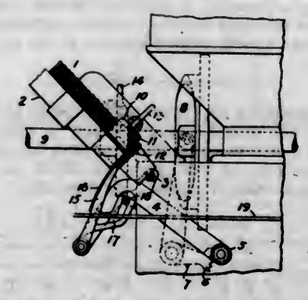
1,688,507. HOISTING APPARATUS. OTTO H. SCHUH, Denver, Colo. Filed July 19, 1926. Serial No. 123,583. 2 Claims. (Cl. 212—64.)

1. In a hoisting apparatus and in combination, an upright post having a diametrical slot in its upper portion, a member movable vertically on the post, and having a sleeve receiving the post, said sleeve being provided with a slot and with an offset portion opposite the slot, a sheave mounted in the slotted portion of the post and disposed in the post slot and the sleeve slot and adapted to move in the offset portion of the sleeve, a cable trained over the sheave and connected to the vertically movable member and crane means carried by and extending laterally from said sleeve of the vertically movable member.



1,688,508. CONTINUOUS WASHING MACHINE. JAMES W. SHAW, Chicago, Ill. Renewal of application Serial No. 101,221, filed Apr. 10, 1926. This application filed Dec. 12, 1927. Serial No. 239,618. 12 Claims. (Cl. 141—5.)

1. In a washing machine, the combination of a tank, a series of longitudinal rails fixed in said tank, a series of longitudinal rails movably mounted in said tank intermediate said fixed rails, means for imparting a combined upward, forward, downward and rearward move-

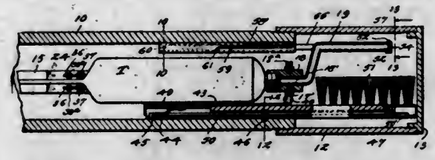


ment to said movable rails, and an open bottom pressure and suction head mounted in adjacent and superimposed relation to said rails.

1,688,509. OIL BURNER. CHARLES R. SMITH, Chicago, Ill. Filed Feb. 5, 1927. Serial No. 166,141. 7 Claims. (Cl. 158—73.)

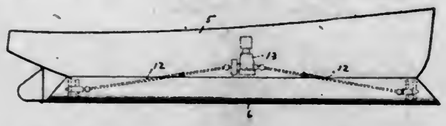
1. In an oil burner, a heated steam generator, means for supplying water under pressure to said generator, a moist steam chamber communicating with said generator, a dry steam chamber communicating with said moist steam chamber, a nozzle for said dry steam chamber, an oil pipe disposed longitudinally and adjustably of said nozzle and dry steam chamber, the discharge terminals of said nozzle and oil pipe being capable of contact one with the other, a collar bushing connecting said nozzle and oil pipe, and thermostatic control mechanism for effecting the adjustment of said oil pipe and for regulating the supply of oil to said oil pipe.

1,688,510. DEVICE FOR FEEDING CUPS OR CONTAINERS TO FILLING OR OTHER MACHINES. CYRUS TAYLOR, Hartford, Conn. Filed June 30, 1926, Serial No. 119,714, and in Great Britain May 26, 1926. 1 Claim. (Cl. 312—44.)



In combination, in a cup feeding device, an inclined open-sided magazine for the nested pile of cups, an adjustable movable rest on which such nested pile of cups rests, a cam-controlled lever for operating such rest, and arranged for actuation by a revoluble member of a machine in connection with which such cup feeding device may be used, a circular clamping device at the lower end of the magazine and a mechanism for causing same to alternately release and seize and hold the nested pile of cups, a separating device for removing the lowermost cup from the pile, and means for operating such separating device, as set forth.

1,688,511. PRODUCTION OF ROAD-SURFACING MATERIAL. FREDERICK WILLIAM VALLÉ-JONES, New Oxley, Wolverhampton, England, assignor to Fox, Stockell & Company, London, England. Filed Apr. 10, 1928. Serial No. 269,014, and in Great Britain Jan. 10, 1927. 5 Claims. (Cl. 94—23.)

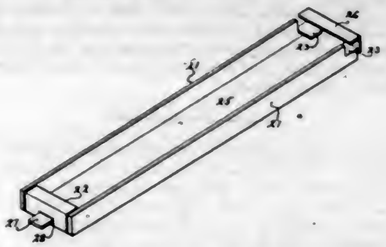


1. The process of producing road-surfacing material which comprises first heating and cleaning a coarse aggregate of the character of stone by means of steam and then bringing the aggregate while in a heated state together with a colloidal mixture of bituminous material.

1,688,512. TOOTH-PASTE-DISPENSING DEVICE. UEL THEODORE WALKER, Eccles, W. Va. Filed July 19, 1927. Serial No. 206,908. 11 Claims. (Cl. 221—60.)

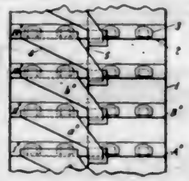
1. In a tooth paste and tooth brush carrier, a carrier tube, a tooth paste tube carrier slidably mounted therein and embodying an outlet nozzle, a tooth brush likewise slidably mounted therein, means for shifting the tooth paste carrier longitudinally of the tube, means operated by shifting of the tooth paste carrier longitudinally of the tube for extending the brush, means for latching the brush in extended position and means for discharging tooth paste from a tube carried by the carrier upon the extended brush.

1,688,513. BOAT-PROPULSION MEANS. CARL L. YOUNG and ALBERT B. ROBERTSON, Amarillo, Tex. Filed Nov. 29, 1927. Serial No. 236,437. 1 Claim. (Cl. 115—16.)



In a boat propulsion means, a longitudinal water tube arranged at the bottom side of the hull of the boat and being open at its opposite ends, the spider arranged within each end of the tube, a sleeve extending through each spider and projecting forwardly and rearwardly thereof, a stud shaft mounted for rotation within said sleeve, a propeller on the outer end of each shaft, and power driven shafts universally connected to the respective inner ends of the respective stub shafts.

1,688,514. MAGAZINE BINDER. HERMAN T. ARENDS, Highland Park, Mich. Filed Dec. 8, 1926. Serial No. 153,254. 2 Claims. (Cl. 281—25.)



1. A binder for magazines or the like comprising two sections each having an inturned flange at one end, one

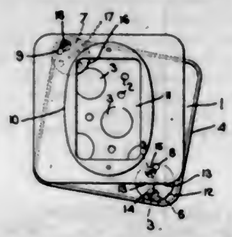
of said sections also having upturned sides and provided with guiding means for the other of said sections, the other of said sections adapted to slide longitudinally

within the first, the inner section being provided with a tongue adapted to pass through a slot in the end of the outer section and be bent over to fix the relative positions of the flanges.

1,688,515. PLATE COLUMN. THEODORE BAKER, Pompton Plains, N. J., and WILLIAM A. PETERS, Jr., Wilmington, Del., assignors to E. I. Du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 19, 1924. Serial No. 733,012. 6 Claims. (Cl. 261—114.)

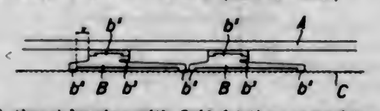
3. In a plate column, a casing, a series of superposed bubbler plates, a series of partitions each of which divides one of the series of spaces formed between the successive bubbler plates into two portions which communicate with each other adjacent one end only of the partition separating them, and a series of down pipes from plate to plate, each down pipe extending from a liquor outlet point on one plate at one side of the partition on that plate through the partition on the plate next below to a liquor inlet point thereon.

1,688,516. DRAWING BOARD. CHARLES E. BARKER, San Francisco, Calif. Filed June 21, 1926. Serial No. 117,496. 2 Claims. (Cl. 45—131.)



1. A device of the type described comprising a bolt, a board having a conical-shaped opening for receiving said bolt, said bolt having a head bearing against one surface of the board, spring means for yieldingly holding said head in contact with the board, a pair of plates mounted on said bolt, one of said plates bearing against said board, a nut for holding the second plate in position, said spring means being disposed between said plates, a spring connecting the second plate with said board, a handle movably carried by said board, and connections between said handle and said second plate.

1,688,517. METHOD OF AND MEANS FOR ARTIFICIAL-TOOTH FASTENING. JOSEF BEISLER, Hamburg, Germany. Filed Jan. 21, 1927, Serial No. 162,654, and in Germany Apr. 10, 1926. 2 Claims. (Cl. 32—9.)



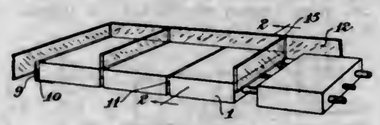
1. The herein described method of securing a porcelain tooth section to a backing plate, consisting in molding into the backing plate a substantially spherical pin-receiving cap formed in line with the face of the backing plate with an opening of materially less diameter than the maximum diameter of the cap and providing in the porcelain section a pin having a head, arranged beyond the section, corresponding approximately in diameter to that of the entrance opening of the cap, then filling the cap with cement and forcing the headed pin into and beyond the entrance of the cap to displace a portion of the cement and cause said cement to fill the space between the entrance opening of the cap and the head of the pin in a mass which in all directions radially of the axis of the pin exceeds the similar dimension of the entrance opening to the cap.

1,688,518. OUTLET-BOX-COVER ADJUSTER. JAMES G. BENNETT, Arlington, Mass. Filed May 21, 1927. Serial No. 193,335. 6 Claims. (Cl. 247—19.)

1. An outlet box comprising a receptacle, a cover plate therefor and a plurality of pivotally mounted adjusting members connecting said cover plate to said receptacle, each having a plurality of separated pivotal connections both with the cover and with the receptacle permitting angular adjustment of said cover relatively to the face of the receptacle.

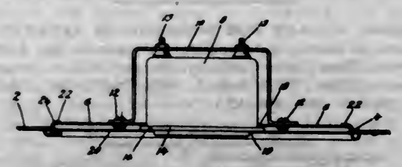
1,688,519. THRUST BEARING WITH FLUID FRICTION. GEORG BÖHM, Kiel, Germany, assignor to Fried. Krupp Germaniawerft Aktiengesellschaft, Kiel-Gaarden, Germany. Filed Dec. 2, 1925, Serial No. 72,753, and in Germany Aug. 6, 1925. 7 Claims. (Cl. 308—160.)

1. A thrust bearing with fluid friction, comprising relatively rotatably bearing members, one of which consists of a thrust ring composed of a plurality of resilient ring sec-



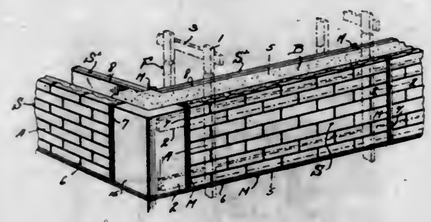
tions each carrying one bearing shoe rigidly secured thereto, radial supporting ribs arranged at the ends of said ring sections, said bearing shoes being arranged on said ring sections at points off-set from said supporting ribs and being undercut at the point where they are connected to said ring sections in order to increase the operative length of the resilient portion of the latter, said ring sections being more resilient on one side of said shoes than on the other.

1,688,520. BUTTON. CHARLES M. BONDY, Cleveland, Ohio, assignor to The Bondy Auto Top Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 27, 1928. Serial No. 257,217. 7 Claims. (Cl. 24—103.)



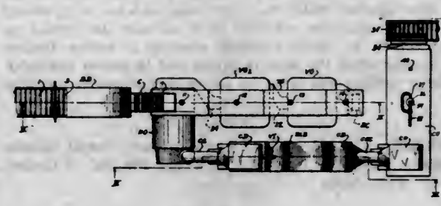
1. The combination with a button of a plurality of separate pin members secured to said button, at least one of said pin members being readily detachable from said button.

1,688,521. COUNTER BIN. ALEX J. BURG, St. Paul, Minn. Filed Apr. 30, 1927. Serial No. 187,803. 5 Claims. (Cl. 45—141.)



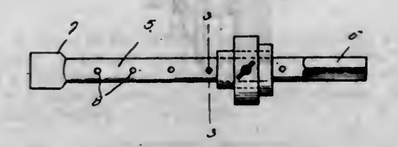
1. A counter bin structure, comprising longitudinal support members, a plurality of base blocks slidably mounted thereon, means interconnecting said base blocks to resiliently draw them together, and division wall plates removably inserted between the blocks to divide the structure into bins.

1,688,522. INSTRUMENT ASSEMBLY. ALBERT CHAMPION, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich. Filed Feb. 17, 1926. Serial No. 88,967. 3 Claims. (Cl. 180—90.)



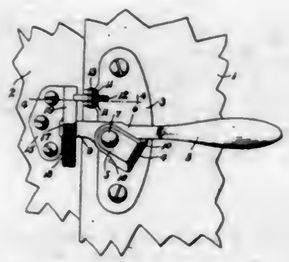
1. An instrument assembly comprising a supporting plate having an aperture therein, an instrument, means for securing the instrument to the supporting plate with a portion thereof projecting forwardly thru the aperture, said aperture being of a size to permit rearward withdrawal of the instrument, a face plate overlying the supporting plate and in spaced relation thereto and concealing said securing means, said face plate being provided with an aperture in which the said forwardly projecting portion of the instrument is snugly received.

1,688,523. WALL STRUCTURE AND METHOD OF BUILDING THE SAME. CHARLES HENRY CROWN, Peoria, Ill. Filed July 30, 1925, Serial No. 47,095. Renewed Sept. 19, 1927. 3 Claims. (Cl. 25—131.)



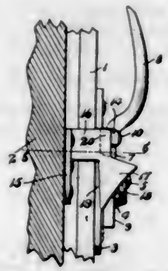
1. A method of constructing a building wall consisting in placing a tier of slabs, disposing a strip along a facing line of said tier, superimposing a second tier of slabs upon the first tier, and then inserting wedges through the strip and between the slabs of each tier to effect the desired spacing.

1,688,524. COTTON TREATING. ARTHUR COBB, Washington, D. C. Filed June 11, 1926. Serial No. 115,160. 3 Claims. (Cl. 19—66.)



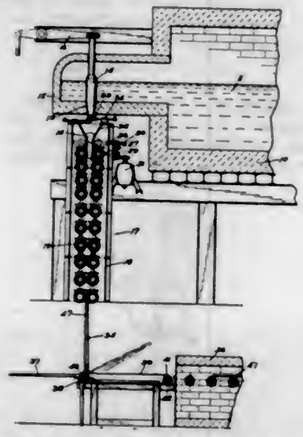
1. The process of conditioning cotton which consists in heating the cotton in a substantially dry atmosphere to temperatures in excess of 175° F. while it is being worked.

1,688,525. RADIATOR WRENCH. JOHN REMER COWART, Savannah, Ga. Filed Aug. 8, 1927. Serial No. 211,499. 2 Claims. (Cl. 81—71.)



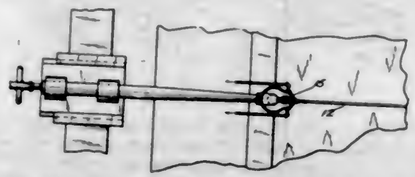
1. In a radiator wrench of the character described, a relatively elongated bar adapted to be engaged through the uniting nipples between the upper and lower ends of the radiator sections, one end of said bar being constructed for engagement with a predetermined one of the nipples, means upon the opposite ends of the bar whereby the same may be turned and means for engagement within the outermost section for limiting the inward engagement of the bar through said radiator sections, said means being longitudinally slidably adjustable upon the bar, and said bar being constructed with spacing markings whereby the means may be disposed at a predetermined point thereon so that the inner end of the bar will engage the proper nipple within the radiator when said means is arranged within the outermost radiator section.

1,688,526. LATCH. BASIL R. CRAMPTON, Grand Rapids, Mich., assignor to Winters & Crampton Mfg. Co., Grand Rapids, Mich., a Corporation of Michigan. Filed Apr. 25, 1927. Serial No. 186,250. 4 Claims. (Cl. 292—336.)



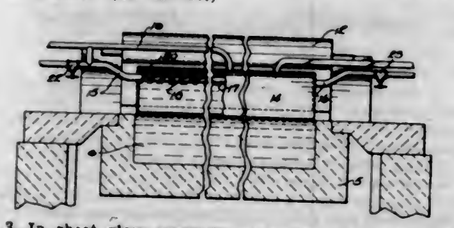
1. In combination, a door, a door casing therefor, a keeper attached to the door casing, a latch lever pivotally mounted between its ends on the door and having one end formed into a keeper engaging arm, said lever being swingable between a vertical and a horizontal position and vice versa, a member pivotally mounted on the door against which the lever engages when it is moved to vertical position whereby said member is turned on its pivot to an outer position wherein it comes against the keeper when the door is closed and is moved inwardly, thereby causing the lever to swing to horizontal position.

1,688,527. LATCH. BASIL R. CRAMPTON, Grand Rapids, Mich. Filed Apr. 9, 1928. Serial No. 268,762. 3 Claims. (Cl. 292—332.)



1. In combination, a door, a door casing therefor, a keeper attached to the door casing, a latch lever pivotally mounted between its ends on the door having one end formed into a keeper engaging arm and the other into a handle, said lever being swingable in a plane parallel to the face of the door from a vertical to a horizontal position and vice versa, a guide lug extending outwardly from the door, a rod slidably mounted through said lug and having a head at one end against which the lever engages when it is swung to vertical position acting to move said rod longitudinally, a second head at the opposite end of the rod having an inner cam side, said keeper being provided with a cooperating cam portion against which the cam side of said second head engages when the door is closed to thereby move the rod longitudinally in the opposite direction from which it is moved when the lever is turned to vertical position.

1,688,528. SHEET-FORMING APPARATUS. JOHN L. DRAKE, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 20, 1925. Serial No. 26,600. 14 Claims. (Cl. 49—3.)



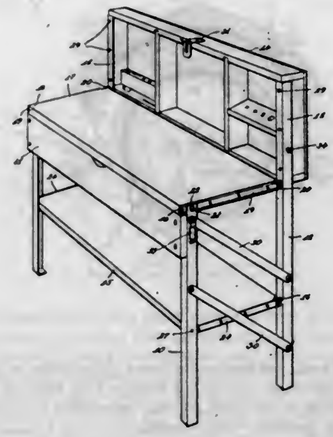
1. In sheet glass apparatus, a glass furnace, containing molten glass, means to discharge a gob of glass from the furnace, and a plurality of pairs of superimposed rotatable members between which the glass is adapted to pass to be reduced to sheet form.

1,688,529. SHEET-EDGE BLOCK. JOHN L. DRAKE, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed May 25, 1925. Serial No. 32,555. 6 Claims. (Cl. 49—17.)

1. In sheet glass apparatus including a mass of molten glass, means to draw a sheet therefrom, slotted means arranged at the edges of the sheet being drawn, the edges of the sheet passing through and contacting with said slotted means, means for creating a suction within the slotted means, and means for circulating a cooling medium through said slotted means to prevent narrowing of said sheet.

1,688,530. COOLER FOR SHEET-GLASS APPARATUS. JOHN L. DRAKE, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 3, 1926. Serial No. 133,327. 10 Claims. (Cl. 49—17.)

3. In sheet glass apparatus, a cooler, and means for introducing a cooling medium into either one or both ends thereof.

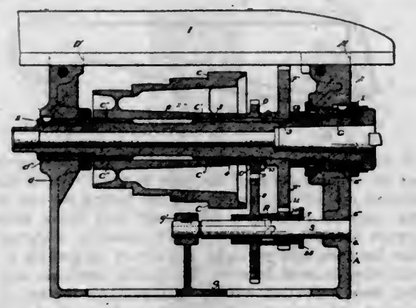


1,688,531. MANUFACTURE OF ARTIFICIAL SILK, ARTIFICIAL HORSEHAIR, AND THE LIKE. HENRY DREYFUS, London, England. Filed June 28, 1923, Serial No. 648,350, and in Great Britain Aug. 11, 1922. 3 Claims. (Cl. 18—54.)

1. Process for the manufacture of artificial filaments and threads, characterized in that the same are dry spun from concentrated solutions of organic substitution derivatives of cellulose containing not less than 25 per cent of cellulose derivative.

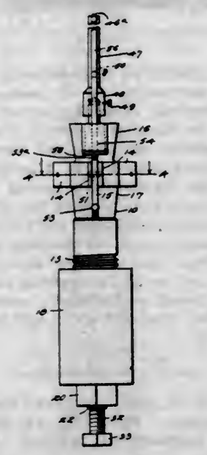
1,688,532. FILAMENTS OR THREADS OF CELLULOSE DERIVATIVES AND METHOD OF MAKING SAME. HENRY DREYFUS, London, England. Filed Sept. 16, 1926, Serial No. 136,000, and in Great Britain Mar. 29, 1926. 31 Claims. (Cl. 18—54.)

1. A process for the manufacture of artificial filaments or threads from organic substitution derivatives of cellulose of viscosities exceeding about 50, which comprises spinning solutions of said cellulose derivatives comprising less than about 15% calculated on the weight of the cellulose derivatives of a high boiling liquid that is not completely removed during the spinning operation.



1,688,533. COMBINATION WORKBENCH AND TOOL HOLDER. GEORGE EGER, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Oct. 29, 1926. Serial No. 145,079. 6 Claims. (Cl. 144—285.)

1. In a combination work bench and tool holder, a front frame, a rear frame, means for connecting said frames and arranged to permit the front frame to be folded against the rear one, a tool chest on the rear frame having a pivoted lid movable to horizontal position to constitute a work bench top, and a shelf pivotally carried by the rear frame and movable to horizontal position, said top and said shelf having means adapted to interlock with said front frame to hold said frames in proper spaced relation.

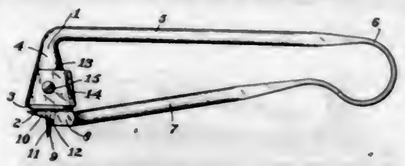


1,688,534. VARIABLE SPINDLE DRIVE. SOL EINSTEIN, Cincinnati, Ohio, assignor to The Cincinnati Milling Machine Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 8, 1923. Serial No. 673,546. 7 Claims. (Cl. 74—59.)

1. A machine tool combining a spindle; a gear-unit keyed thereto and providing a gear and a clutch-element; a driving member loosely journaled co-axially with said spindle; a shiftable gear-unit splined to said driving member and providing a gear and a clutch element adapted to engage said first mentioned clutch-element; a shiftable back-gear unit providing gears of unequal sizes adapted to mesh with gears on said two first-mentioned gear-units; and means

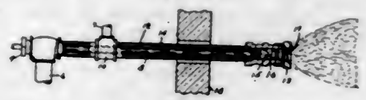
for shifting said shiftable gear-units at different rates successively to disconnect said clutch-elements and connect the back-gears with the gears of said two first-mentioned gear-units.

1,688,535. DEVICE FOR REMOVING MECHANICAL ELEMENTS FROM SHAFTS, ETC. ALVA K. ELLIS and RAY HENRY, Duncan, Okla. Filed Feb. 11, 1928. Serial No. 253,750. 16 Claims. (Cl. 29—86.)



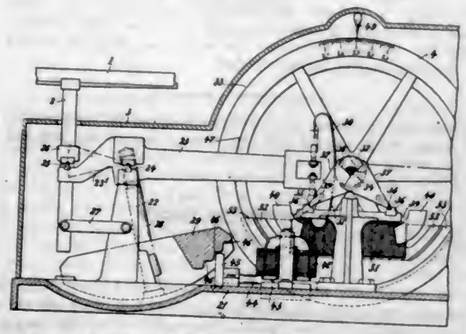
1. A device of the character described including a tubular body, a plunger rectilinearly movable in the body, and a rotatable element engaging with the body for forcing the plunger outward, the rotatable element having a rotative bearing on the plunger.

1,688,536. PAPER FASTENER. GEORGE H. ENNIS, New York, N. Y. Filed Mar. 22, 1928. Serial No. 263,933. 7 Claims. (Cl. 24—153.)



1. A fastener of the character described comprising a penetrating tongue angular in form, and a locking bar having a tongue-receiving portion beneath which the tongue may be slid, and flanges disposed in alignment with the tongue-receiving portion, the flanges being resiliently urged outward.

1,688,537. TACK PULLER AND DRIVER. GEORGE H. FAHRENBRUCH, Sheridan, Wyo. Filed Apr. 16, 1926. Serial No. 102,449. 1 Claim. (Cl. 145—30.)



A tack puller and driver consisting of a rod reversely bent at a point between its ends forming spaced handle portions, one of the handle portions having its end angularly disposed forming a head, said head being disposed between the handle portions and normally bridging the space between said portions, the center of gravity of the head being located between the handle portions, and the other handle portion having spaced claws located at its free end and an outer plane surface disposed at a right angle to the axis of the head.

1,688,538. OIL BURNER. GEORGE A. FISCALINI, San Luis Obispo, Calif. Filed June 29, 1927. Serial No. 202,304. 1 Claim. (Cl. 158—73.)

An oil burner having an oil passageway therein and an air passageway surrounding the oil passageway, the walls of said air passageway extending beyond the end of the oil passageway for forming a mixing chamber having a greater cross-sectional area than the cross-sectional area of the two combined passageways, a partition closing the outer end of the chamber and having small openings therein for causing a slowing up of the oil and air in the chamber for partially mixing them and for mixing them still further as they pass through the openings, a nozzle for said burner spaced from said partition and having a single opening therein, and means for applying the same pressure to the oil and to the air, and manually controlled means for regulating the flow of oil and air to said burner independently of each other.

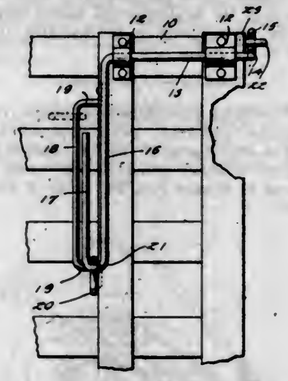
1,688,539. PRICE SCALE. JOHANNES FISCHER, Cologne-Holweide, Germany. Filed Aug. 13, 1925, Serial No. 49,956, and in Germany Oct. 24, 1924. 11 Claims. (Cl. 235—61.)

1. An automatic balance comprising in combination a calculating machine for establishing the price of the matter weighed, a weight indicating device including a drum, determining units on this drum for bodily representing the weights, a transmitting device arranged between the said drum and the calculating machine, this transmitting device including flexible tubes, spring-pressed wires embedded for shifting motion in the flexible tubes and having their ends near the drum projecting out of the tubes, and means for moving these ends radially with relation to the axis of the drum.

1,688,540. CLEANING COMPOSITION. STEPHEN D. FRANKO, Havre de Grace, Md., assignor of one-half to Harry Edgar Dyer, Havre de Grace, Md. Filed Oct. 13, 1926. Serial No. 141,430. 1 Claim. (Cl. 87—5.)

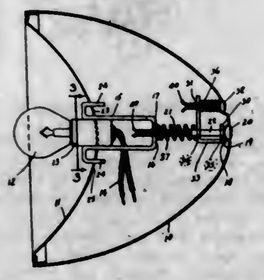
A cleaning composition, formed by mixing together the following ingredients in the following proportions, approximately one gallon of water, sulphur four ounces, three ounces of oxalic acid, two ounces of lead acetate, four ounces of sodium carbonate, two ounces of bicarbonate of soda, one half pound of sodium sulphite, two ounces of rock alum, three ounces of hydrogen peroxide, and one teaspoonful of perfume.

1,688,541. APPARATUS FOR DRYING METAL CANS. NORMAN H. GOLDSWORTHY and GEORGE FLOOK, Syracuse, N. Y., assignors to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 17, 1927. Serial No. 213,678. 19 Claims. (Cl. 34—1.)



1. A drying apparatus for cans comprising a pad of absorbent material, means for moving said pad and means for imparting a combined rolling and sliding movement to the cans in contact with said pad.

1,688,542. PROCESS OF PREPARING PRODUCT FROM ACETYLENE-PLANT WASTE AND THE LIKE. DOUGLAS M. HARRISON, Dormont, Pa., assignor, by mesne assignments, to McKenzie Mortar Company, Pittsburgh, Pa. Filed July 5, 1924. Serial No. 724,541. 2 Claims. (Cl. 106—24.)



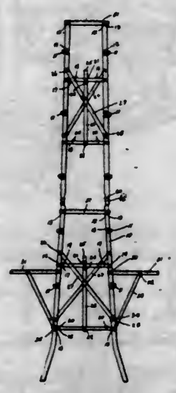
2. The process of treating waste carbide sludge material consisting of adding to the material calcium chloride, heating the mixture to separate the same into a plurality of strata, one of which consists of the resultant desired material, and another of which consists of the undesirable material.

1,688,543. END-GATE FASTENER. SIMON C. HIGHERS, Dixon Springs, Tenn. Filed Mar. 13, 1928. Serial No. 261,291. 3 Claims. (Cl. 292—106.)

1. In a securing means for the tail gates of stake wagons, a bar pivoted to the wagon side and having at its rear end a hook and at its forward end an angular arm, the tail gate having an eye, the hook being positionable to receive the eye when the arm of the bar is vertically disposed and above the bar and being fully engaged therewith when the arm is vertically disposed and below the eye.

1,688,544. LAMP FOCUSING AND ADJUSTING DEVICE. SAMUEL W. HYATT, Connersville, Ind., assignor to Indiana Lamp Corporation, Connersville, Ind., a Corporation. Filed Jan. 28, 1927. Serial No. 164,191. 3 Claims. (Cl. 240—44.)

1. In combination in a lamp having a light bulb support and a casing, a reflector therein with an elongated centrally positioned slot through which said light bulb support projects, said slot having oppositely directed aligned extensions, a U-shaped light bulb support supporting strap, said support being secured at the free end of said strap, said strap having a threaded central aperture and a pair of laterally and outwardly directed arms seatable in said slot extensions and longitudinally and transversely movable therein, and a rotatable swivelably mounted member having a tool engageable casing exposed portion and an opposite threaded portion for central aperture threaded engagement, another member similar to the first mentioned member and similarly mounted upon said casing and in adjacent and substantially parallel relation thereto, and an angular lever having multiple anchorage on said first mentioned member and threaded engagement with the second mentioned member whereby rotation of the latter secures cocking of the former and rotation of the former member secures adjustment of the arms in said extensions and the strap with the light bulb support in said elongated slot.

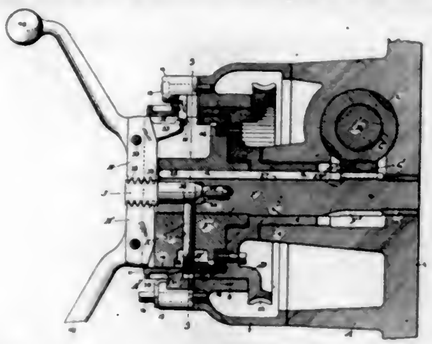


1,688,545. PROJECTED WINDOW. KITARO KATO, Tokyo-Fu, Japan. Filed July 14, 1927, Serial No. 205,703, and in Japan Dec. 30, 1926. 2 Claims. (Cl. 189—66.)

1. An improved projected window comprising a swinging sash with horizontal axes slidably mounted on rails and a sliding sash provided with counter balances, a pulley, a chain or rope passed over pulley, means connecting one end of said chain or rope to said swinging sash, means for detachably connecting the other end to said sliding sash,

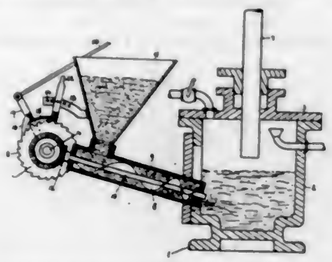
said other end carrying a pulley, hand ropes secured to the top and bottom of said swinging sash the lower one of which passes over the guide pulley arranged on said chain or rope, substantially as described.

1,688,546. KNOCKDOWN CONVERTIBLE STAND. WILLIAM C. KIRK, Indianapolis, Ind. Filed Jan. 18, 1927. Serial No. 161,788. 3 Claims. (Cl. 211—74.)



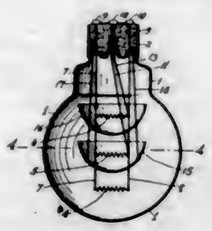
1. A knockdown display stand, comprising a pair of stand units, each comprising four legs arranged in pairs, two opposite pairs being rigidly connected together for forming sides and the intermediate pairs being collapsibly connected together for knockdown purposes, the upper ends of the lower stand legs and the lower ends of the upper stand legs being complementary and forming a detachable connection between the units.

1,688,547. AUTOMATIC POSITIVE-FEED CLUTCH FOR DRILLING MACHINES. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 25, 1921. Serial No. 495,396. 18 Claims. (Cl. 77—33.)



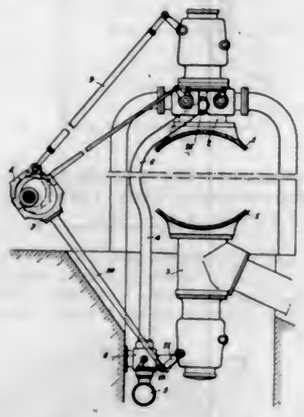
1. A machine-tool combining a translatable sleeve; a spindle rotatively affixed thereto; a power-driven transmission for translating said sleeve; and a clutch serially related to said transmission and comprising inter-mesh-

ing members tending to become disengaged under the torque of the transmitted motion means comprising a sliding cam and a member moved thereby for normally



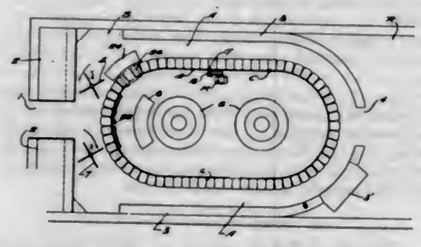
holding said members in engagement; and hand-manipulated means for shifting said cam selectively to effect engagement and release of said members.

1,688,548. BRONZE-STAMPING MILL. ALFRED LEBRECHT, Nuremberg, Germany, assignor to L. Auerbach & Co., Furth, Germany. Filed Mar. 11, 1927, Serial No. 174,612, and in Germany Mar. 15, 1926. 6 Claims. (Cl. 83—57.)



1. A method of working for bronze stamping mills and the like with uninterrupted charging and discharging of the stamper pot, comprising pushing the raw material into the stamper pot at the bottom, underneath the material already present therein.

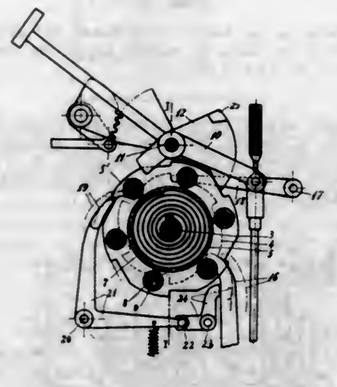
1,688,549. ELECTRIC LAMP. BARTOLOMÉ LLAURADÓ, Santiago, Cuba. Filed Sept. 25, 1926, Serial No. 137,772, and in Cuba Sept. 11, 1926. 3 Claims. (Cl. 176—34.)



1. An electric light lamp having a plurality of glow filaments surrounded, respectively, by semispherical hollow glass bodies of different colors, wires supporting these semi-spherical bodies from the insulating filler of the lamp, another glow filament located between the semi-spherical body farthest from the insulating filler of the lamp and the spheroidal end of the lamp, wires supporting the latter filament from the insulating filler and passing through holes in the semi-spherical bodies, and wires connecting these glow filaments to insulated terminals at the outside of the lamp.

1,688,550. INTERNAL-COMBUSTION ENGINE. NICOLAS EMILIEN METHLIN, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed Dec. 3, 1925, Serial No. 73,070, and in France Jan. 16, 1925. 7 Claims. (Cl. 123—76.)

7. In an internal combustion engine of the type having a combustion chamber, admission and exhaust valves therefor, an admission chamber communicating with said combustion chamber through the admission valve port, and a pair of valves controlling the admission of air and gas to said admission chamber, scavenging means comprising a collector of air under pressure, a conduit connecting the latter with said admission chamber, a rotary distributing valve in said conduit, and common means for simultaneously opening and closing said exhaust valve and said distributing valve, whereby air under pressure is admitted to said admission chamber before said admission valve lifts and is cut off from said admission chamber when said exhaust valve closes.

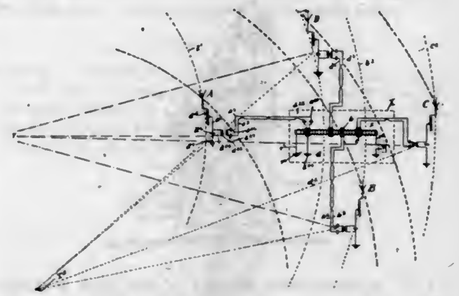


1,688,551. SELF-SERVICE STORE. TOMMIE C. NIX and MACON D. MILLER, Hazel, Ky., assignors to O. A. Harker, jr., Puryear, Tenn. Filed May 20, 1926. Serial No. 110,486. 1 Claim. (Cl. 198—181.)

In a store fixture, a supporting counter, spaced endless trackways upon the top of said counter, a plurality of containers having traction means movable over said trackways, V-shaped members attaced to the bottoms of said

containers with their ends projecting beyond one end of the containers, means for pivotally connecting the ends of the V-shaped members of adjacent containers, upstanding racks carried by the containers at one end thereof, and means engageable with the racks for imparting movement to the containers over the top of said supporting counter.

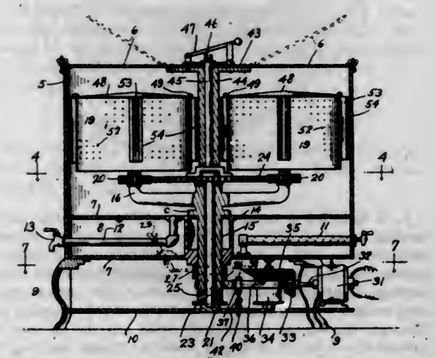
1,688,552. SELF-REGISTERING AND TICKET-DISTRIBUTING PERSONAL-WEIGHING SCALE. JAKOB NOBS, Thoune, Switzerland. Filed Oct. 11, 1926, Serial No. 140,992, and in Switzerland Oct. 13, 1925. 1 Claim. (Cl. 101—66.)



In a self-registering and ticket-distributing personal weighing scale and in combination, a cocking-device of the stamping hammer in operative dependence of said scale and comprising a journalled axle, a ratchet wheel fast to this axle and a spring barrel mounted loosely thereon and having one side wall formed as a second ratchet wheel toothed in an opposite sense to the first ratchet, a rod attached to the platform of the scale and adapted to engage said first ratchet with a finger-shaped end, a stationary pawl engaged in this same ratchet, a pivoted tail-hammer and a trundle-gearing at the periphery of the barrel within operative reach of the hammer's tail and adapted to establish the cocked position of the hammer, a tension spring attached to the hammer in a way to increase its striking power, a rod attached to the hammer so as to maintain its striking position and depending on releasing means, a stationary pawl adapted to engage the second ratchet and provided with a lateral projection established in the path of the hammer's tail and a set of angular levers arranged so as to be capable of regulating the blocking and unblocking of the two ratchet wheels and to throw-out the finger controlled by the scale's platform and a lengthening provided on one of said angular levers and extended into the path of the first ratchet so as to constitute the operating means of the said levers.

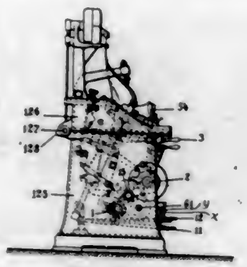
1,688,553. DYEING OF MATERIALS MADE WITH OR CONTAINING CELLULOSE DERIVATIVES. HENRY CHARLES OLPIN, Spondon, near Derby, England, assignor to Celanese Corporation of America, a Corporation of Delaware. Filed Apr. 11, 1927, Serial No. 183,014, and in Great Britain Feb. 9, 1927. 16 Claims. (Cl. 8—5.)

1. Process for dyeing materials comprising an organic substitution derivative of cellulose, comprising applying thereto a sulphuric ester of an anthraquinonylamino alcohol.



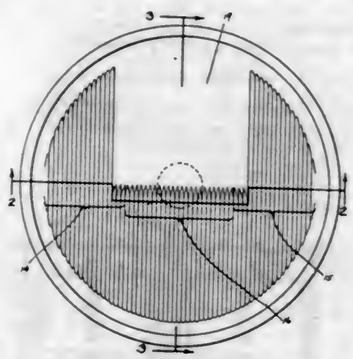
1,688,554. RADIOTELEGRAPHY. RICHARD HOWLAND RANGER, Newark, N. J. Filed Aug. 15, 1921, Serial No. 492,403, and in France July 18, 1919. Renewed Jan. 28, 1927. 23 Claims. (Cl. 250—20.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In radio receiving systems, the combination of a plurality of separated receiving antennæ, a common receiving apparatus, a relatively long coil connected thereto and a plurality of coupling coils, one associated with each antenna and with said long coil, said coupling coils being independently shiftable relatively to said long coil.



10. In radio receiving systems, the combination of a plurality of receiving antennæ having different characteristics, a common receiving apparatus for said antennæ, transmission lines connecting said antennæ to said common apparatus, means for balancing said transmission lines comprising means for selectively tuning each side of said transmission lines, and means for independently regulating the phase of currents from said transmission lines at said receiving apparatus.

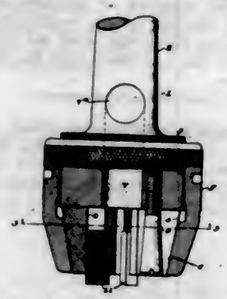
1,688,555. CLOTHES-WASHING MACHINE. ARNOLD RANKIN, Portland, Oreg. Filed Nov. 3, 1927. Serial No. 230,772. 3 Claims. (Cl. 68—18.)



1. In a clothes washing machine of the character described, a water tank, a shaft journaled through the bottom of the tank, a hollow shaft surrounding said first mentioned shaft and projecting into said tank, radiating arms upon the upper end of the hollow shaft, clothes containers mounted for rotation upon the ends of said arms, a driving connection between the upper end of the first mentioned shaft and said clothes containers, which clothes containers are provided with perforations, a single power unit and means whereby either shaft may be independently operated, and means whereby either shaft may be prevented from rotation.

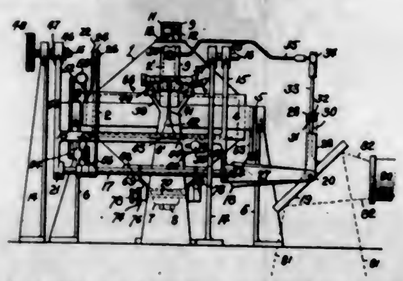
1,688,556. PULLING-OVER MACHINE. IVAN RIESZ, Weissenfels, Germany. Filed Nov. 5, 1920, Serial No. 422,045, and in Germany Dec. 23, 1918. 6 Claims. (Cl. 12—4.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a pulling-over machine of the class described, pincers for stretching an upper and for laying its margin upon an insole, a ratchet mechanism for holding the pincers in stretching position, means for adjusting the ratchet mechanism operable during the stretching movement of the pincers, and means allowing the ratchet mechanism to move in a reverse direction while the pincers lay the margin of the upper upon the insole.



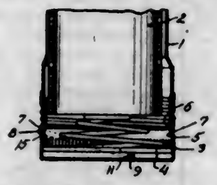
1,688,557. LENS FOR VEHICLE LAMPS. WALTER D'ARCY RYAN, Schenectady, N. Y. Filed Dec. 27, 1926. Serial No. 157,197. 3 Claims. (Cl. 240—48.4.)

1. A lens for a headlight comprising a central portion having a series of vertically-extending prisms extending thereacross, said series comprising a central group of prisms for refracting light in opposite directions and effecting a lateral distribution thereof, the upper ends of said prisms terminating substantially in a horizontal plane through the center of the lens, said lens being free from prisms above such horizontal plane for freely emitting light therethrough without substantial refraction, and a plurality of vertically extending prisms on each side of said first-mentioned group of prisms comprising means for refracting light towards the axis of the lens.



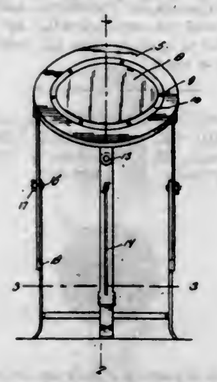
1,688,558. HOLLOW MILL. OLE SEGERSON, Shelton, Conn., assignor to The O. K. Tool Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 20, 1924. Serial No. 757,198. 13 Claims. (Cl. 29—105.)

1. In a hollow mill, the combination comprising a body member having a head portion; detachable blocks secured to said head; detachable wedge shaped blades secured to said blocks; means comprising serrations on the sides of the blades and on the blocks, for varying the position of



the blades in the blocks; and means for varying the position of the blocks to radially adjust the blades with respect to the axis of the mill.

1,688,559. GYROSCOPIC LINE OF SIGHT STABILIZER. ELMER A. SPERRY, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed July 21, 1921. Serial No. 486,526. 18 Claims. (Cl. 88—1.)

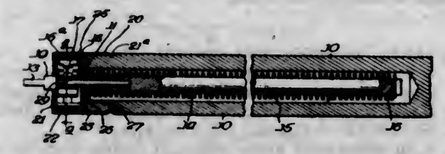


1. In combination, a support, a gyroscope and a reflector mounted thereon, the gyroscope being connected to the reflector to control the position thereof, means for indicating the position of the gyroscope with respect to the earth, and means for adjusting said reflector with respect to the earth without disturbing the gyroscope.

1,688,560. BATTERY HAND LAMP. HENRY W. STAPLES, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed July 26, 1927. Serial No. 208,455. 10 Claims. (Cl. 240—10.5.)

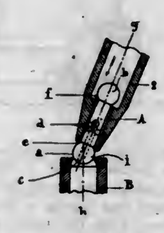
1. In a hand lamp, the combination of a battery casing, a cylindrical end cap secured to one end of said casing, a substantially arcuate supporting loop having a larger radius of curvature than the outside radius of said end cap hingedly secured to the cylindrical wall of said cap adjacent the end thereof and movable to a position substantially concentric with the outside cylindrical wall of said cap, and a projection on the cylindrical wall of said cap for engaging said loop and releasably retaining said loop in a position substantially concentric with said cylindrical wall.

1,688,561. PRACTICE DRUM. JOSEPH J. STRAUB, Brooklyn, N. Y. Filed Oct. 30, 1926. Serial No. 145,240. 2 Claims. (Cl. 84—420.)



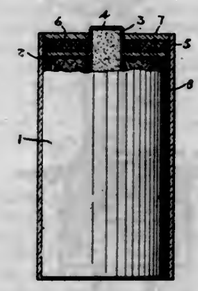
1. In a practice drum of the class described, a flat circular wooden base plate formed with a circumferential channel in the upper face thereof inwardly of the perimeter of said circular plate, drumming material arranged over the central portion of the upper face of the base plate, the edge portion of said drumming material being adapted for disposition in the circumferential channel, and a metallic ring secured entirely within the channel, and clamping the drumming material in a taut position.

1,688,562. PICTURE HOOK AND WIRE ADJUSTER. MAL SCOTT SYKES, Jackson, Miss. Filed Sept. 24, 1926. Serial No. 137,443. 1 Claim. (Cl. 294—19.)



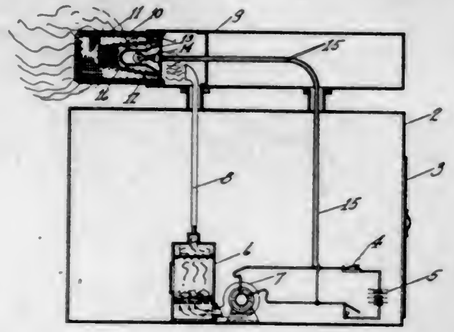
In a device of the class described, a pole, a combined picture hook and picture wire engaging element of U-shape formation at one end of the pole, said engaging element being secured to the pole intermediate the ends of the parallel arms of the U thereby forming a cup adjacent one side of the pole adapted to engage a picture hook and on the other side of the pole a notch in the upper edge of each of the arms adjacent the open end of the U, said notches adapted to engage the picture wire.

1,688,563. SHADE-ROLLER CONSTRUCTION. JOHN K. TOMLINSON, Chicago, Ill. Filed Feb. 18, 1927. Serial No. 169,196. 8 Claims. (Cl. 156—36.)



1. A shade roller holding construction comprising a pawl rotatable with the shade roller, and moved to non-holding position by centrifugal force when the shade roller is rotated, said pawl having a lateral projection and means cooperating with said pawl for holding the shade roller against rotation, comprising an abutment member for engaging the powl to stop rotation of the roller and a laterally extending retaining flange which overlies the lateral projection of the pawl when the pawl is in holding position, to prevent accidental release of the shade roller.

1,688,564. COUPLING DEVICE. LOUIS GASTON TRINQUART, Paris, France, assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 19, 1923, Serial No. 633,333, and in France Oct. 25, 1922. 5 Claims. (Cl. 221—47.4.)

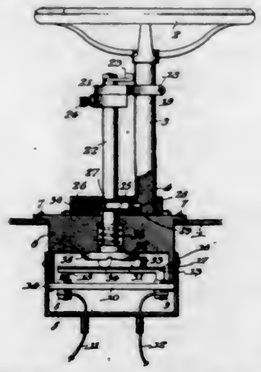


1. A coupling for lubricating devices and the like, comprising a container for the material to be distributed having a longitudinal outlet passage provided with valve seats at opposite ends thereof, and a coupling member freely movable endwise in said passage and provided at its inner and outer ends with heads which are rigid therewith and adapted to fit against the respective valve seats and close the same; said member having a length sufficiently greater than that of said passage to enable one head to be unseated when the other is seated, and a diameter sufficiently less than that of the passage to provide an annular space between the walls of the said member and passage for the discharge of the material therethrough when the inner head is unseated, and also having an axial bore which opens laterally at its inner end through the wall of said member into said space to enable the material to flow into said bore from said space, and which opens at its outer end through the outer head; combined with a tubular receiving member having an annular edge to receive the outer head of the coupling member and form a liquid-tight joint therewith while permitting relative rotation and inclination between said members.

1,688,565. DRY BATTERY. WILLIAM MICOU TURNLEY, Toronto, Ontario, Canada. Filed Jan. 4, 1926. Serial No. 79,146. 4 Claims. (Cl. 136—133.)

1. In a dry cell, the combination with the metallic container of an adhesive sealing material closing the top of the container, and a preformed disc of fibrous insulating material placed over and secured by said adhesive sealing material and extending over the edge of the container.

1,688,566. ADVERTISING DEVICE. ROY VAN AUSDALL, Reily, Ohio. Filed Oct. 20, 1927. Serial No. 227,572. 6 Claims. (Cl. 40—126.)

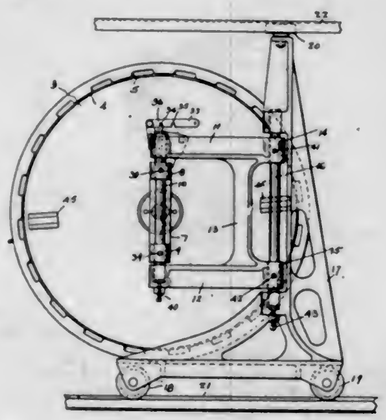


1. An advertising device comprising a casing shaped to represent a tobacco package, with a representation of an article to be smoked supported above said casing, an end of said article being open and having a hollow tubular screen covering the opening, with the outer side of the screen decorated to represent ashes, means for intermittently internally illuminating the hollow screen, a source of smoke, and means for emitting smoke from said source through the open end of said article.

1,688,567. BUS-BAR STRUCTURE. CHARLES F. WAGNER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 24, 1920. Serial No. 412,461. 10 Claims. (Cl. 173—81.)

1. The combination with a plurality of inductively related alternating current conductors, of current responsive means for effecting a predetermined selective distribution of current therein.

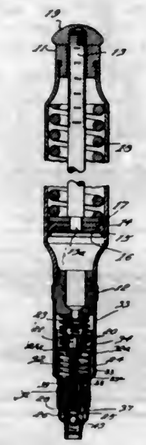
1,688,568. COINCIDENTAL LOCK FOR AUTOMOBILES. ARTHUR AUGUSTUS WELMAN, Evansville, Ind. Filed June 14, 1927. Serial No. 198,796. 1 Claim. (Cl. 70—127.)



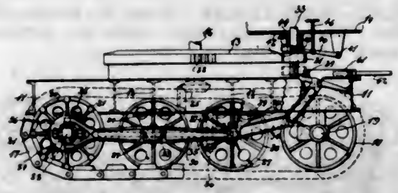
In a combined safety device and lock for automobiles, the combination with the steering shaft of the automobile, of a controlling shaft, means for turning said controlling shaft to different positions, a lock for locking the controlling shaft where set, a mutilated pinion carried by the controlling shaft, a spring-pressed locking rack engaged by said mutilated pinion which is adapted to lock the steering shaft or to be disengaged therefrom, and a circuit-controlling switch and an arm operated by said operating shaft and adapted to open or close the switch according to the setting of said shaft.

1,688,569. BUILT-UP SHAFT OR ROD AND THE LIKE AND METHOD OF PRODUCING SAME. THEODOR WENSEL, Chicago, Ill. Filed June 6, 1927. Serial No. 196,804. 11 Claims. (Cl. 144—309.)

1. The method of making a built up shaft or rod and the like which consists in providing a length of straight grained fibrous material, splitting the same with the grain into a plurality of strips, straightening each strip by a confining pressure, making each strip wedge shaped in cross section, applying an adhesive to said wedge shaped strip, and then grouping a full complement of said wedge shaped strips about a common axis to provide said built up shaft or rod.



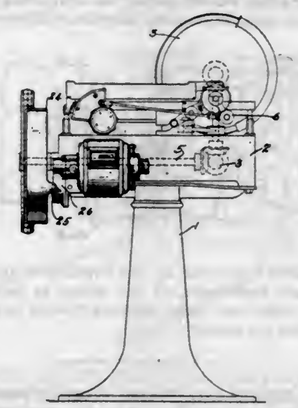
1,688,570. VULCANIZER HEAD. HERBERT LLOYD WILLIAMS, Akron, Ohio, assignor to The Williams Foundry & Machine Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 6, 1924. Serial No. 697,238. 12 Claims. (Cl. 18—6.)



1. In a vulcanizer, the combination with a horizontally disposed casing forming a vulcanizing chamber open at one end, a carriage movable transversely of said casing, a bracket pivotally mounted on said carriage, and a cover supported on said bracket and movable into and out of registration with said casing.

1,688,571. LUBRICATING SYSTEM. OSCAR ZERK, now, by judicial change of name, Oscar Ulysses Zerk, Cleveland, Ohio, assignor, by mesne assignments, to The Bassick Manufacturing Company. Filed Jan. 20, 1922. Serial No. 530,515. 9 Claims. (Cl. 221—47.4.)

1. In combination with a nipple for feeding lubricant to an element to be lubricated, a grease gun comprising a barrel, means for constantly exerting pressure within the barrel, a discharge nozzle connected with the barrel, a valve interposed between the discharge end of the nozzle and the barrel, means projecting from the nozzle for opening said valve, and telescopic coupling means extending from said barrel for connecting the grease gun to said nipple by exerting longitudinal manual pressure on the gun whereupon said valve opening means will be operated.



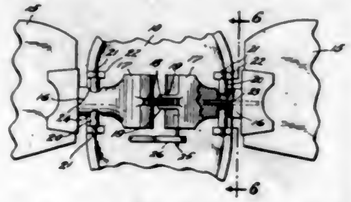
1,688,572. STEERING MECHANISM. SVANTE R. W. M. BAGER, South Milwaukee, Wis., assignor to Bucyrus-Erie Company, South Milwaukee, Wis., a Corporation of Delaware. Original application filed May 2, 1923, Serial No. 636,137. Divided and this application filed Aug. 13, 1926. Serial No. 128,984. 2 Claims. (Cl. 180—9.2.)

1. In a machine of the character described, the combination of: a base frame; a head frame supported thereby and rotatable with respect thereto; traction means supporting said base frame; steering mechanism; means for actuating said steering mechanism; a rack carried by the base frame; a pinion depending from the head frame and directly engaging said rack, whereby to rotate the head frame relative to the base frame; and one means whereby the rotation of said pinion, although said rotation is continuous, can be rendered inoperative to effect the rotation of the head frame and operative to operate, otherwise than by means passing through the axis of rotation of the head frame, the means for actuating the steering mechanism.

1,688,573. MEAT-SLICING MACHINE. LEONARD L. BLOCH, New York, N. Y. Filed Oct. 8, 1927. Serial No. 224,789. 3 Claims. (Cl. 146—102.)

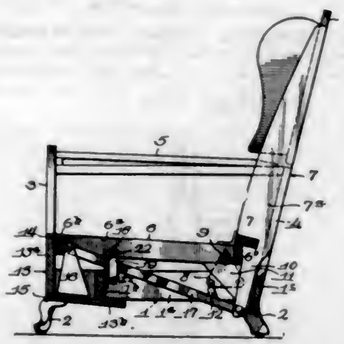
1. In a slicing machine, a frame having a downwardly projecting flange, a plate fitted to the rear surface of said flange, a motor housing having a flanged plate fitted to the front surface of said flange, means for clamping together said plate and the flange of the frame, a driving motor carried within said housing having a driving pulley, a grooved balance wheel for driving said slicing machine and a belt extended between said pulley and said balance wheel.

1,688,574. SECTIONAL HEADER FOR WATER-TUBE BOILERS. ALFRED COTTON, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 8, 1922. Serial No. 550,809. 4 Claims. (Cl. 122—360.)



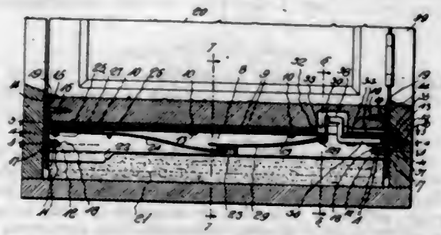
1. In a water tube boiler, a vertically-disposed sectional header adapted to be connected to an adjacent section by a nipple, said header being provided at its upper end with an opening through which a nipple can be introduced into the header without disconnecting the header from its supporting means, an overhead supporting structure, and means depending from said supporting structure and engaged with parts on said header located below the upper end of same for sustaining said header.

1,688,575. MECHANICAL-FIGURE TOY. LEWIS D. CROSSETT, Seattle, Wash., assignor of one-half to Pierre Barnes, Seattle, Wash. Filed Mar. 29, 1927. Serial No. 179,244. 2 Claims. (Cl. 46—40.)



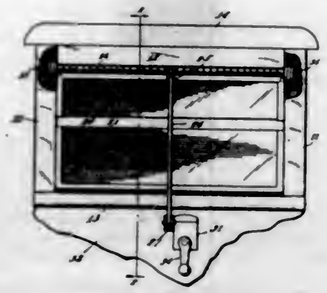
1. A bird toy, having wings adapted to be flapped by a head breeze, said toy having a hollow body, wings, stems therefor extending through opposite walls of said body, rocker shafts for connecting the wings to the body for substantially vertical flapping movements, pins connecting the stems of the wings to the aforesaid rocker shafts permitting rotary movements of the wings about axes longitudinally of the respective wings, connections between the associated

stems and rocker shafts being such as will prevent longitudinal movement of the wings relative to the axes of the respective rocker shafts, means for connecting the wings together for conjoint flapping and rotary movements, and



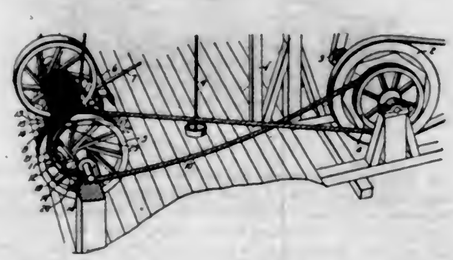
means rendered operable by the flapping of the wings to effect rotary movements of the wings to present alternately the upper and lower surfaces thereof into operative relation with the breeze.

1,688,576. RECLINING CHAIR. HARRY F. DOYLE, Aurora, Ill., assignor to Kroehler Mfg. Co., Naperville, Ill., a Corporation of Illinois. Filed May 14, 1926. Serial No. 109,007. 2 Claims. (Cl. 155—106.)



1. A reclining chair comprising a chair frame, a tiltable frame hung on trunnions in said chair frame and forming seat and back portions, a leg rest hinged to the forward edge of said seat, a bar extending from front to rear of said chair frame beneath said seat and pivotally connected at its rear end to said tiltable frame and at its front end with said leg rest, said chair frame having a transverse frame member below said seat and rearwardly of the leg rest, friction plates mounted on said frame members and embracing said bar and adjustable tension means acting on said plates.

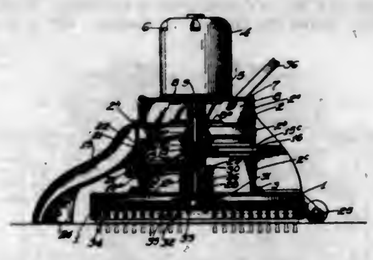
1,688,577. WEATHER STOP. JAMES R. DUPEN, Chico, Calif. Filed Oct. 24, 1927. Serial No. 228,400. 3 Claims. (Cl. 20—68.)



1. In a weather stop, a horizontally elongated open-ended casing for reception in a groove in the lower end of a door, said casing having members in its open ends formed with openings, a pair of vertical end plates for said casing of a length to project upwardly therefrom, said plates having lower openings alined with the aforesaid openings and upper openings above the casing to receive fasteners for securing the plates to the door edges, and threaded fasteners passing through said lower openings and the first named openings, said threaded fasteners permitting different spacing of the end plates from the casing to compensate for variance in door widths.

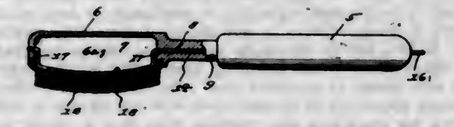
1,688,578. WINDSHIELD REGULATOR. KARL FEILCKE, Indianapolis, Ind. Filed Aug. 2, 1923. Serial No. 655,345. 12 Claims. (Cl. 296—84.)

1. In an automobile or other vehicle, a body including a windshield support, a windshield pivotally mounted in said support, spring means tending to turn said windshield about its pivotal axis in one direction, a self-locking crank-operated device mounted on said body, and means for connecting said crank-operated device with said windshield for rotating said windshield against said spring means, said connecting means including a flexible member for transmitting tension only.



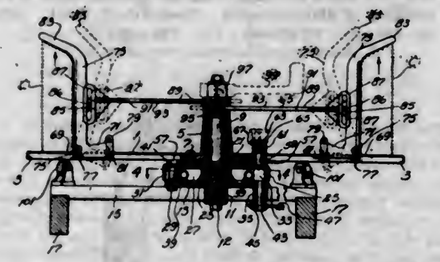
1,688,579. BELT PLACER. HARRY H. FRANKS, Tulsa, Okla. Filed Feb. 24, 1927. Serial No. 170,496. 2 Claims. (Cl. 64—51.)

1. In combination with a wheel having peripheral flanges forming a grooved rim, a belt placer comprising a strip of angle iron curved on an arc of gradually reducing radii with one of its walls lying against the rim of the wheel, and brackets on the outer wall of the angle member attached to the wheel to secure the placer to the wheel with the end of shorter radii adjacent the rim of the wheel.



1,688,580. COMBINED VACUUM CLEANER AND POLISHER. JOHN W. GERNANDT, San Diego, Calif. Filed Dec. 3, 1924. Serial No. 753,622. 4 Claims. (Cl. 15—49.)

1. In a machine of the class described, a supporting frame, a motor mounted thereon, a polishing member revolubly mounted co-axially with said motor near one end of said frame, and a clutch means adapted to connect said

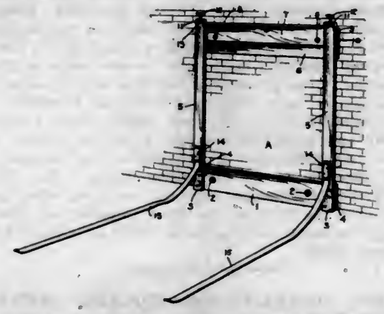


motor with said polishing member and force the latter beyond said frame.

1,688,581. TOOTHBRUSH. NATHAN GLASSMAN, Brooklyn, N. Y. Filed Sept. 9, 1927. Serial No. 218,499. 2 Claims. (Cl. (15—167.)

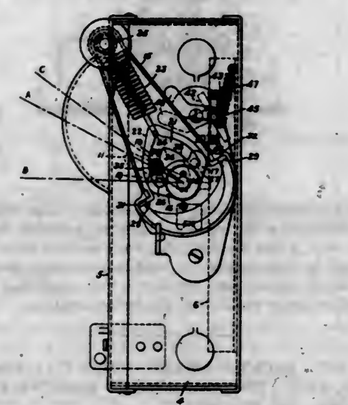
1. A brush of the character described comprising a head portion, a handle associated with said head portion, presenting concave side portions, a resilient bristle-carrying member secured to said head portion and assuming the concave disposition of said side portions and manually operable means rotatably borne by said handle for changing said member from its concave position to a convex position.

1,688,582. REEL. WALTER A. HEINRICH, St. Louis, Mo., assignor to W. N. Matthews Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 25, 1926. Serial No. 83,529. 4 Claims. (Cl. 242—111.)



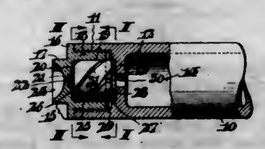
1. A collapsible reel comprising a plate, movable and angularly collapsible fingers thereon, a shaft adapted to be locked for movement with the plate and to be rotatably arranged therewith, a pinion on said shaft and toothed adjusting bars adapted to engage said pinion and said fingers whereby relative movement between the shaft and the plate causes relative movement between said fingers and the plate and means for linking said bars and fingers, whereby the latter may be angularly collapsed with respect to said plate without changing the planes of said bars.

1,688,583. GYMNASIUM-MAT RACK. ARCHIBALD B. HORNE, Springfield, Mass. Filed May 25, 1926. Serial No. 111,492. 4 Claims. (Cl. 211—87.)



1. A device of the class described comprising a swinging frame adapted to be attached to a wall or the like and to

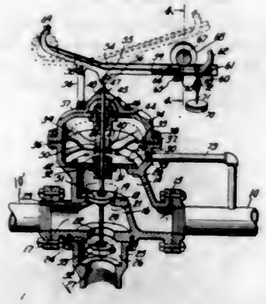
be swung from a vertical to a horizontal position, means for holding the frame in its vertical position against the wall, and flexible straps connected with the frame adjacent the



bottom thereof and adapted to cooperate with the frame to hold a mat against the frame, and means for fastening the flexible straps to the frame in mat-holding position.

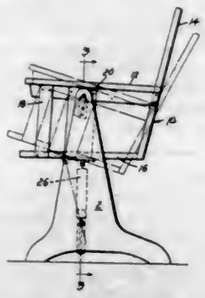
1,688,584. CIRCUIT-BREAKER APPARATUS. OLIVER S. JENNINGS, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 6, 1927. Serial No. 211,035. 4 Claims. (Cl. 200—50.)

1. The combination with a switch having means for actuating it to open position with a snap action after the operating mechanism has moved to a predetermined position, of a control switch retained in one of its positions by the operating mechanism and adapted to be moved to another position to cause actuation of a cutout device, in advance of the movement of the operating mechanism to the said predetermined position.



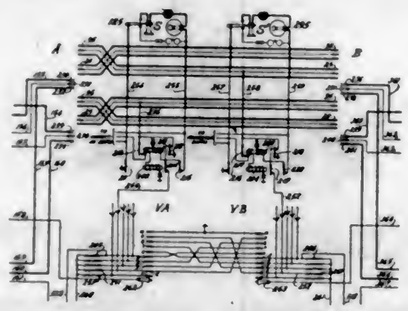
1,688,585. ATOMIZER. JAMES D. LALOR, Baltimore, Md., assignor to The Lalor Fuel Oil System Company, Inc., Baltimore, Md., a Corporation of Maryland. Filed June 13, 1925. Serial No. 36,861. 1 Claim. (Cl. 299—120.)

An atomizer comprising a tubular fluid conducting body; a cavity set apart in the end of the body by a transverse diaphragm centrally-apertured for communication to the



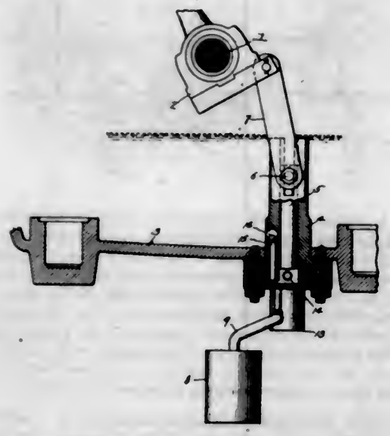
bore of said body and counterbored to seat a centrally apertured compressible gasket; a tip characterized by an axial bore with different co-axial counter-recessions at the forward end, the smaller of which tapers into a restricted discharge orifice leading therefrom, while the inner end of said tip terminates short of the diaphragm to provide a clearance; a core piece snugly fitting the bore of said tip and held stationary by the gasket aforesaid, to thereby form an annular distributing chamber, and in conjunction with the counter-recesses aforesaid a reducing chamber; said core piece having radial grooves in its rear end providing passages from the central aperture of the diaphragm to the distributing chamber, and spiral channels in its cylindrical surface that connect the distributing chamber with the reducing chamber for gyration of the fluid in the latter chamber for expulsion through the restricted discharge orifice as a finely-divided divergent spray.

1,688,586. APPARATUS FOR SUPPLYING ARTIFICIAL PRESSURE TO OIL SAND. JAMES O. LEWIS and HOMER R. PIERCE, Tulsa, Okla. Filed Dec. 29, 1927. Serial No. 243,312. 9 Claims. (Cl. 166—1.)



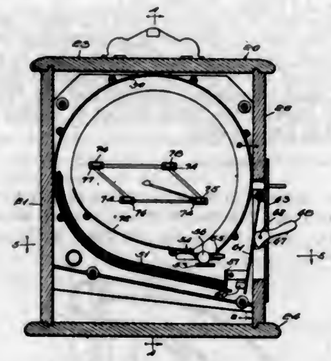
1. In combination with a compressor, a line leading from the compressor for conducting fluid pressure medium to an air well, a line for returning fluid medium from a producing well to the compressor, and means controlled by pressure in the return line for selectively admitting air or returned pressure medium to the compressor.

1,688,587. ROCKING-CHAIR. FRANS J. LILJEDAHL, Oakland, Calif. Filed July 8, 1926. Serial No. 121,095. 2 Claims. (Cl. 155—58.)



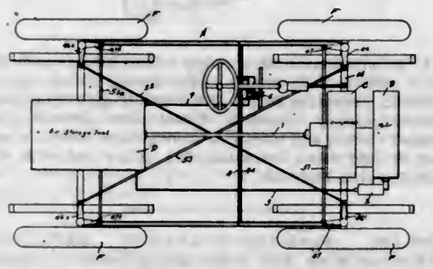
1. A swinging chair comprising a seat portion and arm portions, a pedestal pivotally supporting said swinging chair at the arm portions thereof, and resilient means connected at one end to said pedestal and at its opposite end to said seat portion, said latter connection being in vertical alignment with the first named connection and the pivotal axis between the pedestal and arm portions when the chair is in normal position.

1,688,588. AUTOMATIC TELEPHONE SYSTEM. CLARENCE E. LOMAX, Oak Park, and NORMAN H. SAUNDERS, Homewood, Ill., assignors to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed July 2, 1927. Serial No. 203,059. 8 Claims. (Cl. 179—18.)



1. In an automatic telephone system, a group of subscribers' lines divided into a plurality of subgroups, a start wire for each subgroup, a resistance for each start wire, a relay common to said group of lines, two groups of finders having access to said lines, means including a distributor for each group for preselecting an idle finder in each group, an auxiliary start relay in each distributor, means responsive to the initiation of a call on one of said lines for energizing said common relay over a circuit including the start wire and resistance individual to the subgroup containing said line, means controlled by said common relay for energizing the auxiliary start relay of the first of said distributors if that distributor has preselected an idle finder and for energizing the auxiliary start relay of the other distributor if all the finders of the first group are busy, and means responsive to the energization of an auxiliary start relay for starting a preselected finder to find said calling line.

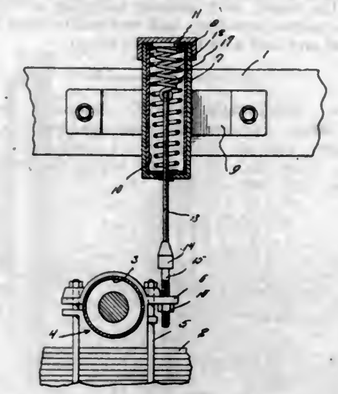
1,688,589. REFRIGERATING MACHINE. IVAR LUNDGAARD, Hartford, Conn., assignor, by mesne assignments, to Devon Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 7, 1924. Serial No. 691,165. 10 Claims. (Cl. 230—203.)



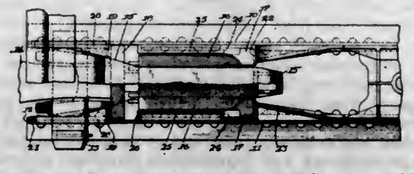
1. In a machine of the class described comprising a crank, a crank-case and a connecting rod connected to said crank, the combination with the crank-case of an auxiliary air pump adapted to receive atmospheric air and having an outlet port leading into the crank-case.

1,688,590. GAME OF SKILL. FRANK W. MILLS, Chicago, Ill. Filed Nov. 6, 1926. Serial No. 146,676. 9 Claims. (Cl. 273—138.)

1. In a device of the kind described, a track disposed in a plane inclined to the horizontal, means for propelling a ball along the track, and a plurality of trip devices engageable by the ball when it falls from the track, said trip devices being actuated by the ball when engaged thereby.



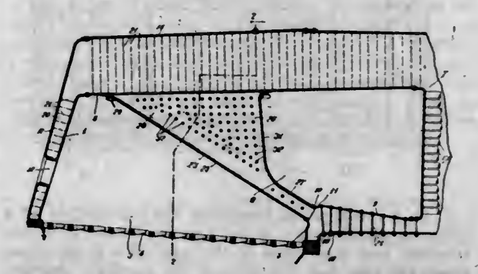
1,688,591. STEERING, PROPELLING, AND BRAKING MECHANISM FOR VEHICLES. ROBERT E. MITTON, Salt Lake City, Utah. Filed Feb. 17, 1926. Serial No. 88,974. 2 Claims. (Cl. 180—66.)



1. A vehicle control comprising a chassis; an air compressor carried on said chassis; an air tank mounted adjacent said compressor; means to operate said compressor for storing air in said tank; traction wheels on which said chassis is mounted, each of said wheels consisting of radially disposed cylinders; pistons operable in said cylinders; a piston rod connected with each of said pistons by ball and socket connections; an air conduit through each ball and socket in open connection with the piston rod contiguous; stub axles on which said traction wheels are journalled; an eccentric cam integral with each of said axles, having a slot cut in the perimeter of said cam and in open connection with the interior with one of said piston rods; pipes to connect the said cylinders with said air tank; and means to direct the passage of air through said cylinders.

1,688,592. AUTOMOBILE SNUBBER. LEONARD WILMOT MONTGOMERY, Amarillo, Tex. Filed Sept. 22, 1927. Serial No. 221,319. 1 Claim. (Cl. 267—8.)

As a new product of manufacture, a snubber comprising an attaching bracket adapted to be rigidly mounted upon a frame bar, a vertically disposed cylinder carried by said bracket, a disk slidable in said cylinder, a spring arranged in said cylinder, and bearing at one end against the bottom of the cylinder and at its opposite end against the under side of the disk, a relatively small coiled spring connected to the disk and disposed within the first-named spring, a cable connected to said small spring and extending downwardly through an opening in the bottom of the cylinder, a bolt carried by the lower end of said cable, and an axle and spring clamp with which said bolt is adjustably connected.

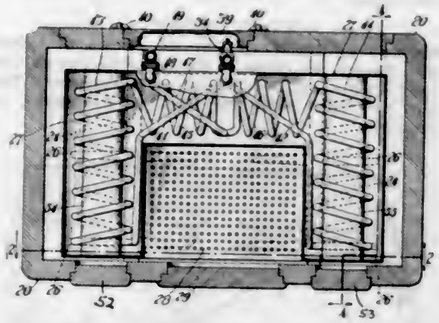


1,688,593. DRAFT RIGGING FOR RAILWAY CARS. CHARLES J. NASH, Chicago, Ill., assignor to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed Aug. 24, 1926. Serial No. 131,218. 1 Claim. (Cl. 213—56.)

A draft rigging for railway cars comprising, in combination a draft gear casing having follower shoulders, and a pair of buffing lugs cooperating with such shoulders and having forward extensions for guiding the casing, the forward end of such extensions forming stop shoulders for engaging a follower, said stop shoulders being positioned in advance of the end of the gear casing, so that the follower cannot engage the casing on buff until after it has engaged the stop shoulders.

1,688,594. LOCOMOTIVE BOILER. JOHN L. NICHOLSON, Chicago, Ill., assignor to Locomotive Firebox Company, Chicago, Ill., a Corporation of Delaware. Filed July 14, 1924. Serial No. 725,784. 4 Claims. (Cl. 122—68.)

1. A locomotive firebox, in combination with one or more hollow substantially vertical and triangular water circulating elements therein, the top of each element opening

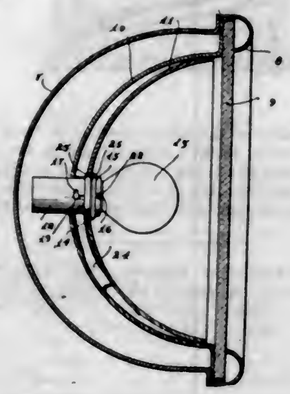


through the crown sheet into the space above the same, each element having an intake throat at its lower end through which communication is established with the bottom of the boiler, said element including a front wall which is inclined upwardly and rearwardly from the connection of said wall with the intake throat.

1,688,595. ICE-CREAM SCOOP. GEORGE T. PARR, St. Paul, Minn., assignor, by mesne assignments, to Pi-Alamoder, Inc., St. Louis, Mo., a Corporation of Missouri. Filed May 24, 1922. Serial No. 563,235. 2 Claims. (Cl. 107—48.)

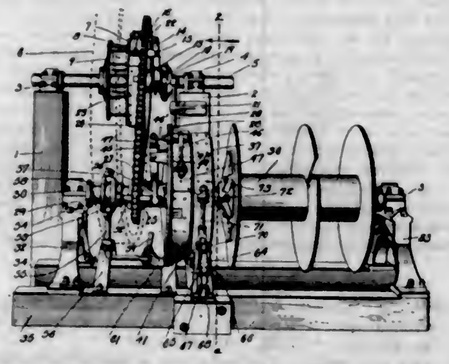
2. An ice cream scoop comprising a handle member, a pair of parallel sector shaped plates secured thereto, an ejector positioned between said parallel plates and adapted to move from the arcuate portion thereof to the point thereof, parallel serrations formed in said plate and extending longitudinally from said arcuate portion toward the point thereof and corresponding serrations formed in said ejector engaging said plate serrations for guiding said ejector in its outermost positions.

1,688,596. REFRIGERATING APPARATUS. DAVID POWELL, Chicago, Ill. Filed Aug. 29, 1925. Serial No. 53,244. 6 Claims. (Cl. 62—95.)



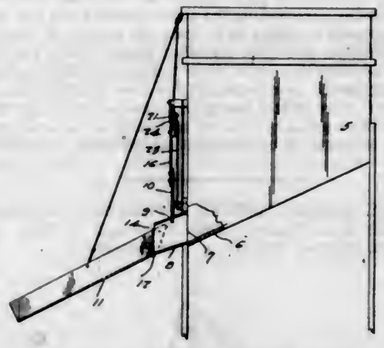
4. In a refrigerating apparatus, the combination of a chamber, a brine tank in the upper end portion of the chamber, said tank being in the form of a U extending about the rear and the sides of the chamber, compartments formed in the legs of said U tank and open at the front of the chamber, and means for cooling the brine in said tank.

1,688,597. METHOD OF PROTECTION AGAINST ATTACK BY MITES OR INSECTS. WILLIS EUGENE RAGAN, Atlanta, Ga. Filed Apr. 4, 1925. Serial No. 20,859. 4 Claims. (Cl. 167—6.)



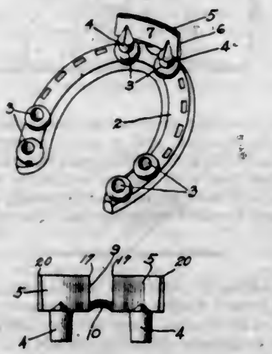
3. The method of treating a fabric to render it obnoxious to mites and insects, consisting in powdering the fabric with sulphur, subjecting the powdered fabric to sufficient heat to convert the sulphur to a thin liquid to thereby allow the liquid to permeate the pores of the fabric, and thereafter allowing the fabric to cool to thereby convert the liquid to a fine powder.

1,688,598. MEANS FOR ATTACHING LIGHT BULBS TO REFLECTORS. DANIEL E. RILEY, Detroit, Mich. Filed May 24, 1926. Serial No. 111,216. 3 Claims. (Cl. 240—41.)



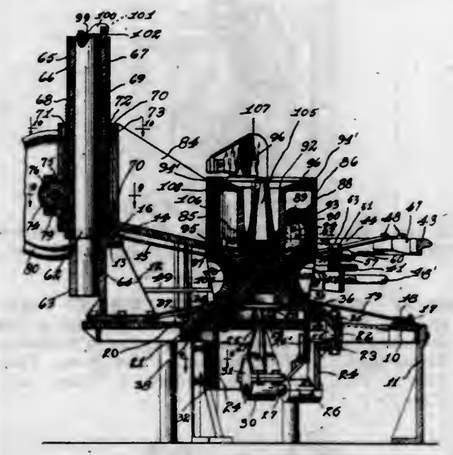
1. An attachment for securing a light bulb permanently on a reflector comprising a collar having at one end an inwardly projecting flange, said inwardly projecting flange having radially extending diametrically opposite slots formed therein and axially extending slots formed in said end of said collar communicating at its end with said radially extending slots.

1,688,599. SAND-REEL-OPERATING MECHANISM. RICHARD WARD SAGE and HARRY RAYMOND BOUGHNER, Augusta, Kans. Filed July 17, 1922. Serial No. 575,464. 1 Claim. (Cl. 254—187.)



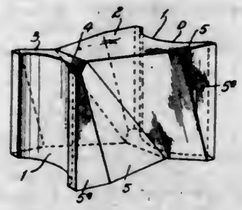
In a hoisting mechanism, a drive shaft and a driven shaft, a sprocket on the drive shaft having slip connection therewith, a sprocket on the driven shaft, a driving connection between the sprockets, a disk fixed to the last named sprocket having a clutch face, a clutch band carried by the disk and adapted for operative connection with the clutch face, a collar slidable on the driven shafts, pins extending laterally from the collar and slidably through openings in the last named sprocket to rotatably key the sprocket to the collar, a lever carried by the disk and operatively connected with said clutch band, a connection between the pins and the actuating lever, means for slidably actuating the collar to shift said lever, brake mechanism including a clutch member on the driven shaft, a brake band cooperating with said member, and actuating means for the brake band in operative connection with the collar actuating means to effect simultaneous opposite movement of the brake band and clutch band on the driven shaft members.

1,688,600. UNLOADING CHUTE FOR GRAIN TANKS. VIRGIL T. SLIVER, Nickerson, Kans. Filed Aug. 24, 1927. Serial No. 215,215. 4 Claims. (Cl. 193—21.)



1. In combination, a tank, a spout leading from the tank, a hinged chute mounted on the spout, a gate valve slidable through an opening in the spout, a cable attached to the hinged chute, a pulley on the top of the tank over which the cable is trained, a lever pivoted on the tank and having the other end of the cable attached thereto and a rod extending rigidly from the valve and pivotally engaged with the lever.

1,688,601. HORSESHOE. ARTHUR R. SWANSTROM, Duluth, Minn. Filed Dec. 20, 1923, Serial No. 681,857. Renewed Jan. 30, 1928. 15 Claims. (Cl. 168—41.)

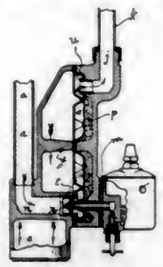


11. A calk having studs connected by a blade, said blade having a weakened area formed by slotting in two directions to substantially decrease the cross-section of the connecting portion.

1,688,602. PERMANENT MOLD. JAMES T. WARNER, Detroit, Mich., assignor to Whitehead and Knles Company Incorporated, River Rouge, Mich., a Corporation of Michigan. Filed June 13, 1927. Serial No. 198,469. 26 Claims. (Cl. 22—128.)

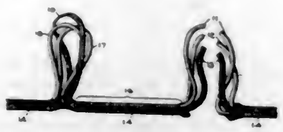
5. In a permanent mold, the combination with a table, of members mounted upon said table forming the bottom and side walls of the mold, a pillar vertically mounted upon said table, a supporting member reciprocably and swingingly mounted upon said pillar having a segemental tubular guide portion, and a cope forming portion comprising a plurality of quadrants universally mounted within said guide portion.

1,688,603. WALL OR BAFFLE TILE FOR WATER-TUBE BOILERS. CLARENCE W. WEHMEYER, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 10, 1926. Serial No. 101,126. 5 Claims. (Cl. 110—98.)



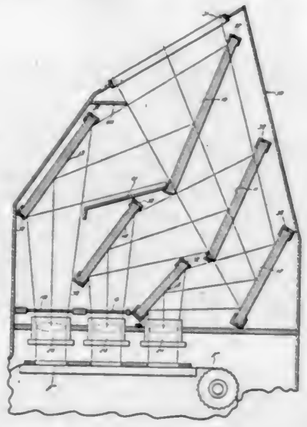
1. A wall or baffle tile for water tube boilers provided at one of its lateral sides with a concaved surface that is adapted to receive a tube or nipple and provided at its other lateral side with a flat, inclined surface that is adapted to be engaged by a similar surface on a reversely arranged tile whose concaved surface receives an adjacent tube or nipple, the width of said inclined surface being less than the width of said concaved surface so as to facilitate turning or rotation of said tile after it has been disengaged from the tile with which it co-operates.

1,688,604. EXHAUST-HEATED OIL VAPORIZER. GEORGE R. WELCH, Detroit, Mich., assignor to George M. Holley, Detroit, Mich. Filed Feb. 15, 1924. Serial No. 693,087. 2 Claims. (Cl. 261—13.)



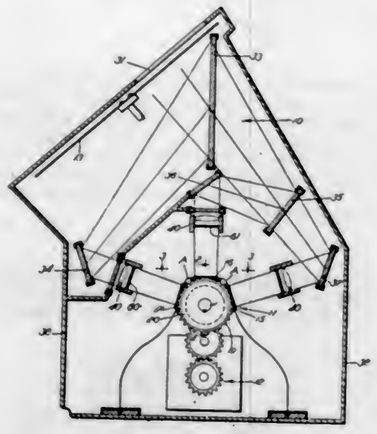
1. In a vaporizer for an internal combustion engine, an exhaust pipe having an opening therein, a cover for closing said opening, two thin sheet metal plates adapted to

be bolted between said cover and said exhaust pipe closing said opening, and spaced apart from each other and from



said cover, the space between said plates being provided with an entrance and an exit and a passage therebetween.

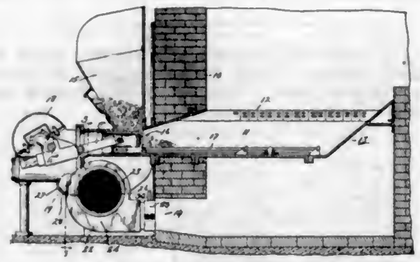
1,688,605. ELECTRICAL AND INSTRUMENT CORD. JOHN D. WILLIAMS, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 14, 1927. Serial No. 167,898. 9 Claims. (Cl. 173—264.)



8. The method of manufacturing electrical cords which consists in assembling electric conductors and a stay cord in substantially parallel relation, applying an outer braided covering to said conductors, pulling the conductors and stay cord through the covering at predetermined points to expose the conductors and stay cord in the form of loops to produce a multi-unit cord, cutting the multi-unit braided cord at the points where the loops of the conductors and stay cord are exposed, and wrapping the exposed ends of the braided covering.

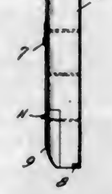
1,688,606. OPTICAL SYSTEM. WALTER L. WRIGHT, Santa Monica, and STANTON M. WRIGHT, Los Angeles, Calif. Filed June 1, 1926. Serial No. 112,968. 1 Claim. (Cl. 88—1.)

In a motion picture camera for taking simultaneously three like equal size pictures of a subject in spaced relation on a strip of film held in a single plane including three primary reflectors angularly disposed and in spaced relation one behind the other in the path of light from the subject, the first two primary reflectors being transparent bodies with polished surfaces so that they reflect off some light and pass the rest, the three primary reflectors being different in size the first being largest and the last the smallest, three secondary reflectors each angularly disposed in the path of light reflected by the primary reflectors, the three secondary reflectors being of different size the one receiving light from the first primary reflector being the largest and the one receiving light from the last primary reflector being the smallest, and the three secondary reflectors being spaced different distances from their reflective primary reflectors the space between the first primary reflector and the secondary reflector receiving light from it being the greatest and the space between the last primary reflector and the secondary reflector receiving light from it being the smallest, three lenses each arranged in the path of light from a secondary reflector to direct the shaft of light onto the film, means whereby the shafts of light directed onto the film by the lenses are different chromatically, a casing surrounding the above named parts and having an opening to admit light from the subject to the primary reflectors, and light shielding means within the casing and in connection with the reflectors including a shield extending from a point adjacent the first primary reflector in the direction of the secondary reflector receiving light from the first primary reflector and back of the secondary reflector receiving light from the second primary reflector.



1,688,607. MOTION-PICTURE APPARATUS. WALTER L. WRIGHT, Santa Monica, Calif. Filed Sept. 15, 1926. Serial No. 135,524. 10 Claims. (Cl. 88—16.4.)

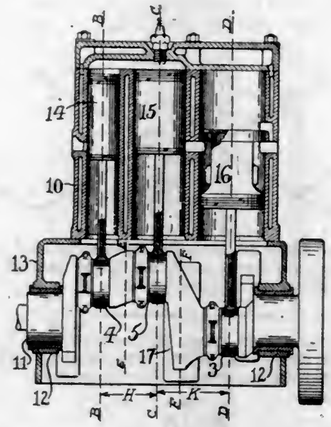
1. A film handling mechanism comprising a revoluble film actuating member, and a series of sequentially arranged film gates tangentially disposed relative to said actuating member and each having a picture aperture, the gates being positioned around the actuating member with the actuating member engaging the film at the picture apertures.



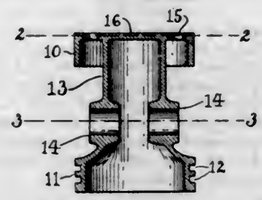
1,688,608. STOKER. ROYCE L. BEERS, Detroit, Mich., assignor to Detroit Stoker Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 31, 1927. Serial No. 164,935. 6 Claims. (Cl. 110—101.)

1. The combination with a wall of a stoker, of a fuel feeding mechanism projecting from said wall at a point spaced from the lower edge thereof, a motor arranged adjacent said wall below said fuel feeding mechanism with the shaft thereof parallel with said wall, a blower fan having a conduit connected to said wall and located to one side of said motor below said fuel feeding mechanism and having a

driving connection with the shaft thereof, and means drivingly connecting the other end of said motor shaft with said fuel feeding mechanism.



1,688,609. DISPENSING DEVICE. CHARLES W. BOLES, Amarillo, Tex. Filed Oct. 11, 1926. Serial No. 140,886. 1 Claim. (Cl. 312—42.)

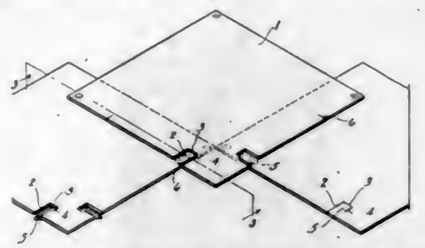


In a dispensing device for containers, an elongated tube having an opening in the side thereof immediately adjacent the lower end thereof, said end of the tube being formed with an inwardly projecting stop flange opposite said opening so that a container within the tube may rest thereon, a pair of wings, means for pivoting the wings to the side edges of the opening so that the free edges of the wings will be in spaced relation to each other, and a coil spring connected to the wings to span the distance therebetween and normally hold the wings in a closed position over the opening.

1,688,610. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Corporation, Reno, Nev., a Corporation. Filed Mar. 24, 1926. Serial No. 96,968. 2 Claims. (Cl. 123—70.)

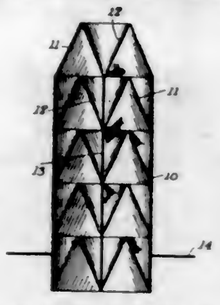
1. In an internal combustion engine, a rotary and reciprocative inertia forced balanced unit comprising six cylinders arranged in two rows of V-formation, three cylinders in each row, the three cylinders having chambers of different diameters, the head ends of the two smaller chambers in each row being connected to form a dual combustion chamber, pistons arranged for operation within the six cylinders, a crankshaft having three separate throws, the pistons in the corresponding cylinders of the two rows being separately connected to the three crank throws, the three crank throws of the crankshaft occupying different radial positions, said three crank throws being arranged on one side of the axis of the crankshaft and a counterbalancing weight carried by the crankshaft and disposed on the opposite side of the axis thereof from said three crank throws.

1,688,611. PISTON FOR CHARGE-PUMPING CYLINDERS. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Corporation, Reno, Nev., a Corporation. Filed Mar. 25, 1926. Serial No. 97,372. 4 Claims. (Cl. 230—202.)



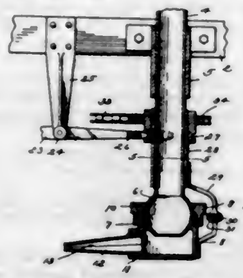
1. In a piston a cylindrical central body, a head formed at one end of the said central cylindrical body, said head extending radially beyond the said central cylindrical body, a cylindrical extension formed around said head, there being apertures formed through the said head in an annular row between the circular line of the outer periphery of the central cylindrical body and the circular line of the inner side of the said cylindrical extension formed about said head, the end of said central cylindrical body opposite the end to which the head is formed extending radially outward, a crank end cylindrical skirt depending therefrom, there being packing ring grooves formed in the outer side of said crank end cylindrical skirt and wrist pin bosses formed in the body of the central cylindrical form.

1,688,612. COMPOSITION SHINGLE. OSCAR BLAINE CLOW, Tacoma, Wash. Filed Apr. 26, 1927. Serial No. 186,733. 1 Claim. (Cl. 108—7.)



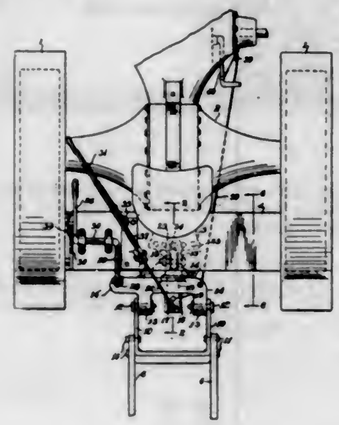
A roofing formed from a plurality of square shingles laid diagonally in horizontal, overlapped courses, each of said shingles being provided in the adjacent side edges thereof which bound its lower corner with slits that extend inwardly at right angles to the edges, then turn downwardly

parallel with the side edges, then outwardly perpendicular to but terminating within the edges and providing attached



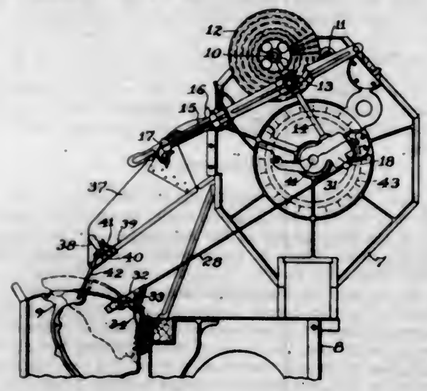
anchor tabs, which are projected beneath the side edges of the shingles in a lower course which are received within the slits whereby the tabs are defined.

1,688,613. AIR AND FUEL MIXING DEVICE. HENRY M. COGAN, Charleston, W. Va. Filed Feb. 12, 1927. Serial No. 167,704. 3 Claims. (Cl. 48—180.)



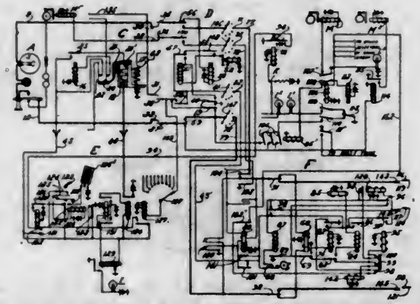
2. A gaseous fuel mixing device for internal combustion engines adapted to be mounted in the fuel intake pipe between the carbureter and the manifold and comprising in combination a foraminous truncated cone, a foraminous cone mounted within the truncated cone, the base of the cone being connected contiguous the smaller end of the truncated cone, the apex of the cone being adjacent the base of the truncated cone and substantially centrally located thereof, a foraminous tube connected to the base of the truncated cone and surrounding the same, said tube being provided with means for securing it within a fuel intake pipe.

1,688,614. ADJUSTABLE FLUSHING NOZZLE. JOHN W. COTTINGHAM, Columbus, Ohio, assignor of one-third to G. F. McDonald and one-third to J. J. McDowell, Columbus, Ohio. Filed Sept. 29, 1925. Serial No. 59,428. 3 Claims. Cl. 299—36.)



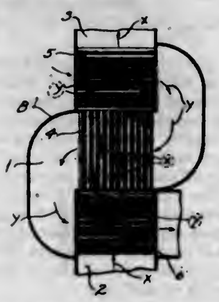
3. In water distributing means, a discharge pipe having the discharge end of globular form, a nozzle including a socket adapted for the reception of the globular end of said pipe, a sleeve slidably and rotatably mounted on said pipe, link connections between said sleeve and said nozzle, means disposed remotely with respect to said nozzle for rotating said sleeve and means operated by said first named means for raising and lowering said sleeve relative to said pipe.

1,688,615. LEVELING DEVICE FOR PLOWS. EARLE H. DANIEL, Springfield, Ohio, assignor to Robert W. Johnston, Columbus, Ohio. Filed Oct. 9, 1926. Serial No. 140,638. 6 Claims. (Cl. 97—47.)



1. In a structure of the character described, the combination, with an implement beam and a tractor and a draw-bar arranged at the rear thereof, of a leveling bracket pivotally connected with the beam by transversely arranged pivots, a coupling pin universally connected with said draw-bar, said beveling bracket being swivelly mounted upon said coupling pin, and an operating device mounted on the tractor and connected with one side of said leveling bracket.

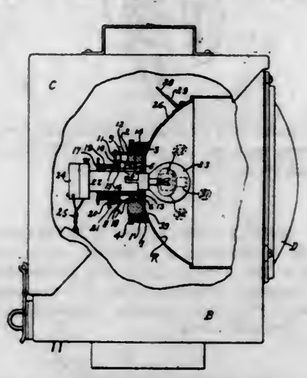
1,688,616. CONTROL MECHANISM FOR COTTON-GIN FEEDERS. THOMAS ELLIOTT, Birmingham, Ala., assignor to Continental Gin Company, a Corporation of Delaware. Filed Nov. 20, 1926. Serial No. 149,769. 4 Claims. (Cl. 19—69.)



1. The combination with means for feeding cotton to a gin breast, of means automatically responsive to the raising of the gin breast to intercept the delivery of cotton into the gin.

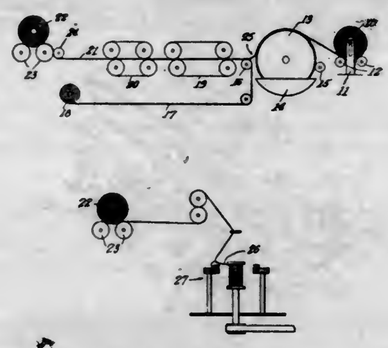
1,688,617. MEASURED-SERVICE TELEPHONE SYSTEM. RALPH W. ENGSBERG, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Apr. 18, 1925. Serial No. 24,034. 7 Claims. (Cl. 179—9.)

1. In a telephone system, a calling line, a meter for said line, selector switches, primary and secondary trunking switches responsive to the initiation of a call to extend a connection to an idle one of said selector switches, other switches, means for operating a seized selector and said other switches to complete a connection, a plurality of relays, there being one in each selector switch operated when the selector is seized, means common to said selector switches responsive to the joint operation of all said relays to prevent the operation of idle secondary trunking switches, and means common to said trunking switches for causing the operation of the said meter upon completion of a connection.



1,688,618. AIR HEATER. HENRY F. GAUSS, Moscow, Idaho, assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 14, 1926. Serial No. 81,335. 3 Claims. (Cl. 257—166.)

2. A device for heating one gaseous medium by another gaseous medium of a higher temperature, comprising a casing provided with an intake portion and a discharge portion, a bank of tubes which joins said portions together, other banks of tubes arranged transversely of said intake and discharge portions and disposed at substantially right angles to the tubes that join said portions together, and a passageway in the casing that establishes communication between the tubes in said intake and discharge portions and which encloses the tubes that join said intake and discharge portions together.

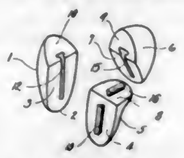


1,688,619. FOCUSING DEVICE. ALEXANDER H. HANDLAN, St. Louis, Mo. Filed July 3, 1924. Serial No. 723,884. 2 Claims. (Cl. 240—44.)

2. A focusing device for an electric lantern having an electric lamp therein, comprising a movable support for said electric lamp and targets associated with said lantern against which rays of light from said electric lamp are thrown, said targets being located at an angle to each other and being located on different imaginary radial lines extended from said electric lamp, so that proper focalization of said lamp will be determined by the location of the rays of light on said targets, and said targets being so

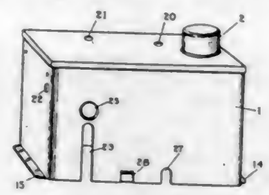
located that the faces thereof against which the rays of light are thrown may be simultaneously viewed from a fixed position, and means adapted to compel the arrangement of said lamp within said lantern in a predetermined position, said means comprising interengaging parts located one on said lamp support and one on an element carried by said lamp support.

1,688,620. APPARATUS FOR THE MANUFACTURE OF YARN. JOHN ALLEN HEANY, New Haven, Conn., assignor to World Bestos Corporation, Paterson, N. J., a Corporation of Delaware. Filed Apr. 23, 1926. Serial No. 104,056. 24 Claims. (Cl. 117—3.)



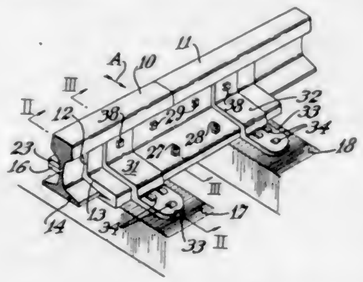
1. In apparatus adapted for the manufacture of yarn from paper-like strips or bands of asbestos material bound with sufficient cohesiveness and tenacity and adapted for yarn manufacture, the combination with strand forming means, of means for conveying thereto a strip or band substantially free from tension.

1,688,621. ARTIFICIAL TEETH. CLINTON J. HUBER, Seattle, Wash. Filed Apr. 18, 1927. Serial No. 184,677. 2 Claims. (Cl. 32—9.)



1. An artificial tooth comprising a backing provided with flat surfaces to which the facing and root portions may be fitted, dove-tailed ribs secured to the backing and extending from said surfaces, a facing fitted to its surface and having a beveled base and a dove-tailed groove in

its inner surface opening to the beveled end to receive the rib in an interlocking connection, and a root portion fitted to its surface and having a beveled end fitted to the beveled

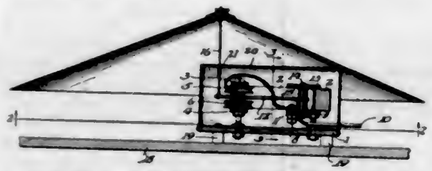


end of the facing in a close joint and provided with a dovetailed groove opening to its beveled end to receive its attaching rib in an interlocking connection.

1,688,622. SHIELD FOR RADIO AMPLIFIERS OR DETECTORS. MERRIAM E. JOHNSON, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed July 8, 1926. Serial No. 121,144. 3 Claims. (Cl. 250—16.)

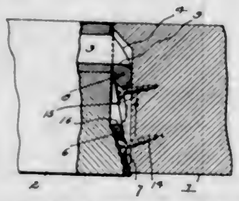
1. A shield for a vacuum tube and its associated apparatus, comprising a metal can for covering said vacuum tube and associated apparatus, a removable cap for said can, and a vibration insulating lining for said can.

1,688,623. JOINT CLAMP. SLOAN A. JONES, Springville, Ala. Filed Feb. 6, 1928. Serial No. 252,210. 1 Claim. (Cl. 238—195.)



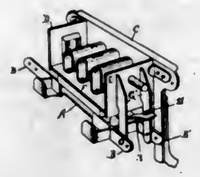
In a joint clamp for railroad rails resting on spaced cross-ties, an angle bar for the outside of the joint and having a flange bent under the joint to form a base plate extending from tie to tie and entirely across beneath the rail and beyond the opposite side thereof, an angle bar for the inside of the rail and having a flange with a base portion resting on the extended base plate portion of the opposite angle iron, U bolts extending across beneath the rails on opposite sides of the joint and connecting the flanges of the angle bars together, a rail anchor conforming in shape to the angle bar for the outside of the joint and bearing thereagainst from base to top thereof, said anchor having a horizontally extending portion provided with holes for spiking to the tie, and securing bolts extending through the two angle bars, the rail and the rail anchor.

1,688,624. BABY BLANKET. WILLIAM KANTER, Brooklyn, N. Y. Filed Feb. 29, 1928. Serial No. 257,813. 1 Claim. (Cl. 5—334.)



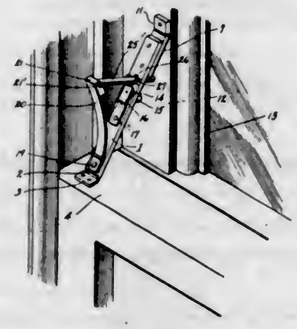
A foldable blanket adapted for use in a bed and provided with a series of button holes near one lateral edge thereof, buttons near the opposite edge for buttoning these edges when the blanket is folded, buttons engaging button holes near the upper and one folded edge of the blanket to partially and adjustably close same at this point, and buttons provided with strings passing through button holes near the side edges of the folded blanket, for securing the blanket to the bed.

1,688,625. LOUD-SPEAKER UNIT. MARZO ALLEN KENNEDY, Chicago, Ill., assignor to Edmund A. Russell, Chicago, Ill. Filed Mar. 26, 1928. Serial No. 264,938. 4 Claims. (Cl. 179—114.)



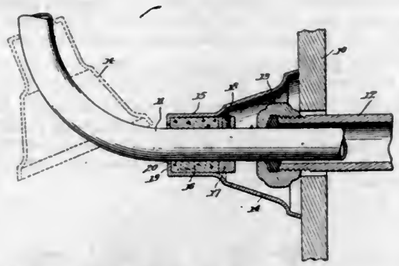
1. In a loud speaker unit, the combination of a non-magnetic base, a horseshoe magnet supported thereon, soft iron plates secured to opposite poles and opposite sides of said horseshoe magnet the unattached ends of which overlap, electromagnets mounted on adjacent sides of the overlapping ends of said plates, the relation being such that the adjacent ends of the cores of said electro-magnet will be spaced apart, the windings of said electro-magnets being connected in series, and a resilient reed secured at one end to a relatively fixed support, the relation being such that the free end of said reed will extend into the space between the adjacent ends of the cores of the electro-magnets, and a vibrator connected to said reed.

1,688,626. ADJUSTABLE STRIKER PLATE FOR DOORS. EUGENE R. KISSINGER and ROY H. KISSINGER, Columbus, Ohio. Filed Mar. 23, 1927. Serial No. 177,706. 3 Claims. (Cl. 292—340.)



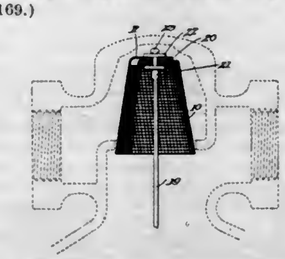
1. As a new article of manufacture, a metallic striker for door locks comprising a main section of wedge like form provided with a longitudinally extending slot, and a separable locking section mounted upon the outer portion of said main section and formed with an opening in registration with said slot, said opening and slot being adapted to receive fastening elements for retaining the striker in an applied position.

1,688,627. ATTACHMENT FOR CONCRETE-BLOCK MACHINES. EDWARD A. LONG, New Castle, Pa. Filed Oct. 14, 1927. Serial No. 226,210. 5 Claims. (Cl. 25—41.)



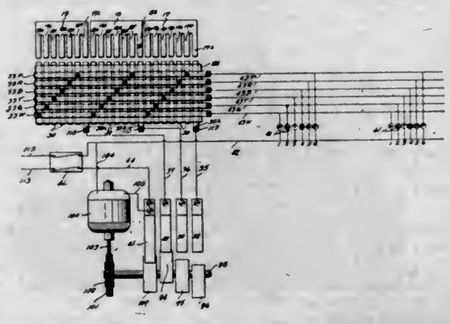
3. In combination with a concrete block forming machine having a block forming enclosure, a flat spring extending under said enclosure and secured in the center to the under side thereof, a pair of sharp pointed pintles secured to said spring and extending upward into said enclosure, and means whereby when the ends of said enclosure are being opened the ends of said spring will bend downward whereby said pintles will be withdrawn from the enclosure.

1,688,628. BURGLAR ALARM. PERCY K. MORROW and ROBERT E. WETMORE, Seattle, Wash. Filed Jan. 9, 1926. Serial No. 80,182. Renewed May 9, 1928. 3 Claims. (Cl. 116—13.)



3. The combination with upper and lower sashes of a window of stops fixed to said sashes, a brace bar seated at one end against one of said stops, a trip fixed slidably to the other end of the bar in co-extensive relation thereto and engaging at its outer end with the other of said stops; said bar having an aperture therein for receiving a cartridge, a cartride retaining plate pivotally mounted on the bar movable from and over the base of the cartridge, a firing point in said plate engageable with said base, a leaf spring fixed at one end to the bar, a hammer fixed to the other end of the spring and adapted to strike the retaining plate to fire the cartridge; said hammer having a notch therein, a latch bar pivotally supported in the brace bar with one end adapted to seat in said hammer notch to retain the spring under tension and its other end engageable with the trip plate to normally retain it extended and adapted to be moved by inward movement of the trip plate incidental to opening of either window sash to release the hammer.

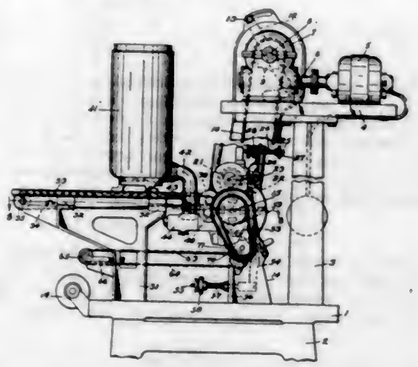
1,688,629. NO-SLIP FLANGE. PHILIP MUELLER, Decatur, Ill., and ANTON C. SCHUERMANN, deceased, Decatur, Ill., by Helena Schuermann, executrix, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Oct. 17, 1925. Serial No. 63,189. 9 Claims. (Cl. 137—111.)



4. In a fitting of the class described, the combination with a pipe, of a hollow escutcheon having a reduced neck, provided with an end flange, a friction ring of cork mounted on said pipe and engaging said flange to provide a non-metallic frictional connection between the pipe and the escutcheon, and independent means on said pipe to positively hold the friction ring in position.

1,688,630. STRAINER SCREEN AND METHOD OF MAKING SAME. PHILIP MUELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Oct. 24, 1925. Serial No. 64,695. 19 Claims. (Cl. 210—169.)

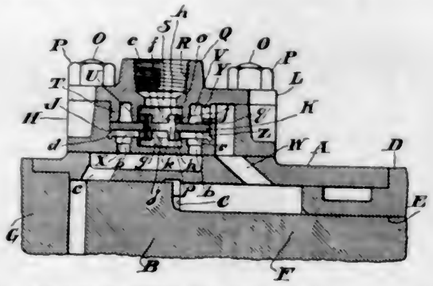
10. A strainer blank of reticulated material having a plurality of integral leaves projecting from its edge.



1,688,631. SIGNAL SYSTEM. HARVEY HUBBELL, Bridgeport, Conn.; Louie E. Hubbell executrix of Harvey Hubbell, deceased. Filed Mar. 30, 1925. Serial No. 19,295. 16 Claims. (Cl. 177—337.)

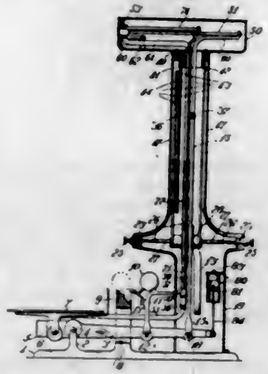
3. A signaling system comprising a plurality of electric circuits, a grouped set of signal lights having different means of identification arranged with a light in each cir-

cuit, a selective device comprising a group of stationary contacts including a contact for each circuit, a plurality of electrically connected, independently movable fingers adapted to engage the stationary contacts, a selective means for moving certain of said fingers into engagement with corresponding stationary contacts, a make and break device electrically connected with said fingers, means for operating the make and break device, and means controlled by the selective device for controlling the said operating means.



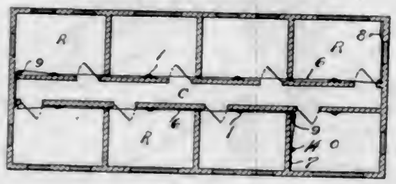
1,688,632. COATING MACHINE. THOMAS BAKER HUESTIS, Bristol, R. I., assignor to National India Rubber Company, Bristol, R. I., a Corporation of Rhode Island. Filed Nov. 6, 1925. Serial No. 67,214. 5 Claims. (Cl. 91—51.)

1. A coating machine comprising a coating roll having small projections thereon, a cooperating yieldingly mounted feed roll, a reservoir for coating material partly surrounding said coating roll and extending upwardly on the discharge side of said roll, means for governing the supply of coating material to the coating roll, and a curved guide forming with the outer wall of the reservoir a passageway for reversing the position of the coated article.



3. A coating machine comprising a coating roll, a cooperating feed roll, a reservoir for the coating material disposed below and partly surrounding the coating roll, said reservoir having curved side walls closely engaging the coating roll adjacent its end, and means for yieldingly maintaining said side walls in engagement with the coating roll.

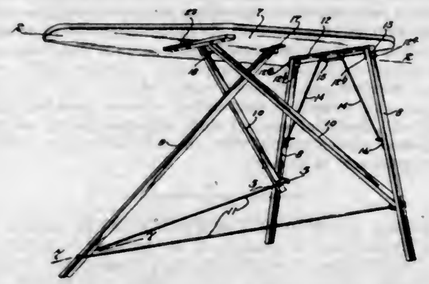
1,688,633. VALVE FOR ROCK DRILLS. GEORGE W. HULSHIZER, Stewartsville, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 18, 1927. Serial No. 213,814. 3 Claims. (121—19.)



1. In a fluid actuated rock drill, the combination of a cylinder and piston, a valve chest having a valve chamber, inlet passages leading from the ends of the valve chamber to the cylinder, a hollow distributing valve in the valve chamber controlling the inlet passages, guide lugs on the ends of the valve between which pressure fluid passes to the inlet passages and having opposed end areas constantly exposed to pressure fluid, and opposed actuating surfaces on the valve intermittently exposed to compression from the cylinder for actuating the valve.

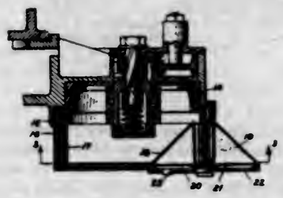
1,688,634. WEIGHING MECHANISM OR SCALE. GEORGE HUTCHINSON, Sheboygan, Wis., assignor to Hutchinson Scale Company, Sheboygan, Wis, a Corporation of Wisconsin. Filed Sept. 14, 1925. Serial No. 56,374. 45 Claims. (Cl. 265—36.)

1. In a scale having a base, the combination of a load counterbalancing element, a beam, means for transmitting motion from the beam to the load counterbalancing element, said means comprising a thrust member articulating with the beam and means for keeping such thrust member at a constant angle relatively to the scale base.



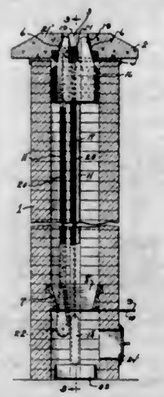
1,688,635. FIRE ALARM. JOHN E. IRBY, Spokane, Wash. Filed July 20, 1925. Serial No. 44,714. Renewed Apr. 28, 1928. 1 Claim. (Cl. 179—5.)

In a fire alarm system, a plurality of electric bells and circuit closing levers for said bells, an inflammable cord having elastic suspending means, and spaced rings carried by said cord and operatively engaging said levers, an audible signal and means actuated by the cord for operating said audible signal, a telephone, and means actuated by said cord for closing the microphone circuit of said telephone to transmit sound from the audible signal.



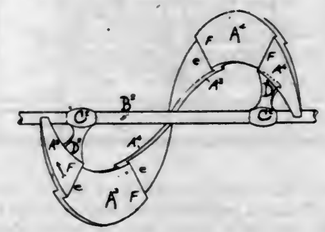
1,688,636. IRONING BOARD. JOHN E. KALGREN, Minneapolis, Minn., assignor to The J. R. Clark Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Sept. 17, 1927. Serial No. 220,272. 6 Claims. (Cl. 68—10.)

1. The combination with a board, of rear legs pivoted to the rear end of said board, a third leg pivoted to said board and forwardly inclined in respect to said rear legs, a top brace pivotally connected to said rear legs and arranged to be detachably secured to the bottom of said board at its free end, guide heads pivotally mounted on said rear legs, and a bottom brace pivotally connected to the lower end of said inclined third leg and having arms



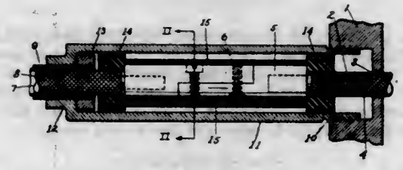
supported by and arranged to slide through said pivoted guide heads and which are put under tension when said top brace is secured to the board.

1,688,637. OPTICAL READING DEVICE. JAMES C. KARNES, Buffalo, N. Y. Filed Sept. 30, 1926. Serial No. 138,758. 4 Claims. (Cl. 88—1.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)



4. A drum having indicia on its inner and outer peripheries, and means for directing an image of the indicia in a plane other than the plane of the periphery of the drum.

1,688,638. CHIMNEY-CLEANING DEVICE. WALTER KOSS, Elyria, Ohio. Filed Aug. 5, 1927. Serial No. 210,922. 2 Claims. (Cl. 15—249.)

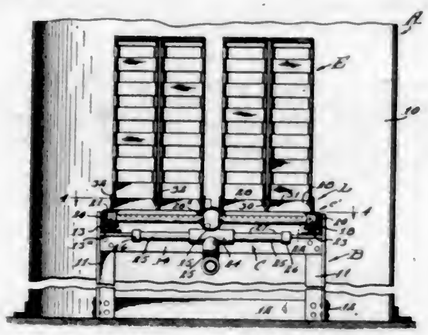


1. In combination with a chimney having downwardly closing doors at the upper end of its flue, said doors closing under the action of gravity, a slide for closing the bottom of the flue, a hollow brush carrying member slidably mounted in the flue, guideways at the sides of the flue, weights in the guideways, cables connecting the weights to the brush carrying member, means on the brush carrying member for holding the doors in open position when the member is in raised position and manually operated means for raising the weights to permit the brush carrying member to move downwardly.

1,688,639. SCREW OR WORM PROPELLER FOR THE PROPULSION OF ALL KINDS OF CRAFT FOR USE IN WATER AND AIR. JOHN K. LARSON, Portland, Oreg. Filed Feb. 14, 1923. Serial No. 619,065. 2 Claims. (Cl. 170—156.)

1. A propeller of the screw or worm type, comprising a supporting shaft, a pitched spiral blade and pitched spokes having less pitch than the blade, the opposite faces of said blade having a plurality of transverse stepped portions of material length and width.

1,688,640. TERMINAL CONNECTING DEVICE. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 19, 1921. Serial No. 462,728. 2 Claims. (Cl. 173—268.)

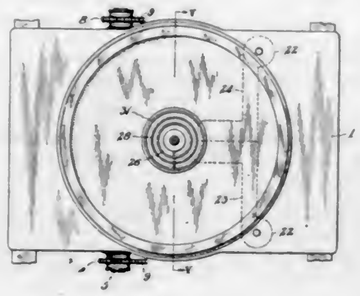


2. In a conduit for electric wires, the combination of a casing, a conductor projecting therefrom, a tubular metallic shield fixed to said casing and surrounding said conductor, an armor-sheathed conductor detachably connected to said first conductor within said shield, the free end of said shield being closed about said second conductor, a ring fixed to the armor-sheathing of said second conductor within said shield and abutting the internal shoulder formed by the closed end of the latter, and insulating annuli surrounding the conductors within the shield and at either end thereof for maintaining the zone of juncture of said conductors in spaced relation to said shield.

1,688,641. GAS BURNER. JOHN MACKENZIE, Minneapolis, Minn., assignor of one-half to Walter Heynacher, Minneapolis, Minn. Filed May 22, 1925. Serial No. 32,126. 10 Claims. (Cl. 126—92.)

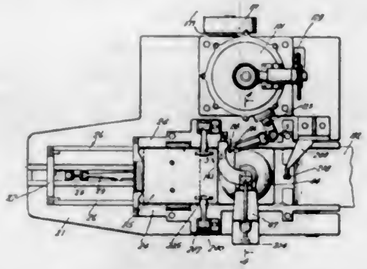
1. In a burner, an elongated header member co-planar sets of equally spaced burner members branching off from either side of said header member, each burner having two rows of divergently related orifices extending longitudinally thereof, frames joining the outer ends of each of the opposing sets of burner members, a stand including seats for said frames, skeleton trays removably mounted on each burner members and located in given relation transversely thereof by cooperation therewith, said trays

being formed with seats, radiants removably mounted in the seats of each tray and disposed thereby in respect to the burner members, whereby opposed walls of each radiant are respectively stationed in the line of flames



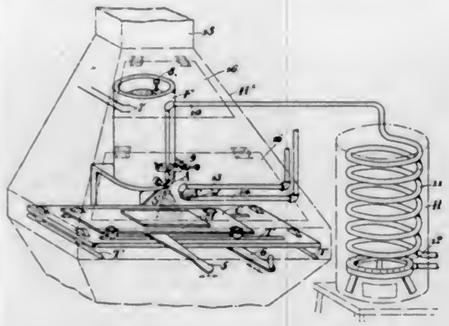
issuing from the divergent orifices of one of the burner members, and keeper members, each common to the radiants in a given tray, each keeper member being adapted releasably to tie together its respective radiants.

1,688,642. ARCH-CONTROLLING DEVICE. NORMAN D. MATTISON, New York, N. Y. Filed Feb. 20, 1925. Serial No. 10,448. 3 Claims. (Cl. 36—71.)



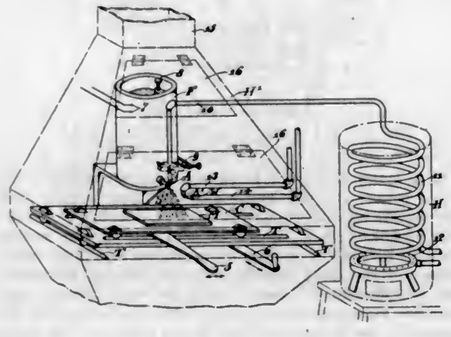
1. A device of the character described comprising an insole member, and a resilient pad carried by said member for location under the outer longitudinal arch of the foot, said pad being constructed and arranged to produce a local sensation of support under said arch but being of insufficient height to cause the foot to roll inwardly.

1,688,643. STEERING MECHANISM FOR CRANES. GARDNER A. MURFEY and ARTHUR S. MEYER, Cleveland Heights, Ohio, assignors to The Browning Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 9, 1925. Serial No. 7,762. 3 Claims. (Cl. 180—9.2.)



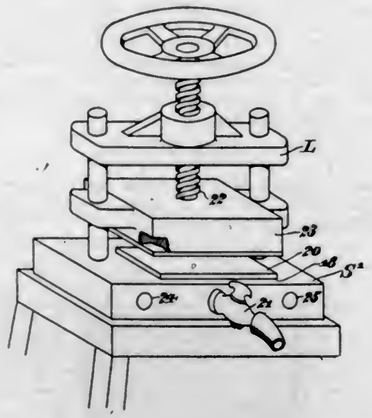
1. In a machine of the character described, the combination of a base member; a rotatable cab mounted upon said member; two oppositely disposed traction members for said base member; mechanism for driving said traction members; and electrically operated mechanism for controlling said driving mechanism so as to operate said traction members simultaneously or independently of each other; said electrical controlling means including a common contact ring for said operating mechanisms of said traction members and independent contact rings for said operating mechanisms, respectively, mounted upon said base member and disposed concentrically with the cab pivot, and respective cooperating brushes mounted upon said cab, including contact rings and cooperating brushes disposed concentrically with the cab pivot, and switch means located in said cab.

1,688,644. COMPOUND LINING CAN ENDS. RONALD E. J. NORDQUIST, Maplewood, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 2, 1927. Serial No. 165,398. 7 Claims. (Cl. 113—80.)



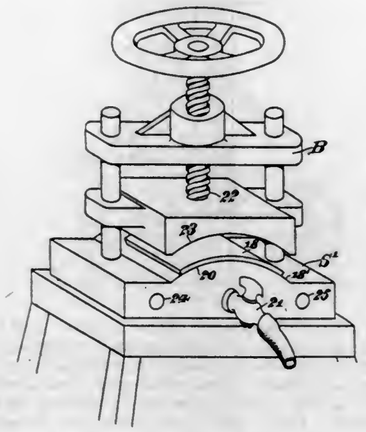
1. In an apparatus for applying lining compound to the flanges of can ends adapted to be interfolded with flanged can bodies to form double seams, the combination of means for rotating the can ends about a predetermined axis, a lining nozzle above said can end and movable towards and from said axis during the lining operation, and means acting during said operation for moving said nozzle in accordance with change of the distance between successive flange portions to be lined and said axis.

1,688,645. PRINTING PLATE AND METHOD OF MAKING THE SAME. EMIL E. NOVOTNY, Philadelphia, Pa., assignor to John Stogdell Stokes, Spring Valley Farms, Huntingdon Valley Post Office, Pa. Filed Feb. 9, 1926. Serial No. 87,111. 16 Claims. (Cl. 41—25.)



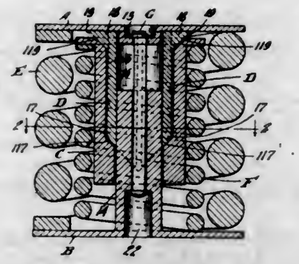
1. A printing plate having a non-homogeneous type-forming face of sprayed metallic particles.

1,688,646. PRINTING-PLATE MATRIX AND METHOD OF MAKING THE SAME. EMIL E. NOVOTNY, Philadelphia, Pa., assignor to John Stogdell Stokes, Spring Valley Farms, Huntingdon Valley Post Office, Pa. Original application filed Feb. 9, 1926, Serial No. 87,111. Divided and this application filed Nov. 19, 1926. Serial No. 149,451. 17 Claims. (Cl. 101—401.1.)



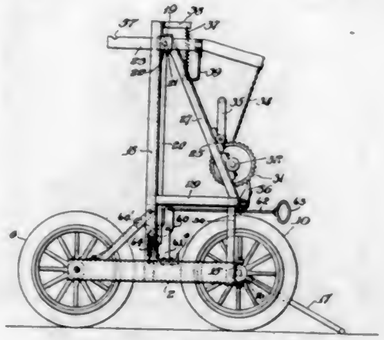
1. A printing plate matrix having a type forming face of smooth non-homogeneous sprayed metallic particles.

1,688,647. PROCESS OF CORRECTING PRINTING PLATES. EMIL E. NOVOTNY, Philadelphia, Pa., assignor to John Stogdell Stokes, Spring Valley Farms, Huntingdon Valley Post Office, Pa. Original application filed Feb. 9, 1926, Serial No. 87,111. Divided and this application filed Nov. 19, 1926, Serial No. 149,452. Renewed Apr. 20, 1928. 3 Claims. (Cl. 101—401.3.)



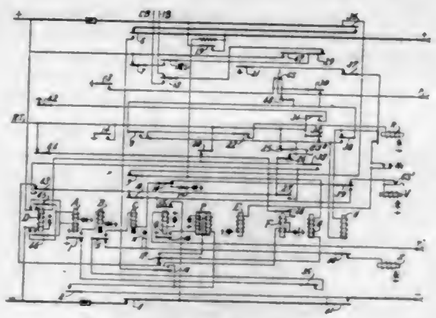
1. The herein described method of leveling a printing plate which consists in providing a printing plate comprising an open, porous sprayed metallic structure having great thermoplasticity when heated below the melting point of the metal and placing said plate on a suitable support, and while thermoplastic applying pressure to cause the face of the printing plate to assume the desired regularities and irregularities and then allowing the printing plate to set by cooling.

1,688,648. PROCESS OF CURVING PRINTING PLATES. EMIL E. NOVOTNY, Philadelphia, Pa., assignor to John Stogdell Stokes, Spring Valley Farms, Huntingdon Valley Post Office, Pa. Original application filed Feb. 9, 1926, Serial No. 87,111. Divided and this application filed Nov. 19, 1926. Serial No. 149,453. 6 Claims. (Cl. 101—401.2.)



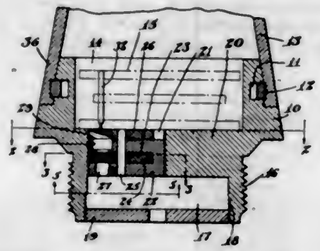
1. The herein described method of producing a curved printing plate which consists in forming a relatively flat plate body of sprayed metallic particles and providing the same with a printing face and then heating such plate below its melting point and curving the heated plate over a suitable form to a predetermined shape.

1,688,649. SHOCK ABSORBER. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed July 15, 1926. Serial No. 122,538. 5 Claims. (Cl. 267—9.)



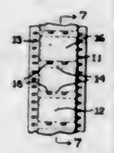
1. In a shock absorber, the combination with follower elements relatively movable toward and away from each other; of a friction post carried by one of said followers; friction shoes co-operating with the post and movable with the other followers, said shoes and post being moved relatively to each other upon relative approach of said follower elements; spring means opposing relative movement of said follower elements; a wedge means engaged by said shoes and movable therewith toward the follower carrying the post; and additional spring resistance means interposed between said last named follower and the wedge means and yieldingly opposing movement of the wedge means.

1,688,650. METHOD OF AND MACHINE FOR HANDLING MOLDED-CONCRETE BLOCKS. HENRY C. PARKER, Catasauqua, Pa., assignor to Hollywood Building Supply Co., a Corporation of Pennsylvania. Filed June 30, 1926. Serial No. 119,544. 4 Claims. (Cl. 214—65.)



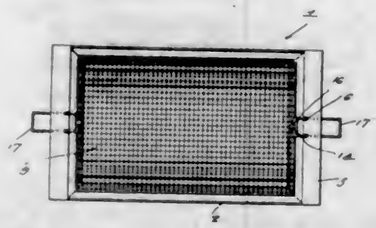
1. A rack for supporting molded concrete blocks comprising a base, a pair of aligned uprights rising from opposite sides thereof and a plurality of horizontally extending arms secured to each of said uprights in vertically spaced relation and in horizontally aligned relation with the corresponding arms on the other upright, the arms adjacent the upper end of the rack being provided with movable extensions hinged to their outer extremities and means for supporting said extensions vertically when turned to horizontal position.

1,688,651. TELEPHONE SYSTEM. WILLIAM OGLESBY PASSMORE, Liverpool, England, assignor to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed July 6, 1926. Serial No. 120,735, and in Great Britain July 20, 1925. 8 Claims. (Cl. 179—18.)



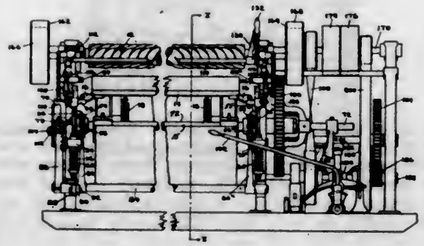
1. In a telephone system in which connections are set up through a first selector having a directed group-selecting movement and a free trunk-hunting movement to select an idle trunk in the selected group and an intermediate selector having similar movements, primary magnets in said switches, respectively, for effecting the group-selecting movements, a line relay in the first selector arranged to repeat impulses directly to the associated primary magnet and to repeat impulses over a talking conductor directly to the primary magnet of the intermediate selector after such selector has been taken into use, and means associated with said first selector for exercising a control over the other talking conductor at the end of the group of impulses transmitted to the intermediate selector so as to cause said intermediate selector to initiate its free hunting operation.

1,688,652. FUSE. CHARLES H. PEARSON, Brookline, Mass. Filed Sept. 22, 1926. Serial No. 137,125. 4 Claims. (Cl. 102—39.)



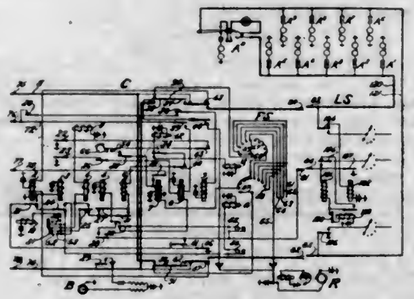
1. A safety device for fuses having a detonating chamber, a primer chamber and a passage flame leading from said primer chamber to the detonating chamber of a movable member in said fuse interposed between the primer chamber and the detonating chamber and extending transversely of the flame passage, a second member associated and simultaneously movable with the first member, said members being movable by centrifugal force to expose the primer in the primer chamber to the action of the firing pin and to clear the flame passage.

1,688,653. FILM-CARRYING STRIP. ARTHUR PRICE, Freeport, N. Y. Filed Aug. 21, 1922, Serial No. 585,415, and in Canada Jan. 31, 1922. 20 Claims. (Cl. 88—19.5.)



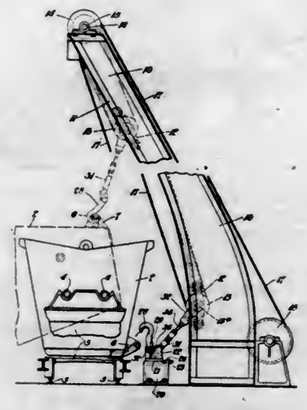
19. A carrying strip, including side portions formed with feed perforations and cross bars extending between these portions, and a celluloid film permanently and directly attached to said cross bars.

1,688,654. DISHWASHER. ALICE EDNA QUANT, New London, Wis. Filed Dec. 30, 1927. Serial No. 243,587. 2 Claims. (Cl. 141—9.)



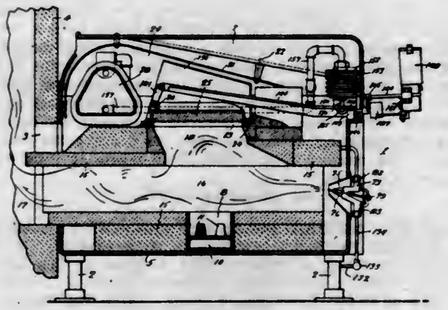
1. In a dish washer, an imperforate casing that is open at its top, handles slidably and swingably associated with the respective ends of the casing at the upper edge portion thereof, a perforate dish receiving receptacle adapted to be removably disposed within the casing, said receptacle being smaller than the casing, bails extending from the ends of the receptacle, and means on the handles engageable with the adjacent bails for effecting the reciprocatory movement of the receptacle within the casing when said handles are disposed in one position.

1,688,655. LEATHER-WORKING MACHINE. LYNDON O. RAMSDELL, Peabody, Mass., assignor to The Turner Tanning Machinery Company, Portland, Me., a Corporation of Maine. Filed Sept. 1, 1927. Serial No. 216,885. 20 Claims. (Cl. 149—16.)



1. In a machine for operating upon hides, skins, leather and other similar pieces of work, a tool for operating on a piece of work, a support for the piece of work movable in one direction to present the work to the tool and in a reverse direction to return the piece of work to initial position, and power-operated means for moving the tool into position to operate upon the work while the work support is moving in one direction and for moving the tool to inoperative position during the reverse movement of the work support.

1,688,656. AUTOMATIC TELEPHONE SYSTEM. ARTHUR J. RAY, Cuba, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed May 22, 1925. Serial No. 31,987. Renewed Aug. 29, 1927. 12 Claims. (Cl. 179—17.)

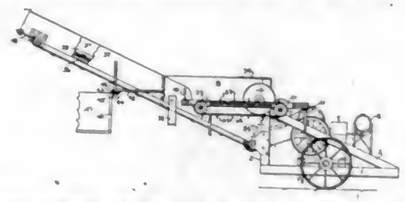


1. In a telephone system, an automatic line selecting switch, an automatic ringing-current selecting switch individual to said first switch, means for first operating said first switch to select a line and for then operating said second switch to select ringing-current, means effective only after said second switch has been operated for testing said line, means for preventing the completion of the connection if the line is busy, and means for automatically completing the connection when the line becomes idle.

1,688,657. LADLE-TILTING APPARATUS. THEODORE A. REPPER, Swissvale, Pa. Filed May 8, 1926. Serial No. 107,676. 6 Claims. (Cl. 214—64.)

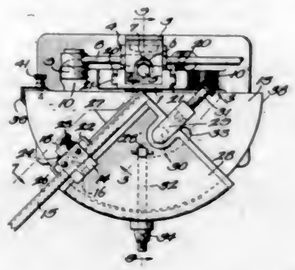
1. In a ladle tilting apparatus, a support, a hook pivotally mounted on said support, an elevating carriage, a connecting arm pivotally connected to said hook and said carriage, and means for elevating said carriage.

1,688,658. HEATING SYSTEM. MARC RESEK, Cleveland Heights, Ohio, assignor to Perfection Stove Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 18, 1925. Serial No. 24,052. 27 Claims. (Cl. 158—1.)



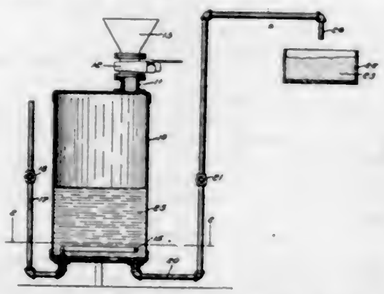
1. In a heating system, the combination of a burner of the injector type, a steam generator exposed to a source of heat, a conduit leading from the steam generator to the burner, means for conducting liquid fuel to the burner, means for varying the amount of heat delivered to the generator thereby to control the steam pressure delivered to the burner, means operated by the steam pressure for actuating the last mentioned means, an adjustment whereby the steam pressure required to actuate said last mentioned means may be varied, and thermostatically controlled mechanism for automatically changing said adjustment.

1,688,659. HEADING AND ELEVATING MACHINE. HARVE D. ROSE and ARCHIE MANTHE, Wamego, Kans. Filed Feb. 25, 1926. Serial No. 90,592. 2 Claims. (Cl. 146—81.)



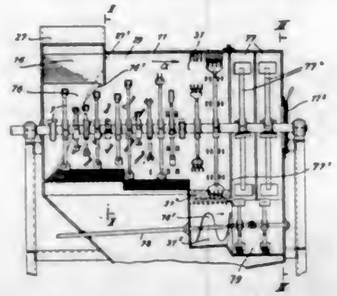
1. In a heading and elevating machine, a frame carried by a pair of wheels, a slotted saw table positioned on the frame, an elevator chute attached to the frame, and having a standard pivotally connected to each side there-

of as temporary supporting means therefor; a pivotal and removable connection comprising a bar and a pin centrally positioned and laterally extending from the bar,



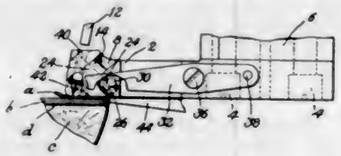
a brace member affixed to each side of the elevator as carrying means for the bar, said pin to be attached to the bed of a wagon as conveying means for the machine.

1,688,660. CUTTING TOOL. HARRY B. ROUSE, Chicago, Ill., assignor to H. B. Rouse & Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 13, 1927. Serial No. 160,924. 4 Claims. (Cl. 164—10.5.)



1. The combination with a cutter; of a work holding table formed with a track circularly curved upon a center adjacent the cutter; and a work presenting member having work engaging sides converging toward the cutter and movable upon the table and engaging said track to be guided in its movements, said track and work presenting member having downwardly and inwardly tapering interengaging surfaces serving to prevent the work presenting member from being lifted where it thus engages said track.

1,688,661. METHOD OF AND APPARATUS FOR PREPARING BINDING MATERIAL FOR CORES. WILLIAM B. RUNYAN, Dayton, Ohio, assignor to The Dayton Malleable Iron Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 9, 1924. Serial No. 685,186. 9 Claims. (Cl. 22—89.)



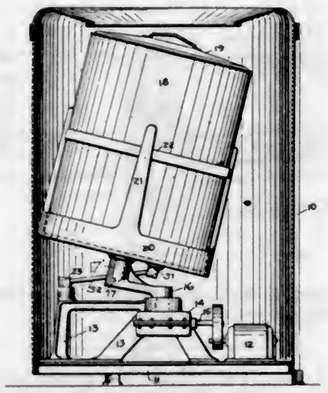
1. The method of preparing a moulding material such as for baked cores, which comprises adding definitely proportioned quantities of oil and water, intimately admixing the oil and water, and adding the admixed oil and water to sand to thereby form the moulding material.

1,688,662. THRASHING MACHINE. FELIX SCHLAYER, Madrid, Spain. Filed Mar. 26, 1925, Serial No. 18,587, and in Germany Apr. 8, 1924. 15 Claims. (Cl. 130—27.)

1. In a machine of the character described, a drum having an intake and a discharge end, a rotary shaft axially extending within said drum, rotary working members mounted on said shaft, stationary working members, and a projection at the intake arranged inside said drum between the outer ends of the rotary working members and the drum wall, said projection being adapted to restrict the space around the rotary working members at points circumferentially in advance of the intake.

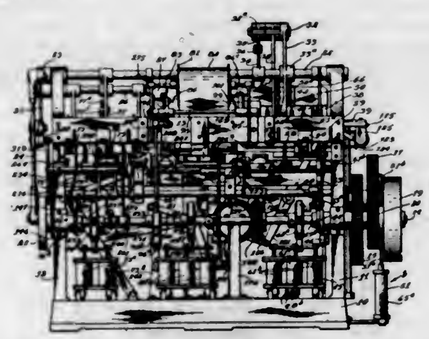
1,688,663. FASTENING-INSERTING MACHINE. THOMAS H. SEELY, Malden, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 26, 1925. Serial No. 52,544. 16 Claims. (Cl. 1—5.)

1. In a fastening-inserting machine, a tack block comprising a body portion having a driver passage, and jaws recessed to form a tack pocket, said jaws being arranged to swing apart on axes arranged obliquely to the direction of the driver passage and to that face of the work into which the tack is driven.



1,688,664. DIPPER HANDLE. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed Aug. 18, 1926. Serial No. 129,908. 4 Claims. (Cl. 214—145.)

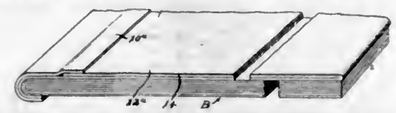
1. A handle for power shovels consisting of a one-piece casting having a shovel mounting portion and spaced parallel arms extending therefrom, there being integral transverse flanges connecting relatively short portions of said arms to form a centrally located box-shaped pocket for receiving and backing up a buffer block.



1,688,665. WASHING MACHINE. DONALD G. SMELLIE, Maywood, Ill., assignor to The Hoover Company, a Corporation of Ohio. Filed Oct. 9, 1925. Serial No. 61,400. 4 Claims. (Cl. 250—78.)

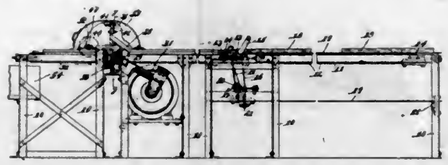
1. In a washing machine, in combination, a supporting frame, a driven shaft supported thereon, a container support secured to the driven shaft, a container mounted thereon, eccentrically with relation to and inclined toward

the axis of the driven shaft whereby the container may be gyrated about the driving axis in a continuous course, and means oscillating the container about its longitudinal axis.



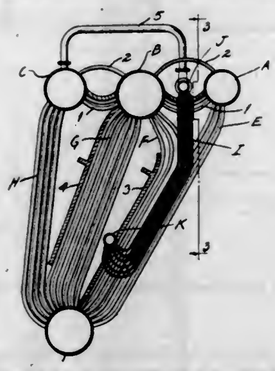
1,688,666. MACHINE FOR FORMING BOOK END SECTIONS. SWAN SMITH, White Bear, Minn., assignor of one-half to West Publishing Company, St. Paul, Minn., a Corporation of Minnesota. Filed Mar. 28, 1925, Serial No. 19,042. Renewed Feb. 6, 1928. 21 Claims. (Cl. 11—1.)

13. In a machine for forming book end-sections, means for gathering an end-sheet and a book-section with a marginal portion of the former overreaching the back edge of the latter, clamping mechanism for temporarily holding said end-sheet and book-section in gathered relation, a gripper for turning said overreaching portion of the end-sheet around the back edge of the book-section and for clamping said portion against the back of said section, means for pasting one of said end-section members prior to the folding of said end-sheet by said gripper to secure a bond between said turned portion of the end-sheet and said book-section, said gripper being adapted to take the formed end-section from said clamping mechanism.



1,688,667. BOOK END SECTION. SWAN SMITH, White Bear, Minn., assignor of one-half to West Publishing Company, St. Paul, Minn., a Corporation of Minnesota. Filed May 16, 1927. Serial No. 191,036. 1 Claim. (Cl. 281—21.)

A book end-section comprising a terminal printed section and an end-sheet and hinge-strip assembly, said assembly including an elongated sheet folded upon itself on a transverse line off center of the sheet to bring the ends thereof in spaced relation and further including a hinge-strip marginally secured to the free ends of said

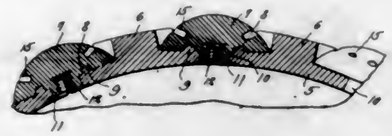


folded sheet, said assembly being marginally turned over the back edge of the printed section on a line of fold extending longitudinally of the hinge strip, the back turned portion of said assembly being secured to the printed section.

1,688,668. CANDY-CUTTING MACHINE. GEORGE SORENSEN, Chicago, Ill. Filed Oct. 4, 1926. Serial No. 139,320. 12 Claims. (Cl. 107—21.)

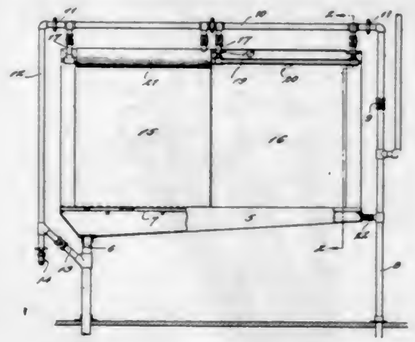
5. A machine for automatically cutting candy or the like adapted to receive the candy in the form of a slab resting on a flexible sheet, comprising feed-in intermediate and discharge conveyors, said conveyors being arranged in longitudinal registration with each other with gaps between them; withdrawing rollers associated with said first gap and arranged to withdraw said flexible sheet therethrough; and cutting elements arranged in said other gap, substantially as described.

1,688,669. SUPERHEATER BOILER. ROBERT L. SPENCER, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 8, 1926. Serial No. 86,856. 3 Claims. (Cl. 122—478.)



1. A water tube boiler, comprising a plurality of elevated steam-and-water drums, a lower water drum, banks of upright water tubes connected at their lower ends with said water drum and at their upper ends with said steam-and-water drums, the front tube bank beng arranged so that the gases from the combustion chamber will flow upwardly over the same, upright superheater elements arranged in vertical lanes in the front tube bank, an intake header attached to the upper ends of said superheater elements and arranged in the space between the first and second steam-and-water drums, and a discharge header attached to the lower ends of said superheater elements and arranged at the rear of the front tube bank.

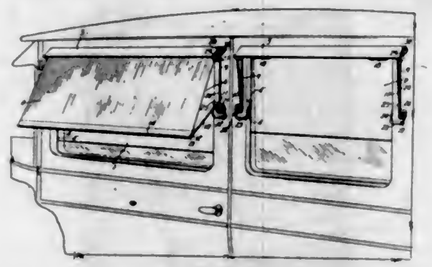
1,688,670. DENTAL APPARATUS. GEORGE A. SWENDIMAN, Grand Forks, N. Dak. Filed Dec. 5, 1927. Serial No. 237,708. 14 Claims. (Cl. 32—17.)



1. A thin, ductile matrix consisting of two ring portions, a narrow portion to be gripped, and a plurality of elevated carets in the wing portions, said matrix being formed of a single piece of material.

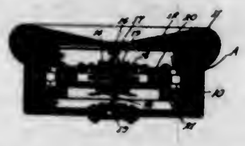
1,688,671. TIRE CONSTRUCTION. WILLIAM ALFRED TAYLOR, Detroit, Mich. Filed June 8, 1927. Serial No. 197,421. 2 Claims. (Cl. 152—16.)

1. A tire tread embodying a body portion formed with recesses, the recesses having curved side walls, tread sections positioned within the recesses, securing members extending through the body portion and into the tread sections to secure the tread sections into position, and means adjacent to the securing members for holding the tread sections against lateral movement.



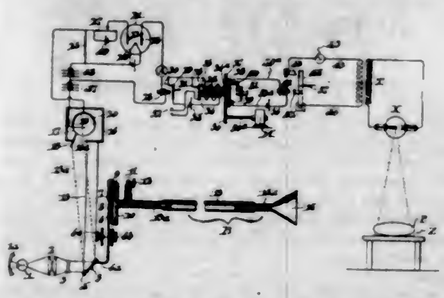
1,688,672. BLACKBOARD CLEANER. THOMAS W. THOMPSON, Freeland Park, Ind. Filed Oct. 28, 1925. Serial No. 65,453. 1 Claim. (Cl. 35—15.)

A cleaning system for blackboards comprising a blackboard having its lower edge spaced from the wall to thereby set the blackboard at an angle to the vertical, a perforated water pipe connected to a water supply system arranged at the top of the blackboard, a metal guard enclosing the water pipe whereby the water striking the guard is forcibly directed against the blackboard.



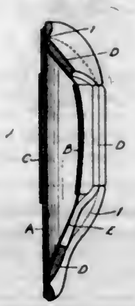
1,688,673. AUTOMOBILE AWNING. TANDY B. THURMAN, Kansas City, Mo. Filed Dec. 31, 1926. Serial No. 158,252. 5 Claims. (Cl. 156—44.)

1. In an awning of the character described a supporting member including inbent arms having fingers for seating in the lintel and side grooves of a window frame, a coil on said member, and a spreader member including a coil



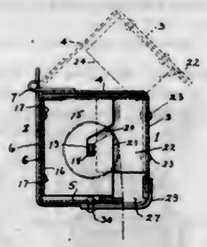
hingedly engaged with the coil on the supporting member and having a web engaging portion.

1,688,674. RECEIVER. HARRY G. WEBSTER, Chicago, Ill. Filed June 7, 1923, Serial No. 643,890. Renewed Jan. 11, 1928. 21 Claims. (Cl. 179—119.)



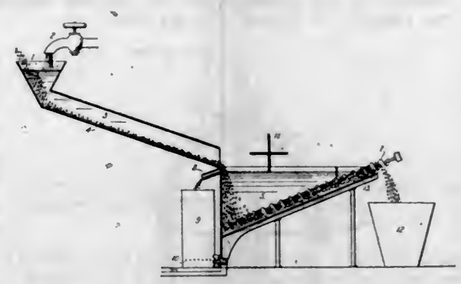
1. In a receiver of the character described, an electromagnet having a reciprocatory armature the polarity of which is reversed with reversals of current in the electromagnet coil, and two magnets positioned each on a side of the armature opposite the other, whereby the armature is attracted toward one or the other of the magnets according to the polarity of the armature, and sound producing means actuated by said armature.

1,688,675. METHOD AND APPARATUS FOR TAKING SYNCHRONIZED RADIOGRAPH EXPOSURES. CHARLES N. WEYL, Philadelphia, Pa. Filed Mar. 5, 1925. Serial No. 13,175. 12 Claims. (Cl. 250—34.)



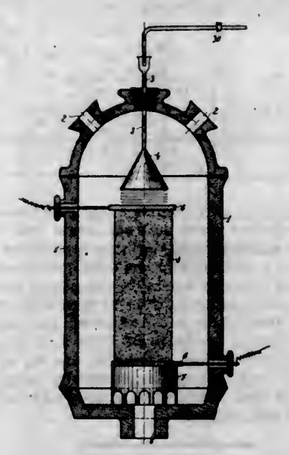
3. In a synchronizing apparatus for radiograph exposures, an applicator including an element adapted to be placed in relation to a part of the body demonstrating the arterial pulse, a diaphragm adapted to be actuated in accordance with said pulse, and a lever actuated by said diaphragm at a predetermined amplitude of movement thereof; a source of light, a photo-electric cell, and a mirror adapted to be actuated by said lever to reflect the beam from said source onto said cell; a timing device adapted to energize the X-ray tube at a predetermined time interval after its own actuation, and means controlled by said photo-electric cell to actuate said device.

1,688,676. ATHLETIC GUARD. WILLIAM P. WHITLEY, St. Louis, Mo., assignor to Rawlings Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 28, 1925. Serial No. 77,932. 3 Claims. (Cl. 2—22.)



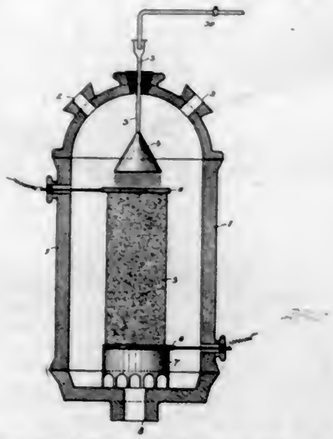
1. An athletic guard composed of a substantially rigid and inflexible protecting element of such cross-sectional shape that the side edge portions of same lie in a different plane than the intermediate portion of said element, a shock absorbing member stretched taut across the rear side of said protecting element and secured to the side edge portions of same, and a non-stretchable stay drawn taut across the front side of said protecting element and having its ends permanently secured to the side edge portions of said protecting element for counteracting the tendency of said element to assume such a condition as to materially reduce the tautness of said shock absorbing member.

1,688,677. MAP CASE. JOHN WINTER, Goshen, Ind. Filed Mar. 25, 1927. Serial No. 178,459. 3 Claims. (Cl. 40—85.)



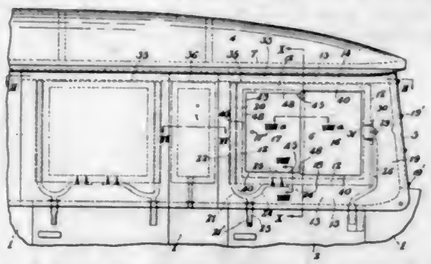
2. A map case of rectangular formation and composed of two cooperating sheet metal sections hinged together, each of which is substantially L-shaped in cross-section, one of said sections serving as a cover for the other which is normally stationary, a pair of polygonal case heads rigidly fastened to said stationary case section at opposite ends thereof, one of said heads being apertured to receive a roller stud, the bottom wall of said stationary section being shortened to provide an opening to admit the passage of a map, a slotted roller bearing plate rigidly secured to said stationary case section inwardly of and adjacent the end opposite said apertured head, said plate extending transversely of the case and intermediate the extremities thereof, said plate being provided with an upright slot to receive a polygonal roller stud and an angular slot in communication therewith to enable the removal of said roller stud, a locking plate rigid with said case cover section and extending transversely of the case and adapted to cooperate with said slotted bearing plate to lock the roller stud within its bearing in said slotted plate, and latch means to disengagenbly secure the case sections together.

1,688,678. PROCESS OF CLEANING THRASHED CEREALS. ALBERTO ALTAMIRANO, Mexico City, Mexico, assignor to Moisés Solana, Mexico City, Mexico. Filed Nov. 13, 1925, Serial No. 68,916, and in Mexico Dec. 24, 1924. 2 Claims. (Cl. 209—173.)



1. A continuous process of cleaning thrashed corn and other cereals, comprising the steps of feeding the grains, while submerged in a moving current of water, through an extended, downwardly-inclined path and separating the heavier particles of impurities from the grains during their travel by the action of the current; discharging the grains and water at the bottom of said path directly upon the surface of the water in a vat; continuously forcing back the light floating particles and removing them at one side of the vat while keeping the surface of the water at the other side clear; and elevating the grains which sink to the bottom and removing them at the clear side of the vat, while subjecting them to a continuous rubbing action during their elevation.

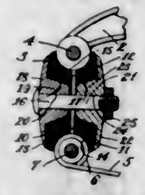
1,688,679. PROCESS FOR HEATING LIQUIDS BY ELECTRICAL ENERGY. GUSTAV BAUM, Karnten, Austria, assignor to The Niagara Electro Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 15, 1925, Serial No. 62,602, and in Austria Oct. 28, 1924. 6 Claims. (Cl. 219—38.)



4. Process comprising passing an electrically conducting liquid through an electrically non-conducting multiple channeled structure in amounts insufficient to completely fill the channels in said structure and passing an electric current through said liquid.

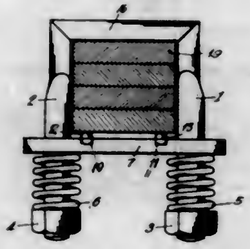
1,688,680. APPARATUS FOR HEATING LIQUIDS BY ELECTRICAL ENERGY. GUSTAV BAUM, Weissenstein-on-the-Drau, Karnten, Austria, assignor to The Niagara Electro Chemical Company, Inc., New York, N. Y., a Corporation of New York. Original application filed Oct. 15, 1925, Serial No. 62,602, and in Austria Oct. 28, 1924. Divided and this application filed Oct. 19, 1926. Serial No. 142,581. 16 Claims. (Cl. 219—40.)

1. Apparatus for heating liquids by electrical energy, consisting of electric current supply mains and exit lines, structures of non-conducting materials with small interstitial spaces inserted between said lines, and a duct supplying the liquid, the orifice of which duct is placed above the said structures.



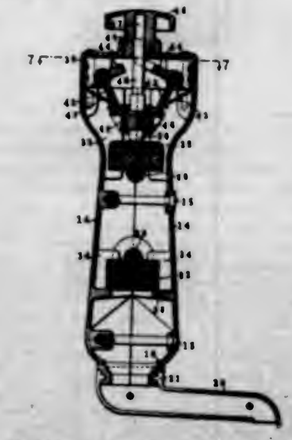
1,688,681. AUTOMOBILE INCLOSURE. GEORGE E. BISHOP, Cleveland, Ohio. Filed Feb. 4, 1924. Serial No. 690,439. 7 Claims. (Cl. 296—139.)

1. An automobile side inclosure comprising a non-folding panel having divided glass outlooks, seats and retaining means for the edges of said outlooks comprising a panel bead exteriorly bounding said outlooks and formed with upper and lower inwardly extending extensions holding one outlook stationary against horizontal movement, the other outlook being adapted to move adjacent said extensions, metal angles secured to the panel body and along which said last-mentioned outlook is movable, one leg of each of the respective angles being longitudinally aligned with the edges of said bead extensions, and means for holding the inner faces of said outlooks.



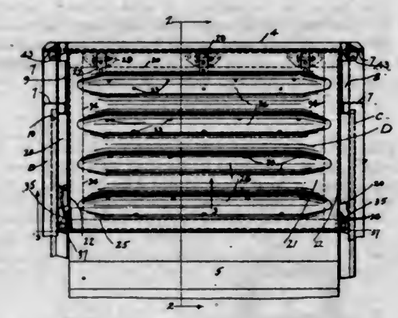
1,688,682. SPRING-SHACKLE ANTIRATTLE ATTACHMENT. HENRY E. BLOMGREN, Brooklyn, N. Y. Filed July 21, 1927. Serial No. 207,350. 6 Claims. (Cl. 267—54.)

1. The combination with a spring shackle formed of side links and upper and lower eye members connected by the links, of a pair of blocks of resilient material such as rubber placed in proximity at the middle of the shackle, and a clamp engaging the blocks to hold them together under



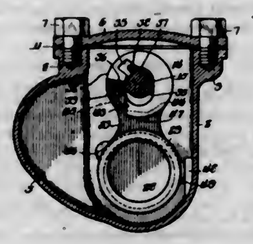
compression whereby to expand the said marginal portions into engagement with all of the said members of the shackle.

1,688,683. SHOCK ABSORBER FOR AUTOMOBILE AND OTHER SPRINGS. ARCH M. BROWN, Chickasha, Okla. Filed May 23, 1925. Serial No. 32,346. 3 Claims. (Cl. 267—53.)



1. In a device of the character described in combination with a leaf spring; a clip having its ends threaded, said clip being adapted to be passed over the spring; and bearing plate; anti-friction members inserted between said bearing plate and the adjacent face of the spring; springs surrounding the threaded ends of the clip; and nuts threaded on said ends, said nuts bearing against the springs and tending thereby to force the bearing plate inwardly and to hold the anti-friction members against the face of the leaf spring.

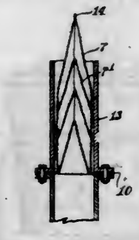
1,688,684. WRINGER. WILLIAM W. BROWN, Oak Lane, Pa., assignor, by mesne assignments, to H. W. Butterworth & Sons Company, a Corporation of Pennsylvania. Filed Apr. 26, 1923. Serial No. 634,707. 23 Claims. (Cl. 68—32.)



1. In a wringer, in combination, complementary front and back frame sections having complementary recesses, said frame sections with their recesses cooperating to form tubular end and base frame elements providing housings in said end elements and a longitudinal conduit in said base element, bearings for the wringer rolls disposed within said housings, cap sections for said frame end elements, means for securing said frame sections in cooperative relationship to form the wringer frame, and adjusting means mounted in said cap sections for adjusting the bearings of one of said rolls.

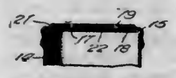
1,688,685. RAILWAY CAR. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed July 11, 1927. Serial No. 204,678. 15 Claims. (Cl. 105—259.)

1. In a railway car, the combination of a member pivoted adjacent the end of the car, said member being adapted to form, in one position, a vertical end wall of the car and, in another position, a portion of the level floor of the car; and a sub-floor adjacent said member whereby a depressed floor portion is presented when the movable member is positioned as the end wall of the car.



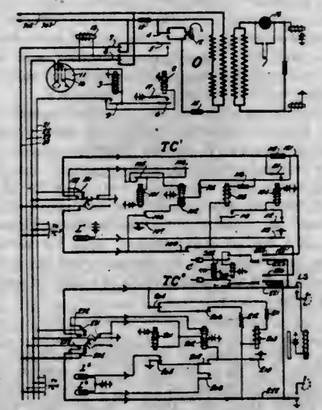
1,688,686. QUICK-OPENING GATE VALVE. RALPH G. CARLSON, Chicago, Ill., assignor to Crane Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 10, 1927. Serial No. 160,127. 9 Claims. (Cl. 251—18.)

1. The combination with a valve, a seat therefor and an operating handle, said valve having a single pivot connection between it and said handle and being movable between extreme open and closed positions, of means rigidly connected to said pivot for moving said valve initially in a direction parallel a radius of said pivot and for thereafter moving said valve about said pivot, said movements together serving to move said valve from one extreme position to the other.



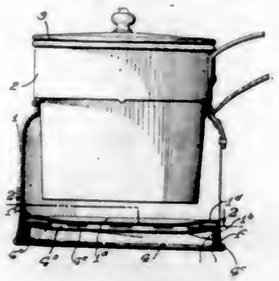
1,688,687. MIXING AND VAPORIZING DEVICE. HENRY M. COGAN, Charleston, W. Va. Filed Aug. 18, 1925. Serial No. 50,917. 5 Claims. (Cl. 48—180.)

1. A fuel mixing device for internal combustion engines lying within the fuel intake pipe between the carburetor and the engine comprising a series of separated foraminous cone screens whose apices extend in the direction of the fuel flow and whose bases are secured to a foraminous



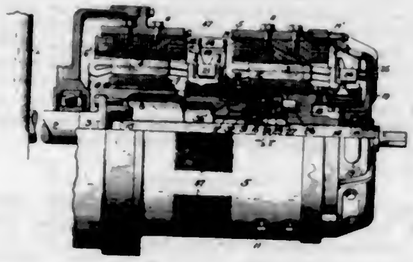
cylinder concentric with the intake pipe and means for securing the base of said cylinder to said pipe.

1,688,688. TALCUM-POWDER BOX. HARRY R. COREY, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 17, 1921. Serial No. 523,005. 2 Claims. (Cl. 221—64.)



1. A powder box comprising a body having a marginal peripheral depression forming within the same a slightly elevated central perforated top; a cap rotatably secured on said body and having a marginal peripheral depression corresponding with that of the body forming within the same a central elevated cap-top having perforations which are arranged to correspond with those of the body by the rotation of the cap, said cap-top being spaced above said central elevated top of the body and the marginal depression of the cap fitting rotatably in that of the body; and a gasket having perforations corresponding with those of the body and cap and confined within the depressed part of the cap and between the central top parts of the body and cap.

1,688,689. AUTOMATIC TELEPHONE SYSTEM. THOMAS F. CROCKER, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 28, 1925. Serial No. 53,025. 17 Claims. (Cl. 179—27.)

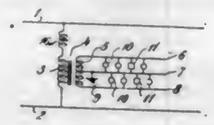


16. In a telephone system, an operator's position, an operator's telephone set for answering calls extended to said position, a receiver included in said set, a relay responsive to the answering of a call for disabling said receiver and for tripping the ring, and a second relay responsive to said first relay for deactuating said first relay.

1,688,690. COOKING UTENSIL. WILLIAM R. DICK, San Diego, Calif. Filed Dec. 4, 1926. Serial No. 152,584. 13 Claims. (Cl. 53—1.)

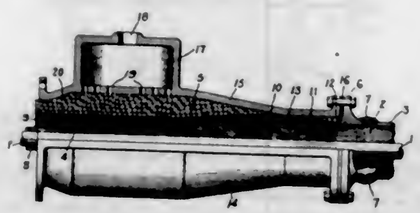
7. In a waterless double cooker, the combination with the lower outer receptacle with perforated bottom, of a substantially conforming, readily removable, perforate bottom portion adapted to fit therein.

1,688,691. TRANSMISSION SYSTEM FOR AUTOMOTIVE VEHICLES. HARCOURT C. DRAKE, Hempstead, and ELMER A. SPERRY, Brooklyn, N. Y., assignors, by direct and mesne assignments, to Sperry Development Company, Dover Green, Del., a Corporation of Delaware. Filed May 5, 1922. Serial No. 558,643. 33 Claims. (Cl. 290—10.)



1. In an electric transmission system, a driving element, a generator connected therewith, a driven element, a motor coupled thereto and electrically connected with said generator, a one way clutch for interconnecting said elements, and means controlled by the relative speed of said elements for rendering said clutching means operative.

10. In combination, a vehicle, a prime mover therefor, a dynamo electric machine coupled to said prime mover to be driven thereby, a second dynamo-electric machine electrically connected to said first named machine and adapted to drive said vehicle, a source of E. M. F. normally connected across the field of said first named machine, means for reversing the connections between said machines, and means controlled by said reversing means for causing said source to be disconnected from said field and for connecting the same across the field of said second named machine.



1,688,692. WIRED RADIO ON POWER LINES. ROBERT D. DUNCAN, Jr., East Orange, N. J., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 12, 1925. Serial No. 14,856. 2 Claims. (Cl. 177—352.)

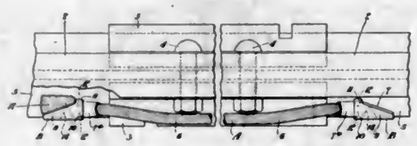
1. A wired radio system comprising a power transmission line for the delivery of power and high frequency signaling energy to a plurality of subscriber stations, a power transformer at each of said subscriber stations, said power transformer having primary and secondary windings for delivery of said power to a load circuit, an auxiliary inductance device interposed in series with said primary winding and connected across said transmission line, and combined impedance of said primary winding and said auxiliary inductance at the frequency of said signaling energy

being less than the impedance of said primary winding alone at the same frequency said auxiliary inductance being designed to pass said power to said load simultaneously with the delivery of said high frequency signaling energy to said load through said transformer.

1,688,693. INSULATED CABLE JOINT. EUGENE D. EBY, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 30, 1924. Serial No. 710,183. 2 Claims. (Cl. 173—268.)

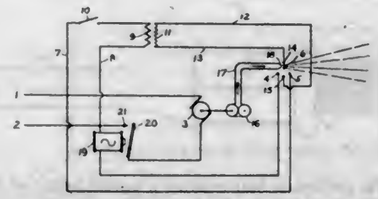
1. An insulated joint for electric cables having thereon wrappings of sheet insulation and a protective metal sheath, comprising an outer casing, an end ring for said casing adapted to fit upon the surface of said cable insulation and electrically connected to said sheath, reenforcement wrappings of sheet insulation disposed upon said cable insulation with a tapered end adjacent said end ring, and a ground shield electrically connected to said end ring and disposed upon the tapered end of said reenforcement wrapping.

1,688,694. PIEZO-ELECTRIC DEVICE. ALVARADO L. R. ELLIS, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 14, 1925. Serial No. 43,627. 4 Claims. (Cl. 171—327.)



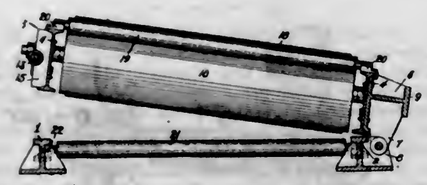
1. A piezo-electric oscillator comprising a plurality of crystals attached to one another in reverse relation at their adjacent edges.

1,688,695. COAL. GUSTAVUS J. ESSELEN, Jr., Swampscott, and MARK W. WEISS, Boston, Mass., assignors to The Delaware, Lackawanna & Western Coal Co., New York, N. Y., a Corporation of New Jersey. Filed Dec. 28, 1927. Serial No. 243,208. 2 Claims. (Cl. 44—1.)



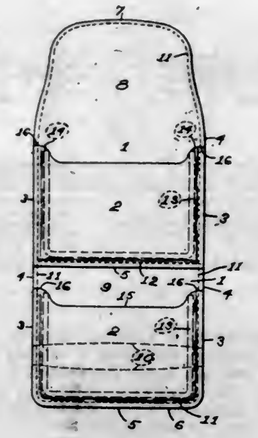
1. Coal having an irregular surface including crests and valleys, said coal having coloring material deposited in the valleys of the surface thereof in an amount sufficient to characteristically alter the appearance of the coal in bulk, but insufficient to cause the coal to lose its general appearance as coal.

1,688,696. RAIL BOND. HAROLD H. FEBREY, Newark, N. J., assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Mar. 16, 1927. Serial No. 175,817. 5 Claims. (Cl. 173—287.)



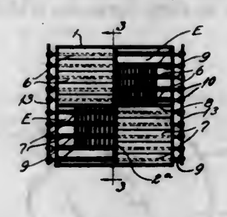
1. A rail bond adapted to be welded to the rails to be bonded, comprising a flexible body portion, a rigid solid terminal on each end of said body, and ferrous metal jacket members mechanically secured on said terminals and covering at least two sides of said terminals, the bottom face and at least a portion of one side face of said terminal being exposed.

1,688,697. ELECTRICAL CIRCUIT CLOSER. FRANK FISCHER, Larchmont, N. Y., and ARNOLD F. VAN PELT, Interlaken, N. J., assignors to Grant Oil Burner Corporation, Wilmington, Del., a Corporation of Delaware. Filed June 21, 1926. Serial No. 117,393. 4 Claims. (Cl. 158—28.)



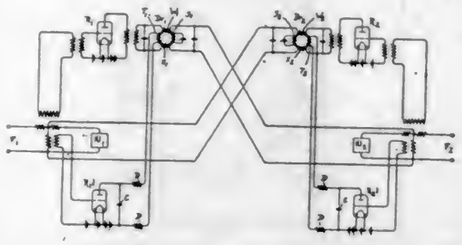
1. An electrical circuit-closer, consisting of a high-votage controlling circuit having a spark gap and a relatively low voltage controlled circuit having an air-gap intercepting the spark-gap, the air-gap being rendered relatively conductive in the controlled circuit when energized by a spark produced at the spark gap by the high-voltage controlling circuit, and a switch in the controlling circuit.

1,688,698. CONVEYER. IVAL G. FOWLER, Toledo, Ohio, assignor to The Edward Ford Plate Glass Company, Rossford, Ohio, a Corporation of Ohio. Filed Sept. 23, 1926. Serial No. 137,193. 4 Claims. (Cl. 198—204.)



1. A conveyer of the class described having a laterally tiltable frame, belt guiding means carried by the frame, an endless conveyer belt guided by said means and removable sideways from the guide means and frame when the frame is tilted.

1,688,699. CIGARETTE CASE. PRINCE ALBERT GARDNER, Jr., St. Louis, Mo. Filed Oct. 28, 1926. Serial No. 144,717. 1 Claim. (Cl. 206—41.)

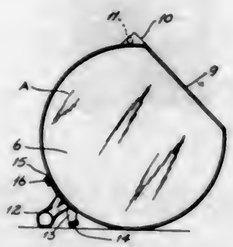


A cigarette case comprising a substantially rectangular body portion composed of flexible material, a series of pieces of flexible material attached to said body portion, one above the other, and arranged with their open ends disposed upwardly, and a resilient U-shaped rod insertible beneath each of said pieces to space the same from the body portion to define pockets, the arrangement of each of the pockets being such as to permit the application of pressure on the opposing lateral sides against the resilient arms of said rod for bulging the intermediate portion of a pocket, said pocket being returned to its normal position when the pressure on said arms is released.

1,688,700. REGENERATIVE AIR HEATER. HENRY F. GAUSS, Moscow, Idaho, assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 14, 1926. Serial No. 81,336. 5 Claims. (Cl. 257—6.)

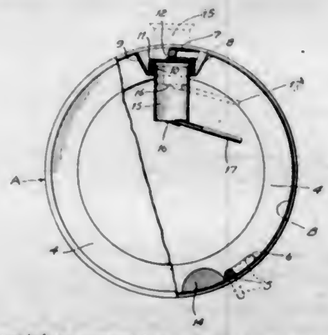
2. An air heater, comprising a casing divided into two passageways, a heat absorbing means in each of said passageways, an inlet at one end of said casing divided into four portions, an inlet duct that communicates with two of said portions, a separate inlet duct that communicates with the other two portions, a discharge at the opposite end of said casing divided into four portions, a discharge duct communicating with two of said discharge portions, a separate discharge duct communicating with the two remaining discharge portions, and closures for the four portions of the inlet and for the four portions of the discharge arranged so that two of the inlet closurers and two of the discharge closures are normally open, and the remaining inlet and discharge closures are normally closed.

1,688,701. AMPLIFIER CONNECTION. FRIEDRICH GEHERTS, Karlshorst, near Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Sept. 10, 1923, Serial No. 661,739, and in Germany Nov. 7, 1922. 11 Claims. (Cl. 179—170.)



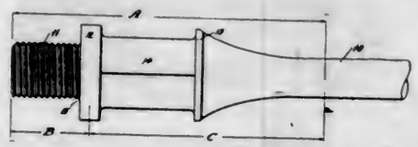
1. The combination in a duplex telephone amplifier system of an impedance comprising a winding connected in each current path and means independent of said winding responsive to talking currents transmitted over the path in which said impedance is connected for automatically increasing the value of said impedance.

1,688,702. METHOD OF TREATING ARTIFICIAL FIBERS. ERNEST K. GLADDING, Buffalo, N. Y., assignor to Du Pont Rayon Company, Incorporated, Buffalo, N. Y., a Corporation of Delaware. Filed July 11, 1927. Serial No. 204,715. 7 Claims. Cl. 18—54.)



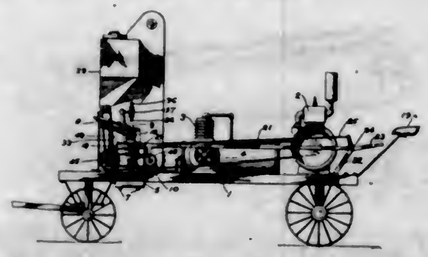
1. The step in the method of treating a cake of artificial fibers which comprises covering it with a fabric.

1,688,703. CONTAINER. WALTER S. GRANT, St. Louis, Mo. Filed Oct. 20, 1926. Serial No. 142,797. 5 Claims. (Cl. 221—1.)



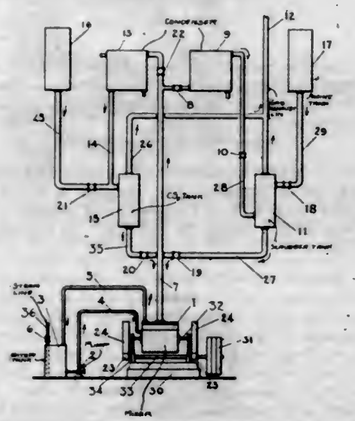
1. A container consisting of a substantially drum-shaped body; a carrying handle mounted at the top of said body; and a pouring spout so mounted in relation to said handle as to be protected by said handle from injury when the container is dropped upside-down, the tip of said pouring spout being within the plane wherewith said handle and the outer wall of said drum-shaped body contact when the container is in upside-down position.

1,688,704. CONTAINER. WALTER S. GRANT, St. Louis, Mo. Filed July 15, 1927. Serial No. 205,880. 2 Claims. (Cl. 221—1.)



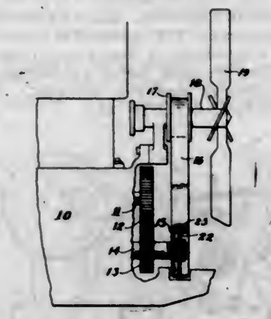
1. A container comprising a drum having a peripheral wall, and a pouring spout radially and telescopically mounted in said wall, said drum having a folding carrying handle and a folding leg, each arranged to lie within the plane of the peripheral wall of said drum when in folded position.

1,688,705. METHOD OF HEAT-TREATING SUCKER RODS. JESSE L. GRAY, Los Angeles, Calif., assignor, by mesne assignments, to L. P. Burgess, D. Daniels, and J. O. Clutter, trustees. Filed Jan. 8, 1927. Serial No. 159,852. 2 Claims. (Cl. 148—21.)



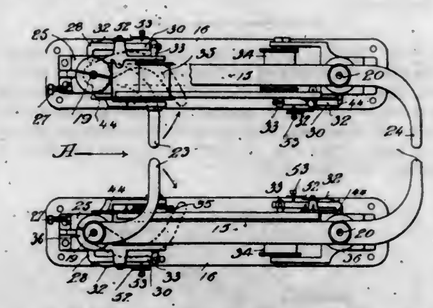
2. The method of heat treating a defined length of a rod or the like, that includes the heating the defined length and an adjacent additional length at least to the transformation point, quenching the defined length and allowing the remainder of the heated portion to retain a part of its heat above the temperature of quench, then allowing the retained heat of the unquenched heated portion to flow into the quenched portion to a condition of heat equilibrium and thus to reheat the quenched portion, the temperature of reheating being controlled by proper regulation of the retained temperature and mass of the unquenched portion in proportion to the mass and quenching temperature of the quenched portion.

1,688,706. DUST SPRAYER. FRED E. GREENE, Berkeley, Calif., assignor to A. B. Humphrey Co., Perkins, Calif., a Corporation of California. Filed July 20, 1926. Serial No. 123,635. 6 Claims. (Cl. 43—148.)



1. In a dust sprayer, the combination of a movable continuous support, means for continuously moving the support, a dust container above the support, means for sifting dust from the container onto the support as the support travels therebeneath, and a suction pipe having a suction head adjacent the support with the mouth thereof so closely adjacent the support as to suck the dust therefrom.

1,688,707. PROCESS OF CATALYZING THE FORMATION OF THIO-UREAS. CARL NELSON HAND and HAROLD P. ROBERTS, Nitro, W. Va., assignors to The Rubber Service Laboratories Co., Akron, Ohio, a Corporation of Ohio. Filed Oct. 1, 1924. Serial No. 740,941. 6 Claims. (Cl. 260—125.)

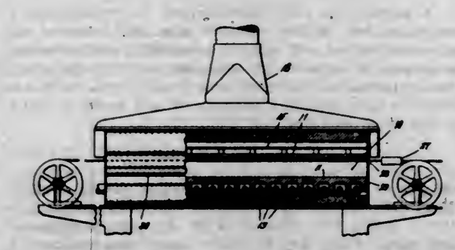


4. The process of making thio-carbanilide which comprises interacting aniline and carbon disulfid at temperatures from 46 to 46.2° C. in the presence of a small quantity of ammonia.

1,688,708. SECURING DEVICE FOR FAN PULLEYS AND THE LIKE. B D HAYS, Grand Saline, Tex., assignor, by mesne assignments, of one-half to C. A. Fischer, Fort Worth, Tex. Filed Dec. 14, 1923. Serial No. 680,694. 1 Claim. (Cl. 287—52.)

In a device for securing a pulley having a rim and a hub to a shaft, which elements have registering apertures, a main pin formed to have one end thereof inserted through said apertures and having a transverse slot extending through its opposite end, a pair of opposed substantially U-shaped latching members in the slot having the inner side faces of their top and bottom portions in engagement with each other and their outer faces in engagement with the walls defining the slides of the slot, a pivot pin common to both of the members and extending therethrough and connected to the main pin, the bottoms of the members being formed to engage the bottom wall of the slot and the tops thereof being formed to engage the inner face of the pulley rim, and a coil spring between the members connected to both and disposed in the open centers thereof.

1,688,709. PASSAGEWAY-CONTROL MECHANISM. FRANK HEDLEY, Yonkers, and JAMES S. DOYLE, Mount Vernon, N. Y. Filed Dec. 28, 1920. Serial No. 433,692. 25 Claims. (Cl. 39—3.)

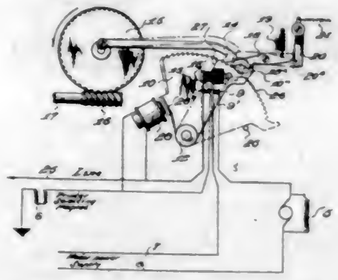


1. In a passageway controlling mechanism, means including vertical shafts arranged to form a restricted passageway between them, in a combination with barrier arms grouped in pairs and extending transversely into said passageway, and having connection with said shafts to rotatively actuate the same, locking devices for said shaft, and means to release said locking devices.

5. In a passageway controlling mechanism, means to form a restricted passage, barrier arms arranged in pairs and extending transversely partway across said passage from opposite sides thereof, rotatively mounted members, means for connecting each of said arms to an associated rotative member to actuate the same, means to yieldingly resist the rotative displacement of said members, and releasable lock devices for said members to maintain said arms in barrier relation across said passageway.

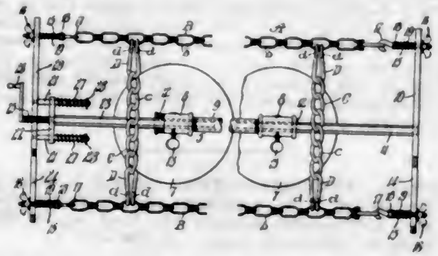
15. In a passageway controlling mechanism, means to form a restricted passageway, barrier arms arranged in successive pairs and extending transversely partway across said passageway from opposite sides thereof, locking devices for said arms, means operated by the rocking movement of the first pair of arms for controlling the locking devices of the second pair of arms, and means controlled by the rocking movement of the second pair of barrier arms for controlling the locking devices of the first pair.

25. In a passageway controlling mechanism, means to form a restricted passageway, barrier means for the restricted passageway, means for locking said barrier means, electrically controlled devices for releasing said locking means, coin or token controlled contacts arranged in the circuit of said devices, and auxiliary contacts controlled by a passage of a person through said passageway, and arranged in said circuit.



1,688,710. ENAMELING OVEN. CHARLES L. HEISLER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 29, 1926. Serial No. 157,800. 5 Claims. (Cl. 263—3.)

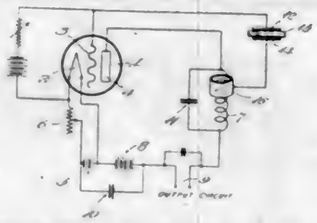
5. An enameling oven comprising heat conducting walls forming a fuel fired heating chambers, heating means on the outside of said walls, said walls being provided with aper-



tures through which hot gases are admitted directly from said heating means into said chamber for preheating, and means comprising a slidable perforated plate for closing said apertures to shut off said gases after said chamber has been heated.

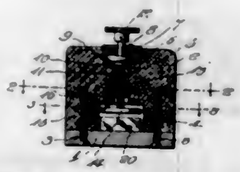
1,688,711. MOTOR-STOPPING DEVICE FOR TELEGRAPH TYPEWRITERS. ERNEST W. HEWITT, Stamford, Conn.; FRANK J. MAUS, Paterson, N. J.; and GEORGE MARX, New York, N. Y., assignors to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Feb. 26, 1927. Serial No. 171,328. 2 Claims. (Cl. 178—2.)

1. In combination with a printing telegraph machine having an electric motor to operate the movable parts, of a motor stopping device comprising an actuating element driven by said motor, timing mechanism operated by said actuating element, a switch in the motor circuit operated to open position by said timing mechanism when the latter has operated a predetermined period, and means controlled by the operation of the printing mechanism of the machine to release said timing mechanism and permit it to move to initial position.



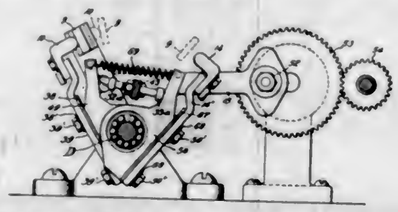
1,688,712. SUPPORT FOR TIRE CHAINS. JOHN P. HOTZ, Boston, Mass., assignor of one-half to Manton A. Wood, Boston, Mass. Filed Mar. 19, 1927. Serial No. 176,806. 8 Claims. (Cl. 29—89.)

1. A support for tire chains having, in combination, a frame, spreaders slidably mounted upon said frame at opposite ends thereof, and hangers mounted in said spreaders and adapted to support the side members of a tire chain at the opposite ends thereof, said hangers also being adjustable in said spreaders laterally of said frame to space said side members apart.



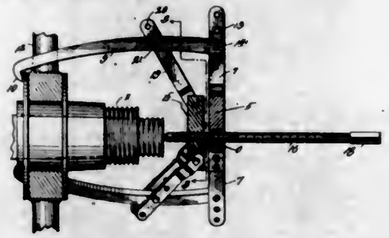
1,688,713. PIEZO-ELECTRIC-CRYSTAL OSCILLATOR SYSTEM. AUGUST HUND, Bethesda, Md., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed May 10, 1927. Serial No. 190,303. 4 Claims. (Cl. 250—36.)

1. In a piezo electric crystal controlled oscillator system an electron tube having grid, filament and plate electrodes, an output circuit interconnected between said plate and filament electrodes, an inductance and a source of potential in said circuit, a pair of parallel electrodes, a piezo electric crystal element mounted between said parallel electrodes



and a connection between one of said parallel electrodes and said grid electrode and a capacity connection between the other of said parallel electrodes and a variable point on said inductance.

1,688,714. PIEZO-ELECTRIC-CRYSTAL APPARATUS. AUGUST HUND, Bethesda, Md., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed May 12, 1927. Serial No. 190,881. 5 Claims. (Cl. 171—327.)

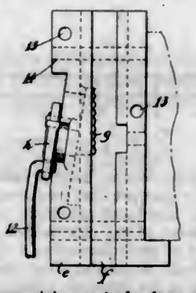


1. Piezo electric crystal apparatus comprising a metallic plate member, an insulated housing carried by said metallic plate member, and having pockets formed therein for receiving piezo electric crystal elements mounted in position upon said plate member and adjustable electrodes carried by said housing centrally of each of the pockets therein for establishing an electrostatic connection with the surfaces of said piezo electric crystal elements.

1,688,715. MOTOR-CONTROL MECHANISM. LEONARD P. HUTT, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed Dec. 19, 1924, Serial No. 757,065. Divided and this application filed Feb. 10, 1926. Serial No 87,388. 5 Claims. (Cl. 200—92.)

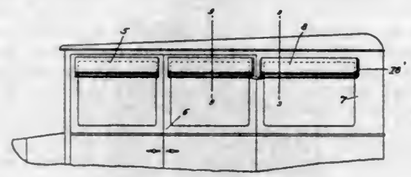
1. An interrupter comprising a contact member mounted to oscillate along a given path, means for oscillating said contact, a pair of auxiliary contacts mounted each to oscillate along an independent path, each independent path having a portion thereof coincident with the path of the first contact, an adjustable member mounted in operative relation to the auxiliary contacts, resilient means for drawing both of said contacts against said adjusting member, said resilient means biasing each of said contacts in an opposite direction whereby when the adjusting member is moved both contacts may be moved simultaneously in opposite directions with respect to the first contact, the relation of said elements being such that by moving the adjusting element one of the auxiliary contacts may be brought into the path of the first contact and the other auxiliary contact removed therefrom whereby contact may be made between the first contact and one of said auxiliary contacts once during each oscillation of the first contact.

1,688,716. WHEEL REMOVER. BENARD D. JERABEK, Hutchinson, Minn. Filed Mar. 29, 1926. Serial No. 98,332. 1 Claim. (Cl. 29—85.)



In a wheel remover, a spider member provided with arms, a strap arm projecting beyond the end and from each side face of each arm of said member, those strap arms arranged against the adjacent faces of the spider arms being integrally connected at their inner ends, hooked wheel engaging arms each having its outer end pivoted between a pair of strap arms carried by a spider arm, a nut member disposed inwardly of the spider member, links pivotally connecting the intermediate portions of the arms with the nut member, and an axial thrust screw passing freely through the spider member and threaded through the nut member, said wheel engaging arms being of arcuate form and arranged to present the convexed sides outwardly of the longitudinal center of the device.

1,688,717. METHOD OF MOTH-PROOFING FABRICS. HILTON IRA JONES, Wilmette, Ill. Filed Jan. 24, 1927. Serial No. 163,311. 6 Claims. (Cl. 167—6.)



1. The herein described steps in a process of moth-proofing fabrics, which consists in first treating the fabric with an aqueous solution of casein and subsequently treating the fabric with an aqueous solution of a salt of a rare earth metal.

1,688,718. CLAMP. WINFIELD S. JONES and ANTHONY E. MCLEAN, Long Beach, Calif. Filed Oct. 4, 1927. Serial No. 223,936. 4 Claims. (Cl. 24—136.)

1. A clamp comprising a body formed with a work-receiving opening and with an inclined wall facing said opening, a slip mounted for slidable movement upon said inclined wall whereby movement of the slip will project the same into or out of said work-receiving opening, said inclined wall being provided with a slot, a pin projecting from said slip through said slot, which pin travels in said slot during sliding movement of the slip upon said inclined wall, and means connected to said pin for quickly moving said slip upon said wall to grip or release the work in said work-receiving opening.

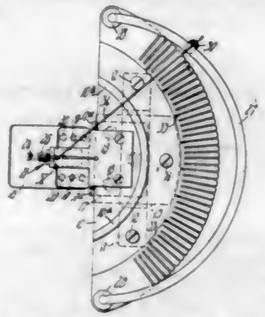
1,688,719. SUNSHADE FOR AUTOMOBILE WINDOWS. JOHN J. KILLIP, Astoria, Oreg. Filed July 6, 1927. Serial No. 203,787. 3 Claims. (Cl. 296—44.)

1. In a shade for automobile windows comprising a rigid shade section secured along the upper edge of the window, vertically disposed aprons attached at one end above the window for supporting each end of the shade, said rigid section and said aprons extending laterally from the window, a vertically disposed lip formed at the outer edge of said rigid section with a series of tubular end sections formed inwardly thereof, a shade panel having a series of hinge sections formed at one edge complementary with said tubular hinge section, a connecting hinge rod for said hinge section, said lip constituting a stop whereby to limit the outward movement of the panel, yieldable means engaging the shade section and the panel whereby to normally force the latter downwardly, and a snap fastener carried by the rigid section engageable with the free edge of said panel for releasably securing the same in raised position.

1,688,720. TREATMENT OF SEED. AUGUST KLAGES, Magdeburg-Sudost, Germany. Filed May 17, 1926, Serial No. 109,574, and in Germany Oct. 27, 1923. 3 Claims. (Cl. 167—38.)

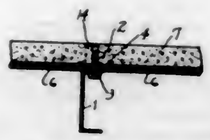
1. A composition of matter for the treatment of seed in order to destroy noxious agents such as bacteria and the like, said composition comprising a mixture of a salt of a basic aromatic compound having an amino group directly attached to the ring, mercuric chloride adapted to react with said salt and an inorganic chloride capable of accelerating the reaction.

1,688,721. EAR CAP. JOHANNES WILHELM KRAMER, Berlin, Germany. Filed Sept. 10, 1926, Serial No. 134,719, and in Germany Sept. 10, 1925. 4 Claims. (Cl. 179—182.)



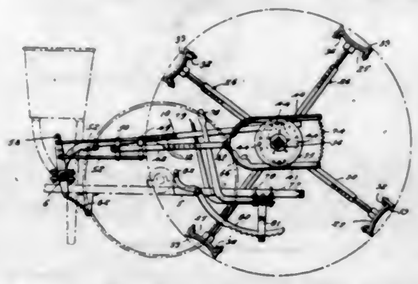
4. An ear cap comprising an annular conical bow of elastic material, fitting to the rear face of an ear concha, a cover connected to the outer edge of said bow, and means on said cover for the attachment of a telephone to said cap.

1,688,722. TYPE-SOLDERING DEVICE. ALFRED G. F. KUBOWSKI, Brooklyn, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 1, 1925. Serial No. 47,534. 9 Claims. (Cl. 113—59.)



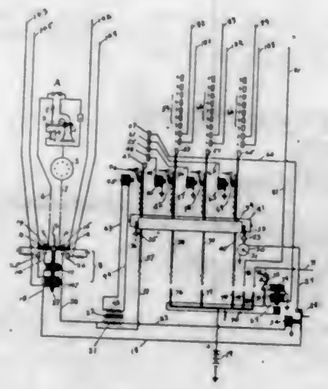
1. A soldering device for gaging a type-carrying block and a type-bar to which said block is to be soldered, said device having a surface upon which the type is held upon its face, a stud adjustable relatively to said surface and upon which a portion of said type-block is positioned to

insure that the face of the type is flat against said surface, and a second gage having a sharp razor-edge constituting



a corner-edge gage for gaging the type at the corner thereof formed by the face and the sides of said type.

1,688,723. ROOF AND FLOOR CONSTRUCTION. JAY C. LATHROP, Cincinnati, Ohio, assignor to Lathrop-Hoge Gypsum Construction Company, a Partnership composed of Jay C. Lathrop and Edward Clyde Hoge, Cincinnati, Ohio. Filed Aug. 25, 1925. Serial No. 52,410. 4 Claims. (Cl. 72—71.)

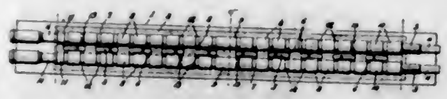


1. In a reinforced floor or roof construction, the combination with supporting beams, and rails or beams extending crosswise of the supporting beams, of a reinforced slab arranged on the supporting means, and enclosing the crosswise rails or beams, and interspaced means of small area rigid with the supporting beams, and nonrigid with relation to the crosswise rails or beams, extending into the slab construction intermediate said cross rails or beams, for the purpose described.

1,688,724. ATTACHMENT FOR CHECK-ROW CORN PLANTERS. JASPER R. LEWIS, Grace, Mo. Filed Apr. 9, 1925. Serial No. 21,867. 6 Claims. (Cl. 74—14.)

1. A movement for planters comprising a shaft, means for rotating said shaft, a series of pins carried by said shaft and being adapted to be rotated thereabout as said shaft is rotated, an arm provided with a notch adapted to receive said pins, said arm being arranged in the path of movement of said pins to cause the arm to be moved by said pins to disengage the notch from the pins as the shaft rotates, and spring means for normally holding said arm in engagement with said pins.

1,688,725. MACHINE SWITCHING SYSTEM FOR TELEPHONE EXCHANGES. CLYDE F. MCCANN, San Francisco, Calif. Filed Nov. 4, 1926. Serial No. 146,175. 7 Claims. (Cl. 179—16.)

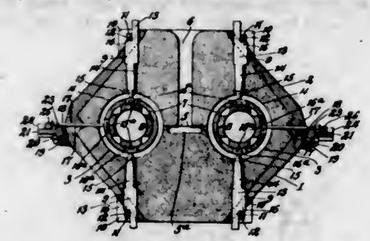


1. In a machine for connecting the calling and called lines of a telephone system, line jack members keyed to correspond to the line numbers, digit members retaining the keyed line members, connective means opposing the line jack members, means to withdraw the digit members by the calling line, releasing the called line jack upon the connective means, means to release the calling line jack upon the connective means by the calling line, and means to ring the called line.

1,688,726. HYDROLYSIS OF METHYL CHLORIDE. RALPH H. MCKEE, New York, N. Y. Filed Sept. 7, 1922. Serial No. 586,760. 7 Claims. (Cl. 260—156.)

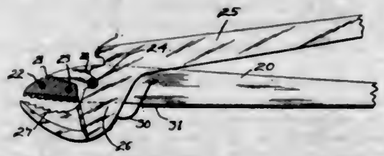
1. Process of hydrolyzing methyl chloride, comprising passing the same, admixed with steam, and at an elevated temperature, over a hydrolyzing agent comprising an alkaline-earth metal hydroxid.

1,688,727. CAST-IRON PIPE. JAMES R. MCWANE, Birmingham, Ala. Filed Jan. 12, 1926. Serial No. 80,781. 11 Claims. (Cl. 137—75.)



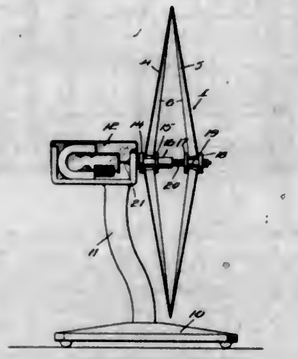
1. A cast iron pipe section having exterior circumferential enlargements adapted for threading, said enlargements being spaced apart and extending from one end to the longitudinal center of the pipe section; and a similar enlargement formed at the other end; all the enlargements being formed without weakening the pipe, which is of standard thickness at its thinnest portions.

1,688,728. MEANS FOR SUPPORTING CORES IN MOLDS IN THE MANUFACTURE OF TUBULAR CASTINGS. JAMES R. MCWANE, Birmingham, Ala. Filed Dec. 12, 1924. Serial No. 755,511. 9 Claims. (Cl. 22—184.)



1. The combination of a pipe mold having a core bar, and means for preventing deflection of the core bar in the pipe mold, comprising a pin having a reduced inner end, said pin being adapted to be inserted through the flask to bear on

the core bar, the said reduced end traversing the mold space to be removably embedded in the pipe but not to enter

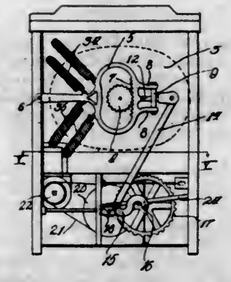


the bore of the pipe and means for locking the pin to maintain its contact with the core bar.

1,688,729. PLIERS. HOMER A. MEAD, Turlock, Calif. Filed Aug. 26, 1925. Serial No. 52,489. 1 Claim. (Cl. 294—44.)

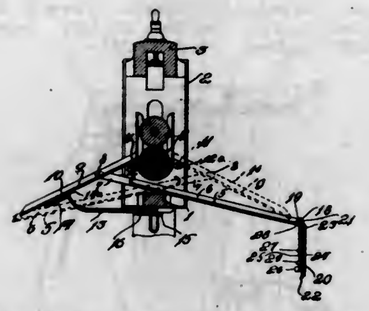
A plier of the class described comprising a straight member U shaped in cross section forming a handle, a steel block having serrations secured to said member at one end thereof to form a jaw, an opening through the U shaped member adjacent the jaw, a second member having a straight handle, a notched shank on said handle adapted to extend transversely through the opening in said first member and having serrations facing the serrations of the first member, said transverse shank having notches on the side adjacent the jaws, a pin through said first member adjacent the said steel block adapted to be engaged by said notches, a flat spring carried by said shank adapted to bear on the edge of said opening to hold the notches in engagement with said pin.

1,688,730. SOUND REPRODUCER. JOSEPH ARCHIBALD MEARS, New York, N. Y., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Sept. 16, 1925. Serial No. 56,671. 10 Claims. (Cl. 181—32.)



1. A sound reproducing diaphragm comprising a single sheet of plaited material folded into a double cone with the peripheral edges of the bases thereof formed integral with each other for enclosing a sound chamber between the surfaces of the double cone and means for adjusting the distance between the apexes of the cones for selecting a desired volume of sound chamber between said cones.

1,688,731. DEHYDRATION OF ALCOHOLS. SYLVAN R. MERLEY, Dover, N. J., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 22, 1925. Serial No. 77,134. 5 Claims. (Cl. 260—156.)

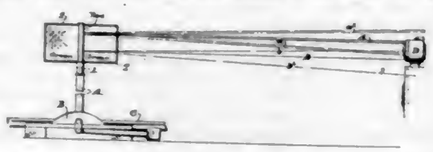


1. The method of dehydrating heavy secondary alcohol liquids containing small quantities of low boiling off-odor compounds comprising rectifying the liquid to be dehydrated with a substantially dry alcohol of lower boiling point than that of the alcohol to be dehydrated and forming a constant boiling point mixture with water and causing the temperature of initial distillation of the mixture to be higher than the boiling point of the liquid to be dehydrated.

1,688,732. WASHING MACHINE. CHARLES METREWITZ, Chicago, Ill. Filed Nov. 6, 1926. Serial No. 146,589. 2 Claims. (Cl. 74—14.)

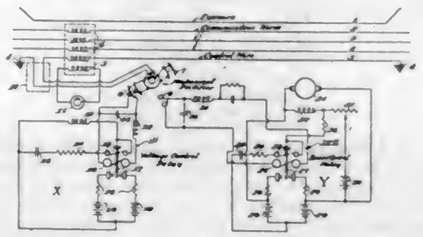
2. In a washing machine, a tub, a gear secured coaxially on said tub, a rack for oscillating said gear, resilient means engaging said tub and said rack at points above and below the median line of said rack, a pair of arms on said rack, a slotted member connecting said arms, driving mechanism including a link extending through said slot and pivoted to said rack and a pair of opposed springs carried by said slotted member for acting upon opposite edges of said link.

1,688,733. DRAIN BOARD FOR WRINGERS. CHARLES METREWITZ, Chicago, Ill. Filed Apr. 7, 1927. Serial No. 181,629. 7 Claims. (Cl. 68—32.)



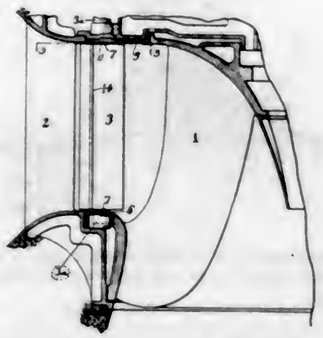
1. In combination, a delivery board, a drain board pivotally secured thereto, and a splash board attached to said drain board.

1,688,734. RAILWAY SIGNAL. CHARLES Z. MILLER, Fort Scott, Kans. Filed Aug. 9, 1926. Serial No. 128,314. 1 Claim. (Cl. 88—1)



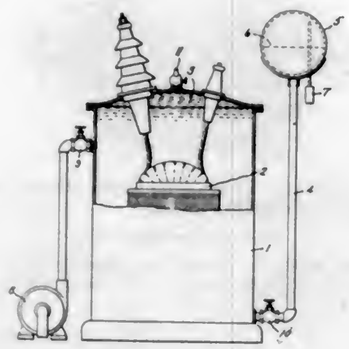
A signal comprising in combination, four casings arranged in pairs at right angles to each other, each pair of the casings being arranged in a single plane at right angles to the plane of the other pair, a reflector and a lens

mounted on each casing one in front of the other, both lenses of one pair of casings being of identical color, both lenses of the other pair of casings being of identical color but contrasting to the color of the lenses of the first mentioned pair, the reflectors and lenses of each pair of cas-



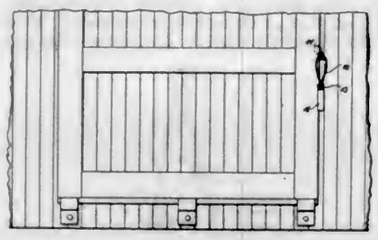
ings being located on the same side of the casings, whereby both reflectors and lenses of each pair will be faced in one direction, and means for supporting said casings whereby the latter may be swung about a common axis to present either pair of casings in operative position.

1,688,735. MEANS OF AND METHOD FOR NEUTRALIZING ALTERNATING CURRENTS. JOSEPH W. MILNOR, Maplewood, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Apr. 5, 1927. Serial No. 181,149. 22 Claims (Cl. 178—69.)



1. In a system for neutralizing alternating current induction, an alternating current generator designed to supply an equal and opposite neutralizing voltage, control means for regulating the value of the neutralizing voltage produced by said generator, and separate control means for regulating the speed of the said neutralizing generator.

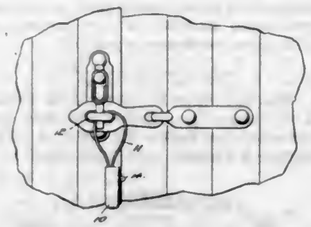
1,688,736. HYDRAULIC TURBINE. LEWIS F. MOODY, Philadelphia, Pa. Filed Mar. 16, 1927. Serial No. 175,665. 19 Claims. (Cl. 253—122.)



1. The combination with a turbine having pivoted gates and stationary members adjacent the ends thereof, of means for sealing the space adjacent to and extending a substantial distance along said gate ends including sealing means carried by said stationary members and adapted to engage said gates when in their closed position.

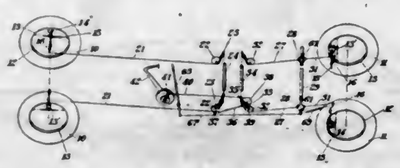
1,688,737. ELECTRICAL APPARATUS. WALTER S. MOODY, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 5, 1922. Serial No. 549,943. 2 Claims. (Cl. 220—85.)

1. The method of opening a casing filled with liquid in which electrical induction apparatus is immersed and having an expansion chamber containing liquid to a level higher than that in the casing, said expansion chamber communicating with the casing below the point at which the opening is to be made, whereby thermal expansion and contraction of the liquid is permitted, said method including the steps of causing liquid to be expelled from the casing into the expansion chamber to lower the level of the liquid within the casing below the opening to be made, preventing return of the expelled liquid, making an opening into the casing above the level of the liquid remaining therein, and subsequently closing said opening and permitting liquid to return by gravity from said expansion chamber to refill said casing.



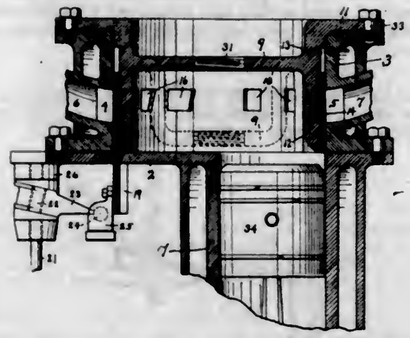
1,688,738. CAR SEAL. LOU Q. MOORE, Pueblo, Colo. Filed Aug. 19, 1926. Serial No. 130,261. 2 Claims. (Cl. 292—320.)

1. In a car seal embodying a flexible shackle, a locket, a hook member having an open side to permit ready attachment of the shackle thereto and adapted to be inserted in said locket, and oppositely disposed spring arms carried by said locket and hook member adapted to be sprung past each other and lock said hook member in the locket.



1,688,739. CAR SEAL. LOU Q. MOORE, Pueblo, Colo. Filed Nov. 12, 1926. Serial No. 147,999. 3 Claims. (Cl. 292—320.)

1. In a car seal, the combination of a locket having an aperture in one wall thereof, a shackle adapted to have both of its ends locked within said locket, a lug on said shackle remote from the end thereof adapted to project through the aperture from the locket and cooperating in-



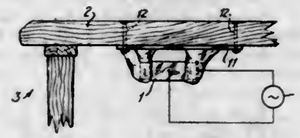
terlocking elements on the two ends of the shackle adapted to permanently engage each other when said ends of the shackle are within said locket.

1,688,740. BRAKE-OPERATING MECHANISM. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 5, 1923. Serial No. 636,969. 13 Claims. (Cl. 188—10.)

1. A brake mechanism comprising equalizing connections for each brake to all of the brakes and non-equalizing operating connections for part of the brakes, substantially as described.

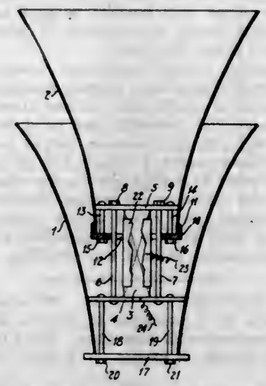
1,688,741. SLEEVE-VALVE ENGINE. KASIMIR W. NAJDER, Royal Oak, Mich., assignor of one-fourth to Isaac S. Gellert, Detroit, Mich. Filed Oct. 18, 1926. Serial No. 142,452. 6 Claims. (Cl. 123—81.)

1. In an internal combustion engine, the combination of a cylinder having a radial flange at one end formed with a segmental slot, a compression chamber attached to said flange and being of greater diameter than said cylinder, a cylindrical sleeve-valve slidable in said chamber and having an extension projecting through said slot, and a head for said chamber.



1,688,742. SPRING-LOCK KEY. FRANK NELSON, Newkirk, Okla. Filed May 3, 1927. Serial No. 188,560. 4 Claims. (Cl. 74—8.)

4. A cotter key of the character described, comprising a relatively long body of channel formation throughout, a spring tongue within the body and secured at one end thereto, the other end of the tongue projecting beyond one end of the body, a stop carried by and projecting from one longitudinal edge of the body adjacent the end from which

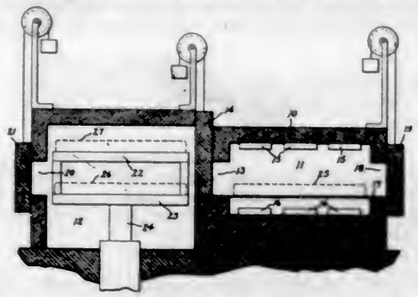


the spring tongue projects, and stop means carried by said tongue and in spaced relation to said first mentioned stop and normally projecting beyond the said longitudinal edge of the body.

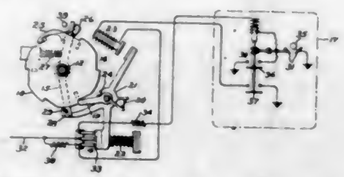
1,688,743. PLANE-SURFACE PIEZO-ELECTRIC LOUD SPEAKER. ALEXANDER MCLEAN NICOLSON, New York, N. Y., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 11, 1927. Serial No. 174,486. 7 Claims. (Cl. 179—101.)

1. A loud speaker comprising a sound reproducing surface, a piezo-electric crystal device adapted to be vibrated by electrical oscillations of sound frequency, a metallic plate positioned parallel thereto, means connecting opposite ends of said crystal device with said plate, and a bearing surface on said plate arranged for connection with said sound reproducing surface.

1,688,744. MULTIPLE ACOUSTIC DEVICE. ALEXANDER MCLEAN NICOLSON, New York, N. Y., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed May 25, 1927. Serial No. 194,044. 10 Claims. (Cl. 179—110.)



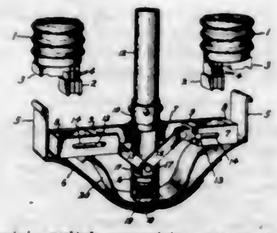
1. An acoustic device comprising a plurality of acoustic amplifiers and a single piezo-electric means for converting electrical oscillations into acoustic vibrations arranged to energize said amplifiers.



1,688,745. FURNACE. ALBERT N. OTIS, Schenectady, N. Y., and LOUIS F. WOOLSTON, Richmond Heights, Mo., assignors to General Electric Company, a Corporation of New York. Filed Mar. 12, 1927. Serial No. 174,864. 5 Claims. (Cl. 263—6.)

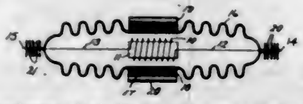
1. An annealing furnace comprising walls forming a heating chamber and a preheating chamber communicat-

ing therewith, heating means in said heating chamber, and a vertically movable member in said preheating chamber acting as a common support for a cold charge being preheated and a hot charge being cooled.



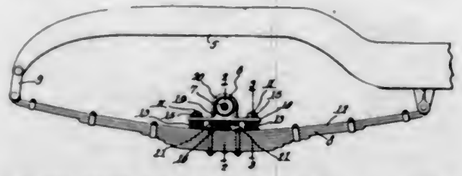
1,688,746. TURNSTILE-CONTROL MECHANISM. ROBERT J. PARSONS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 19, 1924. Serial No. 750,938. 10 Claims. (Cl. 39—3.)

2. A turnstile control mechanism comprising a rotatable member, mechanism for preventing rotation of said member in one direction and for permitting unrestrained rotation of the member in the other direction, means for releasing said mechanism to permit free rotation of said member in either direction, and means responsive to rotation of the member in said one direction for maintaining said mechanism released until after a predetermined angular movement of said member in said one direction, said last means being unresponsive to rotation of the member in the other direction.



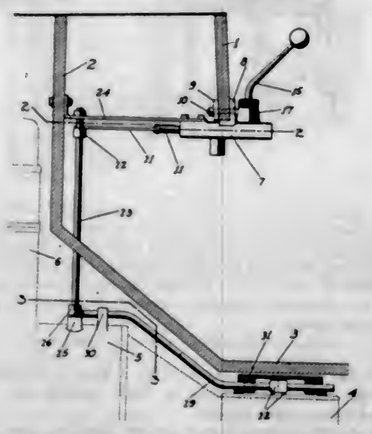
6. A turnstile control mechanism comprising a rotatable member, a pawl and ratchet mechanism for preventing rotation of said member in one direction, electroresponsive means for releasing said pawl to permit free rotation of said rotatable member, switch mechanism associated with said pawl and arranged to be operated upon the release thereof to render said electroresponsive means ineffective, and latching mechanism controlled by said rotatable member for independently maintaining said pawl released until after a predetermined angular movement of said member in said one direction.

1,688,747. ELECTRIC SWITCH. WILLIAM E. PAUL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 10, 1925. Serial No. 61,760. 5 Claims. (Cl. 200—166.)



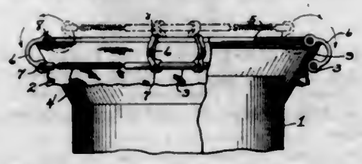
1. An electric switch comprising relatively movable cooperating contacts, means for yieldably supporting one of said contacts, the other of said contacts having relatively movable parts adapted to clamp the yieldable contact, means for moving the contacts relatively to closed circuit position and means operated by a continued movement in the same direction of said means for moving said movable parts to clamping position.

1,688,748. TRANSFORMER. WILLIAM E. PAUL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 9, 1928. Serial No. 253,173. 3 Claims. (Cl. 175—356.)



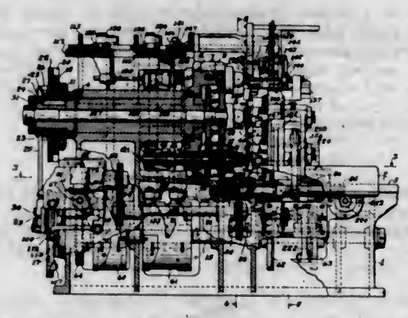
1. A transformer including a primary winding, a closed casing having a high vacuum surrounding said winding, and a secondary winding surrounding said casing and primary winding.

1,688,749. SPRING. CHARLES F. ROSS, Garrett, Ind. Filed Aug. 29, 1925. Serial No. 53,386. 1 Claim. (Cl. 267—28.)



In combination with a spring and the rear axle housing of a motor vehicle, an elongated plate, a supporting block extending upwardly from the plate and formed integral therewith, said block having a curved upper surface to receive the axle housing, an inverted U bolt embracing a portion of the axle housing and extending through the plate, bolts extending upwardly from the spring and passing through the plate adjacent to the ends thereof, coiled spring surrounding the bolts and engaging the plates and vehicle spring, coiled springs surrounding the first mentioned coiled springs and contacting with the vehicle spring and plate, and nuts on the bolts for securing the plates in position.

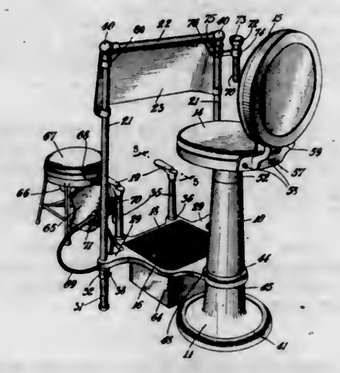
1,688,750. GEAR-SHIFT MECHANISM. BENJAMIN F. SCHMIDT, Los Angeles, Calif. Filed Jan. 11, 1927. Serial No. 160,365. 6 Claims. (Cl. 74—39.)



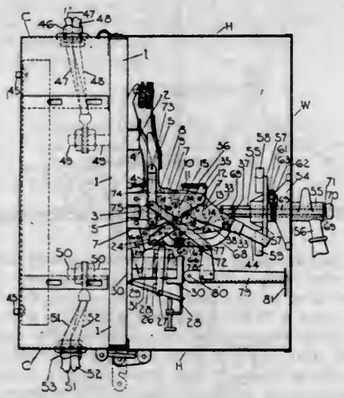
1. A gear shift mechanism for a motor vehicle including a pair of transversely spaced rods extending longitudinally of the vehicle, a shifting lever arranged in connection with the rods to selectively move the same longitudinally, a casing in which said rods and lever are mounted, means for securing said casing in direct connection with the dashboard of the vehicle, a pair of vertical and transversely spaced shafts mounted ahead of the casing, radial arms projecting transversely from the shafts in substantial horizontal alinement with the rods, connections between said arms and rods, and connections between said arms and the gear shift forks of the transmission mechanism of the vehicle to cause the latter to move in the same direction as the corresponding rods with the movement of said rods.

1,688,751. STRAINER HOLDER. EMIL R. SCHNITGER, Watertown, Wis., assignor of one-half to Charles A. Kading, Watertown, Wis. Filed Apr. 2, 1928. Serial No. 266,859. 5 Claims. (Cl. 24—256.)

1. A clamp or holder comprising a ring, arms swingable about the ring, and an elastic annulus carried by the portions of the arms remote from the ring.



1,688,752. THREADING MACHINE. CARL SCHRAMM, West Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed July 31, 1924. Serial No. 729,414. 4 Claims. (Cl. 10—89.)



1. In a threading machine, the combination with a blank carrying spindle, a plurality of chaser members for engaging the blank carried by said spindle, and means for effecting relative movement between the blank carrying spindle and the chaser members longitudinally with respect to the spindle, of resilient means exerting a force tending to move the chaser members away from the blank carried by the spindle in a direction perpendicular to the blank axis, automatic means for moving the chaser members towards the blank nearly to the operative position prior to a cutting operation, and cam locking means for forcing the chaser members into operative position to engage the blank and for holding the chaser members in such position.

1,688,753. SHOE-SHINING INSTALLATION. HERMAN E. SCHULSE, New York, N. Y., assignor to H. E. Schulse Inc., a Corporation of New York. Filed Oct. 29, 1927. Serial No. 229,609. 14 Claims. (Cl. 15—265.)

6. A shoe shining installation including a platform above the floor, foot rests rising therefrom, a pedestal secured to the floor, supporting a seat at the upper end thereof, and sustaining said platform, said seat being accessible for mounting by stepping upon said platform from therebetween and said foot rests, said platform having sockets at the sides thereof, posts extending into said sockets and tightly retained therein, and a hand rail connecting the upper ends of said posts.

1,688,754. SWITCHING APPARATUS. WILLIAM M. SCOTT, Tredyffrin Township, Chester County, and JAMES H. WYATT, Kirklyn, Pa.; said Wyatt assignor to said Scott. Filed July 28, 1923. Serial No. 654,351. 46 Claims. (Cl. 200—29.)

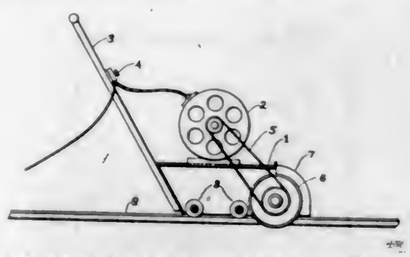
1. Switching apparatus comprising a switch, a nonclosable automatic circuit breaker in series with said switch, and resetting mechanism common to them for resetting them in succession.

1,688,755. PROCESS OF PRODUCING VULCANIZED RUBBER AND PRODUCT THEREOF. WINFIELD SCOTT, Akron, Ohio, assignor to The Rubber Service Laboratories Co., Akron, Ohio, a Corporation of Ohio. Filed Feb. 17, 1925. Serial No. 9,796. 16 Claims. (Cl. 18—53.)

1. The process of producing vulcanized rubber possessing age resistant characteristics which comprises heating rubber and sulfur in the presence of a compound obtained by reacting guanidine and a hydroxy-derivative of benzene.

1,688,756. RUBBER COMPOSITION AND PROCESS OF MANUFACTURING SAME. WINFIELD SCOTT, Akron, Ohio, assignor to The Rubber Service Laboratories Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 8, 1927. Serial No. 182,186. 2 Claims. (Cl. 18—53.)

1. The process of manufacturing vulcanized rubber which comprises heating a mixture of rubber and sulphur in the presence of p-di-methyl-amino-phenyl-p-phenetidyl guanidine.

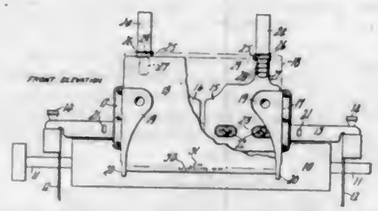


1,688,757. PROCESS OF MANUFACTURING VULCANIZED RUBBER AND PRODUCT THEREOF. WINFIELD SCOTT, Akron, Ohio, assignor to The Rubber Service Laboratories Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 8, 1927. Serial No. 182,187. 2 Claims. (Cl. 18—53.)

1. The process of manufacturing vulcanized rubber which comprises heating a mixture of rubber and sulphur in the presence of a small proportion of p-di-methyl-amino-di-phenyl-guanidine.

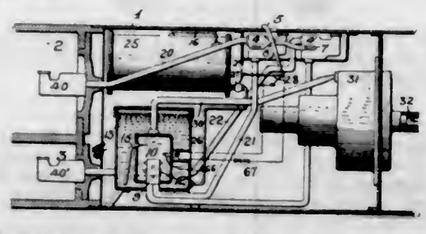
1,688,758. MANUFACTURE OF VULCANIZED RUBBER AND PRODUCT THEREOF. WINFIELD SCOTT, Akron, Ohio, assignor to The Rubber Service Laboratories Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 8, 1927. Serial No. 182,188. 2 Claims. (Cl. 18—53.)

1. The process of manufacturing vulcanized rubber which comprises heating a mixture of rubber and sulphur in the presence of a small proportion of p-di-methyl-amino-phenyl-o-tolyl-guanidine.



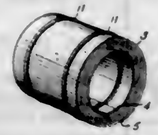
1,688,759. FLOOR-SCRAPING MACHINE. JAMES THOMAS SIMPSON, Macon, Ga. Filed July 20, 1927. Serial No. 207,182. 2 Claims. (Cl. 144—117.)

1. A floor-surfacing device comprising a body adapted to be propelled along a floor, a motor on said body, a cutter-drum mounted in said body in such relation thereto as to operate upon a floor over which the device is to be propelled, power-transmitting means connecting said motor and said drum whereby said motor drives said drum, a spiral cutting blade on said drum set at a cutting-angle of approximately twenty-two and one-half degrees therewith, and means securing said blade in said relation to said drum, said means comprising a cap plate member extending parallel on the exterior surface of the spiral cutting blade, a fillet member, said fillet member being substantially parallel to said cap plate member and located on the interior surface of said cutting blade, and a bolted means securing said cap plate member, spiral cutting blade and fillet member together and as for the purpose set forth.



1,688,760. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 10, 1925. Serial No. 61,652. 5 Claims. (Cl. 197—135.)

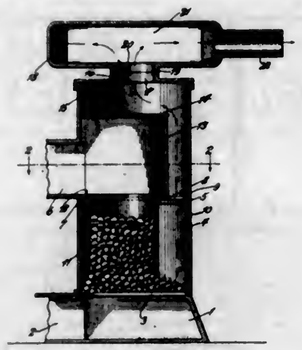
1. In a typewriting machine, the combination with a platen, of a work-table for supporting a work-piece in printing position before the platen, a gage-support extending upwardly from the work-table, adjustable gaging means mounted on the gage-support, said adjustable gaging means including a forwardly-extending abutment for



the upper edge of the work-piece, and a depending member having line-space-gaging means with which the leading edge of the work-piece may be selectively aligned.

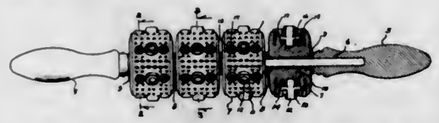
1,688,761. WAKELESS TORPEDO. ELMER A. SPERRY, Brooklyn, N. Y., assignor to Sperry Development Company, Dover, Del., a Corporation of Delaware. Filed Dec. 1, 1921. Serial No. 519,053. 20 Claims. (Cl. 60—45.)

1. In a torpedo, the combination with an oxygen flask, a hydrogen flask, and an engine, of a combustion chamber where said gases are burned under reduced pressure, means for spraying water into said chamber, and a connection from said chamber for leading the steam produced by the combustion of the hydrogen and oxygen and by the evaporation of the water to the engine.



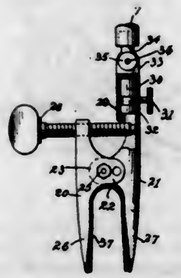
1,688,762. RING MEMBER AND METHOD OF MAKING SAME. CHRISTIAN STEENSTRUP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 29, 1926. Serial No. 112,715. 5 Claims. (Cl. 29—156.)

1. The method of forming a built-up ring member from a sheet metal strip which comprises winding up the strip into a ring having a plurality of turns, securing together portions thereof to prevent unwinding of the ring thus formed and expanding the ring beyond the elastic limit of the material thereof.



1,688,763. FURNACE. HENRY TIELKEMEYER, St. Louis, Mo. Filed Dec. 14, 1927. Serial No. 239,865. 2 Claims. (Cl. 126—103.)

1. A furnace comprising an enclosure having a lateral fuel inlet passage and having an outlet passage through its upper end, a grate within said enclosure below said fuel inlet passage, a supporting member mounted in said enclosure below the plane of the lower end of said inlet passage and comprising an arcuate portion concentric with said enclosure, and an integrally united ring portion formed eccentrically with respect to said arcuate portion and extending approximately to the wall of said enclosure below said inlet passage, a fire pot extending downwardly through and

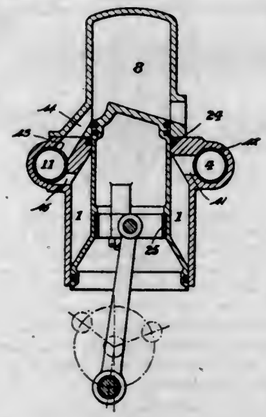


removably supported by said ring and terminating at a distance above said grate, a separate arcuate wall seated upon said ring and having its ends contacting with the wall of said enclosure laterally from the sides of said inlet passage, and a wall seated upon the upper end of said arcuate wall below said outlet passage.

1,688,764. SELF-MASSAGE ROLLER. BRUNO TRANKOWSKI and GUSTAV GRODD, Bridgeport, Conn. Filed Oct. 18, 1927. Serial No. 226,854. 4 Claims. (Cl. 128—57.)

1. A massage instrument comprising a supporting spindle provided with handles, rolls rotatably supported thereon, a series of pressing bowls the inlets of which are formed in the periphery of the rolls and having raised annular lips around their outer ends, a series of sucking bowls also arranged in the face of the rolls and having projected annular lip portions, and ports connecting the pressing bowls and the sucking bowls.

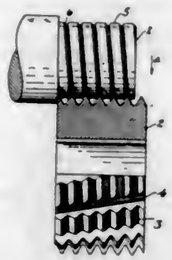
1,688,765. HOLDER FOR NURSING BOTTLES. MANUEL VERAS, Brooklyn, N. Y. Filed Nov. 10, 1926. Serial No. 147,541. 1 Claim. (Cl. 248—65.)



In a nursing bottle holder, the combination with a rod carrying a bottle clamp, of a clamp for mounting the holder upon a support consisting of a pair of levers, one end portion of each lever being arranged as a clamping jaw and each lever having a pair of parallel perforated ears extending laterally from the opposite sides and intermediate the ends with the ears of one lever adapted for overlapping engagement with the ears of the other lever, a bolt engaged in the perforations of the overlapped lever ears to pivotally connect the levers, a thumb screw threaded into an opening at the end of one lever opposite the jaw to have adjustment in a direction transverse to the pivotal connection of the levers with the end of the screw adapted to abut the end of the other lever opposite the jaw to position the lever jaws relative to each other for securing the clamp in support engaging position, and the end of the other lever opposite the jaw end arranged with an extended tubular portion, and a coupling member having pivotal connection with the bottle clamp carrying rod mounted in the tubular extension of the lever end for adjustment about the axis of said tubular extension.

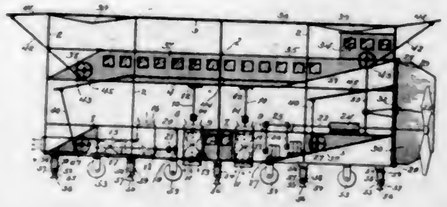
1,688,766. TOY CLOCK. SIDNEY C. VINCENT, Baltimore, Md. Filed Nov. 11, 1925. Serial No. 68,384. 2 Claims. (Cl. 46—46.)

1. A toy clock comprising a casing formed of two cup-shaped sections, a bell-clapper formed of a single piece of metal and pivoted at its lower end to one of the sections, a crank member supported in said sections and having hand-attaching means at one end, and having its other end bent to form an exterior crank handle, said crank member being formed within the casing with a plate like flattened portion, whose edges are adapted to engage alternately and directly, portions of the bell-clapper to cause the same to be oscillated when the crank is turned.



1,688,767. INTERNAL-COMBUSTION ENGINE. CECIL WEBB, Lisburn, Ireland. Filed June 12, 1922, Serial No. 567,651, and in Great Britain June 24, 1921. 4 Claims. (Cl. 123—59.)

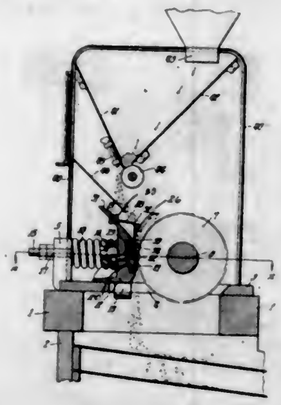
3. An internal combustion engine having a plurality of engine units arranged in groups of three, each engine unit including a differential cylinder and piston, a tubular rotary inlet valve for each group, a tubular rotary transfer valve for each group, a single opening in said transfer valve for



each unit, a housing for said transfer valve and, in each unit, two passages both terminating abreast the corresponding opening in the transfer valve from which they lead to the corresponding pump cylinder and working cylinder, respectively, each opening in the transfer valve cooperating with the two corresponding passages to receive primarily compressed charges from the pump cylinder of one unit and to pass them along the transfer valve to the working cylinder of another unit.

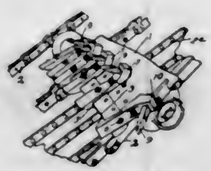
1,688,768. METHOD OF HOBBING THREADS. ERNEST WILDHABER, Brooklyn, N. Y., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 22, 1923. Serial No. 626,848. 9 Claims. (Cl. 10—154.)

3. The method of forming a thread on a blank, which consists in rotating a hob and a blank in engagement with each other, in effecting an annular advance of the blank with respect to the hob, and in radially feeding the blank toward the hob for cutting one side of the blank thread and for feeding the blank away from the hob for cutting the opposite side of the hob thread, the finishing of the blank thread being effected during the large part of the feeding movements, the longitudinal positions of the hob and the blank being maintained unchanged with respect to each other and the feeding movements being effected in timed relation to the angular advance of the blank.



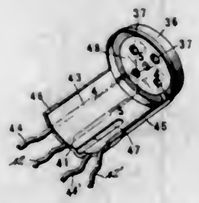
1,688,769. AIRSHIP. ISRAEL WILLIAMS, Lima, Ohio. Filed Oct. 13, 1925. Serial No. 62,219. 1 Claim. (Cl. 244—18.)

An air ship comprising a frame having a plurality of decks, open-ended vertical tubes extending through a lower deck, shafts extending axially through said tubes and having their upper ends exerting thrust upon an upper deck, screw propellers on said shafts within the tubes, tubes extending longitudinally upon the lower deck and having their front ends upturned, shafts disposed axially within the tubes and having their front ends exerting thrust against a fixed element on the deck, and screw propellers on said shafts between the ends of the tubes.



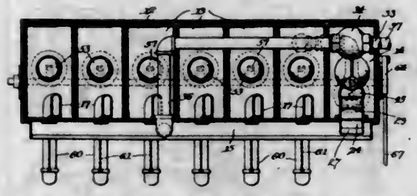
1,688,770. CEREAL-CUTTING MACHINE. HORACE G. WOODHEAD, Chicago, Ill., assignor to B. F. Gump Co., Chicago, Ill., a Corporation of Illinois. Filed July 10, 1922. Serial No. 573,858. 10 Claims. (Cl. 83—14.)

2. In a cereal cutting machine; a reduction roll, a head movably adjustable relatively to said roll, a cutting device on said head to co-act with said roll, and a throat piece on said head adapted to co-act with said roll to form a progressively narrowed approach to the operative area formed by



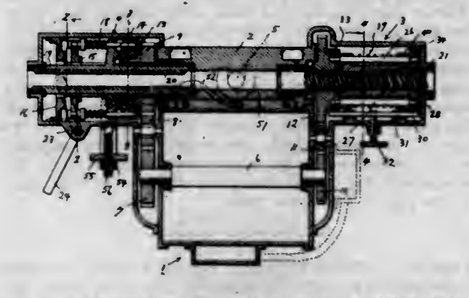
said roll and said cutting device, the lower edge of said throat piece forming a stop against reverse movement of material passing the same.

1,688,771. DIGGING IMPLEMENT. LEWIS EDWARD YOUNIS, La Fayette, Calif. Filed Dec. 18, 1926. Serial No. 155,603. 6 Claims. (Cl. 37—141.)



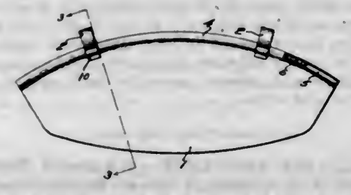
1. In a digging implement, the combination of a receptacle having a digging edge; tooth carriers on the underside of the receptacle; and a tooth at the rear of the edge secured to the carrier, said tooth being downwardly and forwardly inclined.

1,688,772. RADIO SET CONNECTION. MILTON ALDEN, Springfield, Mass. Filed Oct. 5, 1926. Serial No. 139,657. 10 Claims. (Cl. 173—344.)



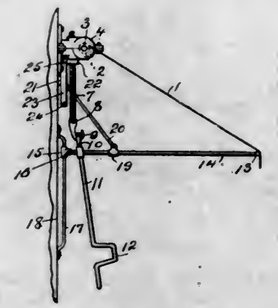
1. A vacuum tube connector comprising an insulating base having a cylindrical flange and adapted to receive a vacuum tube base and having four openings for the tube prongs and having outer tubular contacts extending from two of said openings, inner contacts within said tubular contacts but insulated therefrom and conductors in the flange of said socket connected to said outer and inner contacts respectively.

1,688,773. MEASURING-CAN FILLER. JACOB G. ALDINGER, York, Pa., assignor, by mesne assignments, to York Ice Machinery Corporation, York, Pa., a Corporation of Delaware. Filed June 19, 1925. Serial No. 38,320. 10 Claims. (Cl. 226—105.)



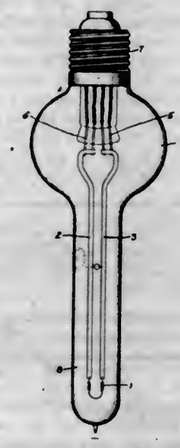
1. In a liquid measuring device the combination of a manifold; a plurality of measuring chambers; individually adjustable overflows between said manifold and said chambers; means for establishing a high liquid level in said manifold to permit filling of said chambers by overflow from said manifold; and means for establishing a low level in said manifold for fixing the levels in said chambers by over-flow back to said manifold.

1,688,774. DRILLING APPARATUS. BENJAMIN T. ANFIELD, Boulder, Colo. Filed Jan. 25, 1927. Serial No. 163,436. 2 Claims. (Cl. 255—47.)



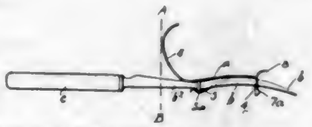
1. In a structure of the class described, a casing, gearing train including a gear provided with an outstanding central hub, a ring rotatably mounted in said casing and spaced from said hub, a split bushing interposed between said ring and hub, a drill screw extending thru the said gear, bushing and ring, said bushing being provided with screw threads connected with the threads of said screw, connecting pins between the ring and hub of said gear, the sections of said bushing being rockably mounted on said pins.

1,688,775. EYE SHIELD. GEORGE A. BAKER, Philadelphia, Pa. Filed Sept. 22, 1926. Serial No. 137,108. 2 Claims. (Cl. 2—13.)



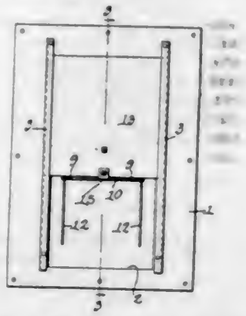
1. An eye shield, bendable to fit the rim of an eye glass and capable of being flattened when not in use, including a pliable guard having its under surface opaque and capable of absorbing light rays, a soft wire secured along one edge of the guard to form a bead, and clips slidable on the bead for engaging the rim of the eye glass.

1,688,776. AWNING. EARL F. BARBER, Kansas City, Kans. Filed Oct. 23, 1925. Serial No. 64,348. 1 Claim. (Cl. 156—44.)



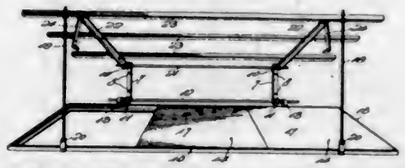
In an awning, the combination with a drum on which an awning sheet is adapted to be wound, a support therefor on which the drum is rotatable, a screw, rotatable on said support and means actuated by the screw for rotating the drum, of a guiding member parallel with said screw, the latter having its threaded part projecting beyond the guiding member, and a nut fitted for travel on said screw and having sliding engagement with said guiding member and arranged to travel on said screw out of engagement with said guiding member, the latter having means for holding the nut from turning.

1,688,777. GAS-FILLED ELECTRIC INCANDESCENT LAMP. JAN BERGMANS and THEODORUS JOSEPHUS JACOBUS ALPHONSUS MANDERS, Eindhoven, Netherlands, assignors to General Electric Company, a Corporation of New York. Filed Nov. 4, 1927, Serial No. 231,130, and in the Netherlands Dec. 21, 1926. 5 Claims. (Cl. 176—16.)



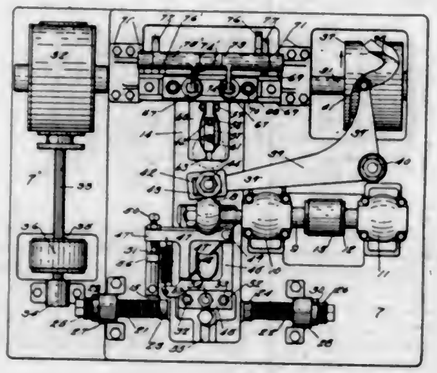
1. A gas filled incandescent electric lamp comprising a pair of parallel leads proportioned to be heated by the normal current flowing through them to a temperature sufficient to cause a flow of the adjoining gas when the lamp is lighted, a concentrated filament on the end of said leads, and a sealed tubular bulb containing inert gas and enclosing said leads and said filament with one end adjacent said filament and of a bore such that when the lamp is lighted currents of gas free from eddies flow along said leads and along said bulb walls with a velocity so great that blackening of the bulb walls in the vicinity of the filament is substantially absent.

1,688,778. CARVING FORK. HUBERT BERRY, Ottery St. Mary, England. Filed Feb. 12, 1927, Serial No. 167,655, and in Great Britain Feb. 17, 1926. 4 Claims. (Cl. 30—5.)



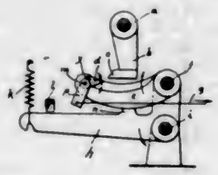
1. In a carving fork projecting arms arranged to extend laterally from the prongs of said fork and to have a sharpened projection at or near each of the extremites of said arms as well as in a central position between said extremities.

1,688,779. TRAP NEST. HARVEY L. HOLINGER, Mountain Grove, Mo., assignor of one-half to T. W. Noland, Mountain Grove, Mo. Filed June 16, 1927. Serial No. 199,308. 1 Claim. (Cl. 119—49.)



The combination with a wall of a trap nest having a door opening, and a sliding door, of a lug extending inwardly from the door having a lower support engaging face and an upper deflecting face, adjustable bearing members connected to the wall, and a trigger suspended from said bearing member and mounted to swing toward and from the door opening, said trigger including means for engagement with the bearing members, a rod connecting said means and normally positioned in the path of the lug to be deflected inwardly thereby when the door is raised and to be engaged by the lug to support the door when open, and offset depending fingers connected to said means.

1,688,780. ROOST AND DROPPING BOARD ASSEMBLY. HERBERT G. BRAHMAN, Hillsdale, Mich. Filed June 14, 1926, Serial No. 115,965. Renewed June 18, 1928. 4 Claims. (Cl. 119—22.)

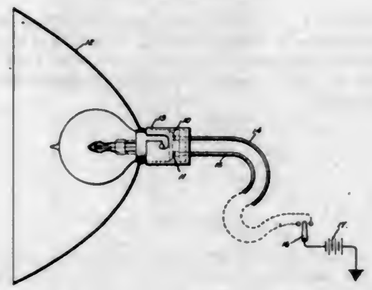


1. In a roost and dropping board assemblage, a plurality of horizontally spaced brackets for stationary mounting on a vertical support, said brackets comprising vertical bars having on their opposite ends upper and lower hooks, pivot means extending across and secured to the rear portion of the dropping board engaged with the lower hooks, supporting means for the roosts having pivot means connecting said supporting means and engaged with the upper hooks, and means for holding the roosts and dropping board in position for use, and for permitting swinging thereof about said pivot means.

1,688,781. MACHINE FOR CUTTING CONCAVE SURFACES. JAMES E. BRANSON, Cincinnati, Ohio. Filed July 31, 1925. Serial No. 47,186. 7 Claims. (Cl. 12—46.)

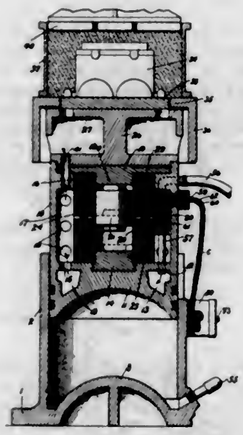
1. In a machine for cutting concave surfaces, a main frame, a pair of bearing blocks attached to the frame and extending upwardly therefrom, a shaft in the bearing blocks, a rotary forming cutter on the shaft and extending thereon over the frame, a work slide beneath the cutter, the slide adapted to be reciprocated in a direction substantially at a right angle to the axis of the cutter shaft, work holding means disposed in one end of the slide, a master cam on the end of the slide opposite the work holding means, a carrier for the slide, the carrier adapted to guide the slide in a direction normally at a right angle to the axis of the cutter shaft, the carrier pivotally mounted on the frame, and means adapted to yieldingly retain the carrier with the median line of the carrier at a right angle to the axis of the cutter shaft.

1,688,782. STOPPING DEVICE FOR LOOMS. SAVERIO BACCHER, Como, Italy. Filed Dec. 20, 1927, Serial No. 241,401, and in Germany Oct. 16, 1926. 2 Claims. (Cl. 188—69.)



1. In a stopping device for looms, the combination of a trigger fixed upon the driving shaft of a loom, with a catch-lever mounted resiliently at one of its ends, a catch carried by the other end of said lever, said catch being adapted to erect itself when coming into slight engagement with said trigger, thereby more effectively engaging said catch with said trigger.

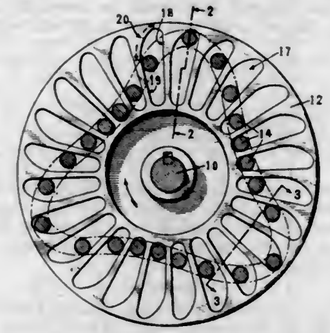
1,688,783. ELECTRIC LAMP. WILLIAM R. BURROWS, Newark, N. J., assignor to General Electric Company, a Corporation of New York. Filed Nov. 1, 1921. Serial No. 512,152. 9 Claims. (Cl. 240—41.)



1. An incandescent lamp comprising a filament so curved that its light center is located at a distance from the middle point of the filament and in the plane of the filament between its sides, and a second filament mounted

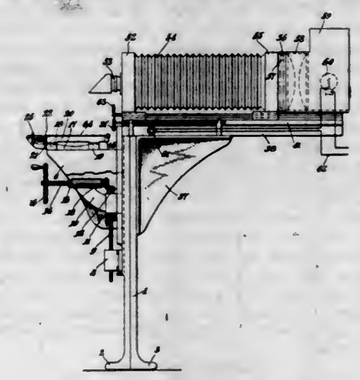
to extend through the plane of the curved filament with its vertex or middle point spaced away from the vertex

or middle point of the curved filament sufficiently to make the light centers of the two filaments coincide.



1,688,784. MOLDING APPARATUS. DONALD J. CAMPBELL, Muskegon Heights, Mich. Filed Feb. 4, 1925, Serial No. 6,728. Renewed Aug. 20, 1928. 14 Claims. (Cl. 22—45.)

1. In molding apparatus, a vertical support, a table at the upper end of the support on which a pattern and a flask around the pattern may be carried, an annular solenoid winding fixed to said support and a vibrating body surrounded by said winding and adapted to be raised when the winding is energized and dropped when the winding is de-energized, the said body striking the said support at each extreme of its movement.

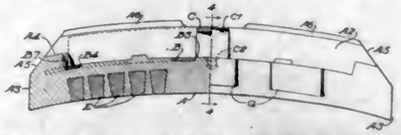


1,688,785. POWER TRANSMISSION. HENRY B. CHALMERS, New York, N. Y. Filed May 24, 1927. Serial No. 193,875. 4 Claims. (Cl. 74—14.)

1. An automatically variable ratio power transmission having a driven member carrying a cam of substantially polygonal shape having its sides concaved inwardly at intervals and a driving member consisting of a disc having radial slots and roller masses engaging both the cam of the driven member and the slots of the driving member, so that the acceleration and deceleration of said masses

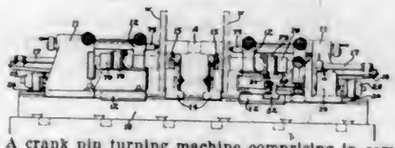
will at substantially all times exert a uni-directional torque variable-ratio power.

1,688,786. STEP AND REPEAT MACHINE. OSCAR CHOUINARD, New York, N. Y., assignor to Hunter Wykes, New York, N. Y. Filed Mar. 30, 1925. Serial No. 19,266. 9 Claims. (Cl. 88—24.)



1. In a machine of the character described, the combination of means for carrying a sensitized surface, a projecting camera adapted to project an image from an image bearing means movable with said camera onto said sensitized surface, a stationary part and a relatively movable part adapted to be moved to predetermined positions, said projecting camera together with said image bearing means being attached to and movable with said movable part, a registration means detachably carried by one of said parts and provided with a plurality of locking ports spaced to provide for a series of given predetermined successive settings of said movable part, a locking means carried by the other of said parts and adapted to be moved into locking engagement with successive locking portions of said registration means, and means to move said movable part into an approximate predetermined position where said locking means may engage one of said locking portions on said registration means.

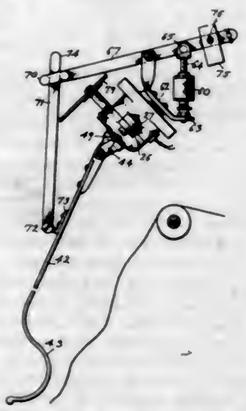
1,688,787. METHOD OF MAKING BRAKE SHOES. CHARLES COBB, Jr., Marshall, Tex. Original application filed May 18, 1926, Serial No. 109,900. Divided and this application filed Mar. 4, 1927. Serial No. 172,772. 5 Claims. (Cl. 22—203.)



1. The herein described method of forming a brake shoe, which method consists in forming a lower mold section having bottom, side and end faces conforming to the cast body of the shoe, and forming an upper mold

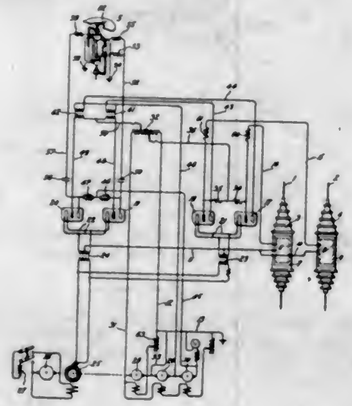
section in which is a plate metal back having a group of apertures in a line parallel to the length of the shoe and said mold section being formed with a space above and along and adjacent said group of apertures, and then pouring molten metal into said mold, the metal filling

the space in the mold below said back and rising through said apertures and into the space above and adjacent said apertures whereby a metal body is formed above said group to connect the metal extending through the apertures of said group.



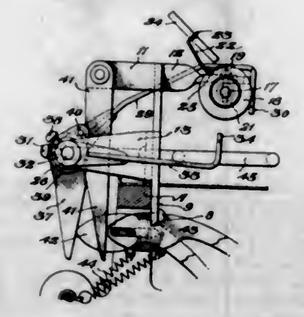
1,688,788. QUARTERING AND CRANK-PIN-TURNING MACHINE. LYNDON C. COLE, Hamilton, Ohio, assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 8, 1926. Serial No. 100,674. 14 Claims. (Cl. 29—27.)

1. A crank pin turning machine comprising in combination, a base, headstocks thereon having tool rotating and feeding means, supplementary headstocks on said base, work centering means on said headstocks, and work centering and adjustable tool guiding means on said supplementary headstocks.



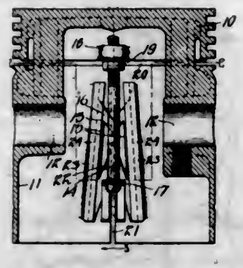
14. A quartering and crank pin turning machine for locomotive driving sets comprising in combination, a base, a headstock thereon, work supporting means on said headstock, a saddle adjustably mounted on an oblique surface of said headstock, a tool supporting bar rotatably mounted in said saddle, a tool mounted on one end of said bar, a tool head within which said tool operates, an adjustable guide for said tool head having ways thereon for said tool head extending parallelly to the bar, and means to axially advance said bar while said bar is rotating.

1,688,789. SHEET DETECTOR. STANLEY A. COMISKEY, Seattle, Wash., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 20, 1924. Serial No. 750,983. 17 Claims. (Cl. 192—127.)



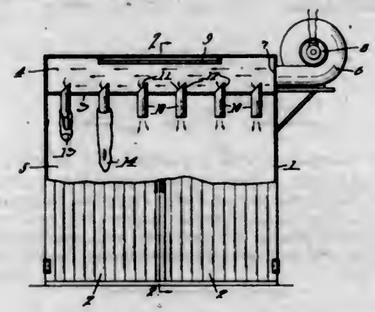
3. In a web handling mechanism, the combination of a detector member, an electric switch thrown by the member to cause the stoppage of the machine, and a fluid pressure device associated with the member and acting to move the member to cause the return of the switch to normal operative position.

1,688,790. SYNCHRONISM-INDICATING MEANS. ELLSWORTH D. COOK, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 6, 1927. Serial No. 196,800. 5 Claims. (Cl. 172—245.)



1. In a means for indicating synchronism between voltages on a plurality of conductors, the combination with a synchronoscope, of capacitance transformers associated with each of said conductors and power amplifying means associated with each of said capacitance transformers, said amplifying means being adapted to supply to said synchronoscope voltages bearing a substantially constant phase relation to the voltage on said transformers.

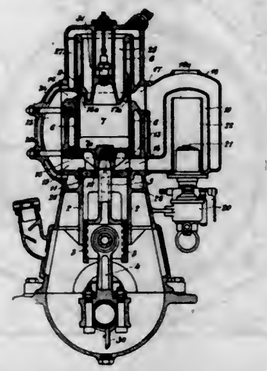
1,688,791. KNITTING MACHINE. OWEN L. RIMEL, Harrisburg, Pa. Filed Feb. 20, 1926. Serial No. 89,656. 3 Claims. (Cl. 66—137.)



1. In a knitting-machine, the combination, with reversibly-shiftable fingers controlling the position of yarn passing to the needles, of mechanism for shifting said fingers, whereby reverse plating is effected, comprising a rock-shaft, an arm and eccentric part on said shaft, a pivotally-mounted member swingable by said eccentric part, springs holding said fingers against said arm and member, means controlled by said shaft whereby tension on yarn is altered simultaneously with the shifting of said fingers, and means whereby said shaft is rocked.

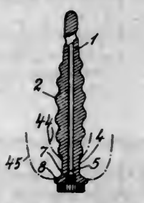
1,688,792. ADJUSTABLE GAS-ENGINE PISTON. WALTER L. SCHOENGARTH, Hurley, Wis. Filed Apr. 9, 1927. Serial No. 182,396. 5 Claims. (Cl. 74—108.)

1. A piston comprising a head and skirt, the skirt being formed in piece with the head but substantially severed therefrom by a horizontal slot extending for the greater part of the circumference of the piston, said skirt being formed with another slot extending longitudinally thereof from the transverse slot to the bottom of the skirt and having bearing surfaces formed on each side thereof and extending substantially the length of the skirt, and, curved adjusting wedge mounted between said bearing surfaces, substantially as set forth.



1,688,793. SHOE DRIER. WILLIAM C. SCHRENKEISEN, Mount Vernon, N. Y., assignor to Hill Laundry Equipment Co. Inc., Long Island City, N. Y., a Corporation of New York. Filed Oct. 27, 1927. Serial No. 229,212. 4 Claims. (Cl. 34—26.)

4. A shoe drier comprising a cabinet having walls enclosing it on all sides, a wall adjacent to the top thereof dividing the interior of the cabinet formed by said walls into an upper air header and an enclosed drying compartment therebeneath, an air blower communicating with one end of said header, an air heater in said header, a duct passing through said wall into the drying compartment, and means on said duct for suspending in said enclosed drying compartment a shoe to be dried, whereby the duct is adapted to direct heated air into the interior of the shoe from which it escapes into the compartment.

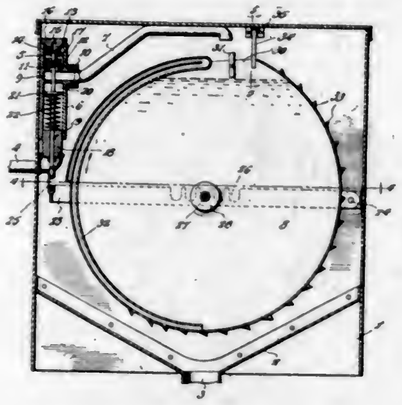


1,688,794. TWO-STROKE-CYCLE INTERNAL-COMBUSTION ENGINE. ARTHUR OSKAR LEONARD WENNERBY, Gottenburg, Sweden. Filed Aug. 4, 1927. Serial No. 210,682, and in Sweden July 20, 1926. 2 Claims. (Cl. 123—74.)

2. In an engine of the two-cycle rear compression cylinder type, a combustion cylinder having a reentrant head, a compression cylinder intermediate the combustion cylinder and the crank, a working piston in said cylinders, having a cylindrical flange defining with its upper face and with said reentrant head a combustion chamber, said flange being ported and constituting a valve for controlling intake and exhaust ports in said combustion cylinder adjacent said reentrant head, the lower face of said piston acting as a compression piston in said compression cylinder, the latter being in communication with the intake port of said combustion cylinder, a jacket casing forming a mixing chamber, a carburettor connected thereto, said

mixing chamber being in constant intercommunication with said compression chamber, whereby the mixture within said casing is alternately rarefied and densified for drawing upon the carburettor, and effecting intimate mixture of the fuel thus educted from the carburettor, and means for passing the heated exhaust products of said combustion cylinder through the jacket of said casing.

1,688,795. TEAT CANNULA. NILS AAS, Skarnes, Norway. Filed Sept. 3, 1927, Serial No. 217,472, and in Germany Dec. 1, 1926. 3 Claims. (Cl. 128—348.)



1. A teat cannula having a tubular stem, a narrow collar on the lower open end of said stem and a thickened portion on the middle of said stem tapering towards both ends and having a comparatively steep surface at the end facing said narrow collar, the said steep surface being provided with a groove so as to form an annular convolution with a rounded top.

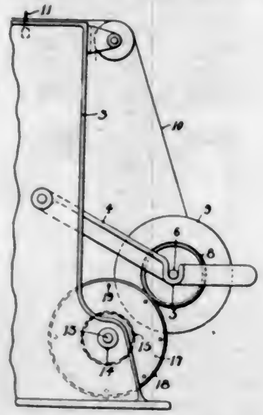
1,688,796. OIL HEATER. WILLIAM E. BAKER, Erie, Pa. Filed July 31, 1924. Serial No. 729,381. 2 Claims. (Cl. 219—38.)

1. An oil heater comprising a vaporizing tube, a sleeve within said tube and spaced therefrom, a fuel inlet between said tube and sleeve, means for causing the fuel to take a circuitous path throughout the entire length of sleeve, a pipe arranged within the sleeve, a heating element between said pipe and sleeve, a vapor outlet for said pipe at the end of the tube where the inlet is located, whereby the fuel will be in continuous contact with the heating element through its entire travel within the tube.

1,688,797. FLUSH TANK. JOSEPH BARTOSIK, Monessen, Pa. Filed Nov. 16, 1927. Serial No. 233,667. 7 Claims. (Cl. 4—32.)

1. A flushing apparatus comprising a tank, a pivotally mounted frame within the tank, an overbalanced rotatable drum carried by said frame, valve-controlled means for filling the drum, means controlled by the pivoted frame for governing the valve-controlled means, and means whereby rotation of the drum will be prevented.

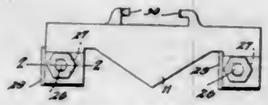
1,688,798. FABRIC MAKING. ALBERT BODMER, Wattwil, Switzerland, assignor to Heberlein & Co. A. G., Wattwil, Switzerland, a Corporation of Switzerland. Filed Nov. 27, 1926, Serial No. 151,258, and in Germany Dec. 5, 1925. 9 Claims. (Cl. 28—1.)



1. The method of producing fabrics with pattern effects which consists in weaving a fabric with unnitrated threads and nitrated vegetable threads, and decomposing portions of the nitrated threads with alkali according to a predetermined pattern.

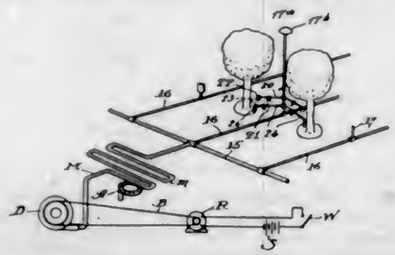
1,688,799. FABRIC MAKING. ALBERT BODMER, Wattwil, Switzerland, assignor to Heberlein & Co. A. G., Wattwil, Switzerland, a Corporation of Switzerland. Original application filed Nov. 27, 1926, Serial No. 151,258, and in Germany Dec. 5, 1925. Divided and this application filed July 14, 1928. Serial No. 292,922. 7 Claims. (Cl. 28—1.)

1. Method of producing fabrics with pattern effects which consists in taking for treatment a fabric containing unnitrated threads and nitrated cellulosic threads, applying to the fabric according to a predetermined design a reserve which is resistant to the action of a reagent which will decompose the nitrated threads with which it comes into contact and subjecting unreserved portions of the fabric to said reagent to decompose the nitrated threads in such last portions.



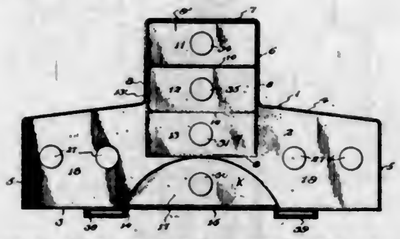
1,688,800. WINDING OF YARNS UPON BEAMS. JOHN BRANDWOOD, Southport, England, and JOSEPH BRANDWOOD, Waban, Mass. Filed May 23, 1925, Serial No. 32,513, and in Great Britain Jan. 9, 1925. 2 Claims. (Cl. 28—39.)

1. In an apparatus for the winding of yarns upon a flanged yarn beam with bosses, the diameter of which are approximately the diameter of the yarn barrel of the beam, a friction driving drum, a shaft upon which the said drum is mounted, bearing arms pivoted to bear the yarn beam parallel to the driving drum shaft, and a disc mounted on the shaft at either side of the friction drum and spaced apart therefrom to allow the reception of the flanges of the beam when borne in the pivoted arms in the respective spaces between the disc and the drum, the diameters of the discs and friction driving drum being approximately



equal and the diameters of the beam bosses and of the beam barrel being in such relation that the beam barrel is clear of the friction driving drum when the said beam rests by its bosses upon the discs.

1,688,801. RAIL-SECURING DEVICE. WILLIAM G. COUGHLIN, Philadelphia, Pa. Filed Apr. 17, 1926. Serial No. 102,684. 11 Claims. (Cl. 238—299.)

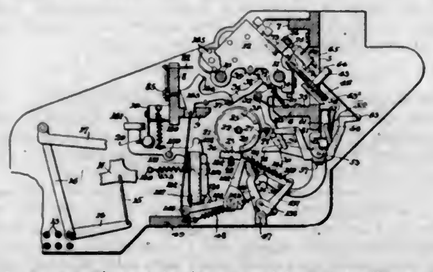


1. In combination with a wooden cross tie and a rail supported thereby, a tie plate consisting of a plate disposed between the rail and tie and having depending flanges paralleling the sides of the tie and an integral abutment engaging the outer edge of the rail base, and removable clips secured to said depending flanges engaging the inner edge of said base.

1,688,802. FROST-PREVENTION APPARATUS. JAMES W. CROWHURST, Los Angeles, Calif. Filed Apr. 13, 1927. Serial No. 183,543. 4 Claims. (Cl. 126—59.5.)

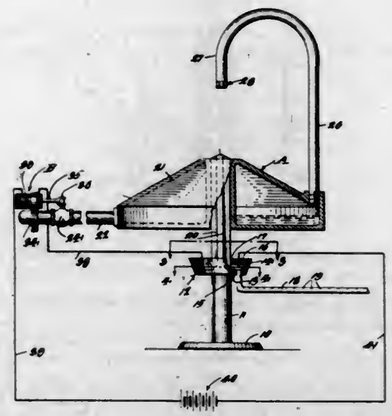
1. A frost preventing apparatus comprising means for placing a fluid under pressure, and means for conducting the fluid to different and elevated points of discharge in respect to vegetation so as to produce currents of the fluid downwardly into contact with the earth and resultant upward currents, to thereby utilize warmth of the earth to raise the temperature of the rebounding fluid.

1,688,803. TRAFFIC SIGNAL FOR MOTOR VEHICLES. JAMES THOMAS DAILEY and JESSE JAMES JACKSON, Kingwood, W. Va. Filed Mar. 30, 1927. Serial No. 179,621. 1 Claim. (Cl. 177—329.)



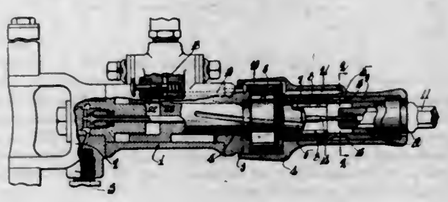
A signal of the class described, comprising a main casing, a dome forming a part of the top wall of the casing, the bottom of the casing having an opening therein closed by a lens, an arched plate spanning the opening and defining a tail light compartment, a supplemental casing having its upper portion engaged in the dome and its lower portion extended into the main casing and resting upon said plate, the supplemental casing cooperating with the main casing to provide lamp compartments, the main and supplemental casings each having an open end, a single cover connected to the main casing and closing the open end of each casing, said cover having openings therein shaped to designate direction indicia for registration with the respective compartments.

1,688,804. SOUND-PRODUCING APPARATUS. RAYMOND E. J. DALEY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 22, 1927. Serial No. 241,967. 5 Claims. (Cl. 179—115.)



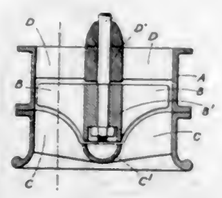
1. A sound producing apparatus comprising an armature, a vibratory member, and mechanical coupling means including a member provided with a hollow rigid portion connected between said armature and said vibratory member at one of its ends and resiliently supported at the other of its ends.

1,688,805. ADDING ATTACHMENT FOR TYPEWRITING MACHINES. GUSTAVE O. DEGENER, New York, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed June 10, 1926. Serial No. 114,950. 56 Claims. (Cl. 235—59.)



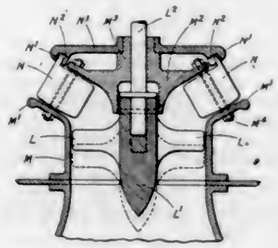
1. A computing mechanism comprising a travelling totalizer, devices for entering numbers in said totalizer when it is in a certain zone, and error check means rendered effective by a movement of the totalizer to a different zone which locks said devicese immediately after the operation of entering an incorrect digit has been completed.

1,688,806. OIL BURNER. FRANK ENGEL and JULIUS ENGEL, Syracuse, N. Y. Filed May 27, 1926. Serial No. 112,105. 2 Claims. (Cl. 158—62.)



1. A hydro-carbon burner of the character described, comprising an upright supporting standard having the surface of the upper portion thereof provided with a plurality of longitudinally extending flutes, a closed casing constituting a gas generating chamber and having a central passageway formed therethrough to receive the fluted upper end of said standard for support of the casing thereon, oil supply means leading into said chamber, a gas lead-off pipe extending from the upper portion of said chamber to a position over the upper end of the passage therethrough, discharging downwardly thereover, and a pre-heating igniting element arranged beneath the casing in such position as to permit a flame to pass upwardly through said passage along said flutes for the purpose of igniting the gas issuing from the discharge end of said pipe.

1,688,807. DRILLING MECHANISM. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 31, 1923. Serial No. 683,580. 2 Claims. (Cl. 121—6.)



1. In a rock drill, a hammering motor comprising a cylinder and a piston reciprocable therein, a chuck housing removably secured to said cylinder, a chuck sleeve rotatably mounted in said housing, a hollow drill steel mounted in said sleeve, means including said sleeve and steel defining a chamber communicating with the bore in said steel, the walls of said cylinder and chuck housing and said chuck sleeve having connected passages formed therein in constant communication with said chamber, means for supplying pressure fluid through said passages and chamber to the bore in the drill steel for cleansing a drilled hole, and a valve operable from the rear end of the cylinder for controlling said supply.

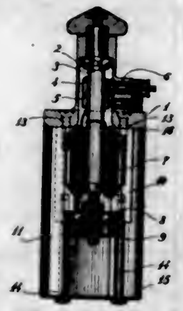
1,688,808. AXIAL-FLOW HYDRAULIC MACHINE. JAMES HERBERT WAINWRIGHT GILL, Heacham, England. Filed Oct. 14, 1926, Serial No. 141,639, and in Great Britain Dec. 24, 1925. 16 Claims. (Cl. 103—89.)

1. In an axial flow hydraulic machine, a bladed rotor, the pitch of whose blades varies in a radial direction substantially in such a manner as to be proportional to $\frac{r}{r-c}$ where r is the radius and c is a constant.

1,688,809. AXIAL-FLOW HYDRAULIC MACHINE. JAMES HERBERT WAINWRIGHT GILL, Heacham, England. Filed Oct. 16, 1926, Serial No. 142,050, and in Great Britain Dec. 24, 1925. 9 Claims. (Cl. 253—148.)

1. An axial flow hydraulic machine, including in combination a casing, a bladed rotor rotatably disposed within the casing and having blades whose pitch varies in a radial direction in such a manner that the "head radius" lies between—

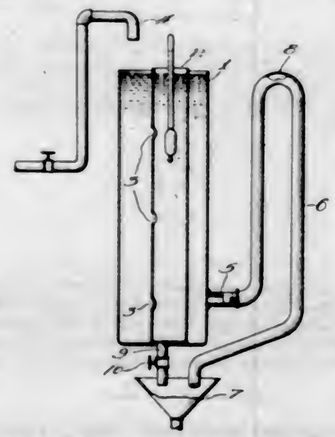
$$\frac{2}{3}R\frac{1-p^3}{1-p^2}+0.075\ R\ (1-p)^2$$



and

$$\frac{2}{3}R\frac{1-p^3}{1-p^2}-0.075\ R\ (1-p)^2$$

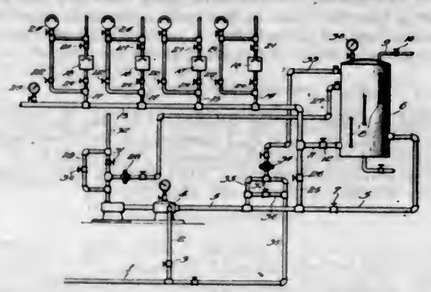
where R is the maximum radius of the rotor disc and pR is the radius of the rotor boss, and a set of guide vanes disposed on the side of the rotor corresponding to the inlet side when the machine is acting as a turbine, the rotor and the guide vanes being so mounted that the axial distance between them can be varied.



1,688,810. MAGNETO-ELECTRIC-LIGHTING MACHINE FOR CYCLES AND MOTOR CYCLES. LOUIS HEMMELER, Bienne, Switzerland. Filed May 6, 1927, Serial No. 189,408, and in Switzerland May 10, 1926. 1 Claim. (Cl. 171—252.)

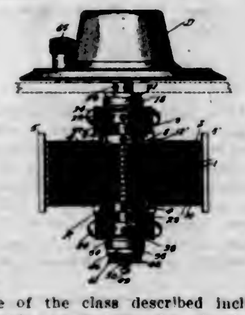
In an electromagnetic machine for cycles and motor cycles and in combination a shaft and a rotor fast thereto, a non-magnetic support including an annular bearing and arms extending from the same and parallel to said shaft, magnets having polar projections extending parallel to said shaft and between the arms of said support whereby rotation of said magnets is prevented, a shield containing the other bearing of the rotor shaft and supporting said non-magnetic support and an outer shell adapted to press the

magnets against said shield in order to maintain the air-gap between rotor and magnets.



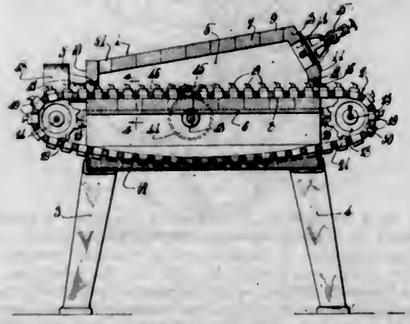
1,688,811. APPARATUS FOR ASCERTAINING THE CHARACTERISTICS OF FLOWING LIQUIDS. VICTOR HENNY, Martinez, Calif., and JEAN D. SEGUY, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed July 5, 1923, Serial No. 649,537. Renewed July 2, 1928. 3 Claims. (Cl. 265—45.)

1. In an apparatus for testing flowing liquids, the combination with open communicating containers of substantially uniform height, of means for introducing a liquid to one of said containers whereby a relatively stagnant testing pool of liquid is maintained in the communicating container, an overflow from the first mentioned container for maintaining a liquid level in the two containers.



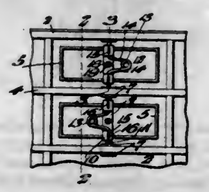
1,688,812. PRESSURE-FEEDING APPARATUS. LYMAN C. HUFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Aug. 16, 1923, Serial No. 657,750. Renewed May 28, 1928. 3 Claims. (Cl. 137—78.)

1. In a fluid charging apparatus for pressure systems, the combination with a pump interposed in a supply line, of a liquid reservoir connected thereto receiving the fluid pumped through the supply line, a drawoff from said reservoir communicating with separate units to be supplied with liquid, means for introducing an extraneous gas under pressure to the reservoir above the body of liquid maintained therein, to maintain the liquid in the reservoir under a predetermined pressure sufficient to supply liquid to said units, against the pressure maintained therein, and means communicating with the reservoir for automatically varying the speed of the pump operated by variations in the pressure in the reservoir, and an auxiliary line communicating with the



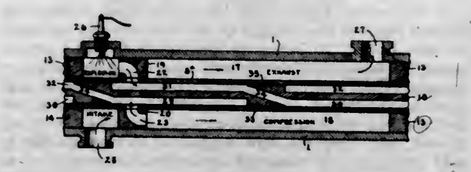
reservoir operation by variations in the pressure therein to by-pass the excess liquid from the discharge side of said pump back to the suction side thereof.

1,688,813. VARIABLE CONDENSER. HARRY H. IDE, La Grange, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed June 23, 1924. Serial No. 721,627. 11 Claims. (Cl. 175—41.5.)



1. A device of the class described including a fixed element comprising a plurality of conducting members, L shaped supporting members having a plurality of slots adapted to receive said conducting members, whereby said conducting members are supported and uniformly separated from each other by said L shaped supporting members and secured thereto to form a single mountable unit, a U-shaped supporting frame, and adjustable means for adjustably supporting said unit on said supporting frame.

1,688,814. BLANK-HEATING FURNACE. HARRY C. JOHANSEN, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Jan. 30, 1922. Serial No. 532,680. 10 Claims. (Cl. 263—8.)

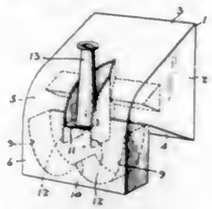


1. In a blank heating furnace, an elongated combustion chamber, a burner discharging longitudinally of said chamber and toward one end thereof adapted to generate different degrees of heat along said chamber with a maximum at said end, and means for feeding a series of blanks longitudinally of said chamber and discharging the same adjacent said end.

1,688,815. ICE-CAN-SUBMERGING DEVICE. LOUIS KOBASH, Maple Shade, N. J. Filed May 3, 1924. Serial No. 710,885. 1 Claim. (Cl. 62—157.)

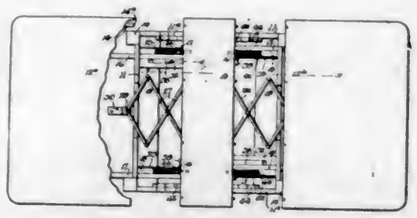
In a device of the character stated, a bar adapted to rest on the top of an ice can, thin, flat keepers on the ends of said bar having rectangular slots in the tops thereof, a tension device consisting of a wire member coiled and bent to form a single central eye, which eye is horizontally disposed and is arranged in substantially the same horizontal plane as the said keepers, and arms diverging V-shaped therefrom, in substantially the same plane with said eye and having their ends deflected in opposite directions to form bolts slidable in the slots of said keepers, and upright pins on said bolts projecting through said slots in said keepers.

1,688,816. ROTARY ENGINE. CHARLES E. KRAUS, Grand Rapids, Mich. Filed Jan. 19, 1927. Serial No. 161,978. 10 Claims. (Cl. 123—13.)



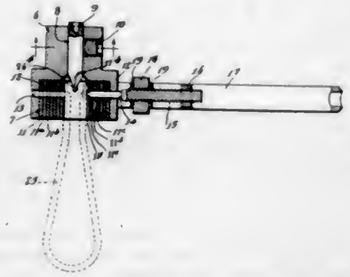
1. A rotary internal combustion engine comprising, an explosion chamber and a compression chamber, a shaft extending through both of said chambers, a power rotor fixed to said shaft in said explosion chamber, a compression rotor fixed to said shaft in said compression chamber, means on the compression rotor to compress the gas in the compression chamber, a transfer member having a plurality of chambers, each of which is adapted, by movement of the transfer member, to receive compressed gas from the compression chamber at one revolution of the rotors and to communicate with and deliver said compressed gas to the explosion chamber at the next succeeding revolution, means for igniting the gas in the explosion chamber, means on the power rotor acted upon by the exploded gas to rotate said rotor, and means for discharging the burned gas from the explosion chamber.

1,688,817. SOUND AMPLIFIER. FREDERICK KUCH, Stratford, Ontario, Canada, assignor to The McLagan Furniture Company, Limited, Stratford, Ontario, Canada. Filed June 18, 1926. Serial No. 116,866. 5 Claims. (Cl. 181—27.)



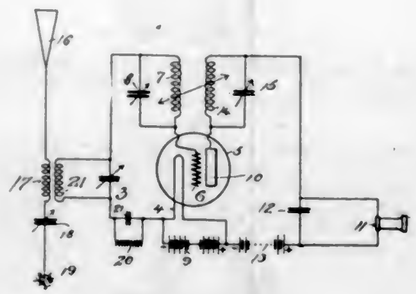
3. A sound amplifier, comprising a sound dispersing chamber formed with divergent walls, a chamber arranged in substantially right angular relation to said dispersing chamber and having a curved wall leading from the outer side thereof to and continuous with the upper divergent wall of the dispersing chamber, said right

angularly arranged chamber having its end walls convergently curving inward and terminating in a central dividing ridge, means for directing and concentrating the sound waves against said ridge, means arranged between



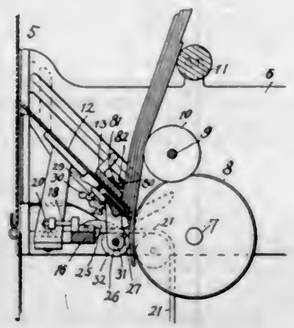
said latter chamber and sa'd dispersing chamber for effecting a further division of the separate groups of sound waves, and means for directing sound waves into the latter chamber directly against said dividing ridge.

1,688,818. TABLE. CHRISTIAN KUEHN, St. Louis, Mo. Filed June 24, 1926. Serial No. 118,242. 6 Claims. (Cl. 45—9.)



1. In a table construction, the combination with a stationary support and table top sections movably arranged on said support, of lazy tong mechanism having a central point of engagement with said support, a plurality of extension leaves arranged in superimposed relation in said stationary support, means operable by said table top sections and engaging the lowermost extension leave for raising and lowering said extension leaves relative to said table top sections, and depending portions fixed to the undersides of said table top sections and pivotally connected to the respective ends of said mechanism for effecting simultaneous operation of both of said sections, said lazy tong mechanism be'ng spaced from said table top section and arranged below the superimposed extension leaves.

1,688,819. CENTERING TOOL. JOHN LECK, Escondido, Calif., assignor of one-half to William A. Dyer, Escondido, Calif. Filed Apr. 4, 1927. Serial No. 180,775. 6 Claims. (Cl. 77—18.)

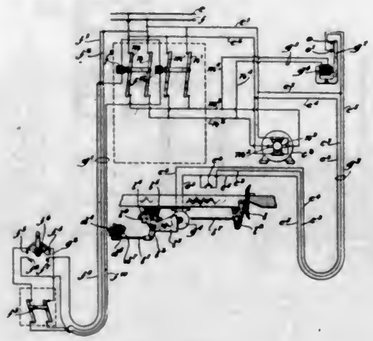


1. A centering tool comprising a body provided with a recess in one end and with a drill seat axially alined with the recess, a drill in the drill seat projecting into the recess, a bushing removably fitting in the recess, the inner faces of opposite walls of the bushing parallel, the body and bushing provided with alined orifices, a pin projecting into the orifice in the body, a means to move the pin into and out of the orifice in the bushing, and a means to indicate a length of movement of the pin.

1,688,820. ELECTRICAL SIGNAL SYSTEM. CHARLES V. LOGWOOD, New York, N. Y., assignor to De Forest Radio Telephone & Telegraph Company, New York, N. Y., a Corporation of Delaware. Filed May 28, 1921. Serial No. 473,362. 1 Claim. (Cl. 250—20.)

The combination with a source of alternating current of an audion having input and output circuits, the input circuit including two inductances in series and each shunted by a variable condenser to provide tuned circuits and the output circuit including an inductance shunted by a variable condenser, said input and outpnt circuits being inductively coupled together, the tuned circuits in said input circuit being tuned to different frequencies and said source being directly associated with only one of said tuned circuits.

1,688,821. PERIODICAL-VENDING MACHINE. GEORGE H. MATCHETT, Cleveland, Ohio. Filed Mar. 13, 1920. Serial No. 365,583. 13 Claims. (Cl. 312—53.)

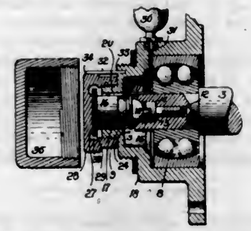


1. In a machine of the character described, a platform adapted to support sheets to be fed, an extrusion roller adjacent an edge of the platform, a retaining member pivotally mounted adjacent an edge of the platform, the lower portion of said retaining member being adapted to be engaged by a sheet as it is extruded to move the upper portion of the retaining member toward the said extrusion roller and means for adjusting the said retaining member with respect to the extrusion roller.

1,688,822. PROCESS OF PREPARING PURIFIED PHOSPHORIC ACID. JOHN MAXWELL, PHILIP C. HOFFMANN, and CLARENCE E. MCCOY, Richmond, Va., assignors, by mesne assignments, to Virginia-Carolina Chemical Corporation, Richmond, Va., a Corporation of Virginia. Filed Dec. 22, 1925. Serial No. 77,118. 10 Claims. (Cl. 23—165.)

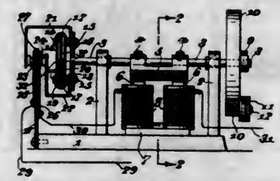
1. In the process of producing a purified phosphoric acid, the steps of heating an impure phosphoric acid to a temperature of at least 1200° C. in the presence of sufficient oxidizing gas to insure the absence of elemental phosphorus in the resulting fumes and recovering the phosphoric acid contained in the fumes.

1,688,823. ELEVATOR. HAROLD V. MCCORMICK, Long Beach, N. Y., assignor to Shur Loc Elevator Safety Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 24, 1927. Serial No. 163,032. 12 Claims. (Cl. 187—52.)



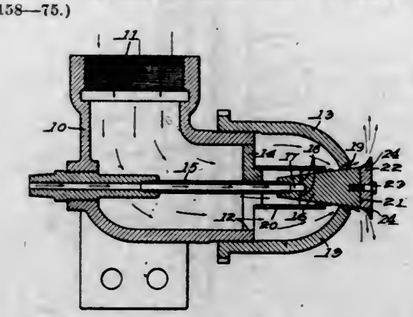
5. The combination of a door, a door operating motor in operative relation with the door, a source of power connected to the motor, a device to control the supply of power to the door operating motor, a three armed lever having one arm weighted, an operating connection from another of the arms of the lever to said device, a bell crank latch pivotally mounted on the third arm of the lever, a detent to be engaged by the latch, an arm operatively connected with the bell crank latch, and means to offer resistance to the movement of said arm, whereby in the initial movement of the three armed lever the latch is released and full movement of the three armed lever is permitted.

1,688,824. THEME FINDER. WILLIAM OTTO MIESSNER, Milwaukee, Wis. Filed Apr. 5, 1926. Serial No. 99,942. 3 Claims. (Cl. 35—12.)



1. A theme finder consisting of a member provided with a longitudinally extending straight phonograph needle guiding slot and graduations adjacent said slot, said slot being enlarged at one end portion to revolubly receive a phonograph post.

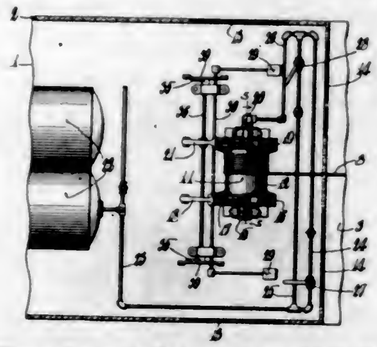
1,688,825. THRUST BEARING FOR GYRO-COMPASS ROTORS. CHESTER B. MILLS, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 28, 1920. Serial No. 413,312. 9 Claims. (Cl. 308—163.)



1. The combination, a rotatable element, a stationary thrust bearing associated therewith, a limited stop, a plurality of discs positioned between said bearing and said stop, and a reservoir containing fluid, said discs being positioned in said reservoir whereby interstices between said discs are maintained saturated.

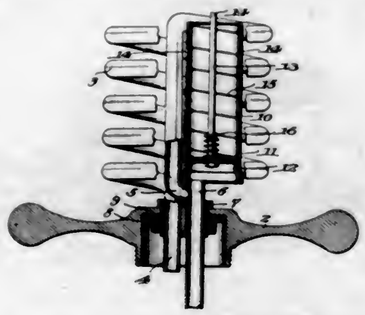
1,688,826. PERIODIC CIRCUIT CONTROLLER. CARL P. NACHOD, Louisville, Ky., assignor to Nachod Signal Company, Incorporated, Louisville, Ky., a Corporation of New York. Filed Oct. 18, 1923. Serial No. 669,335. 1 Claim. (Cl. 200—90.)

Apparatus of the character described comprising a base, shaft-supporting structure carried by said base, a shaft journaled in said structure, an inertia disk carried by said shaft, a weight carried by said disk at or adjacent its periphery, an electro-magnet, a coacting armature for oscillating said shaft, a circuit closer comprising a plurality of contact members moving with said shaft and controlling the circuit of said magnet, contacts disposed in the axis of rotation of said system and rotating therewith and connected with said contact members, and stationary contacts with which said contact members respectively engage in the axis of rotation of said shaft.



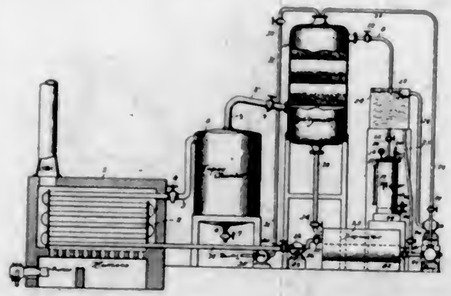
1,688,827. BURNER. JOHN H. NELSON, Worcester, Mass. Filed Sept. 14, 1925. Serial No. 56,137. 3 Claims. (Cl. 158—75.)

1. In a device for mixing liquid fuel with an atomizing medium, the combination with a nozzle having an opening therein, and a conical body located in said opening its



larger end projecting therethrough, and spaced from its edge all around to provide an outlet for the escape of the mixture, of means for introducing liquid fuel in a position to spread on the surface of said body, means for directing the atomizing medium along said surface toward the outlet to take up the fuel therewith as it passes out of the outlet, and a tube surrounding the smaller end of said body and extending a distance therealong open at both ends to receive and discharge a current of an atomizing medium, and positioned to receive any fuel which is not deposited on the surface of the body and allow it to spread in a thin film on the tube for the same purpose, the larger end of the conical body being larger than said tube, whereby an annular escape passage is formed at the end of the tube.

1,688,828. LOADING AND UNLOADING MECHANISM. ROBERT C. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 17, 1924. Serial No. 699,663. 6 Claims. (Cl. 254—186.)

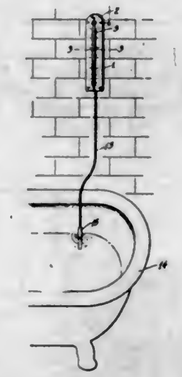


1. The combination with a hoisting mechanism having a winding drum, a brake cooperating with said drum, a driving motor for said drum, and means for controlling the drive of said drum by said motor, of means for independently controlling said brake, said drive control means and said motor including separate control elements for each arranged at each end of said drum whereby the operator may independently control the drum brake, the drive control means, or the motor while stationed at either end thereof.

1,688,829. CONDENSER FOR AUTOMOBILE RADIATORS. SILAS K. PALMER, Lake Park, Iowa. Filed Feb. 13, 1924. Serial No. 692,557. 3 Claims. (Cl. 257—25.)

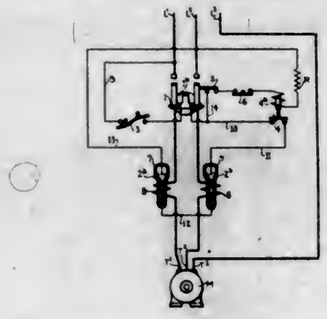
1. A condenser for automobile radiators, comprising a radiator cap, a condenser comprising a coiled tube located above the cap and having its ends connected to said cap, said coiled tube being adapted to condense the vapors evolved within the radiator, and a combined air-relief valve and a movable mechanical visible indicator connected to the condenser in the region of the return end of the tube thereof, said valve being adapted to operate the mechanical indicator.

1,688,830. PROCESS OF CRACKING OIL. ROBERT T. POLLOCK, Boston, Mass., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 6, 1920. Serial No. 428,792. Renewed July 16, 1928. 3 Claims. (Cl. 196—48.)



2. A continuous process for cracking hydrocarbon oil, consisting in subjecting the oil to cracking conditions of heat and pressure in a heating zone, in passing the evolved vapors through a dephlegmator wherein they are caused to physically commingle with incoming charging oil and a supply of water, in passing the charging oil, together with the reflux condensate separated from the vapors in said dephlegmator and the unvaporized water to a separator from which the water is withdrawn, in passing mixed reflux condensate and charging oil from said separator to said heating zone, in taking off dephlegmated vapors from said dephlegmator, in condensing such vapors and collecting the resulting distillate.

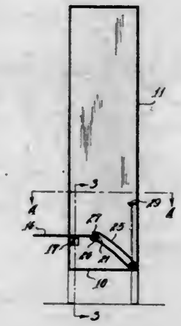
1,688,831. METHOD OF TREATING MOLASSES. FRED RANSOHOFF, New York, N. Y., assignor to The Fleischmann Company, New York, N. Y., a Corporation of Ohio. Filed May 11, 1925. Serial No. 29,623. 15 Claims. (Cl. 195—16.)



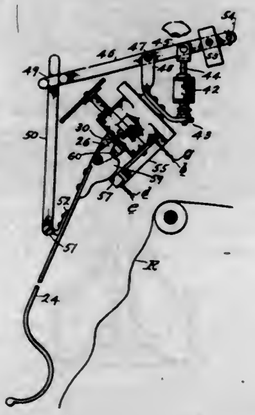
6. A method of treating cane molasses for use in the manufacture of yeast by an aeration process, which comprises treating the molasses with sufficient ammonia to render it alkaline, adding an ammonium phosphate and thereafter separating the solution from substances undissolved therein.

1,688,832. BATH THERMOMETER. JACK D. SARTAKOFF, New York, N. Y., assignor of one-half to J. D. Sartakoff Corporation, New York, N. Y., a Corporation of New York, and one-half to Khetah Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1923. Serial No. 683,397. 5 Claims. (Cl. 73—52.)

1. A bath thermometer embodying a U tube, a reading column in the tube, a flexible pressure communicating tube connected at one of its ends to one leg of the U tube, a hollow bulb connected to the other end of the pressure communicating tube, and means for regulating the capacity of the bulb.



1,688,833. PROTECTIVE CIRCUIT CONTROLLER. EDWARD W. SEEGER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 18, 1923. Serial No. 639,768. 9 Claims. (Cl. 175—294.)

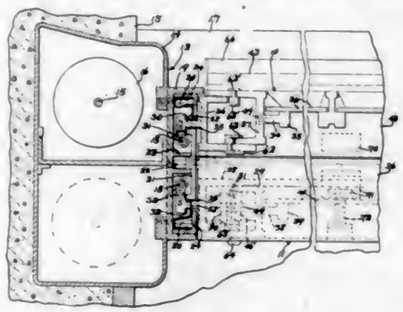


1. The combination with a translating circuit of an electro-responsive switch for establishing power connections thereto and control means for said switch including a plurality of control switches connected in series in the energizing circuit thereof, certain of said switches being responsive upon given overload conditions in said translating circuit to interrupt said energizing circuit and another being responsive upon response of said former switches to insure against re-establishment of said energizing circuit by said former switches upon resetting thereof.

1,688,834. LOCKER. JAMES W. SHARP, Lakewood, Ohio. Filed Aug. 11, 1923. Serial No. 656,937. Renewed Apr. 12, 1928. 3 Claims. (Cl. 312—165.)

1. In a locker of the character described, the combination of a sliding seat adapted to be positioned within the locker when the locker is closed, a pair of channel members secured to the side walls of the locker, pivotal means connecting the rear end of the seat to the channel members, means formed integrally with said channel members at the upper ends thereof adapted to secure the seat in extended position, means rigidly secured to the locker walls adjacent the door opening, such means and the channel members being so positioned that the seat is drawn to its foremost position extending horizontally through the door opening, the rear end is secured by the channel members, the mid-portion rests on rigid means and the whole seat comprises a cantilever.

1,688,835. PAPER-BREAK INDICATOR. EDWARD P. SHELDON, Brooklyn, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 3, 1925. Serial No. 54,172. 8 Claims. (Cl. 192—127.)

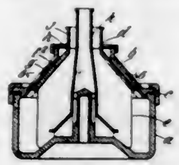


1. In a web handling mechanism, the combination of a plurality of webs, a detector member for each web located to contact therewith and movable on breakage of a web, means controlled by the detector members to stop the machine, means for automatically returning the controlling mechanism to operative position, and means for indicating which detector member has operated.

1,688,836. WINDOW CONSTRUCTION. HARRY B. STEIN, Chicago, Ill. Filed Dec. 23, 1927. Serial No. 242,114. 7 Claims. (Cl. 189—66.)

1. A window construction comprising frame means, a sash having side members with inner and outer portions, groove and rib means on said frame means and said members for slidably mounting the sash, also to permit reversing said side members in said frame means, means for swinging said inner portions on said outer portions,

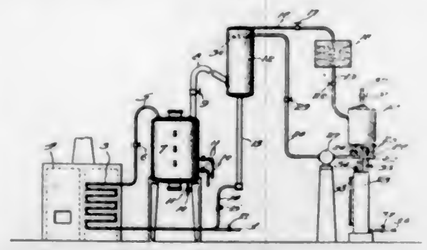
and means for variously mounting the sash pane on the inner portions, thereby permitting said side members to



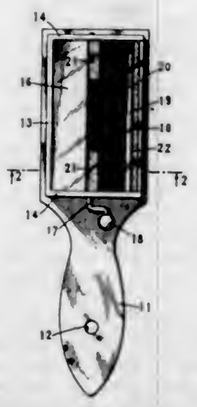
be reversed in said frame means and the window sash to be swung in the selected direction.

1,688,837. PROCESS OF MANUFACTURING DINITRO DERIVATIVES OF PERYLENE AND ITS COMPOUNDS. KARL STIEGER, Graz, Austria, assignor to Felice Bensa, Genoa, Italy. Filed Jan. 5, 1926, Serial No. 79,477, and in Austria Oct. 28, 1925. 3 Claims. (Cl. 260—142.)

1. A process for manufacturing dinitro derivatives of any one of the compounds selected from the group of perylene and its halides consisting in suspending such compound in glacial acetic acid, heating the suspension to substantially the boiling temperature of water and subjecting the suspension to the action of a quantity of nitric acid produced in situ which gives two molecules of NO_2 for each molecule of the said compound.



1,688,838. DRUM FOR CENTRIFUGAL SEPARATING APPARATUS. KARL JOHAN SVENSSON, Lidingo Villastad, and KARL AXEL PATRIK NORLING, Sodertorns Villastad, Sweden. Filed Dec. 11, 1926, Serial No. 154,111, and in Sweden Dec. 29, 1925. 2 Claims. (Cl. 233—46.)

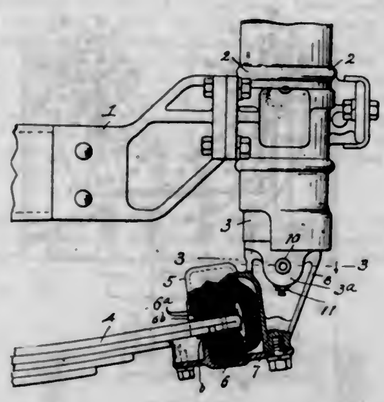


1. A centrifugal drum, for the continuous separation of mixtures of a plurality of fluids of different specific gravities containing solid particles in suspension, provided with a top plate adapted to keep apart the separated lighter and heavier fluid components during their discharge from the drum, and adapted to determine the position of entrances to channels adapted to discharge the heavier fluid components at a relatively high velocity, so as to facilitate the discharge therewith of the separated solid particles not deposited on the wall of the drum, and means adapted for varying the distance of said channel entrances from the centre of the drum thereby to vary the permissible deposit of solid particles on the wall of the drum.

1,688,839. OIL APPARATUS. CLAUDE F. TEARS, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed June 18, 1923, Serial No. 646,055. Renewed May 28, 1928. 2 Claims. (Cl. 137—78.)

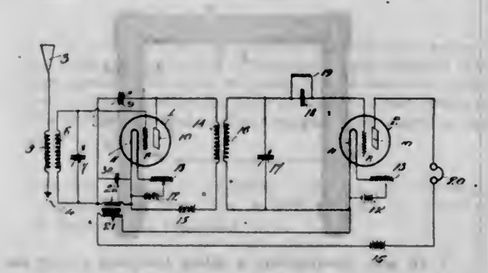
2. A stream divider for distilling systems, comprising an enlarged container, a liquid inlet line connected thereto, an outlet line terminating in a standpipe in the container, a plurality of relatively smaller manifolded outlet lines terminating as standpipes in the container and having their upper extremities equilevel with the larger outlet line.

1,688,840. PENCIL SHARPENER. HAGOP P. TEVONIAN, Brooklyn, N. Y. Filed June 9, 1927. Serial No. 197,624. 8 Claims. (Cl. 120—89.)



1. A pencil sharpener comprising a receptacle having a top and a hinged side, hinged substantially central of the base and having its free edge engaging said top, the inner face of the hinged side being provided with an abrasive surface.

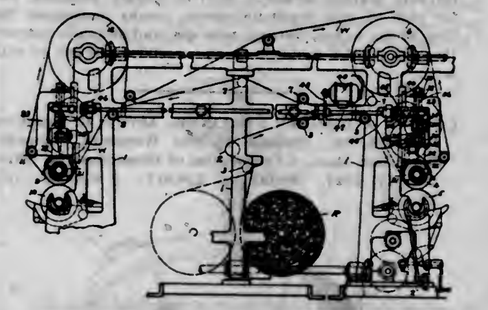
1,688,841. SHACKLE CONSTRUCTION. JOHN F. WALLACK, Shaker Heights, Ohio, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 29, 1924. Serial No. 740,638. 2 Claims. (Cl. 267—54.)



1. The combination with a resiliently suspended plunger carried by the chassis of a motor vehicle and having a pair of spaced ears, and the end of a spring of the motor vehicle, of a connection comprising an elastic body with which

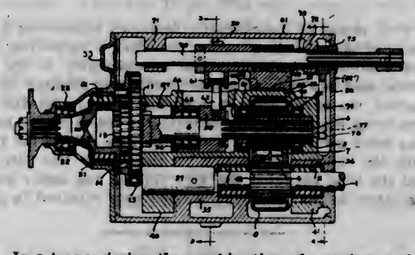
the end of the spring cooperates, a housing for such body having a rigid extension provided with a portion adapted

to extend between the ears of the plunger, and means for securing the plunger and the extension to each other.



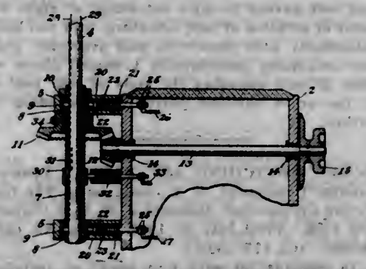
1,688,842. RADIO SIGNALING CIRCUITS. ROY A. WEAGANT, Douglaston, N. Y., assignor to De Forest Radio Company, Jersey City, N. J., a Corporation of Delaware. Filed Jan. 31, 1925. Serial No. 5,923. 8 Claims. (Cl. 250—20.)

1. A radio signaling circuit comprising a radio frequency amplifier having a grid-filament circuit, a plate-filament circuit and a grid-plate circuit, a detector coupled with the plate-filament circuit and having an output circuit coupled with the grid-filament circuit of said amplifier, and a capacity included in said grid-filament circuit, and a second capacity included in said grid-plate circuit having a predetermined ratio value with respect to said first mentioned capacity whereby a Wheatstone bridge is formed in which the plate-filament circuit of the detector is coupled across one set of nodal points and the plate-filament circuit of the amplifier is coupled across the other set of nodal points.



1,688,843. INTAGLIO PRINTING MACHINE. ADOLPH M. ZUCKERMAN, New York, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 27, 1925. Serial No. 52,737. 11 Claims. (Cl. 101—157.)

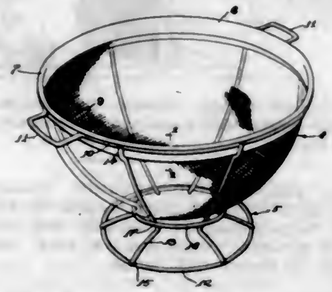
1. In a printing machine, the combination of a plurality of printing couples each including an impression cylinder and a cooperating form cylinder vertically arranged, one of which is movable relatively to the other, means including screw rods for simultaneously adjusting the movable cylinders, means including second screw rods for independent-



ly adjusting the movable cylinders, and unyielding rigid connections between said means and the cylinders that are adjusted thereby.

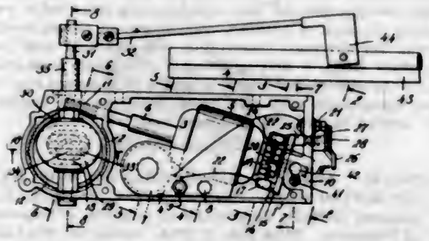
1,688,844. TRANSMISSION GEARING. CHARLES E. F. AHLM, East Cleveland, Ohio, assignor to Automotive Patent Holding Company, Cleveland, Ohio, a Corporation of Delaware. Filed Aug. 16, 1924. Serial No. 732,387. 11 Claims. (Cl. 74—58.)

1. In a transmission the combination of a casing, a shaft journaled in the casing, a plurality of dental driven members rigidly carried by the shaft, another shaft carried by the casing permanently out of axial alignment with said first named shaft, an intermediate shaft, a laterally movable bearing therefor, said bearing being mounted to swing about the axis of rotation of said second named shaft, a chain for drivingly connecting said shaft to said intermediate shaft, a driving member in splined engagement with the intermediate shaft arranged to be moved into driving engagement with said driven members and means for so moving the driving member.



1,688,845. AERIAL LOOP MECHANISM FOR RADIO RECEIVING SETS. VICTOR ALVEAR, Brooklyn, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Feb. 2, 1924. Serial No. 690,141. 8 Claims. (Cl. 250—33.)

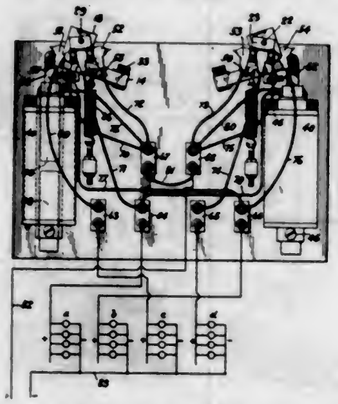
1. Aerial loop mechanism for a radio receiving set, embodying a rotatable, vertical, loop shaft supporting loop wiring, a pair of insulated, spaced, rotatable bearing-mem-



bers secured to said shaft, a pair of fixed journal-bearings for said bearing members, electric contact members, one for each of said bearing-members, means to connect the loop wiring to said bearing members, and means to connect the two contact members to the receiving devices of said set.

1,688,846. COLANDER STRAINER. ARTHUR G. ANDREWS, Rockford, Ill., assignor to The Washburn Company, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 17, 1927. Serial No. 226,617. 5 Claims. (Cl. 53—1.)

4. A utensil of the character described comprising a wire frame of skeleton construction providing a supporting ring, and a screen bowl arranged to fit removably in the wire frame, said bowl having a sheet metal ring forming the rim thereof, the upper edge of said ring being rolled and said ring being beaded slightly beneath the rolled edge, and the ring being arranged to fit within the wire ring of the frame with the rolled edge seating on the top of the wire ring and the bead engaging the wire ring on the under side of the latter so that the bowl is removably retained in place.

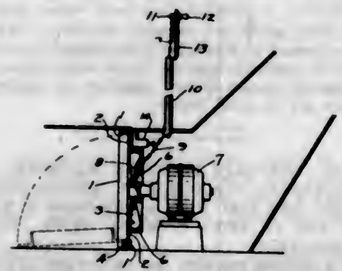


1,688,847. ELECTRIC MOTOR. EMANUEL AUFIERO, Brooklyn, N. Y., assignor to E. A. Laboratories, Inc., Brooklyn, N. Y. Filed Jan. 11, 1924. Serial No. 685,633. 3 Claims. (Cl. 172—36.)

1. In an electric motor, the combination of an armature, a field coil having its axis extending at right angles to the axis of rotation of said armature, said coil being offset longitudinally with respect to said armature, and a field frame comprising substantially L-shaped pieces with one portion of each engaging the ends of said field coil and with the other portions partially surrounding the said armature.

1,688,848. SWITCHING APPARATUS. LLEWELLYN T. BARNES, Hempstead, N. Y., assignor to The Gem Engineering Corporation, Hempstead, N. Y., a Corporation of New York. Filed July 30, 1923. Serial No. 654,667. 2 Claims. (Cl. 177—346.)

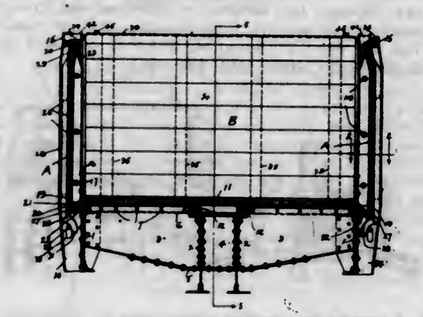
2. In combination with four banks of translating devices, an automatic switching apparatus for energizing and deenergizing successively a varying pair of banks, said apparatus comprising four switches, one in series with each bank, said switches being divided in two groups, an electromagnet for each group of switches and means for shunting one switch of one group across the electro-



magnet of the other group, and means whereby each electromagnet when energized, operates to close the last-mentioned switch in its group and to open another switch in its group.

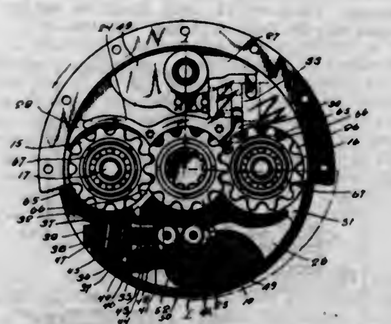
1,688,849. SAFE CONSTRUCTION. DAVID H. BELLAMORE, New York, N. Y., and CARL P. BARTELS, Hamilton, Ohio, assignors to The Mosler Safe Company, Hamilton, Ohio, a Corporation of New York. Filed June 8, 1923. Serial No. 644,090. 9 Claims. (Cl. 109—10.)

1. In safe construction, a filling including a core embedded in heat insulating material, said core containing moisture and having a surface coating preventing loss of moisture from the core under normal temperatures.



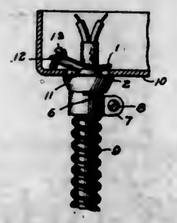
1,688,850. FORCED-DRAFT FAN INCLOSURE. WILLIAM D. CALHOUN, Seattle, Wash. Filed Apr. 11, 1927. Serial No. 182,605. 1 Claim. (Cl. 126—99.)

In a device of the class described, an air duct, a motor positioned in the duct, a fan mounted on the motor shaft, a closure having a circular opening, the diameter of which



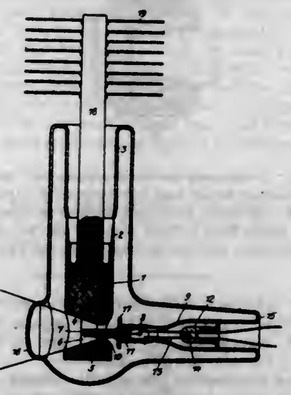
is slightly larger than the diameter of the fan, said closure being positioned so that the fan will rotate in the said opening, said closure being provided with a flange surrounding the said fan, a stationary frame mounted in the said duct to hold the said closure, suitable hinges by which the said closure is mounted in the said frame, said frame and closure closing the entire interior of the duct with the exception of the opening around the fan when in the closed position, a flexible device attached to the said closure and extending outward through the said duct to a remote point, and means for adjustably holding the end of said flexible device to adjust the position of the said closure.

1,688,851. RAILWAY CAR. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed July 11, 1927. Serial No. 204,677. 16 Claims. (Cl. 105—259.)



1. In a railway car, the combination with plow guides; of a level floor extending continuously therebetween; side doors spaced away from the edges of said level floor, said doors extending below the level of the floor; and elements with inclined surfaces leading from said plow guides to the door.

1,688,852. CLUTCH DEVICE. HOWARD E. CHRISTIE, Bronx, N. Y. Filed Apr. 8, 1922. Serial No. 550,641. 6 Claims. (Cl. 192—61.)

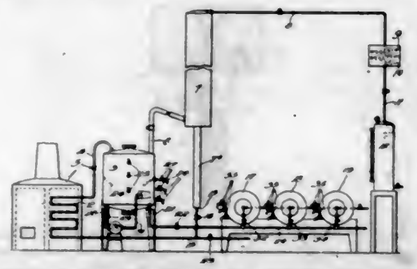


4. A clutch mechanism with which to connect a drive shaft with a driven shaft, said mechanism comprising a housing adapted to contain a fluid, a rotor whose rotation depends upon movement of said fluid, a piston valve for determining movement of said fluid, said valve having parts of uneven surface extent subject to pressure of said fluid tending to operate said valve, and centrifugally controlled means also tending to operate said valve.

1,688,853. OUTLET-BOX CONNECTION. MARTIN M. CLAYTON, Baden, Pa., assignor to National Metal Molding Company, a Corporation of Pennsylvania. Filed Aug. 14, 1926. Serial No. 129,108. 1 Claim. (Cl. 247—25.)

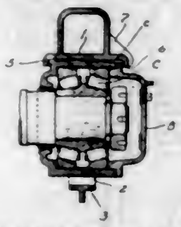
The combination with an electrical outlet-box having an opening through its wall, of a conduit connecter projected through said opening and having shoulders arranged respectively within and without said opening, the inner shoulder having a projection inclined away from the box wall and provided with a threaded opening, and a screw projected through said threaded opening in inclined relation to the box wall with its tip bearing against the inner face of said wall.

1,688,854. VACUUM TUBE FOR THE PRODUCTION OF SOFT X RAYS. KARL WILHELM DAUMANN, Hamburg, Germany, assignor to C. H. F. Muller Rontgenrohrenfabrik, Hamburg, Germany, a Corporation of Germany. Filed Apr. 15, 1926, Serial No. 102,130, and in Germany Apr. 25, 1925. 3 Claims. (Cl. 250—34.)



1. A vacuum tube for the production of soft X-rays, comprising an incandescent cathode, a flaring anti-cathode surrounding said cathode at a distance, a window of a material of high permeability to X-rays, located in line with the longitudinal axis of the cathode at that portion of the vacuum tube toward which said anti-cathode flares, and a disk or screen likewise located in line with the longitudinal axis of the cathode, but at the opposite side of the X-ray producing anti-cathode, to prevent the X-rays from issuing in a direction away from said window.

1,688,855. PROCESS FOR CONVERTING PETROLEUM OILS. AUBREY D. DAVID, Chicago, Ill., assignor to The Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Feb. 14, 1923, Serial No. 619,038. Renewed Apr. 24, 1928. 3 Claims. (Cl. 196—69.)

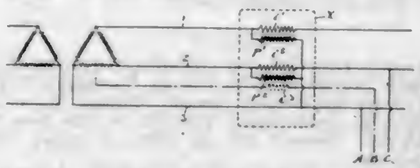


1. A process for treating hydrocarbon oil consisting in raising the oil to a cracking temperature while advancing in a stream through a heating zone, in transferring the highly heated oil to an enlarged reaction chamber wherein a sub-

stantial body of oil accumulates and wherein no rise in oil temperture occurs, in taking off vapors from said enlarged chamber for condensation and collection, in continuously withdrawing residual oil from said enlarged chamber without recirculating any portion thereof through said heating

zone, in maintaining a swirling motion of the liquid oil in said enlarged chamber to hold the carbon in suspension in the oil by withdrawing a portion of the liquid oil therefrom and returning it under an increased pressure to said chamber tangential to the wall thereof.

1,688,856. CAR-TRUCK SIDE FRAME. HARRY E. DOERR, St. Louis, Mo., assignor to Scullin Steel Company, St. Louis, Mo., a Corporation of Delaware. Filed Apr. 30, 1927. Serial No. 187,887. 6 Claims. (Cl. 105—220.)

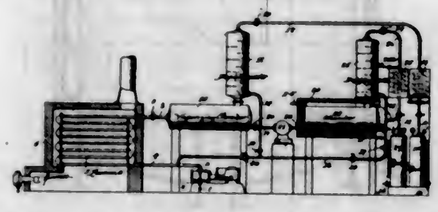


1. A car truck side frame designed for use with roller bearing journal boxes and provided with integral end portions that completely surround the journal boxes, and which comprise parts that extend transversely across the underside of the boxes and are normally spaced away from same.

1,688,857. LINING COMPOSITION FOR METALLIC CONTAINERS. TAKANOSHIN DOMOTO, Osaka, Japan. Filed Sept. 5, 1923, Serial No. 661,113, and in Japan Dec. 2, 1922. 1 Claim. (Cl. 134—17.)

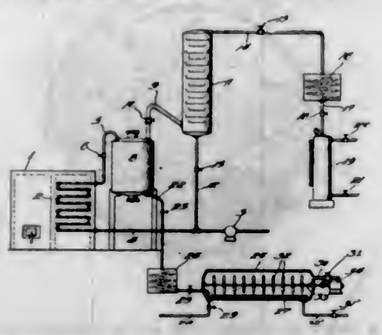
A lining composition for metallic vessels, comprising a mixture of rubber, benzol and aluminum soap, in the respective proportions by weight of 10, 100 and 5.

1,688,858. METER FOR MEASURING COMBINED POLYPHASE AND SINGLE-PHASE ELECTRICAL ENERGY. GEORGE F. DREWRY, Toronto, Ontario, Canada, assignor to The Lincoln Meter Company, Limited, Toronto, Canada. Filed Feb. 20, 1922. Serial No. 537,879. 5 Claims. (Cl. 171—309.)



1. In a meter, the combination with a three-phase source of electrical supply, one phase of which is divided into a single phase three wire system by a neutral central wire, of potential and current meter coils connected with the three-phase source, and a current coil arranged in said neutral wire of the single phase three wire system adapted to influence the total flux of the aforesaid meter coils.

1,688,859. PROCESS OF CRACKING HYDROCARBONS. GUSTAV EGLOFF and HARRY P. BENNER, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 20, 1920, Serial No. 432,068. Renewed Nov. 21, 1927. 2 Claims. (Cl. 196—56.)

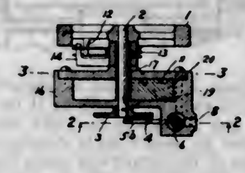


1. A process of cracking hydrocarbons consisting in dispersing in a liquid hydrocarbon oil at least 10% by volume of a solid bitumen in colloidal form, and in then subjecting the mixture to a cracking temperature while the same is maintained under a superatmospheric pressure.

1,688,860. PROCESS FOR CRACKING OIL. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Oct. 31, 1921, Serial No. 511,714. Renewed Mar. 12, 1926. 3 Claims. (Cl. 196—49.)

1. A process for cracking hydrocarbon oil, consisting in raising the oil to a cracking temperature under a substantial pressure in an initial stage of conversion, dephlegmating and condensing the generated vapors from said stage, passing the unvaporized oil to a top fired secondary zone and there subjecting it to increased pressure and temperature conditions, dephlegmating and condensing the generated vapors relieved from the secondary zone of reaction and collecting them separately from those produced in the initial stage.

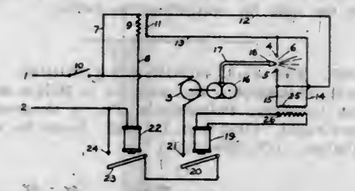
1,688,861. PROCESS OF CRACKING PETROLEUM OIL. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Oct. 17, 1923, Serial No. 668,980. Renewed May 28, 1928. 2 Claims. (Cl. 196—37.)



1. A process for treating the residuum accumulating in the reaction zone of an oil cracking apparatus, during the conversion of hydrocarbon oil, under heat and pressure, which consists in withdrawing the residuum from such reaction zone, in passing the same through a cooling zone, in then delivering the cooled residuum to a tank filled to at least fifty per cent of its capacity with liquid sulphur dioxide, in violently agitating the residuum and the liquid sulphur dioxide in said tank, in then ceasing the agitation and permitting the residuum constitutents and sulphur dioxide to stratify in upper and lower layers, in separately drawing off the constituents from said upper and lower layers, and in subjecting the separately withdrawn constituents to independent chemical treatments, to obtain lubricating stock from the upper stratum and cylinder stock from the lower stratum.

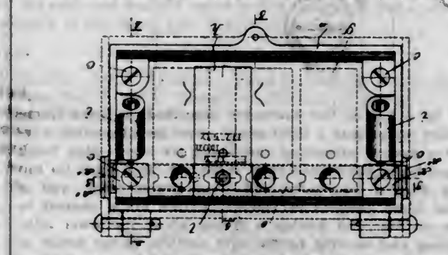
1,688,862. LIFTING JACK. CHARLES D. ELLWOOD, Racine, Wis., assignor to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Apr. 26, 1926. Serial No. 104,760. 6 Claims. (Cl. 254—6.)

1. In a lifting jack, a supporting frame, a bell crank lever pivoted in the frame to oscillate in a vertical plane and comprising a forwardly extending lifting arm and a downwardly extending power arm, a lifting head pivoted at the free end of the forwardly extending arm, means for maintaining the lifting head horizontal at all elevations, a push-rod guided for horizontal movement in the frame, power means for reciprocating the rod, a cross-head at the forward end of the rod, and means at the free end of the power arm of the bell-crank which swings in a vertical arc across the path of the push-rod and is engaged by the cross-head.



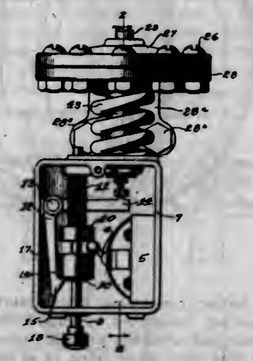
1,688,863. MILKING-MACHINE PULSATOR. SVEN JOHAN ERLING, Stockholm, Sweden, assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed May 28, 1927, Serial No. 194,911, and in Sweden June 10, 1926. 11 Claims. (Cl. 31—61.)

1. A pulsating apparatus for milking machines, which comprises a regulating element adapted to transmit pulsations toward the teat cups, a driving device, an oscillatory fly-wheel mass adapted to actuate the regulating element, and means connecting the driving device and the fly-wheel mass adapted to transmit the power of the driving device to the fly-wheel mass during only a part of the latter's oscillation and to allow the fly-wheel mass to move independently of the driving device during a substantial part of its oscillation.



1,688,864. ELECTRICAL SPARK IGNITION MEANS FOR BURNERS. FRANK FISCHER, Larchmont, N. Y., and ARNOLD FRANCIS VAN PELT, Interlaken, N. J., assignors to Grant Oil Burner Corporation of Delaware, New York, N. Y. Filed July 8, 1927. Serial No. 204,330. 4 Claims. (Cl. 158—28.)

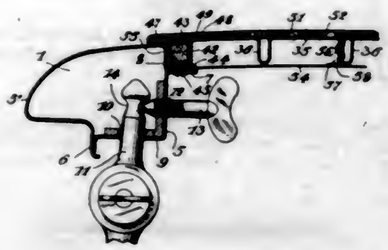
1. In a burner ignition control device, a power circuit, a transformer having its primary connected to the power circuit, a pair of spaced electrodes forming a spark gap for igniting the burner, said electrodes being connected to the secondary of the transformer, a relay switch having its coil in series with the transformer for opening the power circuit when the electrode circuit is too widely opened, a second transformer with one coil shunted across



the electrodes and means controlled by said second transformer for opening the power circuit when the electrodes are short circuited.

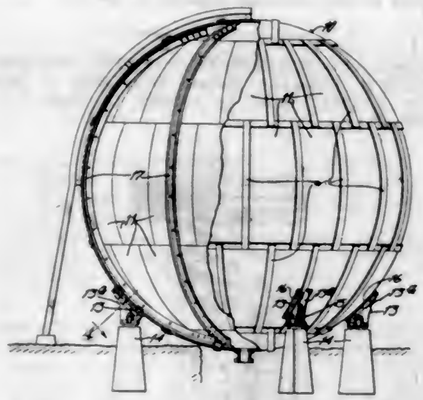
1,688,865. MAGAZINE FOR TICKETS. PAUL GAGNEAU, Paris, France. Filed Mar. 18, 1926, Serial No. 95,689, and in France Apr. 3, 1925. 6 Claims. (Cl. 211—50.)

1. In a ticket control device, the combination of a box, a reserve ticket magazine connected to the rear wall of said box, a detachable main ticket magazine located in the front of the box and having detachable means for holding tickets, said detachable means being connected to the rear of said main magazine by fastening means non-accessible at the front of said main magazine, and at the rear of the rear wall of said box, and locking means adapted to hold said main magazine in position.



1,688,866. FLUID-PRESSURE-OPERATED ELECTRIC SWITCH. CHARLES C. HANSEN, Forest Park, Ill. Filed Nov. 5, 1923. Serial No. 672,832. 4 Claims. (Cl. 200—83.)

1. The combination of a switch, a housing in which the switch is disposed and by which the latter is supported, a fluid pressure operated actuator comprising a diaphragm and a casing, a sleeve on the actuator casing, a stem operable by the diaphragm and slidable in said sleeve, a spring outside of the actuator for retracting said stem, said spring extending around the sleeve and abutting against

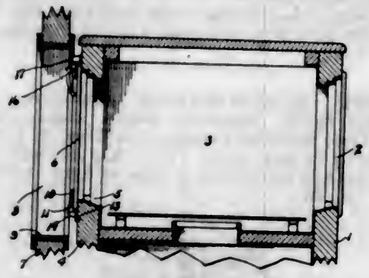


the switch-housing, and adjustable connection between the sleeve and said housing whereby the latter may be moved longitudinally with respect to the sleeve to vary the tension of the spring, and means in the housing operable by the stem for controlling the switch.

1,688,867. TOP FOR AUTOMOBILE BODIES. LEO I. HEINTZ, Philadelphia, Pa., assignor to Heintz Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 15, 1923. Serial No. 662,823. 12 Claims. (Cl. 296—137.)

1. In a top of the character described, a front frame member comprising a light gauge sheet metal portion having transverse curvature and along its lower edge being flanged horizontally and then vertically, and along its top being flanged vertically and then horizontally, and a second light gauge sheet metal portion angle shaped in cross section, and having a flange along its lower edge abutting and secured to the said vertical flange which is at the lower edge of the first portion, and secured along its upper edge to the said horizontal flange which is at the upper edge of the first portion.

1,688,868. GAS HOLDER. GEORGE T. HORTON, Chicago, Ill. Filed June 11, 1927. Serial No. 198,245. 2 Claims. (Cl. 220—1.)

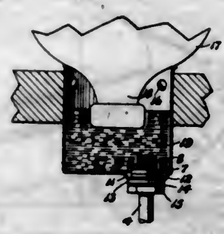


1. A gas holder comprising a substantially spherical shell substantially supported by supporting legs resting on foundations and attached at their upper ends to the shell on the line of a circle lying in a horizontal plane and having a diameter substantially less than the diameter of a great circle of said shell, and vertically arranged curved stiffening members attached to the inner wall of said shell extending from substantially the top of the shell to substantially the bottom of the same, one of said stiffening members being arranged adjacent each supporting leg.

1,688,869. METHOD OF MANUFACTURING TIRES. HENRY M. LAMBERT, Portland, Oreg., assignor to Lambert Tire & Rubber Co., Barberton, Ohio, a Corporation of Arizona. Filed Oct. 13, 1922. Serial No. 594,301. 1 Claim. (Cl. 18—55.)

The method of manufacturing cushion tires which consists in building up on a rim, a solid carcass body of approximately the outline or form of but of lesser cross sectional area than the desired tire, placing it between punching mold halves, said mold halves having portions forming a tire molding cavity of the desired size and having punching elements, bringing the mold halves with their punching elements together to enclose the rim and tire carcass and simultaneously punch holes in the same, and displacing the carcass material punched to fill the mold cavity, and subsequently vulcanizing the mass while in the mold and thereafter removing the mold halves from the mass so vulcanized.

1,688,870. REAR ICING DOOR FOR REFRIGERATORS. CHARLES H. LEONARD, Grand Rapids, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Sept. 21, 1925. Serial No. 57,531. 2 Claims. (Cl. 62—46.)



1. A refrigerator including an ice chamber having a front door opening and also an opening at the back of the ice chamber, a door for closing the front opening, socket members attached at spaced apart distances from each other to the back of the refrigerator below the back opening, said socket members including portions set at an angle to the vertical, wedging members, one for each socket member attached to and extending downwardly from a back door and adapted to enter said socket members and engage with said portions of the socket members, said wedging members being formed with cam portions or surfaces to engage against the socket members and force the door tightly to closed position, and means to detachably connect the door at its upper edge portion to said back of the refrigerator.

1,688,871. UNIVERSAL WATER-COOLER CONNECTION. CHARLES H. LEONARD, Grand Rapids, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Oct. 12, 1925. Serial No. 61,876. 5 Claims. (Cl. 62—44.)

1. In combination with a refrigerator having a water carrying coil located inside thereof with a terminal end extending outwardly at the front of the refrigerator and an inlet end extending upwardly, of a fitting secured to the upper end of said inlet end of the coil, said fitting com-

prising a sleeve, having an integral outwardly extending flange between the ends of the sleeve, said sleeve being threaded externally on each side of said flange, a cup having an opening in its bottom through which the lower portion of said fitting extends, a binding nut threaded on to the lower end of the fitting and yieldable washers dis-

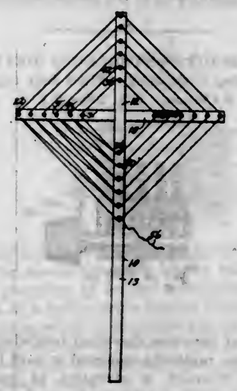
posed between said nut and the bottom of the cup and between said flange and the upper side of the bottom of said cup for permanently securing the cup to said fitting and making a water tight connection therewith, said cup being set into the upper part of the refrigerator through the top thereof.

1,688,872. DUPLEX WAVE SIGNALING SYSTEM. HAROLD M. LEWIS, Long Branch, N. J. Filed Aug. 14, 1920. Serial No. 403,560. 24 Claims. (Cl. 250—6.)

21. The method of signaling which comprises generating a carrier wave for outgoing transmission, receiving an incoming carrier wave, and combining said carrier waves to produce a combination frequency wave having a frequency above the usual range of audible sound frequencies.

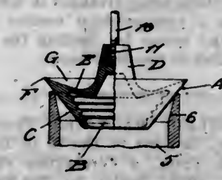
1,688,873. PROCESS FOR RECOVERY OF POTASSIUM CHLORIDE. NORMAN M. MCGRANE, Long Beach, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed May 4, 1927. Serial No. 188,865. 9 Claims. (Cl. 23—36.)

1. The process for recovery of potassium chloride from materials containing chlorides and sulphates of potassium and sodium which comprises leaching such material with an aqueous solvent at a super-atmospheric temperature, continuing such leaching operation until the concentrations of sodium and of sulphate reach maximum values and then decrease materially below said maximum values while the concentrations of potassium and chloride continues to increase, separating the resulting solution from the solid material, cooling such solution to a temperature materially below the leaching temperature to cause precipitation of a salt consisting principally of potassium chloride, and then separating such salt from the mother liquor.



1,688,874. PIPE CLEANER. GODFREY MORGAN, Buffalo, N. Y. Filed Oct. 17, 1927. Serial No. 226,540. 4 Claims. (Cl. 131—13.)

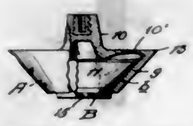
3. A device of the class described comprising a tubular body which is open at its upper end to receive cleaning swabs and provided at its lower end with a fixed head having an opening in the central part thereof, a cap having a tubular wall adapted to fit the exterior of the lower end of said body and a head on said cap arranged below the fixed head of the body, a reaming rod secured at its lower end to the central part of the head of said cap and project-



ing upwardly therefrom through the opening in said head of the body and into the space within the latter, and a cover secured to the upper end of said body.

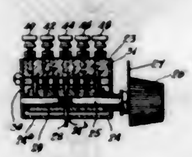
1,688,875. LOOP AERIAL. PAUL D. MORRIS, Berlin, Md. Filed Dec. 3, 1927. Serial No. 237,545. 8 Claims. (Cl. 250—33.)

1. In an aerial, a frame comprising adjacent inwardly bowed cross members, insulators carried by said cross members and projecting from either side thereof, and a conductor supported by said insulators and arranged in a plurality of continuous loops wound alternately on either side of said cross members.



1,688,876. FLOAT VALVE. ELI J. PALMER, Los Angeles, Calif., assignor to California Production Company, Las Vegas, Nev., a Corporation of Nevada. Filed Sept. 30, 1926. Serial No. 138,662. 4 Claims. (Cl. 4—57.)

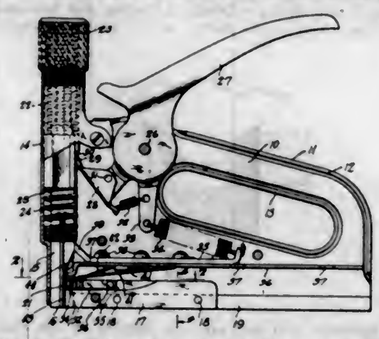
1. The combination with a valve seat having a frusto conical axial passage of a valve having frusto conical body of substantially lesser pitch than said frusto conical axial passage, the valve being formed of flexible material and being open at its lower end, a diaphragm wall at the upper



end of said valve body of substantially thinner material than the adjacent portions of the valve, a stem formed integral with said diaphragm wall and a pull-rod secured to said stem, the said thin diaphragm wall permitting said stem and pull-rod to have a universal movement relative to said body.

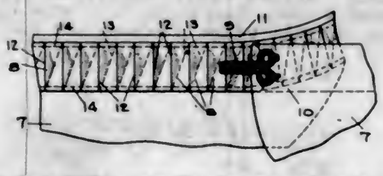
1,688,877. VALVE FOR FLUSH TANKS. ELI J. PALMER, Los Angeles, Calif., assignor to California Production Company, Las Vegas, Nev., a Corporation of Nevada. Filed Nov. 29, 1926. Serial No. 151,315. 4 Claims. (Cl. 4—56.)

1. As a new article of manufacture a partial closure element, for open mouthed hollow float valves, having a drain hole and an extension serving as a retainer for the closure element, said extension being sufficiently flexible to permit insertion of said element through the mouth of the valve, said extension overlying and reinforcing the greater portion of the lateral wall of the inside portion of the valve.



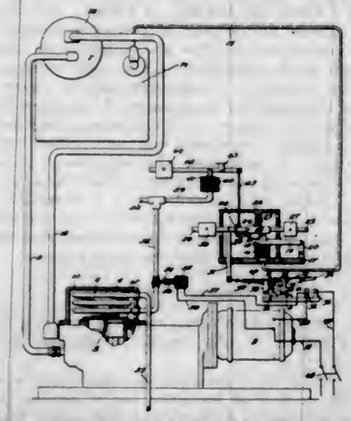
1,688,878. CIRCUIT-CONTROLLING DEVICE. CARLOS E. PATINO, New York, N. Y. Filed July 13, 1925. Serial No. 43,224. 9 Claims. (Cl. 200—6.)

9. A device of the class described comprising a U-shaped frame, a member rotatably mounted in said frame adjacent the crosshead thereof, a plurality of conducting pins mounted in connection with said member and insulated one from the other, a block of insulation material mounted in said frame adjacent said member, a plurality of contact disks mounted in said block, said disks being arranged in pairs, the separate pairs being insulated one from the other and the disks in each pair insulated from each other, means for coupling circuit wires with the separate disks, said disks being provided with projecting contact faces of different dimensions in the separate pairs, and said pins being adapted to be moved into and out of engagement with the contact faces of the separate pairs of disks to frictionally pass therebetween to complete the circuit between the contact faces in each pair, and the contact faces on the separate pairs of disks being arranged in different position with relation to a predetermined number of the other pairs of disks, and means for limiting the rotary movement of said member in two directions.



1,688,879. STAPLING MACHINE. FRIDOLIN POLZER, Norwalk, Conn., assignor to The E. H. Hotchkiss Company, Norwalk, Conn., a Corporation of Connecticut. Filed Feb. 24, 1928. Serial No. 256,556. 4 Claims. (Cl. 1—48.)

1. In a staple driving machine, a housing, a staple strip slide bar in the housing, a movable plunger for driving the individual staples, means for operating the plunger, means for feeding the staple to driving position, means on the outside of the staple strip to enter behind first staple on the strip when in driving position to prevent the prongs from turning back, and holdback means mounted on the

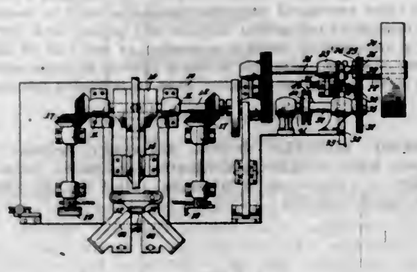


slide bar inside the staple strip to engage the rear edge of the second staple to prevent retrograde movement of the staple strip.

1,688,880. FASTENER FOR BARBERS' APRONS. GLEN L. POPE and ANE COHEN, Gretna, Nebr. Filed Apr. 20, 1928. Serial No. 271,497. 5 Claims. (Cl. 24—206.)

4. A fastener for connecting two opposed parts of an apron, one of said parts being provided with a hook, a strip of fabric wound spirally to provide a plurality of overlapping folds and secured to the opposed part of the apron, said overlapping parts of the folds being adapted to provide holders for said hook.

1,688,881. REFRIGERATOR. JOHN R. REPLOGLE, Detroit, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed May 21, 1921. Serial No. 471,317. 2 Claims. (Cl. 62—4.)

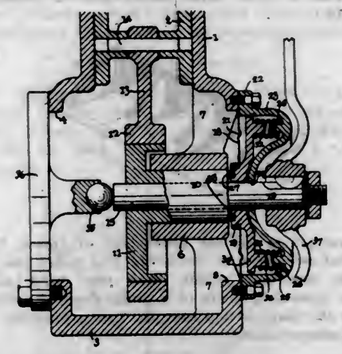


1. In an apparatus of the class described, a refrigerant system, a passage for cooling water associated therewith, an electrically actuated valve in said passage, a motor for

said system, an electric circuit connecting both the motor and the valve with an electric current supply, a switch in said circuit for opening and closing the same, fluid pressure actuated means mechanically connected to said switch for operating the same, and auxiliary means mechanically connected to said switch for opening it when the pressure in said water passage falls to a predetermined minimum, said auxiliary means operating independently of said fluid pressure means to actuate said switch.

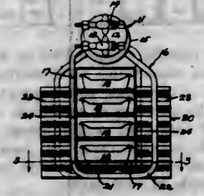
1,688,882. ART OF CEMENT MANUFACTURE. WALTER A. SCHMIDT, Los Angeles, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Sept. 21, 1927. Serial No. 221,142. 5 Claims. (Cl. 106—25.)

1. In the wet process of manufacturing Portland cement, the process comprising recovering dust from the kiln gases, mixing such dust separately with water and maintaining such dust and water in contact with one another for a period of time, and then introducing the resulting mixture into the raw mix slurry.



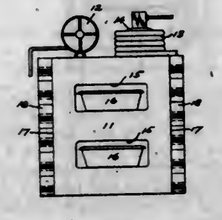
1,688,883. ELECTRIC CHAIN WELDER. JOHN SENFT, York, Pa., assignor to United States Chain and Forging Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 18, 1924, Serial No. 720,766. Renewed Aug. 21, 1928. 13 Claims. (Cl. 219—5.)

1. In an automatic electric chain welder, means for holding a chain link while it is being welded and for advancing the chain after each weld to bring an unwelded link to welding position, a drive shaft, means for supplying welding current to the link to be welded, and means automatically operated from said last mentioned means for automatically connecting said holding and advancing means to said drive shaft, and for automatically disconnecting said holding and advancing means from said drive shaft.



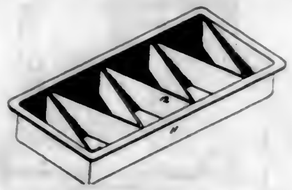
1,688,884. COMPRESSOR. CHARLES C. SPREEN, Detroit, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Nov. 6, 1924. Serial No. 748,069. 3 Claims. (Cl. 286—11.)

1. In a rotating shaft seal, the combination with a casing having an aperture, a bearing within said casing supported by spaced arms integral with the casing, and a shaft having a reduced portion forming a shoulder, the reduced portion of said shaft extending through the aperture in said casing; of a seal structure comprising an annular resilient corrugated diaphragm, a cap member for securing said diaphragm to said casing adjacent the periphery of the opening therein, anti-friction means including a spider having a hub portion and spaced arms projecting therefrom, for engaging the shoulder of said shaft, and means



disposed between said cap member and said spider for maintaining said spider in positive engagement with said shaft.

1,688,885. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich. Filed June 3, 1926. Serial No. 113,473. 7 Claims. (Cl. 62—95.)

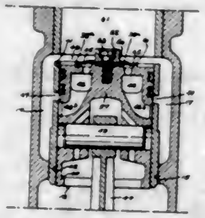


2. A refrigerant expansion unit comprising header means adapted for connection with looped refrigerant expansion tubes, a plurality of looped refrigerant expansion tubes connected at longitudinally spaced intervals to said header means, and a series of corrugated plates having high heat conductivity interposed between and extending beyond the sides of said looped tubes, and each engaging at least one of the adjacent tubes.

1,688,886. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich. Filed June 4, 1926. Serial No. 113,665. 1 Claim. (Cl. 62—95.)

For use in connection with a supply of compressed refrigerant, and in a refrigerator cabinet, and for cooling such cabinet, and under conditions which normally cause the accumulation of frost on the exterior of the brine tank thereof, a cooling unit comprising: such brine tank, a refrigerant expansion chamber within said brine tank, and a plurality of fins disposed on at least one of the exterior walls of said brine tank and extending outwardly therefrom a distance greater than the thickness to which such frost accumulates under normal operating conditions.

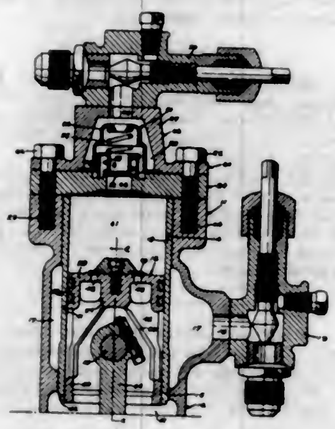
1,688,887. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 4, 1926. Serial No. 113,667. 2 Claims. (Cl. 62—111.)



1. A receptacle for the production of frozen fluid in mechanical refrigerators consisting of a metal pan, and a removable partition within said pan, said partition structure consisting solely of a single sheet of metal bent to divide the space within said pan into a plurality of triangular compartments.

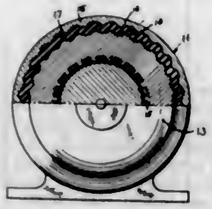
1,688,888. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Aug. 6, 1926. Serial No. 127,532. 2 Claims. (Cl. 62—111.)

1. A tray for freezing comestibles in a mechanical refrigeration system comprising a supporting rack provided with a plurality of openings, molds adapted to be removably secured in the openings of said rack, depending flange means associated with said rack adjacent the openings to retain said molds on said rack, and means intermediate the ends of said molds to cooperate with said flange means to retain said molds in said rack.



1,688,889. PISTON FOR REFRIGERATION PUMPS. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Oct. 30, 1926. Serial No. 145,153. 5 Claims. (Cl. 230—221.)

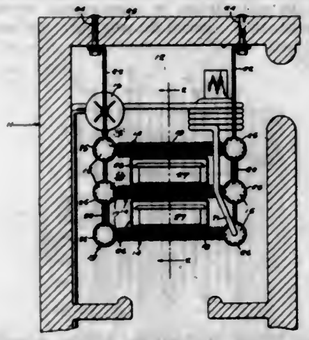
1. In a compressor, the combination of a piston having ports extending through the end wall, and a valve structure comprising a plate adapted to seat against the end wall of said piston to close the ports therethrough, a follower movable with said valve plate, and a retainer stud secured to the end wall of said piston for said follower and valve plate, said valve plate and follower being reciprocable relative to said stud and piston.



1,688,890. PUMP FOR MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Oct. 30, 1926. Serial No. 145,157. 1 Claim. (Cl. 230—190.)

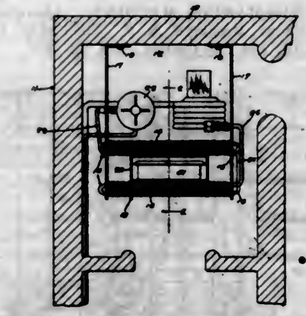
In a compressor for refrigerating apparatus, a cylinder casing having an intake chamber encircling a portion thereof, a sleeve in said casing having intake ports extending in a direction axially thereof and in open communication with said intake chamber, a piston in said sleeve having a plurality of passages extending from the side wall and through the top wall thereof, said sleeve ports being of greater length than the distance between the inlet end of

said piston passages and the piston end wall, and a movable valve associated with the piston end wall to control the passage of refrigerant through said piston, said piston being arranged to uncover a portion of one end of said sleeve ports and with the passages therein in communication with said intake chamber when in retracted position.



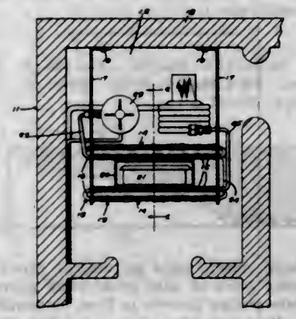
1,688,891. ELECTRIC-MOTOR. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 10, 1927. Serial No. 160,294. 3 Claims. (Cl. 172—36.)

1. A vibration reducing construction for an electric motor comprising a motor frame, a motor stator, and intermediate resilient means interposed between said stator and said frame and supporting said stator in said frame held only resiliently against both rotary and translatory movements relative to said frame.



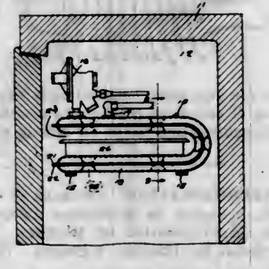
1,688,892. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich. Filed Jan. 29, 1927. Serial No. 164,426. 3 Claims. (Cl. 62—95.)

1. Refrigerant expansion apparatus comprising: a plurality of refrigerant expansion units formed substantially identical, and each comprising a refrigerant expansion compartment, consisting of a pair of headers with connecting tubes; fin means on said connecting tubes; ice tray receptacles carried by said fin means; a framework connecting said refrigerant expansion compartments into a single re-



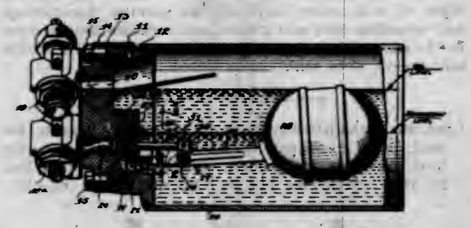
frigerant expansion unit; and conduits connecting said headers into a single refrigerant expansion chamber.

1,688,893. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich. Filed Jan. 29, 1927. Serial No. 164,427. 4 Claims. (Cl. 62—95.)



1. Refrigerant expansion apparatus comprising; a plurality of refrigerant expansion units formed substantially identical, and each comprising a refrigerant expansion compartment, having the form of a spiral tube; fin means on said spiral tubes; ice tray receptacles supported by said fin means; a framework connecting said spiral tubes into a single refrigerant expansion unit; and means connecting said spiral tubes into a single refrigerant expansion chamber.

1,688,894. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich. Filed Jan. 29, 1927. Serial No. 164,428. 3 Claims. (Cl. 62—95.)

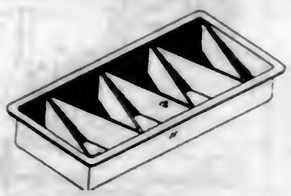


1. Refrigerant expansion apparatus comprising; a plurality of refrigerant expansion units formed substantially identical, and each comprising a refrigerant expansion compartment, having the form of a spiral tube; fin means carried by the separate turns of each of said spiral tubes; ice tray receptacles supported by said fin means; a framework connecting said spiral tubes into a single refrigerant expansion unit; and means connecting said spiral tubes into a single refrigerant expansion chamber.

1,688,895. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 29, 1927. Serial No. 164,429. 4 Claims. (Cl. 62—95.)

2. In a mechanical refrigerating system, a refrigerant expander unit including two sheet metal plates joined at their peripheral edges and bent to form a container of substantially U-shape, the legs of said container being spaced to form a tray receiving recess therebetween, and spacing means intermediate the peripheral edges of said plates within said container.

1,688,896. REFRIGERANT-CONTROL MECHANISM. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 29, 1927. Serial No. 164,434. 5 Claims. (Cl. 137—104.)

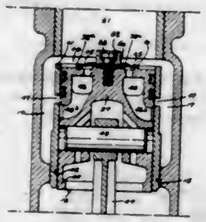


2. In refrigerating apparatus of the class described, a vessel adapted to contain a liquefied refrigerant, said vessel having refrigerant passages through its wall, a removable valve seat extending into the interior end of the inlet passage in said vessel, a valve element in said vessel arranged to co-operate with said seat, float mechanism for actuating said valve element, and a bracket removably secured to the wall of said vessel positively retaining said valve seat in said passage, said bracket carrying said valve element and said float mechanism.

1,688,897. SUPPORTING MEANS FOR VAPORIZERS. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 31, 1927. Serial No. 164,981. 5 Claims. (Cl. 62—95.)

1. A supporting structure for fixing the cooling unit of a mechanical refrigerating apparatus in a chamber of a refrigerator through which air circulates, comprising sub-

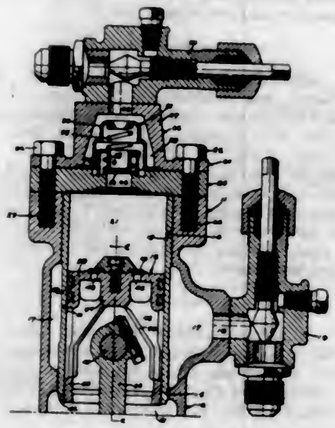
1,688,887. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 4, 1926. Serial No. 113,667. 2 Claims. (Cl. 62—111.)



1. A receptacle for the production of frozen fluid in mechanical refrigerators consisting of a metal pan, and a removable partition within said pan, said partition structure consisting solely of a single sheet of metal bent to divide the space within said pan into a plurality of triangular compartments.

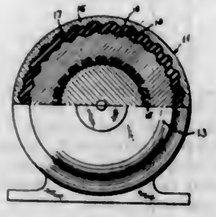
1,688,888. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Aug. 6, 1926. Serial No. 127,532. 2 Claims. (Cl. 62—111.)

1. A tray for freezing comestibles in a mechanical refrigeration system comprising a supporting rack provided with a plurality of openings, molds adapted to be removably secured in the openings of said rack, depending flange means associated with said rack adjacent the openings to retain said molds on said rack, and means intermediate the ends of said molds to cooperate with said flange means to retain said molds in said rack.



1,688,889. PISTON FOR REFRIGERATION PUMPS. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Oct. 30, 1926. Serial No. 145,153. 5 Claims. (Cl. 230—221.)

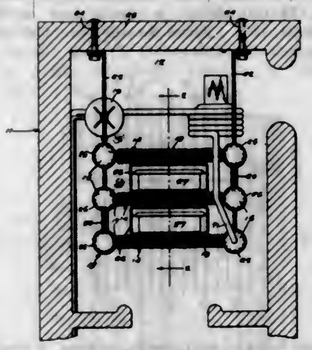
1. In a compressor, the combination of a piston having ports extending through the end wall, and a valve structure comprising a plate adapted to seat against the end wall of said piston to close the ports therethrough, a follower movable with said valve plate, and a retainer stud secured to the end wall of said piston for said follower and valve plate, said valve plate and follower being reciprocable relative to said stud and piston.



1,688,890. PUMP FOR MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Oct. 30, 1926. Serial No. 145,157. 1 Claim. (Cl. 230—190.)

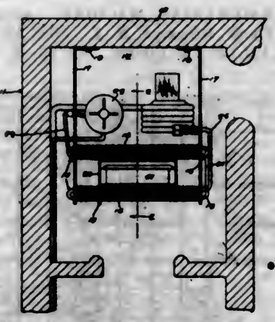
In a compressor for refrigerating apparatus, a cylinder casing having an intake chamber encircling a portion thereof, a sleeve in said casing having intake ports extending in a direction axially thereof and in open communication with said intake chamber, a piston in said sleeve having a plurality of passages extending from the side wall and through the top wall thereof, said sleeve ports being of greater length than the distance between the inlet end of

said piston passages and the piston end wall, and a movable valve associated with the piston end wall to control the passage of refrigerant through said piston, said piston being arranged to uncover a portion of one end of said sleeve ports and with the passages therein in communication with said intake chamber when in retracted position.



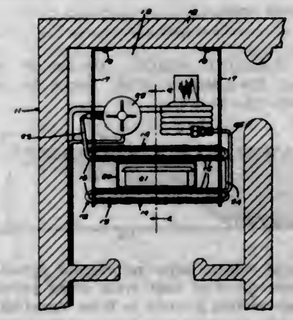
1,688,891. ELECTRIC-MOTOR. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 10, 1927. Serial No. 160,294. 3 Claims. (Cl. 172—36.)

1. A vibration reducing construction for an electric motor comprising a motor frame, a motor stator, and intermediate resilient means interposed between said stator and said frame and supporting said stator in said frame held only resiliently against both rotary and translatory movements relative to said frame.



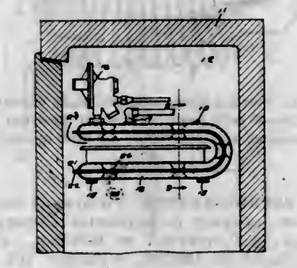
1,688,892. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich. Filed Jan. 29, 1927. Serial No. 164,426. 3 Claims. (Cl. 62—95.)

1. Refrigerant expansion apparatus comprising: a plurality of refrigerant expansion units formed substantially identical, and each comprising a refrigerant expansion compartment, consisting of a pair of headers with connecting tubes; fin means on said connecting tubes; ice tray receptacles carried by said fin means; a framework connecting said refrigerant expansion compartments into a single re-



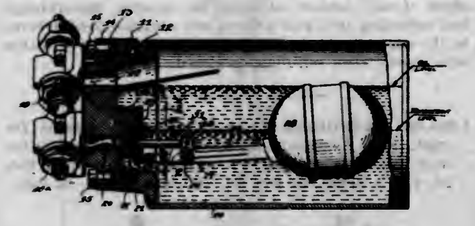
frigerant expansion unit; and conduits connecting said headers into a single refrigerant expansion chamber.

1,688,893. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich. Filed Jan. 29, 1927. Serial No. 164,427. 4 Claims. (Cl. 62—95.)



1. Refrigerant expansion apparatus comprising: a plurality of refrigerant expansion units formed substantially identical, and each comprising a refrigerant expansion compartment, having the form of a spiral tube; fin means on said spiral tubes; ice tray receptacles supported by said fin means; a framework connecting said spiral tubes into a single refrigerant expansion unit; and means connecting said spiral tubes into a single refrigerant expansion chamber.

1,688,894. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich. Filed Jan. 29, 1927. Serial No. 164,428. 3 Claims. (Cl. 62—95.)

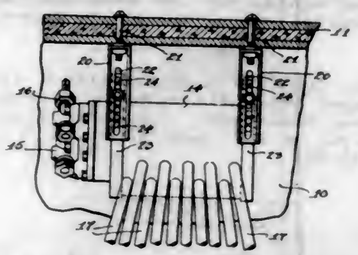


1. Refrigerant expansion apparatus comprising: a plurality of refrigerant expansion units formed substantially identical, and each comprising a refrigerant expansion compartment, having the form of a spiral tube; fin means carried by the separate turns of each of said spiral tubes; ice tray receptacles supported by said fin means; a framework connecting said spiral tubes into a single refrigerant expansion unit; and means connecting said spiral tubes into a single refrigerant expansion chamber.

1,688,895. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 29, 1927. Serial No. 164,429. 4 Claims. (Cl. 62—95.)

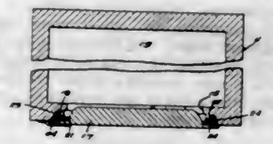
2. In a mechanical refrigerating system, a refrigerant expander unit including two sheet metal plates joined at their peripheral edges and bent to form a container of substantially U-shape, the legs of said container being spaced to form a tray receiving recess therebetween, and spacing means intermediate the peripheral edges of said plates within said container.

1,688,896. REFRIGERANT-CONTROL MECHANISM. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 29, 1927. Serial No. 164,434. 5 Claims. (Cl. 137—104.)



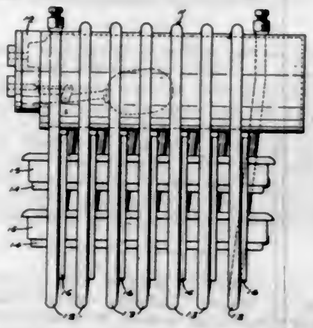
2. In refrigerating apparatus of the class described, a vessel adapted to contain a liquefied refrigerant, said vessel having refrigerant passages through its wall, a removable valve seat extending into the interior end of the inlet passage in said vessel, a valve element in said vessel arranged to co-operate with said seat, float mechanism for actuating said valve element, and a bracket removably secured to the wall of said vessel positively retaining said valve seat in said passage, said bracket carrying said valve element and said float mechanism.

1,688,897. SUPPORTING MEANS FOR VAPORIZERS. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 31, 1927. Serial No. 164,981. 5 Claims. (Cl. 62—95.)



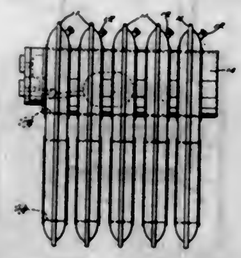
1. A supporting structure for fixing the cooling unit of a mechanical refrigerating apparatus in a chamber of a refrigerator through which air circulates, comprising sub-

stantially L shape brackets fixed within said chamber, stirrups for suspending said cooling unit in said chamber, and means for rigidly connecting said stirrups to said



brackets, said stirrups being longitudinally adjustable relative to one leg of said fixed brackets to position said cooling unit in desired relation in the air flow in said chamber.

1,688,898. REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Feb. 21, 1927. Serial No. 169,756. 5 Claims. (Cl. 20—69.)

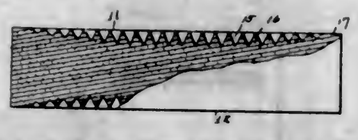


1. The combination with a cabinet provided with an opening through the wall of said cabinet to permit access to the interior thereof, said wall having a groove adjacent the opening therethrough and a door for closing the opening in said cabinet, said door being adapted to close the groove when the opening is closed; of sealing means comprising a resilient strip of metal secured to the edges of said cabinet adjacent the opening therethrough and extending into said groove, and a rubber bead secured to the edge of said door to contact with said strip within said groove when said door is closed.

1,688,899. REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Feb. 21, 1927. Serial No. 169,757. 9 Claims. (Cl. 62—95.)

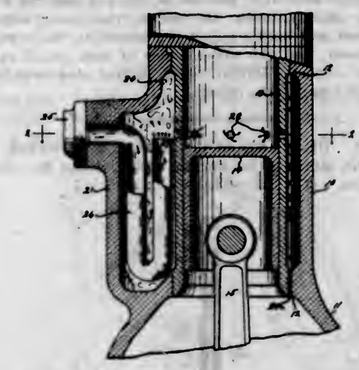
4. In a mechanical refrigerating system, a cooling unit including a liquid refrigerant container, and a continuous brine containing coil extending around and having regularly spaced portions of the length thereof engaging said container.

1,688,900. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, M'ch., a Corporation of Michigan. Filed Feb. 21, 1927. Serial No. 169,760. 6 Claims. (Cl. 62—95.)



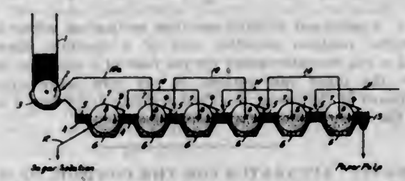
1. In a mechanical refrigerating system, a cooling unit including a liquid refrigerant container, and a plurality of spaced parallel closed hollow brine receptacles surrounding said container, said receptacles having aligned apertures through which said container extends.

1,688,901. BAG-MAKING MACHINE. ABRAHAM STONE and MAX FROST, Brooklyn, N. Y. Filed May. 16, 1927. Serial No. 191,730. 20 Claims. (Cl. 93—8.)



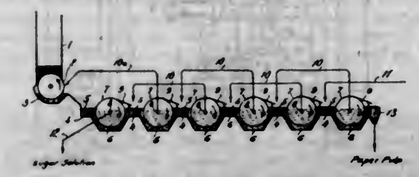
1. In a bag-making machine, the sub-combination of cutting mechanism adapted to sever strips from the edge portions of a blank, adhesive-applying mechanism aligned with said cutting mechanism, longitudinally slidable feed rods having two pairs of feed fingers pivoted thereto, a table on which said blank is adapted to rest and having longitudinal slots in which said fingers are adapted to move, links pivotally connected to said fingers above their pivotal connections to said feed rods, and means adapted to reciprocate said links.

1,688,902. BUILDING BRICK. HALVER R. STRAIGHT, Adel, Iowa. Filed Mar. 8, 1926. Serial No. 93,241. 2 Claims. (Cl. 72—37.)



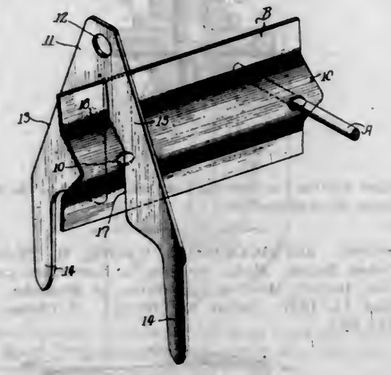
1. A brick of substantially rectangular formation, two of the opposite faces of said brick being provided with a series of intersecting grooves to form outwardly projecting members, the grooves being deeper at their central portions than at their ends, and so proportioned that the drying surface of said opposite faces will be gradually increased from their edges to their central portions.

1,688,903. COMPRESSOR FOR REFRIGERATING APPARATUS. MELBOURNE E. THOMPSON, Detroit, Mich., assignor to Trippensee Sales and Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed June 16, 1927. Serial No. 199,273. 2 Claims. (Cl. 230—211.)



1. In a refrigerating compressor a cylinder, an intake chamber for refrigerant in the form of a jacket around said cylinder, a refrigerant inlet for said chamber, an outlet for refrigerant from said chamber to said cylinder, and a liquid collector and vaporizer connected to said inlet and located within said chamber.

1,688,904. PROCESS FOR SIMULTANEOUSLY MAKING SUGAR AND PAPER PULP FROM CANE. EUGENIO ANTONIO VAZQUEZ, Habana, Cuba, assignor to Vazcane Process, Inc., a Corporation of Delaware. Filed Aug. 30, 1927, Serial No. 216,348, and in Cuba June 2, 1927. 10 Claims. (Cl. 127—45.)



1. A process for recovering sugar from fibrous vegetable materials which comprises separating the material into fibers, agitating the fibers in a leaching liquid, separating the liquid from the undissolved fibers, and recovering the sugar from the leaching liquid.

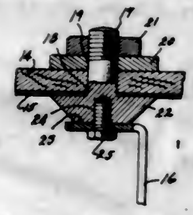
1,688,905. APPARATUS FOR SIMULTANEOUSLY MAKING SUGAR AND PAPER PULP FROM CANE. EUGENIO ANTONIO VAZQUEZ, Habana, Cuba, assignor to Vazcane Process, Inc., a Corporation of Delaware. Original application filed Aug. 30, 1927, Serial No. 216,348, and in Cuba June 2, 1927. Divided and this application filed Apr. 3, 1928. Serial No. 267,036. 15 Claims. (Cl. 127—4.)

1. An apparatus for preparing sugar-cane for the recovery of sugar and fiber pulp which comprises an abrasive surface moving in contact with the sugar-cane whereby the sugar-cane is separated into fibers, and a source of liquid for wetting said abrasive surface.

1,688,906. ROAD-STRIP SUPPORT. WILLIAM E. WHITE, Chicago, Ill., assignor to Kalman Steel Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 11, 1926. Serial No. 140,884. 5 Claims. (Cl. 94—51.)

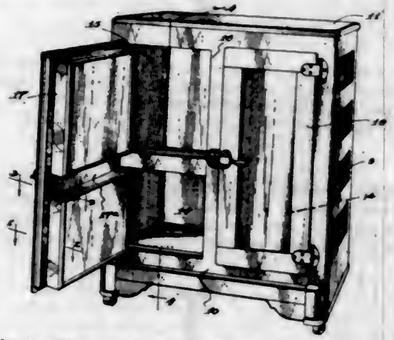
1. A device for co-operation with a channel road strip, having a notch at the extreme of the channel comprising pronged strip holding device adapted to straddle the strip and to engage with the notch in the channel thereof.

1,688,907. SUPPORT FOR ROAD STRIPS. WILLIAM E. WHITE, Chicago, Ill., assignor to Kalman Steel Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 11, 1926. Serial No. 140,885. 3 Claims. (Cl. 94—51.)



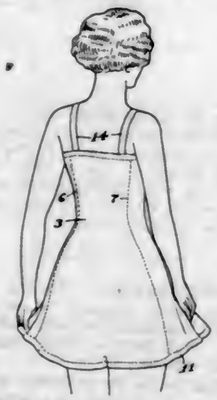
1. In a device for co-operation with a road strip having vertically aligned holes in the channel thereof, the combination of an apertured head, having a prong adapted to enter the apertures, and a stake passing through the aperture in the head and alongside of the strip and adapted to be driven into the soil for holding the strip against movement in all directions.

1,688,908. REFRIGERATOR. WALTER H. WHITTIER, Grand Rapids, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed July 26, 1926. Serial No. 124,866. 3 Claims. (Cl. 62—95.)



2. A supporting device for anchoring a brine tank carrier within the cooling chamber of a refrigerator comprising an anchor element extending through and entirely supported by a wall of the refrigerator casing, said anchor

having a flanged portion within the cooling chamber adjacent the lining thereof, and means co-operating with said

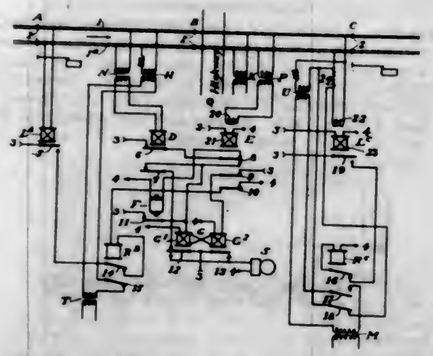


flanged portion for securing said tank carrier to the flanged portion of said anchor.

1,688,909. REFRIGERATOR. WALTER H. WHITTIER, Grand Rapids, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed May 14, 1927. Serial No. 191,322. 5 Claims. (Cl. 62—89.)

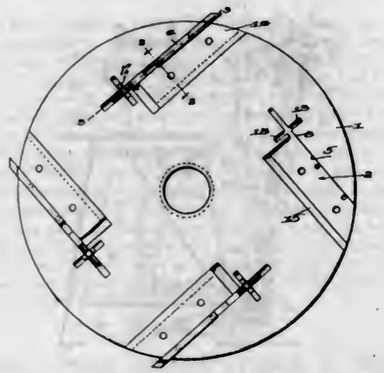
1. In a refrigerated food storage cabinet, a horizontal partition dividing said cabinet into a refrigerating chamber and a refrigerated chamber, said cabinet having openings through the front wall to permit access to each of said chambers, and a single door closing the openings, said door having a groove adapted to receive the front portion of said partition.

1,688,910. UNDERGARMENT. CHARLES N. WINSHIP, Wakefield, Mass., assignor to Winship, Bolt & Co., a Copartnership consisting of Charles N. Winship and Elizabeth E. Bolt, Wakefield, Mass. Filed Mar. 13, 1926. Serial No. 94,587. 1 Claim. (Cl. 2—78.)



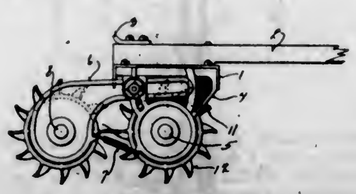
A lady's undergarment comprising a front section forming the greater part of the body of the garment, said front section being of approximately rectangular form with a slit extending for a considerable distance upwardly from the central part of the lower edge thereof, a tapered gusset sewed to the opposite edges of said slit, a back panel sewed to the opposite edges of said front section, said panel being relatively narrow at its top and waist and widening rapidly below the waist, the lower edges of said gusset and back panel being united in the crotch of the garment, and the lower edges of said panel extending from opposite lateral edges thereof downwardly toward each other to the crotch.

1,688,911. BILLIARD CUE. ROBERT B. WOLPERT, Minneapolis, Minn. Filed Apr. 22, 1927. Serial No. 185,833. 5 Claims. (Cl. 273—68.)



1. A sectional billiard cue, one section of which has a tubular resilient metallic core of a constant diameter, and a non-metallic casing for the core of a constant diameter, the inner end portion of the core being extended outward of the casing to afford a shank fitted into a socket in the other section of the billiard cue.

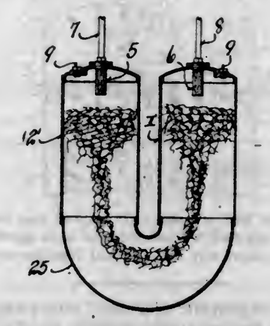
1,688,912. APPARATUS FOR THE CONTROL OF HIGHWAY-CROSSING SIGNALS. HENRY S. YOUNG, Wilkinsburg, and ROBERT M. GILSON, Pittsburgh, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 7, 1926. Serial No. 140,010. 7 Claims. (Cl. 246—130.)



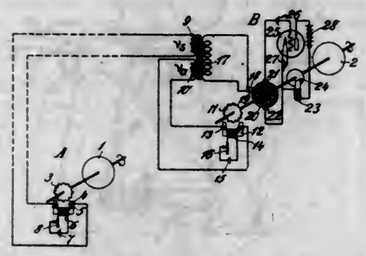
7. In combination, a section of railway track, a source of signaling current connected with the rails at one end of said section, a track relay connected with the rails at the other end of said section, means including a coding device for at times applying periodically interrupted alternating train control current to the rails at the relay end of said section, a resistance interposed between said relay and one of the rails of said section, and means controlled by said coding device for closing a shunt around said resistance when train control current is not being supplied to the rails and for opening said shunt when train control current is being supplied to the rails.

1,688,913. COPE HEAD FOR TENONERS AND THE LIKE. HARRY T. AHRENDT, Dubuque, Iowa. Filed May 11, 1927. Serial No. 190,471. 9 Claims. (Cl. 144—230.)

1. A cope head having an elongated channel shaped recess in one of its faces, a gib slidably seated in the bottom of the recess, a knife resting on the gib and guided by a wall of the recess, means for simultaneously adjusting the gib and knife lengthwise inwardly and outwardly, and means for locking the knife and gib in the recess.



1,688,914. SOIL-PULVERIZING MACHINE. HENRY ARIENS, Brillion, Wis., assignor to Brillion Iron Works, Brillion, Wis. Filed May 21, 1927. Serial No. 193,196. 3 Claims. (Cl. 55—24.)

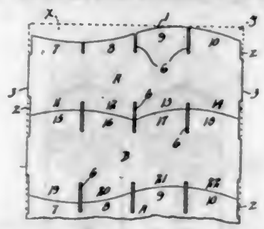


1. The combination of a machine adapted to be drawn over the ground and provided with a pair of spaced and parallel shafts, a series of wheels carried by each shaft and adapted to dig into the ground with the wheels of one series staggered with reference to the wheels of the other series, one series consisting of wheels with their teeth staggered and curved and adapted to enter the ground substantially vertically and to underhang the ground as they rise therefrom.

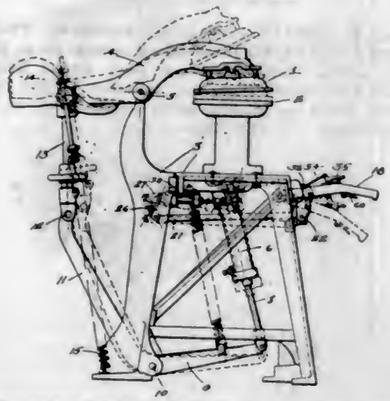
1,688,915. APPARATUS FOR TREATING LIQUIDS. JOHN ASTROM, Fort Wayne, Ind., assignor of one-half to Deister Machine Company, Fort Wayne, Ind., a Corporation. Filed Dec. 10, 1926. Serial No. 153,885. 8 Claims. (Cl. 210—24.)

1. A liquid treating device comprising two compartments, one end of one compartment permanently communicating with one end of the other compartment, means for passing liquid in either direction through said compartments, and liquid treating means carried within said compartments and their communicating parts, the communicating parts being of comparatively large cross section so that the liquid treating means will freely pass into the communicating parts.

1,688,916. MEANS FOR SYNCHRONIZING TWO OR MORE ROTATING BODIES. WALTHER BOCK, Berlin-Schoneberg, Germany, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany. Filed Dec. 9, 1927, Serial No. 238,982, and in Germany Dec. 11, 1926. 10 Claims. (Cl. 172—293.)



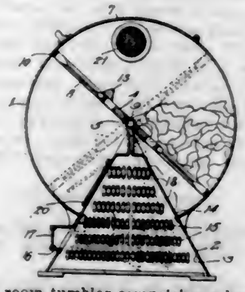
1. Apparatus for maintaining two or more rotating bodies in complete synchronism, comprising, in combination, means for producing a synchronizing alternating current with a periodicity corresponding to the speed of one rotating body and having a distinct phase relationship with respect to it, means to transmit said synchronizing current to another rotating body to be operated synchronously with said first mentioned rotating body, means similar to said first mentioned means for producing an auxiliary alternating current with a periodicity corresponding to the speed of said second rotating body to be synchronized and having a distinct phase relationship with respect to it, a rotating commutator driven wtih said second rotating body to be synchronized and designed to effect commutation synchronously with said second rotating body to be synchronized, the A. C. input side of said commutator being supplied by a current attained by superposition of said synchronizing and said auxiliary currents, and a speed controlling device acting on said rotating body to be synchronized and operated by the mean value of the commutated current supplied by the output side of said commutator.



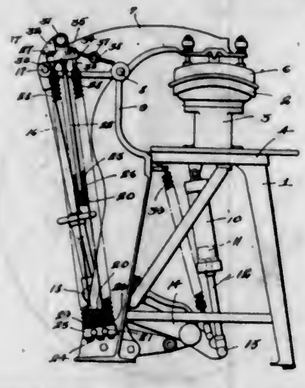
1,688,917. SHINGLE. LEON BUSHA, Minneapolis, Minn. Filed Apr. 9, 1926. Serial No. 100,855. 2 Claims. (Cl. 108—7.)

1. Roofing material for thatched roofs comprising two shingle strips cut from a sheet of material forming a four-sided figure having two opposite straight and parallel sides, said strips being cut transversely so that they have their

remote sides irregularly curved and substantially parallel and the contiguous sides so cut that the sides of each strip adjacent one end are oppositely curved and said sides adjacent its other end are similarly curved and substantially parallel, the opposite curved sides of each sheet being non-symmetrical about any axis located therebetween.

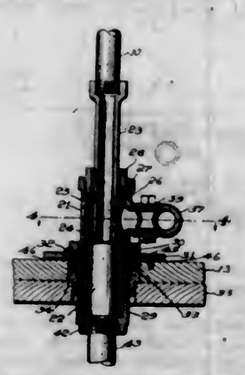


1,688,918. PRESSURE CONTROL FOR PRESSING MACHINES. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Apr. 7, 1927. Serial No. 181,872. 18 Claims. (Cl. (Cl. 68—9.)



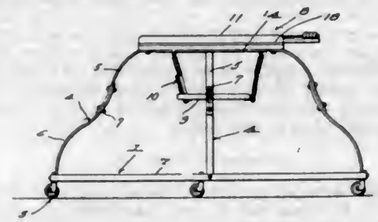
1. A pressing machine comprising cooperating elements, one of which is movable toward and from the other, power means including a motor for actuating the movable element, and operator controlled means for adjusting the pressure including mechanism for shifting the position of the motor.

1,688,919. DRYING-ROOM TUMBLER. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed June 23, 1927. Serial No. 200,981. 6 Claims. (Cl. 34—7.)



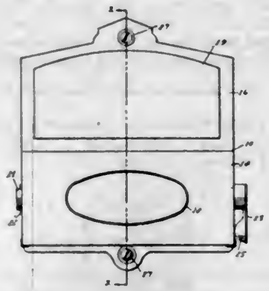
1. A drying room tumbler comprising a horizontal cylindrical body, an oscillating support mounted in the body to oscillate about the axis of the body above and below the horizontal plane of such axis, the support having air passages therethrough and slidably fitting the body whereby it acts with the clothes thereon as a rotary piston, an air chamber extending into the lower part of the body and having a check valve controlled outlet into the body arranged to prevent passage of air under the suction action of the support with the clothes thereon from the body into the air chamber.

1,688,920. PRESSING MACHINE. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Oct. 22, 1927. Serial No. 228,042. 9 Claims. (Cl. 68—9.)



1. A pressing machine comprising a pair of co-operating pressing elements one of which is movable toward and from the other, motor means for actuating the movable element, and retarding mechanism normally idle and arranged to come into action to act against the motor means as the movable element approaches its final pressing position.

1,688,921. PIPE FITTING. WALTER G. DOWS, Dorchester, Mass. Filed Mar. 11, 1925. Serial No. 14,728. 19 Claims. (Cl. 137—69.)

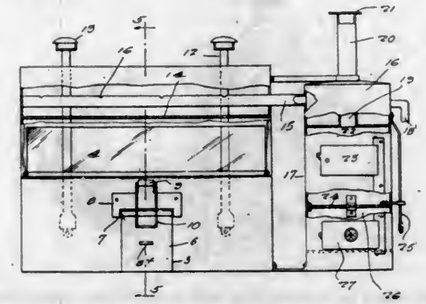


1. In combination with a riser for heating fluids, a hollow casing constructed to form a connection between two sections of the riser and having a threaded outer surface, a neck leading from one side of the casing and adapted to be connected to a branch pipe, an internally threaded sleeve adjustably engaging the threads of the casing and having a centering portion adapted to fit a hole in the floor and center the casing, a laterally extending flange upon the sleeve that rests upon the floor, and the sleeve being adjustable lengthwise of the casing to raise and lower the latter.

1,688,922. BABY WALKER. JOHN DRINOSKY, Jr., Niles, Ohio. Filed Feb. 23, 1927. Serial No. 170,285. 1 Claim. (Cl. 155—22.)

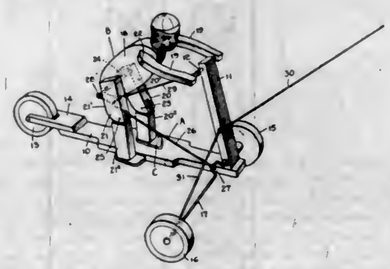
In a baby walker of the class described, a base ring, casters connected to said ring at circumferentially spaced points, supporting legs connected with the ring at circumferentially spaced points and composed of upper and lower slidably connected sections, the upper ends of the upper sections being directed laterally and inwardly toward each other, an annulus rigidly fastened to said inturned ends, a second annulus superimposed upon the first annulus, and relatively rotatable with respect to the latter, the second named annulus having its inner edge downturned, a keeper strip carried by said down turned edge and engaged beneath said first named annulus, facing plates carried by the opposed faces of said annuli, one of said plates having its outer edge formed with an upstanding flange providing confining means and spacing means, and anti-friction balls disposed between said facing plates.

1,688,923. TWINE HOLDER. THOMAS P. HARRIS, Clarinda, Iowa. Filed Jan. 25, 1927. Serial No. 163,309½. 4 Claims. (Cl. 242—146.)



1. A twine holder comprising a body portion formed of a single piece of sheet metal having a bottom provided with a twine receiving opening, end, front and top members, the top being provided with a flat and upwardly projecting back member, a windlass rotatively mounted in said end members, means for rotating said windlass, and means mounted on said windlass for fastening the end of twine thereto.

1,688,924. PROCESS FOR ORNAMENTING SHEET MATERIAL. RAYMOND HARVEY, New York, N. Y., and HARRY V. DAY, Pequannock Township, Morris County, N. J., assignors to The Pantasote Leather Company, Passaic, N. J., a Corporation of New Jersey. Filed July 1, 1926. Serial No. 119,984. 5 Claims. (Cl. 41—26.)

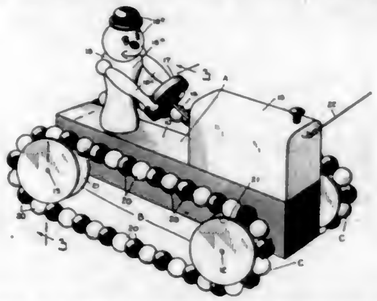


1. A process for ornamenting flexible sheet material which consists in covering the material with a pattern or stencil, spraying a color containing a fixing means against the stencil or pattern, and applying a coat over the entire material to cloud over sharply defined irregular outlines and to produce a diffused effect thereon.

1,688,925. BROODER. OLE J. HAUGEN, Mapes, N. Dak. Filed Apr. 24, 1926. Serial No. 104,422. 1 Claim. (Cl. 119—34.)

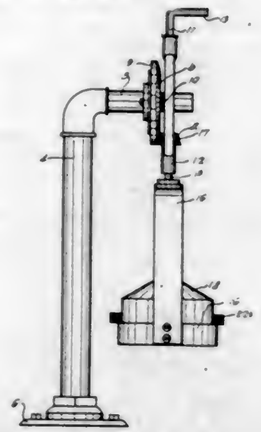
A brooder comprising a casing body having a compartment to receive chicks, means for heating said compartment, a sub-casing in communication with the interior of said compartment at one end thereof and having an inclined transparent top and also having a vertically disposed opening in said top at a point adjacent to the compartment and further having an opening in its wall remote from the compartment, a door for the latter opening, means for detachably securing said door in open position, a vertically movable curtain between the interior of the said compartment and the interior of the sub-casing, spring actuated means in the lower part of the casing body for taking up or lowering said curtain, and means movable through the said opening in the top of the sub-casing through the medium of which the curtain may be raised and the lowering of the curtain may be controlled.

1,688,926. SCOOTER FIGURE WHEELED TOY. JOHN L. HENRY, Albany, Tex. Filed June 3, 1926, Serial No. 113,384. Renewed Feb. 28, 1928. 12 Claims. (Cl. 46—45.)



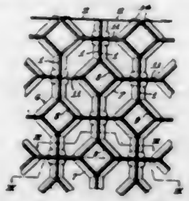
1. A figure wheeled toy comprising a simulated scooter vehicle embodying a frame having a running board and wheels carried by the frame, an articulated toy figure simulating an occupant of the vehicle mounted on the scooter vehicle, said toy figure including a body member, a leg member connecting the body member to the running board and a second leg member connected to the body member and mounted free of said running board, said second leg member being movably mounted so as to simulate propelling contact with a support on which the toy is placed, and means whereby propulsion of the vehicle along the support causes the articulated figure toy to move to simulate occupant-propelling activity.

1,688,927. FIGURE WHEELED TOY. JOHN L. HENRY, Albany, Tex. Filed Sept. 17, 1926, Serial No. 136,018. Renewed Feb. 28, 1928. 8 Claims. (Cl. 46—45.)



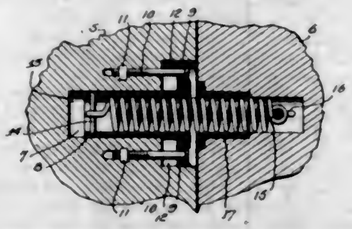
1. A vehicle toy simulating a tractor comprising a vehicle body, a pair of front wheels and a pair of rear

wheels thereon, and traction belts trained over and connecting the front and rear wheels, each tranction belt



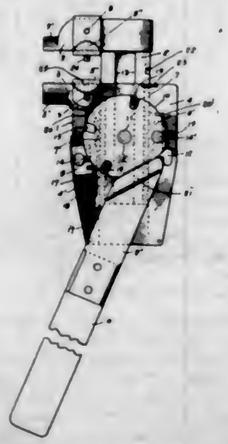
comprising an endless cord and beads having bores therethrough, said beads being loosely strung on said cord, said beads defining the traction elements.

1,688,928. CASTING APPARATUS. BERT L. HOOPER, Lincoln, Nebr. Filed May 5, 1927. Serial No. 188,937. 2 Claims. (Cl. 22—65.)



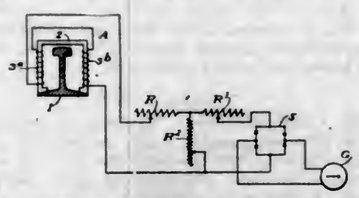
1. A centrifugal casting machine comprising a standard support having an angular arm, a fixed gear wheel on said angular arm, a frame pivoted coaxially of said gear wheel to rotate, in a substantially vertical plane, a mold holder carried to revolve with said frame and mounted to rotate about its own axis, a pinion fixed to the mold holder and enmeshed with said fixed gear wheel, and a handle on the frame opposite the mold holder.

1,688,929. CELLULAR RADIATOR. GEZA HORVATH, Highland Park, Mich. Filed May 6, 1925. Serial No. 28,411. 1 Claim. (Cl. 257—130.)



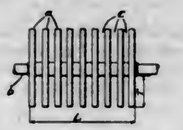
A radiator core comprising vertical rows of air tube holders with the holders of one row staggered relatively to the holders of an adjacent row, each row of tube holders being composed of channel-shaped members arranged face to face and forming walled passages between said holders, the members of said rows having the ends thereof laterally disposed and connected to the ends of members in adjacent rows, said holders having lateral webs engaging in the walled passages between said holders of adjacent rows and the webs of alternate rows being in perpendicular planes so that said webs may cooperate with the walled passages between said holders of adjacent rows in providing cross formations between adjacent holders, and tubes in said holders.

1,688,930. SPRING HINGE. ALFRED E. HYLAND, Kresseville, N. Y. Filed Nov. 21, 1927. Serial No. 234,715. 3 Claims. (Cl. 16—180.)



2. A spring-hinge appliance embodying a bushing set in a bore in one of the members and provided with lateral lugs, clearances being provided in said member underneath said lugs and at the inner end of the bushing, bolts extended through said lugs into the member, nuts engaging the threaded ends of said bolts and buried in said member, a coil-spring having one end inserted in said bushing and anchored to the inner end thereof, and means in the swinging-member for engaging the opposite end of said spring, said swinging-member being bored to receive the spring and said means for engaging this end of the spring consisting of a swinging-lever engaging the end of the spring and mounted on the swinging-member, and devices for locking this lever in its adjusted position.

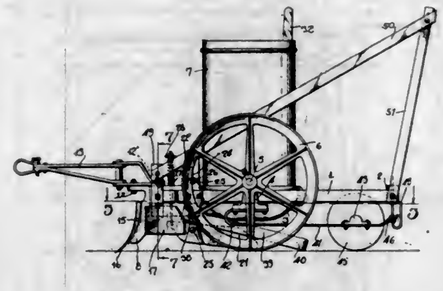
1,688,931. PIPE WRENCH. GEORGE ELWOOD KNIGHT, Sacramento, Calif. Filed July 7, 1926. Serial No. 120,885. 2 Claims. (Cl. 81—126.)



1. A wrench of the character described comprising a body provided with a projecting jaw, an outer jaw formed with a shank, slidably supported in said body, teeth along opposite sides of said shank, a handle pivoted to said body, sliding blocks equipped with teeth to engage the teeth in said shank and also adapted to engage a portion of said handle and selective means for engaging and disengaging said blocks with the shank and said handle.

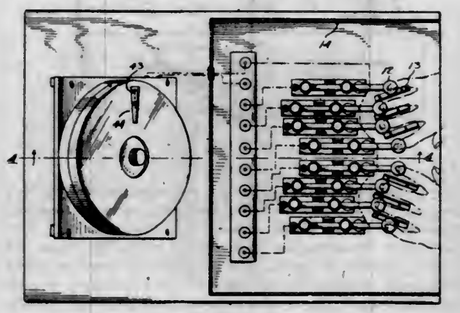
1,688,932. ELECTRICAL MEASURING APPARATUS. LAURICE L. LOCKROW, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 14, 1926. Serial No. 135,399. 1 Claim. (Cl. 175—183.)

In combination, a transformer, a full wave rectifier having its input terminals connected with the secondary of said transformer and having the characteristic of varying in resistance with variations in the temperature at which it operates, a galvanometer connected with the output terminals of said rectifier, an impedance R^2 connected in multiple with said secondary and also with the input terminals of said rectifier, an impedance R interposed between said impedance R^2 and one terminal of said secondary, and an impedance R^1 interposed between said impedance R^2 and one of the input terminals of said rectifier, said impedances being so chosen that the sum of impedances R^2 and R is constant and is substantially equal to the combined impedance of the rectifier and the galvanometer, and that the sum of impedances R^2 and R^1 is constant and is substantially equal to the effective resistance of said transformer secondary.



1,688,933. MULTISTAGE DISK-WHEEL TURBINE. FRANZ LÖSEL, Brunn, Czechoslovakia. Filed Aug. 16, 1924, Serial No. 732,413, and in Austria Feb. 7, 1924. 1 Claim. (Cl. 253—39.)

A multi-stage disk-wheel turbine of the low velocity type comprising a multiple disk-wheel rotor, the rotor shaft and the disk-wheels being integrally formed into a single solid unit with the disks disposed at right angles to the shaft and each integral disk-wheel being of substantially uniform thickness from the shaft radially outward to its outermost peripheral edge, whereby unequal temperature expansions and contractions in the rotor unit and dangerous stresses due thereto are avoided notwithstanding the high temperature operation and whereby the turbine length may be kept within practical limits notwithstanding the large number of stages operating at low steam velocity necessary to obtain the required efficiency.

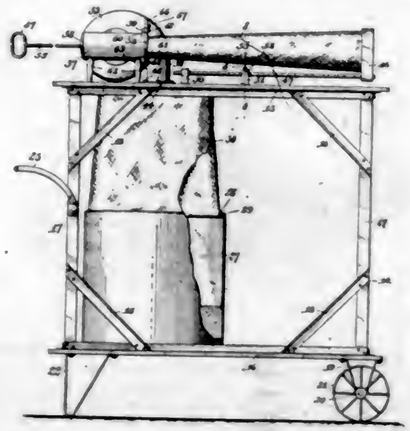


1,688,934. COTTON PLANTER. PATRICK H. LYNCH, Dunn, N. C., assignor to The John A. McKay Manufacturing Company, Inc., Dunn, N. C., a Corporation of North Carolina. Filed Feb. 20, 1926. Serial No. 89,791. 6 Claims. (Cl. 111—59.)

1. In a machine of the character described, the combination of a main frame, divided castings bolted together, brackets extending forwardly from said castings, an opener casting suspended from the forward end of said brackets, a plow point secured thereto, and means for securing the opener casting, brackets, and the main frame together.

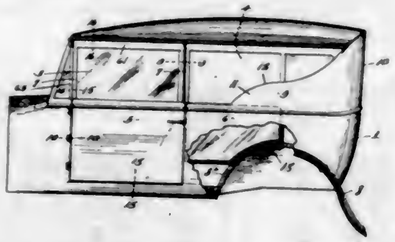
4. In a machine of the character described, the combination of a frame, a plow member carried by said frame near the front thereof, an adjustably mounted divider shoe suspended from the frame rearwardly of said plow member, resilient tensioning means connected with said shoe, seed feeding means mounted on the frame and having a point of discharge closely behind the shoe, covering drags independently pivoted to the frame, and disposed behind the point of discharge for covering the seed, and a resiliently mounted covering roller located behind the drags.

1,688,935. APPARATUS FOR TESTING THE APTITUDE OF KEYBOARD OPERATORS. HORACE B. MCCHESNEY, Montclair, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Sept. 27, 1926. Serial No. 137,993. 4 Claims. (Cl. 35—12.)



1. In a device of the kind described, a keyboard, display means for successively displaying characters corresponding to the respective keys of said keyboard, means operatively connected to said display means to time the intervals for the exposure of said numbers, whereby whether or not the operator strikes the designated keys at the proper instant will be indicated by the counter, and means operatively associated with the keyboard for registering the number of times the respective keys of the keyboard have been depressed.

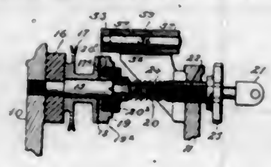
1,688,936. MACHINE FOR CLEANING DUST-COLLECTOR TUBES. VERNON B. MCLEAN, Buffalo, N. Y. Filed Nov. 13, 1924. Serial No. 749,662. 8 Claims. (Cl. 15—7.)



2. A machine for cleaning tubes, comprising a fan, a brush casing connected with the eye of said fan and having

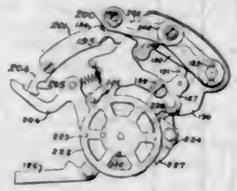
means to connect the open end of a tube thereto, a brush arranged in said brush casing, means mounted in said

brush casing to move said brush into said tube, and reversely, and a dust receptacle connected with the outlet of said fan.



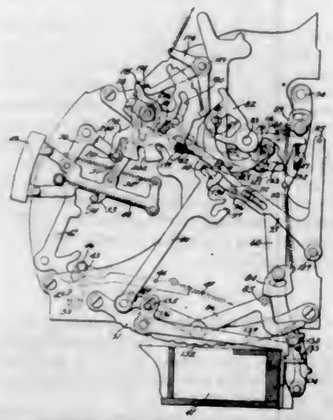
1,688,937. AUTOMOBILE BODY, DOOR, AND WINDOW CONSTRUCTION. LEWIS J. MORGAN, Syracuse, N. Y., assignor of one-fourth to Harry M. Strong, Syracuse, N. Y. Filed June 12, 1923. Serial No. 644,890. 12 Claims. (Cl. 296—44.)

1. In an automobile body, door and window construction the combination of a framing including spacing members comprising metal strips spaced apart and formed with lengthwise channels on their inner opposing edges for forming guides, a sashless window pane movable along the guides, said strips having upward extensions beyond the upper edge of the door and the body and said extensions forming guides for the window panes when in elevated position out of the door or the body, metal edge facing strips for the exposed edges of the framing, an outer metal sheeting on the door or body, each edge facing strip being interlocked at its outer edge with the sheeting, and means securing said edge facing strips to the underlying spacing members.



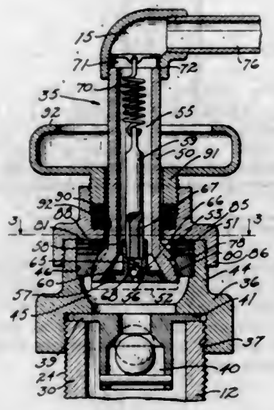
1,688,938. SEWING MACHINE. JOHN ROGER OLIVER, Medfield, Mass., assignor to Reece Shoe Machinery Company, Boston, Mass., a Corporation of Maine. Filed Apr. 6, 1926. Serial No. 100,088. 5 Claims. (Cl. 112—59.)

1. In a hook needle sewing machine, a revoluble thread wheel having non-slipping engagement with the thread, a revoluble friction member contacting the thread wheel with substantial friction, a non-revoluble presser member pressing said friction member against the thread wheel, with an anti-friction rolling-element bearing between the presser member and friction member, means anchoring the friction member against rotation during part of each stitch cycle to impose full resistance on the thread wheel and



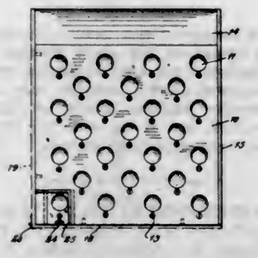
full tension on the thread, and timed means operating to release the friction member thereby to relax the tension during another part of each stitch cycle.

1,688,939. CASH REGISTER. LAWRENCE C. OSTENDORF, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Apr. 23, 1924. Serial No. 708,465. 11 Claims. (Cl. 235—2.)



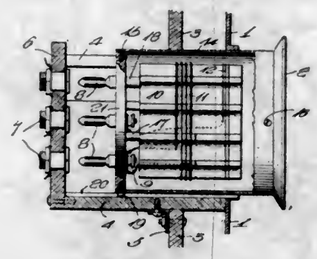
1. In a machine of the class described, the combination of a pivoted printer member having a home position and an operated position, a driving means, an impression platen arm supported by said printer member, a type segment adapted to be differentially positioned, a yieldably supported member adapted to cause said impression platen arm to operate and cause an impression to be made from said type segment, and a second yieldably supported member adapted to cause said impression platen arm to operate to make said impression, before said driving means can return said pivoted printer member to home position.

1,688,940. CASH REGISTER. WILLIAM H. ROBERTSON, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Aug. 16, 1926. Serial No. 129,452. 10 Claims. (Cl. 235—2.)



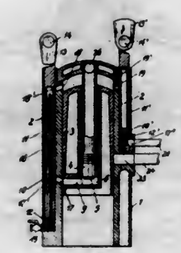
3. In a machine of the class described, the combination of a totalizer, actuators therefor, a member for disengaging and engaging the totalizer with the actuators, a lever having a cam slot adapted to control the position of the member whereby said member is moved into an ineffective position during sub-total operations and into an effective position during grand-total operations, and a pitman for transmitting movement from the lever to the member as determined by said cam slot.

1,688,941. SWIVEL-TYPE LUBRICATING DEVICE. RONALD M. SCHLEGEL, Los Angeles, Calif., assignor to Frank J. Kimball Company, Los Angeles, Calif., a Corporation of California. Filed Apr. 26, 1927. Serial No. 186,605. 13 Claims. (Cl. 308—170.)



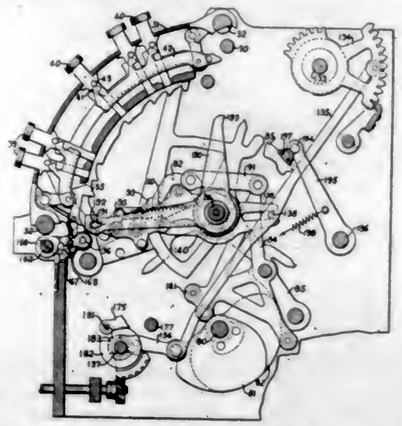
1. A device for injecting lubricant into a rotating hollow shaft, said device comprising: a body adapted to rotate with said shaft and having a chamber communicating with the interior of said shaft, a seat being formed upon said body in said chamber; a nozzle projecting into said chamber and having a face adapted to make a tight contact with said seat or be disposed away from said contact; and means for forcing lubricant through said nozzle into said chamber in a manner to move said nozzle so that said face contacts said seat.

1,688,942. GAME BOARD. HARRY SCHLESINGER, Passaic, N. J. Filed Sept. 24, 1927. Serial No. 221,695. 5 Claims. (Cl. 273—123.)



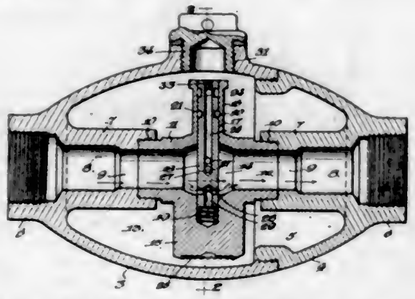
1. A game-board comprising a plurality of depressed parts formed in said board, an exchangeable means for limiting the run of balls propelled onto said board, a means for allowing a ready exchange of one and the other of said depressed parts, and a runway for the balls leaving the board.

1,688,943. RADIO RECEIVING APPARATUS. SAMUEL TAYLOR SCHOFIELD, Washington, D. C., assignor to National Electrical Supply Company, Washington, D. C., a Corporation of Virginia. Filed Oct. 4, 1927. Serial No. 223,903. 6 Claims. (Cl. 250—16.)



1. In a transformer mounting for radio receiving apparatus a panel structure apertured to receive a transformer through the front thereof, an auxiliary panel structure extending parallel to said aforementioned panel structure and correspondingly apertured to permit the insertion or removal of the transformer therethrough, and a plurality of guide members carried by said auxiliary panel structure and extending substantially at right angles to said aforementioned panel structure adjacent the apertured portion thereof for guiding said transformer into or out of said radio receiving apparatus.

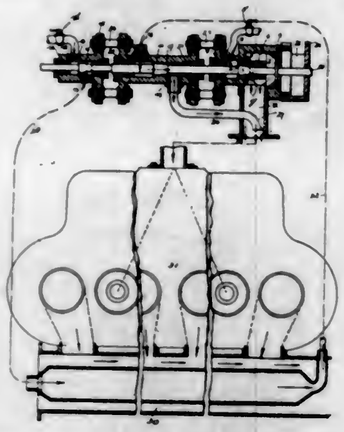
1,688,944. INTERNAL-COMBUSTION ENGINE. WALDEMAR SCHULZ, Neu-Ruppin, Germany. Filed June 17, 1926, Serial No. 116,709, and in Germany June 19, 1920. 5 Claims. (Cl. 123—71.)



1. An internal combustion engine of the Diesel type in which air for combustion is raised by compression to the temperature of spontaneous fuel ignition, comprising a working cylinder and piston, one part being formed with a chamber forming a counter cylinder and the other with a portion coacting with the walls of said chamber to function as a counter piston, means for admitting air successively to said counter cylinder and working cylinder, said air being simultaneously compressed by reciprocation of said working piston, and means forming a by-pass connecting said counter cylinder and working cylinder, a fuel nozzle terminating in said by-pass, said pistons being so related to the cylinders in which they travel as to provide a superior pressure differential in the counter cylinder, inducing a flow in said by-pass towards said working cylinder, the air in said working cylinder being raised only to the combustion pressure while the air in said by-pass is raised to spontaneous ignition pressure.

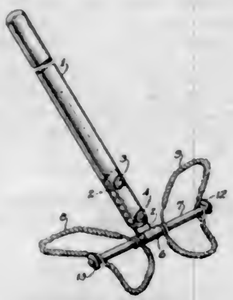
1,688,945. CASH REGISTER. BERNIS M. SHIPLEY, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Apr. 22, 1926. Serial No. 103,818. 19 Claims. (Cl. 235—130.)

1. In a machine of the class described, the combination of a total lever having an adding position and a plurality of total-taking positions, and automatic means for locking said total lever against a return movement to adding position after a certain total-taking operation.



1,688,946. LUBRICATOR. EDWARD F. TERRY, Jr., Denver, Colo., assignor, by mesne assignments, to The Gardner-Denver Company, Quincy, Ill., a Corporation of Delaware. Filed Feb. 17, 1926. Serial No. 88,866. 24 Claims. (Cl. 184—55.)

4. In a lubricator, the combination with a casing having a lubricant reservoir and an open ended passageway for the flow of fluid, of a pendulum member swingingly mounted in the casing and having means for delivering lubricant from the reservoir into the passageway between the ends thereof.

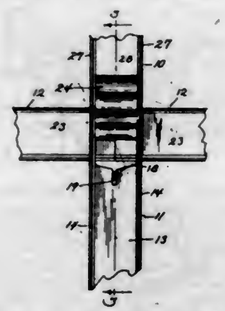


1,688,947. CARBURETOR. FRANCOIS VICTOR ALBERT THOMAS, Paris, France. Filed July 7, 1921, Serial No. 483,035, and in France Aug. 2, 1920. 2 Claims. (Cl. 261—18.)

1. In a carburetor designed for the use of heavy or light hydrocarbon made up of several interconnected body portions, one of such body portions having an air inlet, a mixture outlet, a valve controlling communication between the air inlet and fuel outlet, a light hydrocarbon inlet, a valve controlling communication between the light hydrocarbon inlet and the fuel outlet, a second body portion spaced from the first mentioned body portion and including a heavy hydrocarbon vapor inlet, a heavy hydrocarbon vapor outlet leading to and communicating with the fuel outlet of the first mentioned body portion, a valve arranged between the said inlet and outlet of the second body portion, a third body portion spaced from the second body portion and having a heavy hydrocar-

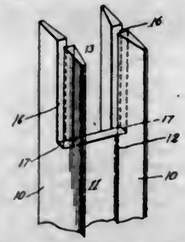
bon inlet and a heavy hydrocarbon outlet leading to a vaporizer for the vaporization of such hydrocarbon for the inlet of the second body portion, a valve arranged between the inlet and outlet of the third body portion, and a single member for simultaneously and similarly controlling all of said valves.

1,688,948. MOP. HENRY M. VAN DEUSEN, Westfield, Mass. Filed Apr. 4, 1928. Serial No. 267,341. 2 Claims. (Cl. 15—229.)



1. In a mop construction a handle, a shank portion, a loop member formed on the shank portion, a cross bar mounted in the lop, a plurality of flexible retaining members loosely mounted on the cross bar, mop material held firmly in operative position by the retaining members, stop means on each end of the cross bar for maintaining the flexible members in position thereon.

1,688,949. INTERLOCKING JOINT FOR METALLIC FRAMES. WESLEY WAIT, Newburgh, N. Y. Filed Mar. 31, 1927. Serial No. 180,014. 8 Claims. (Cl. 189—36.)

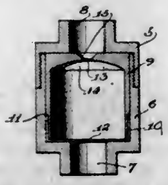


1. In an interlocking joint for metallic frames, the combination of a column formed with a web and flanged sides and comprising upper and lower sections, the lower section having in its web a recess between the upper ends of the flanged sides, with a chair positioned in the recess between the flanged sides of the lower column section and seated upon the web of said section, a girder seated

transversely in the upper end of the lower column section on the chair having a flanged side between the ends of the flanged sides of said lower column section, and a saddle positioned on the girder between the flanged sides of the lower column section, the upper column section

being seated in the saddle, the web of the upper column section being recessed between the lower ends of the flanged sides of said upper section to admit the intermediate part of the saddle between the web of said upper section and the top of the girder.

1,688,950. METHOD FOR SHAPING COLUMNS, GIRDERS, BEAMS, AND THE LIKE FOR INTERLOCKING JOINTS. WESLEY WAIT, Newburgh, N. Y. Filed Mar. 31, 1927. Serial No. 180,015. 2 Claims. (Cl. 29—155.)

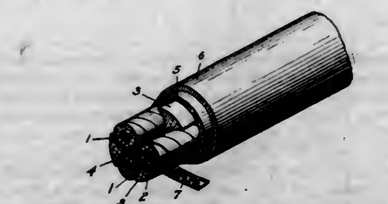


1. The method of shaping webbed columns, girders and beams having flanged sides with filets at the angles between the web and sides to provide joint seats, consisting in first cutting away the web between the side filets at an end of the member being shaped, the removal of the web between the filets forming fins on the inner faces of the flanged sides at the recessed part of the web, and then slotting the flanged sides in the plane of the web to remove the fins and filleted parts to form slots in the flanged sides coinciding with the recess previously formed in the web.

1,688,951. IGNITION DEVICE. WILHELM WALTHER and GOTTHILF RAU, Stuttgart, Germany, assignors to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Aug. 8, 1927, Serial No. 211,496, and in Germany Aug. 27, 1926. 7 Claims. (Cl. 200—19.)

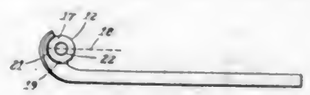
2. In an ignition system an interrupter having a stationary part and a cylindrical casing rotatably adjustable for timing the ignition, operating means for rotating said casing, holding means for securing said operating means to the casing in fixed relation thereto, an annular spring housing arranged to fit over and around said casing and carried by a sleeve arranged to be secured to the casing together with said operating means by said holding means at will, a spring mounted in said housing having one end fixed to the housing, and means for securing the other end of the spring to said stationary part at will.

1,688,952. TONE-CONTROL DEVICE. ALBERT G. WEEKS, Minneapolis, Minn. Filed Jan. 25, 1927. Serial No. 163,495. 9 Claims. (Cl. 181—27.)



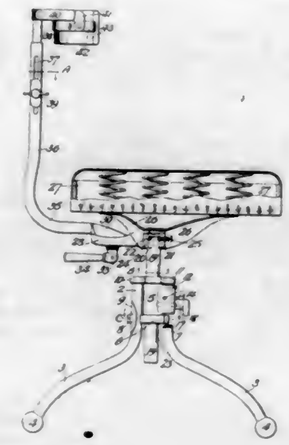
2. A tone control device comprising a hollow sectional body having end walls provided with openings, the sections of said body being longitudinally adjustable with respect to each other, means for securing the body sections in relatively adjusted positions, one end wall of said body being thickened and having its inner face dished, the opening in said thickened end wall being arranged concentrically of the dished face thereof, and a rigid casing receiving and supporting said body and having sound inlet and outlet ways therein communicating with the openings in said body.

1,688,953. WINDOW-GLASS CLIP. FAY A. YEAGER, Muskegon, Mich., assignor to Joachim R. M. Knudsen, Muskegon, Mich. Filed Aug. 1, 1927. Serial No. 209,773. 3 Claims. (Cl. 189—78.)



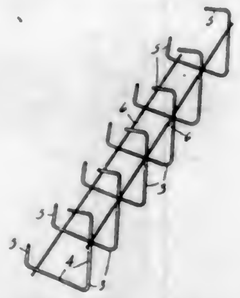
1. In combination, an open window frame formed of members having flanges lying at right angles to each other, a pane of glass or the like located in said frame against certain of said flanges, headed pins mounted on other of said flanges which project outwardly from the flanges against which the glass bears, and a clip mounted on each pin having a curved slot therein whereby movement of the clip on the pin forces the clip against the glass and secures it in the frame.

1,688,954. ELECTRIC CABLE. RALPH W. ATKINSON, Perth Amboy, N. J., assignor, by mesne assignments, to General Cable Corporation, a Corporation of New Jersey. Filed Sept. 28, 1925. Serial No. 58,986. 2 Claims. (Cl. 173—266.)



1. In an electric cable, a body of insulation wrapped in a strip of copper of the conductivity, pliancy, texture, and tenacity which characterize electrolytically deposited copper, the whole being surrounded by a metal sheath.

1,688,955. METHOD OF MANUFACTURING COVERED-JOINT HINGE MEMBERS. JAMES T. ATWOOD, Rockford, Ill. Filed Mar. 25, 1927. Serial No. 178,333. 3 Claims. (Cl. 29—11.)

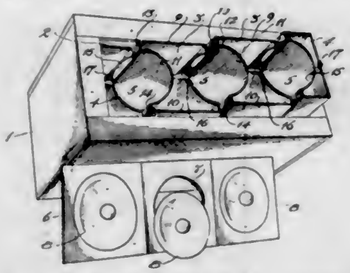


1. The method of manufacturing the outside member of a covered joint hinge, consisting in upsetting and bending one end of a flat metal blank to form a laterally offset head having a cross-sectional shape providing a pintle bearing knuckle portion and a cover portion, and removing stock from the pintle bearing side of the headed end for reception of the knuckle of the inside hinge member.

1,688,956. CHAIR PARTICULARLY FOR OFFICE USE. CARL JACK BENDIX, East Melbourne, Australia. Filed Mar. 23, 1926. Serial No. 96,853. 4 Claims. (Cl. 155—138.)

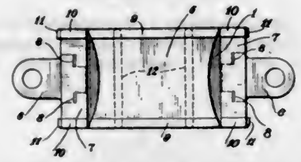
1. In a chair of the type described, a junction member comprising a tubular body portion, a collar carried by the upper end of the body portion and formed in its under surface with circular depressions to receive the upper ends of supporting legs, a collar provided at the lower end of the tubular body and formed in alignment with the respective depressions of the upper collar with edge depressions opening radially of the collar, a series of legs having straight portions to fit in vertically aligned depressions of the upper and lower collars, a housing integral with the body portion, and mechanism arranged wholly within the housing for slidably adjusting a seat post.

1,688,957. STRUCTURAL REENFORCE ELEMENT. DEWEY H. BITNEY, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Filed Oct. 22, 1926. Serial No. 143,479. 9 Claims. (Cl. 72—76.)



2. A reenforce bar spacer unit consisting of a plurality of cross members open at one side and conformed to provide three inwardly facing angles, and longitudinal rods to which said cross members are connected in spaced non-collapsible relation.

1,688,958. STRUCTURAL UNIT. DEWEY H. BITNEY, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Filed Feb. 11, 1927. Serial No. 167,419. 4 Claims. (Cl. 72—122.)

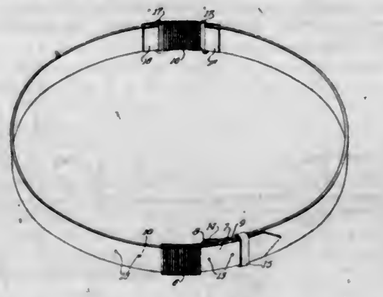


2. A structural unit comprising a longitudinal supporting rod and a plurality of vertical legs welded to the said rod in spaced relation with their upper ends projecting above the rod, said legs having projections at their lower ends disposed horizontally and transversely of said longitudinal supporting rod providing feet, the feet of adjacent legs being oppositely disposed.

1,688,959. ICE-CREAM CABINET. CLARENCE H. BROOKS, Norfolk, Va., assignor, by mesne assignments, to Brooks Cabinet Company, Inc., Norfolk, Va., a Corporation of Virginia, and Manning Manufacturing Company (Incorporated), Rutland, Vt., a Corporation of Vermont. Filed Sept. 13, 1927. Serial No. 219,308. 6 Claims. (Cl. 62—75.)

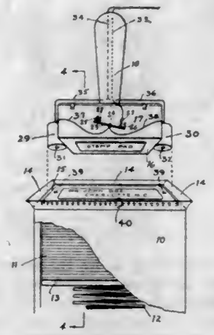
1. A cabinet having a rectangular chamber formed therein, a plurality of similar containers having recessed walls arranged slidably in said cabinet with the recessed walls of adjacent containers in contact with each other, and their opposed recesses forming a chamber.

1,688,960. ELECTRICAL CONDENSER. WILLIAM DUBILIER, New Rochelle, N. Y., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 30, 1925. Serial No. 72,300. 13 Claims. (Cl. 175—41.)



1. A condenser having a body comprising electrically conductive elements insulated from one another, said elements projecting from said body, means for mounting a terminal in contact with part of said projecting elements, and similar means for mounting a second terminal in contact with the remainder of said elements, and a clamping casing enveloping said body and extending substantially from end to end thereof, and engaging said terminal mounting means.

1,688,961. ELECTRICAL CONDENSER. WILLIAM DUBILIER, New Rochelle, N. Y., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 30, 1925. Serial No. 72,301. 5 Claims. (Cl. 175—41.)

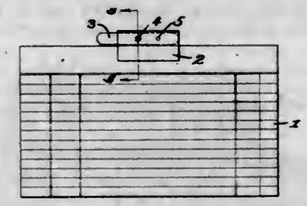


4. A condenser comprising electrically conductive elements insulated from each other, part of said elements projecting from one end of the condenser and part from the other, a terminal to engage the elements projecting at each end of the condenser, insulating clamping members to grip said terminals, and a casing enclosing said elements, the casing having projections at each end in line with the sides, to extend across the clamping members, and with portions at each end of said sides to be bent against said members to secure same against displacement.

1,688,962. SPRING-CONNECTING MEANS FOR BELTS OR STRAPS. JOSEPH P. GORDON, Rockford, Ill. Filed Feb. 26, 1923. Serial No. 621,275. 1 Claim. (Cl. 267—73.)

A spring connection for a belt or strap comprising a single piece of spring wire wound to provide a flat coil the convolutions of which are normally in approximately abutting relation, each end portion of the wire being looped to provide an eye for the reception of an end of the belt, each loop being of the same shape as and parallel with the convolutions of the spring and disposed in the plane of the flat inner side thereof so as to position the major portion of the spring body at the outer side of the inner line of the belt, and the end of each loop being bent to terminate within the adjacent coils.

1,688,963. ADDRESSING MACHINE. ERNEST D. GRADY, Charlotte, N. C. Filed Oct. 12, 1926. Serial No. 141,112. 9 Claims. (Cl. 101—47.)

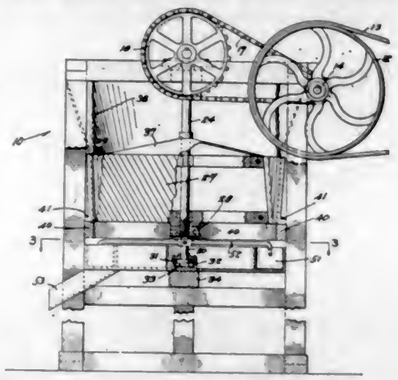


1. An inking device having magnetic means for picking up and holding a stencil during a printing operation and additional means for causing the stencil to be released after the printing operation.

1,688,964. COMPLEX ANTIMONY COMPOUND. HANS HAHL, Elberfeld, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y. Original application filed Mar. 29, 1926, Serial No. 98,272, and in Germany June 8, 1925. Divided and this application filed Oct. 8, 1926. Serial No. 140,420. 3 Claims. (Cl. 260—11.)

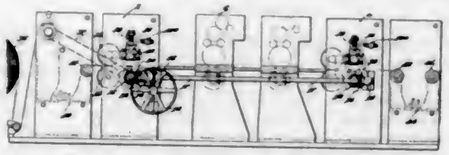
1. The process for the manufacture of complex antimony compounds, which process consists in causing an antimonyl compound of a polyphenol containing two hydroxyl groups in ortho-position to each other to interact with a neutral salt of an aliphatic hydroxy acid.

1,688,965. CARD INDEX AND SIGNAL THEREFOR. ALBERT H. HEILAND, Seattle, Wash. Filed Mar. 25, 1927. Serial No. 178,443. 6 Claims. (Cl. 116—135.)



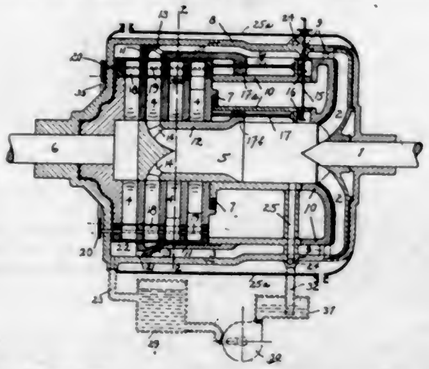
1. An index card or the like and a tab, means whereby said tab may be supported wholly beyond one edge of the card, said tab being movable longitudinally of and relative to said edge for indicating purposes, the tab being of materially less length than the length of the edge on which it is mounted.

1,688,966. NUT-CRACKING MACHINE. HIRAM H. HILL, Chico, Calif. Filed June 21, 1926. Serial No. 117,450. 1 Claim. (Cl. 146—11.)



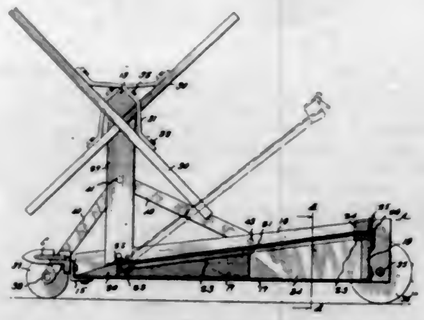
In a device of the type described, a cylindrical nut cracking member having grooves on the exterior surface thereof, each groove extending from the top to the bottom of said member, a second cylindrical member en-

closing said first named member and having grooves on the interior surface thereof, the grooves of at least one



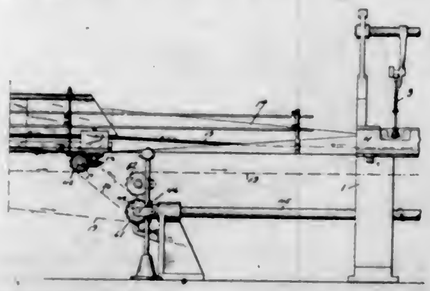
of said members slanting so as to cause each groove to extend less than one-fourth of the way around the circumference of the member.

1,688,967. PRINTING MACHINE. GEORGE E. HOLMES, Dover, N. H. Filed Mar. 30, 1926. Serial No. 98,469. 18 Claims. (Cl. 101—228.)



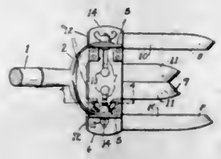
1. In a web printing press, a printing unit, intermittently operating rotary feed couples both in front and rear of said unit, both members of the couple at the rear having a very slightly greater surface speed than the couple at the front, and means for revolving said couples in synchronism.

1,688,968. HYDRAULIC POWER-TRANSMISSION GEAR. ANTON HUWILER, Basel, Switzerland. Filed Oct. 27, 1927, Serial No. 229,094, and in Switzerland Oct. 25, 1926. 3 Claims. (Cl. 60—54.)



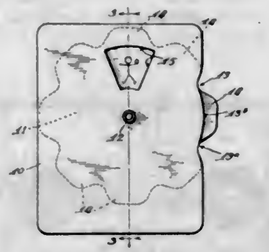
1. A hydraulic power-transmission gear, comprising in combination, a centrifugal pump, a plurality of turbine rotors having dissimilar specific speeds, a common shaft for said rotors, conduits connecting said pump and rotors, axially movable slide members adapted to throw each of the rotors in and out of the circuit of the liquid and conduits through which the rotors not in operation communicate with the suction chamber of the pump into which the said rotors may be drained.

1,688,969. SEED-SAVING ATTACHMENT FOR MOWING MACHINES. JAMES C. JONES, Brighton, Tenn. Filed Dec. 23, 1924. Serial No. 757,760. 1 Claim. (Cl. 56—207.)



A seed saving attachment for mowing machines including a laterally extending cutting bar, comprising a receiver pan structure consisting of a bottom, side wall members extending upwardly therefrom, a supplemental wall of less height than and arranged against the inner face of a side wall, a rear wall of less height than said side walls and resting upon said bottom, a front wall of substantially triangular cross section resting upon and extending transversely of the said bottom adjacent the forward edge thereof, said front wall presenting a rearwardly and upwardly inclined top surface, a screen frame for said pan comprising front, rear and side bars, a screen body overlying said frame, a hinge member securing said front bar to the front wall of said pan and maintaining said bar and the screen substantially flush with the top of said front wall, said frame having one side bar resting on the supplemental wall and the rear bar resting upon the rear wall, and a flailing structure mounted to revolve over the forward portion of said pan to throw cuttings from said cutting bar onto said screen.

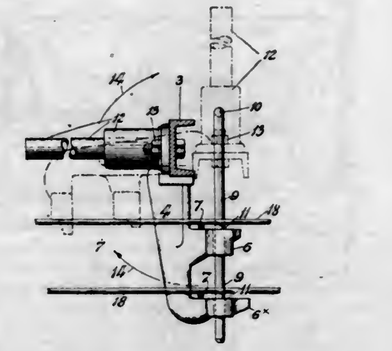
1,688,970. ART OF AND MACHINE FOR ASSEMBLING BOOKS. CHARLES A. JUENGST, Croton Falls, N. Y., assignor to American Assembling Machine Company, Inc., Memphis, Tenn., a Corporation of Delaware. Filed Sept. 7, 1923. Serial No. 661,344. 42 Claims. (Cl. 270—54.)



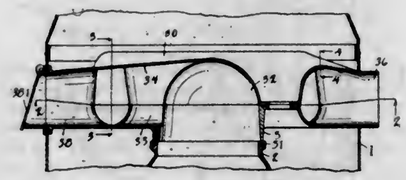
1. The method of tipping one signature to another which consists in advancing the two signatures side by side but out of alinement with each other so as to expose a portion of that side of one signature that is adjacent to the other signature, applying adhesive to one of said signatures at the exposed portion thereof, and then bringing the signatures into substantial alinement and pressing them together.

1,688,971. SOIL-WORKING IMPLEMENT. WILLIAM H. KAMMERER, Kalamazoo, Mich. Filed Nov. 13, 1925. Serial No. 68,846. 3 Claims. (Cl. 97—58.)

1. In a soil working implement, the combination of a head bar having longitudinal slots therein, pairs of curved teeth provided with integral shanks having lugs at their ends engaging the front edge of said head bar, said teeth having lateral twists in their curved portions, the shanks of the pairs of teeth being of different length, and bolts through said shanks engaging said slots in said head bar for adjustably and interchangeably securing said teeth thereto.



1,688,972. TOY MOTION-PICTURE DEVICE. LELAND A. KING, Chicago, Ill. Filed May 29, 1926. Serial No. 112,476. 4 Claims. (Cl. 88—16.)



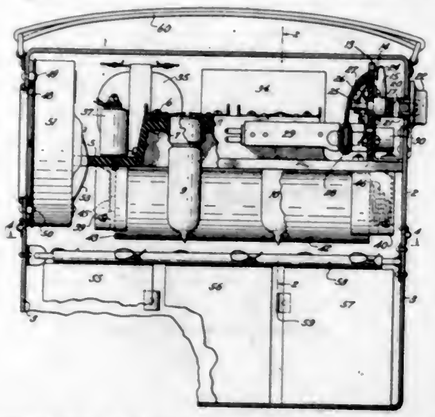
1. A device for providing motion picture effects of the character described comprising a rotatable member in the form of a flat disc having finger-engaging projections on the periphery thereof, a supporting and disc-covering member in the form of a flat sheet having a sight-opening therein, said rotatable member being pivotally mounted on the supporting member and having thereon a series of successively varying pictures for motion picture effects, said pictures being arranged to register successively with said sight-opening when the disc is moved a predetermined amount, said peripheral projections extending beyond an edge of the supporting member and said edge constituting a finger guide whereby a finger applied to such projections respectively may move the rotatable member substantially such predetermined amount only.

1,688,973. INSTALLING DEVICE FOR PLACING REENFORCING IN CONCRETE. SAMUEL M. KIRSHNER, Philadelphia, Pa. Filed May 25, 1927. Serial No. 193,995. 6 Claims. (Cl. 94—39.)

1. In a device of the character stated, a yoke, pendant hooks supported therefrom, arms extending laterally from said hooks, certain of said arms having aligning holes therein, upright pins positioned in said holes, and a laterally extending handle projecting from said yoke, whereby said yoke and hooks may be revolved as a unit.

1,688,974. WARM-AIR FURNACE. JOHN P. KOLLA, Holland, Mich., assignor to Holland Furnace Company, Holland, Mich. Filed Oct. 24, 1927. Serial No. 228,247. 3 Claims. (Cl. 126—102.)

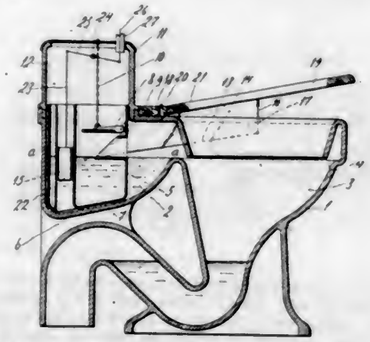
1. In a furnace structure, a radiator comprising a bottom casting with central intake and a top casting, the bottom casting being flanged to connect to the top of the combustion chamber of a furnace, the top casting being formed with a central dome and connected semi-circular passages leading around the same to the smoke flue, said upper casting having an integral dividing rib depression at the center of the discharge passage from the dome to the semi-circular passages and the discharge passage to the smoke pipe.



1,688,975. FLOTATION OIL. ROYER LUCKENBACH, Brooklyn, N. Y. Filed Mar. 23, 1925. Serial No. 17,835. 4 Claims. (Cl. 252—9.)

1. An oil for the flotation of minerals which comprises, a heavy petroleum residuum, a petroleum diluent therefor, and a frother containing cotton-seed foots, pine creosote, and a soap.

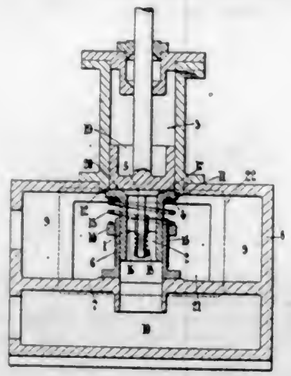
1,688,976. AUDIPHONE. GEORGE R. LUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 21, 1924. Serial No. 721,509. 3 Claims. (Cl. 179—107.)



1. In an audiphone, in combination, a panel, vacuum tubes mounted on said panel, dry cells mounted on the sides of said panel adjacent said tubes, a second panel mounted on the opposite side of said panel, a pair of jacks

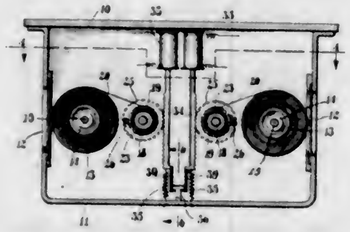
mounted on said second panel, one of said jacks being connected to the output of said tubes, and the other so

connected into the filament circuit of said tubes that an outside source of current may be substituted for said cells.



1,688,977. WATER-CLOSET. OLOF LUNDBERG, Saltsjobaden, Sweden, and JOHAN MAGNUS BERNSTRÖM, Arabia, Helsingfors, Finland. Filed Dec. 5, 1927. Serial No. 237,684, and in Sweden May 17, 1927. 5 Claims. (Cl. 4—18.)

1. A water closet of the character described, comprising a flush bowl and a reservoir chamber separater from each other by an overflow wall, a tank suspended within the reservoir and arranged to be lowered into the water chamber to displace the water therein over the said overflow wall, and into the flush bowl, means to elevate the tank above the normal water level in the reservoir maintained by the overflow wall, a valve disposed in the tank and automatically opened and closed by the lowering and raising, respectively, of the tank within the reservoir to discharge the contents of the tank into the reservoir and thence to the bowl, and a float controlled means operating automatically with a drop in the water level in the reservoir to supply water to the tank and reservoir when the said tank is in raised position.



1,688,978. RECIPROCATING PUMP. JOHN MCCALLUM, Glasgow, and HARRY PERCIVAL HARVEY ANDERSON, Calderbank, Scotland. Filed Oct. 25, 1926, Serial No. 144,124, and in Great Britain Oct. 31, 1925. 6 Claims. (Cl. 103—153.)

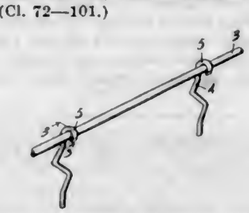
1. A pump having, in combination, a barrel, a plunger adapted to be reciprocated therein, a casing at one end of the barrel, a partition dividing the casing into a suction chamber and a delivery chamber, a gland supported by said partition concentric with the barrel and open to the suction chamber, a hollow delivery valve slidable in the gland, a seating on the adjacent annular edge of the barrel for said valve, spring means concentrically disposed around the exterior walls of said valve for constraining said valve to its seat for displacement by the plunger, a

suction valve slidable wthin the delivery valve, a seating on the delivery valve for the suction valve such that when said valve is closed the inner surface is flush with the inner surface of the delivery valve, and spring means disposed within said delivery valve for seating the suction valve.

1,688,979. AUTOMATIC STATION INDICATOR FOR TRAINS. IRVING MENDELSOHN, New York, N. Y. Filed June 16, 1927. Serial No. 199,175. 2 Claims. (Cl. 40—55.)

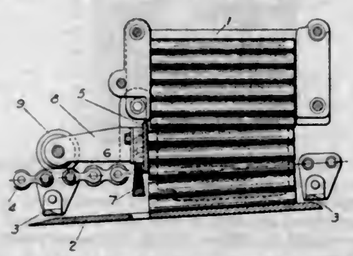
1. In an automatic station indicator for trains, the combination with a solenoid actuated rack connected with web advancing rolls, of a casing housing the said indicator, a tongue projecting therefrom, and having a roughened portion, an elliptically shaped member bolted to the tongue, and having a similar roughened portion engaged against the first roughened portion, the edges of the elliptically shaped member being provided with knurlings, and a projection from the said rack engageable against the knurled edge of the elliptical member to limit the travel of the rack, and the movement of the web roll, as determined by the position of the elliptically shaped member.

1,688,980. MULTIPLATE VERTICAL WALL. SAMUEL W. MILLER, Hollis, N. Y., assignor to Linde Air Products Company, a Corporation of Ohio. Filed June 6, 1925. Serial No. 35,483. 6 Claims. (Cl. 113—112.)



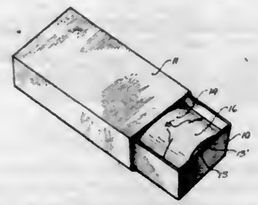
1. A method of constructing a vertical multi-plate metal wall that comprises severally welding lower edges of such plates to connectors, assembling such plate-connector units

in said wall in inverted position so that the connector of each unit extends along the upper edge of each unit, and



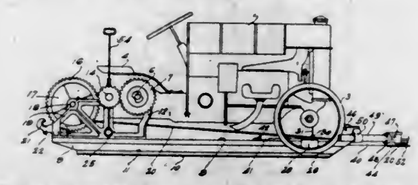
then welding the lower edge of the plate of each unit to the connector of an adjacent lower unit in the wall.

1,688,981. ANCHORING ELEMENT FOR CONCRETE CONSTRUCTION. ROBERT B. MITCHELL, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Filed Jan. 26, 1927. Serial No. 163,649. 2 Claims. (Cl. 72—101.)



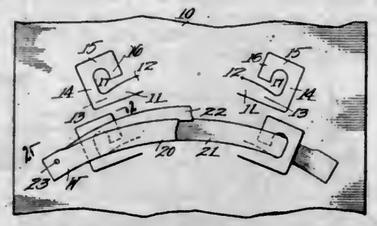
1. An anchoring element for use in concrete construction consisting of a rod and a plurality of spaced anchoring members formed of wire and having eyes at their upper ends embracing said rod and welded thereto so that they are fixedly secured in spaced relation on the rod.

1,688,982. APPARATUS FOR FEEDING CIGARETTES AND ARTICLES OF A SIMILAR SHAPE. WALTER EVERETT MOLINS, Deptford, London, England. Filed Mar. 13, 1926, Serial No. 94,483, and in Great Britain Apr. 22, 1925. 3 Claims. (Cl. 198—30.)



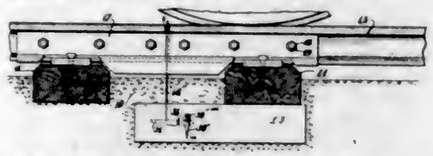
1. A hopper apparatus which comprises in combination a series of vanes adapted to be arranged beneath the delivery end of a cigarette hopper, and adapted to arrange the cigarettes in superimposed rows, a gate located at the delivery end of said vanes arranged to permit one or more rows of cigarettes to be removed therefrom by a conveyor, and yieldingly controlled means pendent from the lower edge of said gate adapted to yield in the direction of the axial movement of said cigarettes.

1,688,983. CARTON. ALEXIS W. O'KEEFE, Chicago, Ill. Filed Mar. 1, 1926. Serial No. 91,381. 3 Claims. (Cl. 206—65.)



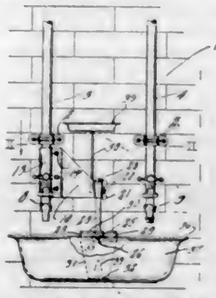
1. A carton comprising a box-like structure, a support in said structure having two opposite edges thereof positioned in two opposite edges of the box, a raised center portion forming an apex lying along the longitudinal center of the box and having sloping sides, each of said sides being adapted to support articles thereon with their upper ends spaced apart, and a flexible arched filler adapted to be positioned in said box and engaging the sides thereof and a cover for said box.

1,688,984. TRACTOR-DRIVEN SKIDDER. JAMES V. L. PEACOCK, Columbus, Ga. Filed Aug. 11, 1924. Serial No. 731,399. 9 Claims. (Cl. 254—166.)



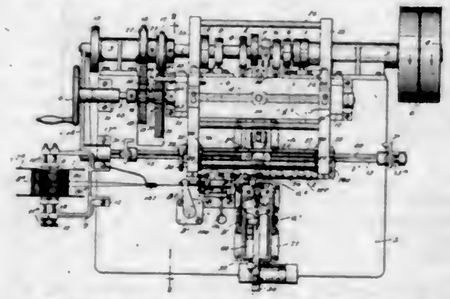
5. An attachment for converting a tractor into a skidder and the like, comprising a skid having rear supports for the rear end of the tractor and means to clamp the tractor to said supports, a drum shaft mounted on the skid, a transmission at each side to drive said drum shaft from the rear axles of the tractor, a forward extension guide carried by the skid for a pulling cable wound on said drum, said guide having a hold-down pulley under which the cable runs.

1,688,985. DISPLAY CARD. EARL R. PERSON, Leominster, Mass., assignor to Du Pont Viscoloid Company, Inc., Leominster, Mass., a Corporation of New Jersey. Filed July 21, 1926. Serial No. 124,049. 3 Claims. (Cl. 206—79.)



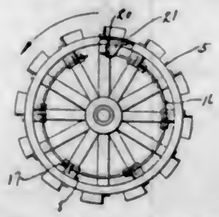
3. A display card comprising a back portion of sheet material having attaching members formed in cooperating pairs therein, the two members of each pair being widely spaced apart and each attaching member being shaped in a major segment of a circuit open at one point only, which point is closely adjacent the point of connection of said member to the back portion of the display card, and each attaching member engaging the front, back and upper and lower edges of a supported article and thus preventing upward, downward or forward displacement thereof.

1,688,986. AUTOMATIC EXPLOSIVE MECHANISM. BORIS RANZAN, New York, N. Y. Filed Sept. 19, 1927. Serial No. 220,518. 5 Claims. (Cl. 246—210.)



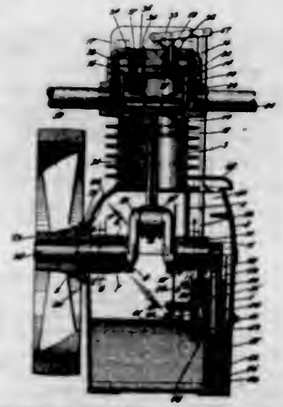
1. In a device of the class described a bomb comprising a casing adapted to be disposed below the rail bed of a railway, a firing pin slidably mounted in said casing, a trigger mechanism adapted to retain said firing pin in a retracted position, a spring mounted in said casing for urging said firing pin, and actuating mechanism for said trigger mechanism comprising an alarm clock adapted to actuate the same at a predetermined time for releasing said trigger mechanism to discharge said bomb.

1,688,987. BASIN MOUNTING. OSCAR M. RIES, Toledo, Ohio. Filed Dec. 13, 1926. Serial No. 154,442. 4 Claims. (Cl. 45—38.)



1. A support for a basin provided with an annular rim and an eye through said rim, and a projection for entering the basin eye, said support having an extension below the projection, said extension contoured to nest with the basin outer side and extending under the basin, and said support having additional basin rim engaging means upon opposite sides of the projection for holding the basin supported against rocking when having its eye engaged by the projection.

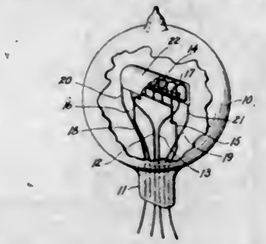
1,688,988. MACHINE FOR MAKING ARTICLES COMPOSED OF WIRE RINGS OR LINKS. FRIEDRICH AUGUST KARL ROLLE, Vauxhall, N. J., assignor, by mesne assignments, to Binder Bros., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 19, 1922. Serial No. 582,844. 37 Claims. (Cl. 140—3.)



1. Wire-feeding mechanism comprising a traveling member adapted to engage a plurality of wires, a plurality of clamping members movable in unison with said traveling member and also movable relatively thereto transversely of its traveling motion to clamp or release the respective wires, pressure means adapted to engage said clamping members and to press them against the respective wires, and means for effecting relative motion between said pressure means and said traveling member in a direction transverse to the traveling motion of said member and also transverse to the clamping movement of the clamping members to establish a co-operative relation between said pressure means and the different clamping members.

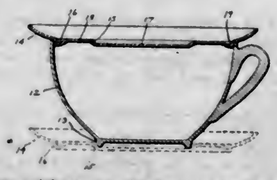
1,688,989. EXTENSION-RIM ATTACHMENT. NATHAN HOWARD SAUNDERS, Cambridge, Wis. Filed May 31, 1927. Serial No. 195,426. 7 Claims. (Cl. 301—39.)

5. The combination of a tractor wheel provided with an inturned flange and spokes and an extension rim having a plurality of hooked brackets for receiving said spokes, said brackets each having a shoulder contacting wtih said flange and having guiding means, a circular rod guided by said guiding means and having a plurality of locking members carried by said rod for locking said spokes within said brackets, a bracket rigidly carried by said extension rim and through which said rod passes, and a nut bearing against said last mentioned bracket and threaded upon said rod.



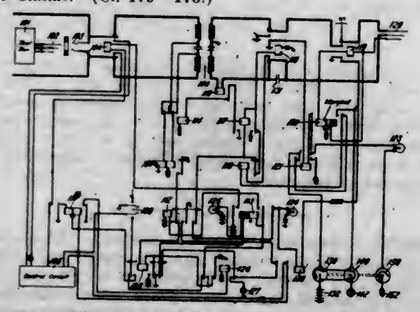
1,688,990. COMPRESSOR. JOHN H. SCHREIBER, St. Louis, Mo. Filed Apr. 10, 1926. Serial No. 101,053. 25 Claims. (Cl. 230—4.)

1. A compressor comprising a cylinder having an inlet passage and an outlet passage, a piston operative within the cylinder, a shaft arranged to operate said piston, a lubricant pump operated by said shaft, and a part on said shaft arranged to deliver to said piston oil passing from said pump.



1,688,991. ELECTRON-DISCHARGE DEVICE. PAUL SCHWERIN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 29, 1923. Serial No. 671,348. 2 Claims. (Cl. 250—27.5.)

1. In an electron discharge device, a press, pairs of lead-in wires sealed in said press, a straight filamentary cathode supported between one pair of lead-in wires and lying at right angles to the axis of the press, a trough shaped grid electrode located parallel to and effectively surrounding said filament with its open side facing said press, said

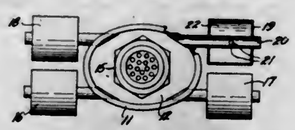


grid being supported at its opposite ends by a pair of said lead-in wires, and a trough shaped anode located parallel to and above said grid and filament and being supported at its opposite ends by a pair of said lead-in wires.

1,688,992. CUP SUPPORTING AND COVERING SAUCER. BENJAMIN F. SMITH, Concord, Mass., assignor of one-half to Charles A. Holt, Cambridge, Mass. Filed June 21, 1927. Serial No. 200,381. 2 Claims. (Cl. 65—15.)

1. For use with a cup having a mouth of relatively large diameter and a bottom of smaller diameter bounded by an outwardly facing annular shoulder; a saucer adapted to either support or cover the cup, the saucer being of greater diameter than the mouth of the cup and provided on its upper side with an inwardly facing annular inner shoulder of relatively small diameter formed to cooperate with the bottom shoulder of the cup in centrally confining the cup on the saucer and on its lower side with an outwardly facing annular continuous outer shoulder of larger diameter than the inner shoulder and spaced outwardly therefrom, and formed to enter the mouth of the cup and cooperate therewith in centrally confining the saucer on the cup when the saucer is used as a cover.

1,688,993. TELEPHONE SYSTEM. EDMUND B. SMITH, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 19, 1926. Serial No. 142,577. 9 Claims. (Cl. 179—175.)

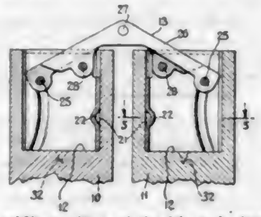


1. In a telephone exchange system, machine ringing trunks having selectable apparatus to control the ringing of different party line bells, a device for testing said trunks, comprising means for selecting said apparatus and means responsive to ringing current to test the ability of said apparatus to control the ringing of party line bells, and means for rendering said selecting means and said responsive means effective during a single automatic progressive test to successively test the ability of said apparatus to cause the ringing of each of a plurality of party line bells.

1,688,994. METHOD AND APPARATUS FOR DRILLING HOLES. EGGLESTON SMITH, Sioux City, Iowa, assignor to Eggleston Drilling Corporation, Dover, Del., a Corporation of Delaware. Filed Dec. 17, 1923. Serial No. 681,032. 8 Claims. (Cl. 255—1.)

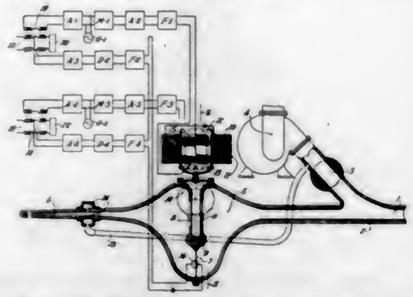
1. A rotary drilling apparatus comprising, a drilling tool, means for applying a predetermined normal feeding pressure to said tool, a rotatably driven drill shaft, and means for connecting said drilling tool to said shaft including means for continuously imparting in opposition to the predetermined normal feeding pressure a force which becomes larger or smaller respectively as the resistance to rotation encountered by the drilling tool increases or decreases.

1,688,995. TELEPHONE MUFFLER. WALTER F. SMITH, Jr., New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1925. Serial No. 70,461. 7 Claims. (Cl. 179—188.)



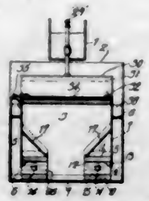
1. A voice muffler for a telephone transmitter comprising a chamber adapted to form a mouthpiece and a breath exhaust passage leading from said chamber to the open air, said passage comprising a tubular element having an expansion chamber coupled thereto, and being proportioned to substantially suppress the transmission therethrough of sound waves corresponding to the higher frequencies of speech.

1,688,996. CONCEALED HINGE. JOSEPH SOSS, Brooklyn, N. Y. Filed Mar. 1, 1926. Serial No. 91,400. 5 Claims. (Cl. 16—164.)



1. A sheet metal hinge butt comprising a U-shaped body and laterally extending flanges at one side of the arms of

said body, the opposite walls formed by the arms of said body having apertures for receiving the link pivot pin of the hinge, said walls being provided on adjacent faces with

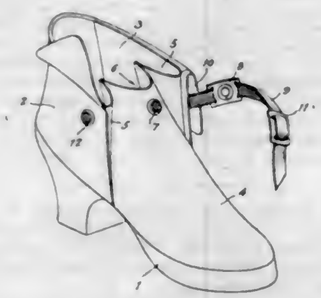


grooves for guiding a link of the hinge in its movement in said butt, and means for reinforcing the crosshead of said body.

1,688,997. SIGNALING SYSTEM. CLARENCE A. SPRAGUE, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 20, 1923. Serial No. 652,692. 19 Claims. (Cl. 179—15).

1. An electro-compressional signaling system comprising a conduit or pipe filled with a fluid and extending between two distant points, means at each of said points for simultaneously impressing upon the fluid in said pipe high frequency compressional waves modulated in accordance with signals, means at each of said points for receiving and detecting said modulated waves transmitted from the other point, and means at each of said points for at least partially nullifying the effect of locally generated waves upon the receiving and detecting apparatus at that point.

1,688,998. FROTH-FLOTATION CONCENTRATION OF ORES. FREDERICK SWINNEY, deceased, Tucson, Ariz., by Rose Lima Swinney, administratrix, Tucson, Ariz. Filed May 24, 1927. Serial No. 193,906. 19 Claims. (Cl. 209—170.)

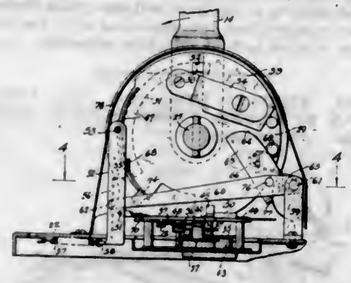


1. A froth-flotation cell having passages for feeding pulp in opposing streams from the sides of the cell so that the streams are directed against each other to effect agitation of the pulp and the pulp is substantially dependent upon the impinging streams for its agitation and a tailings outlet at one end of the cell so that the general course of pulp through the cell is longitudinally across the direction of the entering streams, and means at the side passage for aerating the pulp as it enters the cell through the side passages.

1,688,999. METHOD OF MAKING ANNEALING POTS. JAMES HALL TAYLOR, Chicago, Ill. Filed Jan. 12, 1925. Serial No. 1,810. 1 Claim. (Cl. 263—48.)

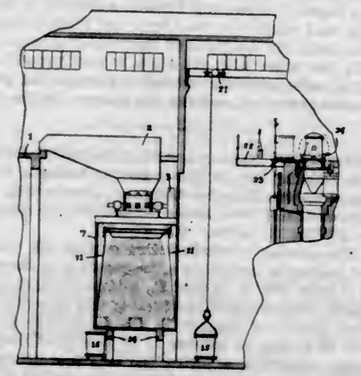
The method of making an annealing pot which consists in forming a tubular member with an upper enlarged section, and compressing said enlarged section in the direction of the axis of said pot to materially thicken such enlarged section.

1,689,000. FOOTWEAR. HENRY C. WAGNER, Beacon Falls, Conn., assignor to The Beacon Falls Rubber Shoe Company, Beacon Falls, Conn., a Corporation of Massachusetts. Filed Feb. 18, 1928. Serial No. 255,242. 7 Claims. (Cl. 36—50.)



1. A fastening device for gaiters having side flaps and a vamp, comprising, a strap having one end secured to one of the side flaps, two snap buckles adjustably secured to said strap, studs fixed respectively to the center of the vamp adjacent the top thereof and to the other of the side flaps, said snap buckles being adapted respectively to be secured to said studs.

1,689,001. DOORCHECK. GEORGE H. WALDBAUER, Bridgeport, Conn. Filed Mar. 31, 1927. Serial No. 179,803. 8 Claims. (Cl. 16—69.)

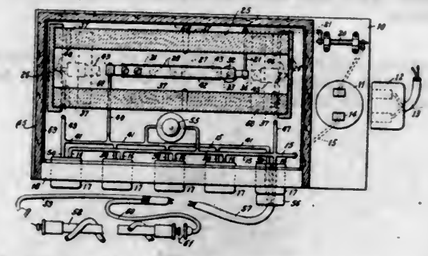


1. In a door check, a lever, means for pivotally connecting said lever to a door and a stationary element so that movements of the door will swing said lever about its pivot, a spring tending to swing the lever to move the door to closed position, a stop means to arrest movement

of the lever a short distance before the door is closed and retain it in that position, and a timing mechanism to

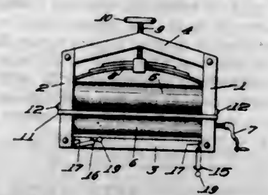
release the lever after a given time and permit the spring to complete the closing movement.

1,689,002. APPARATUS FOR PREPARING REFUSE FOR INCINERATION. GEORGE M. WELLS, Montclair, N. J. Filed Oct. 6, 1922. Serial No. 592,678. 3 Claims. (Cl. 214—17.)



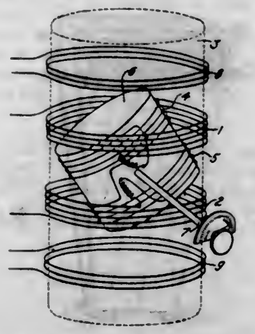
1. In an incinerating apparatus, an open top bin supported elevated with relation to a floor plane and having side and end walls forming an upwardly extending refuse chamber with openings through the lower corners of the bin, tracks mounted inset on the side walls adjacent to the open top of the bin, and a removable carriage travelling the tracks and having a dependent scraper cross-wise of the chamber and substantially the width thereof.

1,689,003. ANTICREEP RAIL ANCHOR. WILLIAM ERASTUS WILLIAMS, Wilmette, Ill. Filed Oct. 29, 1927. Serial No. 229,580. 7 Claims. (Cl. 238—330.)



1. An anchor of the class described, having a clamping member at one side of the rail base and a lever member at the other side of the base with a body portion extending underneath the base and a fulcrumed projection on the lever end adapted to clamp tightly to the corner of the base of the rail as the lever end is turned over in securing the anchor to the rail.

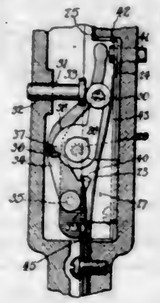
1,689,004. APPARATUS FOR WAVING HAIR. CHARLES S. ACKLEY, New York, N. Y. Filed Mar. 26, 1925. Serial No. 18,349. 14 Claims. (Cl. 219—26.)



7. Apparatus for waving hair comprising a plurality of electrical connectors, each connector being adapted for connection to a hair waving device, an electrical circuit connected to said connectors, a master heater in said circuit and a thermostatic switch associated with said master heater for opening and closing said circuit.

1,689,005. MANGLE. HJALMAR AHLIN, Chicago, Ill. Filed Feb. 10, 1926. Serial No. 87,319. 1 Claim. (Cl. 68—13.)

A device of the character described comprising a frame having side members, rollers journalled between the side members, clamp members pivoted at the inner surfaces of the side members adacent the lower ends thereof and having surface engaging ends adapted for swinging movement in the vertical plane of said frame from positions between and above the lower ends of said members to positions below the said ends for securing the frame to a horizontally disposed plane surface.

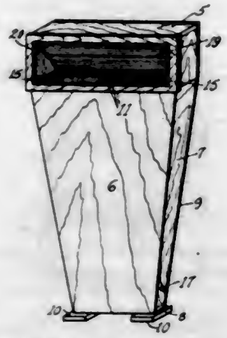


1,689,006. VARIABLE-INDUCTANCE DEVICE. MILTON K. AKERS, Troy, Ohio, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Dec. 31, 1919, Serial No. 348,555. Divided and this application filed Dec. 12, 1925. Serial No. 75,024. 6 Claims. (Cl. 171—119.)

1. In a variable inductance, a tubular core, a stator winding on said core, a second winding of a separate circuit on the core alongside the stator winding and in fixed rela-

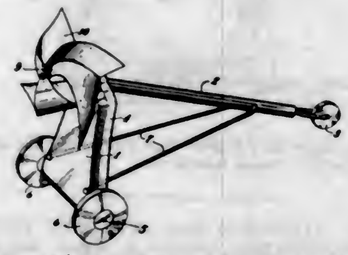
tion thereto, a rotor winding adjustable in the tubular core about an axis disposed at an angle to the axis of the tubular core and carrying a winding positioned by the rotor to cooperate with both the stator winding and the second winding.

1,689,007. THERMOSTATIC SWITCH PLUG. CHARLOTTE ARNESEN, Chicago, Ill. Filed Mar. 24, 1926. Serial No. 96,921. 16 Claims. (Cl. 200—138.)



1. In a plug of the character desired, a switch device comprising a pair of relatively movable contact members normally tending to move into spaced relation, a bracket having an arm pivoted thereto, a push button for swinging said arm, a second arm also pivoted on said bracket, a latch device operatively associated with said arms and adapted releasably to hold the first arm against movement and the contact members together, and means for moving the second arm to release said latch device.

1,689,008. ANTISEPTIC, ANTIFOULING, GERMICIDAL WATERPROOF COATINGS. ARTHUR BIDDLE, Trenton, N. J., assignor to United Products Corporation of America, a Corporation of Delaware. Filed July 3, 1926. Serial No. 120,531. 1 Claim. (Cl. 134—40.)

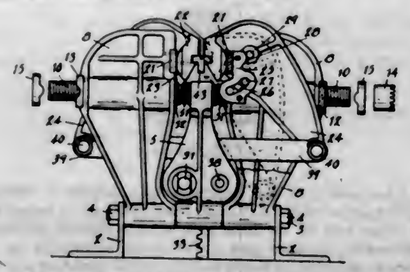


A composition of matter including an intimate mixture of a poisonous compound of arsenic substantially twenty parts by weight, casein substantially three parts by weight and rubber latex substantially ten parts by weight, said compound being dilutable with water up to four thousand parts by weight to provide a fluid which may be sprayed upon various objects to preserve the same from attack by noxious animal and vegetable life.

1,689,009. HORN FOR LOUD SPEAKERS. STEPHEN H. BYRNS, Kansas City, Mo. Filed Aug. 15, 1927. Serial No. 213,024. 1 Claim. (Cl. 181—27.)

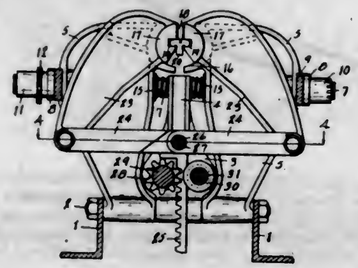
A horn construction for loud speakers comprising a casing constructed entirely of wood material and having a partition structure dividing said casing into a pair of tapered horn chambers having receiving openings for loud speaker units, a sheet of relatively thin wood material mounted longitudinally within each of said horn chambers in spaced relation to the front and rear walls thereof, and an outlet compartment communicating with the outer or discharge ends of both of said horn chambers.

1,689,010. WHEELED WIND TOY. MARY COHN, New York, N. Y. Filed Jan. 7, 1928. Serial No. 245,216. 2 Claims. (Cl. 46—48.)



1. A wind toy comprising a light wind receiving and deflecting plate, a wheel adapted to support the plate at its base, a tubular rearwardly extending support, a wheel carried by said support at its lower end, a strut member extending from the lower end of the tubular support and connecting the latter with the plate, a light propeller, and a shaft for said propeller extending through the plate and supported hereby, as and for the purpose set forth.

1,689,011. CUTTING OIL AND PROCESS OF PRODUCING SAME. MYRON PARK DAVIS, Yonkers, N. Y., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 3, 1926. Serial No. 85,750. 2 Claims. (Cl. 87—9.)

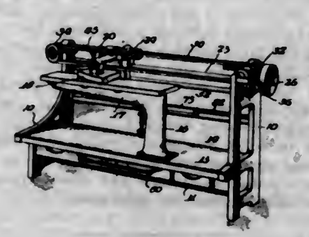


1. The process of compounding cutting oil, which comprises heating a lard oil to a temperature in the neighborhood of from 450° F. to 475° F., while thoroughly agitating the same, discontinuing the heating and introducing finely divided flowers of sulphur in the proportion of approximately 20 pounds of sulphur to 10 gallons of lard oil with thorough agitation, allowing the resulting action to continue for a few minutes and thereafter adding paraffin oil of a viscosity in the neighborhood of 100 seconds at 100° F. Saybolt standard until 4 to 7 gallons of paraffin oil are added to each 10 gallons of lard oil, continuing to stir the mixture while the reaction proceeds, and after all action has subsided diluting the material with a further quantity of paraffin oil to a total volume of approximately 50 gallons for each 10 gallons of lard oil.

1,689,012. MACHINE FOR APPLYING BELT FASTENERS AND THE LIKE. JAMES K. DIAMOND, Grand Rapids, Mich., assignor to Clipper Belt Lacer Company, Grand Rapids, Mich. Filed Apr. 29, 1926. Serial No. 105,424. 24 Claims. (Cl. 1—49.4.)

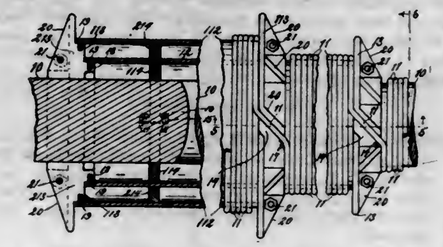
14. In a structure of the class described, the combination of opposed jaw supports mounted for adjustment to and from each other and provided with opposed thrust bearing surfaces, jaws provided with bearings mounted to coact with said thrust bearings of said jaw supports, said jaws having jaw faces above the planes of their axial centers, a fastener holder floatingly mounted between said jaws, and means for actuating said jaws.

1,689,013. BELT-FASTENER-APPLYING MACHINE. JAMES K. DIAMOND, Grand Rapids, Mich., assignor to Clipper Belt Lacer Company, Grand Rapids, Mich. Filed Apr. 29, 1926. Serial No. 105,425. 11 Claims. (Cl. 1—49.4.)



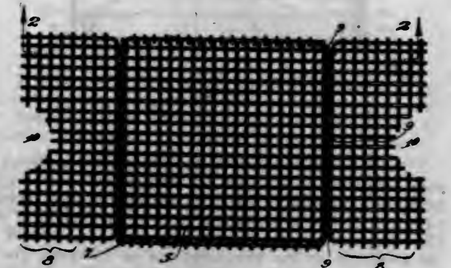
6. In a structure of the class described, the combination of opposed jaw supporting members provided with segmental facing bearings, coacting jaws of segmental cross section disposed in said bearings, said jaws having radially disposed jaw faces lying within the arcs of said bearings, a fastener holder floatingly mounted on said jaws at approximately the axial center thereof, and means for opening and closing said jaws.

1,689,014. REDUCTION OF AROMATIC NITRO COMPOUNDS. PAUL DIETERLE, Buffalo, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 4, 1926. Serial No. 79,270. 16 Claims. (Cl. 260—130.5.)



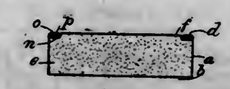
1. A method of reducing an aromatic nitro compound which comprises subjecting the nitro compound to the action of ferrous sulfide.

1,689,015. IRONING MACHINE. HUBERT C. ELLIS and NORMAN C. ELLIS, Evanston, Ill. Filed Mar. 20, 1926, Serial No. 96,113. Renewed Sept. 6, 1928. 13 Claims. (Cl. 68—9.)



1. In an ironing machine, the combination of a frame, an ironing table, a horizontally reciprocable carriage, a flat-iron mounted on the carriage and to reciprocate horizontally over the table, friction-gearing, mechanism for reciprocating the carriage driven by said gearing, and means mounted to travel with the carriage for controlling the gearing to start and stop the iron at will at any point within its range of travel.

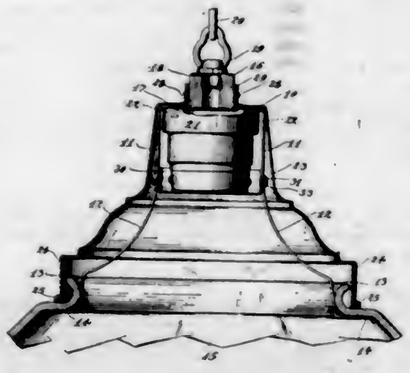
1,689,016. WINDLASS CONSTRUCTION. WALTER W. ERLEWINE, Long Beach, Calif., assignor to Marion Machine, Foundry & Supply Company, Marion, Ind., a Corporation. Filed Feb. 7, 1927. Serial No. 166,421. 6 Claims. (Cl. 242—117.)



1. A change speed windlass construction including a cable winding member of relatively small diameter, a cable winding tubular member of greater diameter removably mounted on a portion of said smaller member, an annular flange surrounding the smaller member and connected with each end of the larger member and having an inclined groove therein for the cable to pass from one member to the other, and a spacer removably mounted on the smaller member for supporting the larger member intermediate its ends substantially as set forth.

1,689,017. PLANT CONTAINER. JOSEPH T. FEWKES, Philadelphia, Pa. Filed Apr. 11, 1927. Serial No. 182,626. 1 Claim. (Cl. 47—37.)

A container, composed of woven wire mesh, including a flat rectangular bottom, a continuous side wall rigidly secured to the bottom and having a border wire extending around its upper edge, half covers resting on the upper edge of the side wall and each having a border wire along its outer edge and a notch extending inwardly from its inner edge, and links encircling the border wire along the outer edge of each half cover and the adjacent portion of the border wire in the side wall to form hinges; whereby the container may be embedded in the ground with a plant growing therein and extending through the aperture formed by the notches in the half covers and raise said half covers as it increases in size due to the hinged connection of the covers to the side walls.



1,689,018. PACKING CONTAINER. MARCEL FROIDEVAUX, Geneva, Switzerland, assignor to Kustner Freres & Cie., Société Anonyme, Geneva, Switzerland, a Swiss Company. Filed Dec. 12, 1924, Serial No. 755,419, and in Switzerland Dec. 20, 1923. 3 Claims. (Cl. 206—46.)

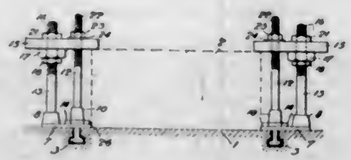
3. A container of very thin metal comprising a body having an integral bottom and an opening at the top, an exterior laterally extending flange surrounding said

opening, and a cover to be disposed upon the flange, the edges of the flange and cover, after the container has been filled with substantially solid or semisolid materials, to be turned over together and pressed inward of the container until they are flush with the outer surface of the cover, the materials in the container bracing the thin metal thereof from within when the edges of the cover and flange are being bent, and cooperating with the external pressure to cause said edges to form a seam around the outside of the container.

1,689,019. LIGHTING FIXTURE. FRED W. L. FULLERTON, Maplewood, N. J., and MICHAEL A. BELLONE, St. Albans, N. Y., assignors to Full-O-Lite Company, Inc., New York, N. Y., a Corporation of New York. Filed July 7, 1927. Serial No. 203,884. 4 Claims. (Cl. 240—133.)

1. In a lighting fixture, a globe support comprising a yoke consisting of a single flat strip of material shaped to form a horizontal top with depending sides having out-turned lower ends adapted to enter the mouth of the globe at opposite sides thereof, a lamp receptacle fixed to the underside of the horizontal top of the yoke, and a shell covering the yoke and seated upon the outer surface of the globe.

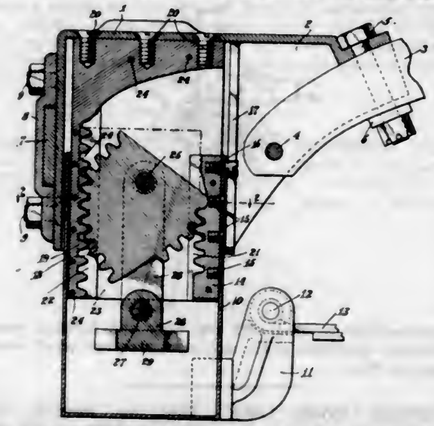
1,689,020. SUBMARINE SIGNALING. JOHN J. GILBERT, Port Washington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 1, 1926. Serial No. 112,840. 8 Claims. (Cl. 178—63.)



1. In a submarine signaling system, a loaded cable, receiving apparatus and a sea-earth connection for said cable, and a twin core terminal section connecting said cable to said sea-earth connection through said receiving apparatus, said terminal section having a distributed inductance different from said cable.

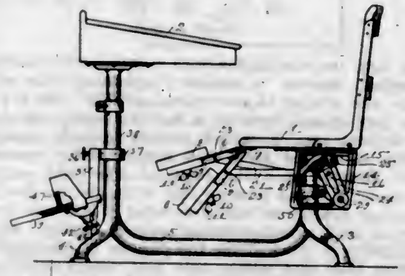
1,689,021. CLINCHING TOOL. BENJAMIN F. GILLES, Watertown, Wis., assignor to G. B. Lewis Company, Watertown, Wis., a Corporation of Wisconsin. Filed Aug. 6, 1926. Serial No. 127,613. 4 Claims. (Cl. 1—47.)

2. A tool of the character described, comprising a body portion having a slot therein adapted to embrace a nail extension, and means over which the nail may be struck to direct its point back upon itself, said means being tapered to accommodate nail extensions of different lengths.



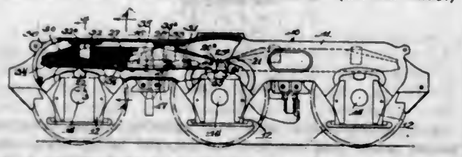
1,689,022. COMBINED CLAMPING AND SUPPORTING DEVICE. HENRY GRAHAM, Uriksdal, Sweden. Filed Mar. 25, 1927, Serial No. 178,472, and in Germany Jan. 2, 1926. 5 Claims. (Cl. 90—59.)

1. A combined clamping and supporting device for clamping work pieces to benches on working machines and for similar purposes, comprising a pivot member adapted to be locked to the bench in adjustable positions, and an arm like member pivotally fastened to said pivot member, means for locking the pivot member in adjusted positions on the bench and for locking the armlike member in adjusted position in relation to the pivot member, a screw-threaded member extending from the pivot member, and another screw threaded member fastened to the armlike member, said screw threaded members carrying a clamping member and being provided with nuts for holding the clamping member in any desired position and thereby pressing said clamping member against the work piece.



1,689,023. CONNECTING DEVICE. LOUIS D. GREGG, Hackensack, N. J. Filed Mar. 6, 1926. Serial No. 92,664. 21 Claims. (Cl. 267—2.)

1. In a device of the character disclosed, the combination of pressure transmitting means connecting two parts while permitting a limited relative movement of one with respect to the other, means adapted to maintain substantially constant the pressure transmitted by the pressure transmitting means from one part to the other whatever their relative position may be, and means providing a normalizing pressure tending to restore to and to hold said parts in



their normal spaced relationship one to the other whenever moved therefrom by abnormal pressure conditions.

1,689,024. SEAT STRUCTURE. GEORGE H. HAMILTON, Grand Rapids, and ROY A. WHITE, Walker Township, Kent County, Mich., assignors to American Seating Company, Grand Rapids, Mich., a Corporation of New Jersey. Filed July 5, 1927. Serial No. 203,496. 6 Claims. (Cl. 155—171.)

1. In a structure of the character described: a seat; a leg rest mounted in connection therewith swingably in a vertical plane; means carried in connection with the seat for holding the leg rest in adjustable swung positions, comprising a fixed member having an arcuate surface, a swingably mounted member having a surface inclined to said arcuate surface, a clamping element adapted to be moved along said surfaces, means for releasably moving said element into wedgingly clamping engagement between said surfaces, and connections between the leg rest and said second-mentioned member for swinging the leg rest by the swinging movement of said second-mentioned member.

1,689,025. SIX-WHEEL TRUCK. CLARENCE B. HARRISON, Lima, Ohio, assignor to The Ohio Steel Foundry Company, Lima, Ohio, a Corporation of Ohio. Filed July 25, 1927. Serial No. 208,140. 6 Claims. (Cl. 105—195.)

1. A car truck having side frame members, three wheel axles, journal boxes for said axles, an equalizer bar extending from each center journal box to the two adjacent end boxes, and two leaf springs interposed between each equalizer bar and its respective side frame member, said springs being arranged with the center between them disposed substantially two-thirds the distance from the center box to said end journal box.

1,689,026. FREQUENCY ARRANGEMENT IN CARRIER-WAVE SYSTEMS. RAYMOND A. HEISING, Millburn, N. J., assignor to Western Electric Company, Inc., New York, N. Y., a Corporation of New York. Filed July 20, 1921. Serial No. 486,069. 6 Claims. (Cl. 250—9.)

1. A system of radio communication comprising a group of multi-two-way-channel stations, a second group of two-way-channel stations, a channel of each being adapted to cooperate with a channel of one of the first mentioned stations, the distance between cooperating stations being substantially less than that between any two non-cooperating stations in different groups of stations, and transmitting and receiving circuits at each of said stations, the frequency spacing between the receiving channels of each of the stations of the first group being substantially greater than the minimum spacing between the receiving channels of the different stations of the first group.

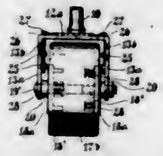
1,689,027. FISH BAIT. WARREN W. HELLE, Hinsdale, Ill. Filed Nov. 15, 1926. Serial No. 148,532. 6 Claims. (Cl. 43—39.)

4. An artificial bait comprising a central shaft with a plurality of hooks projecting therefrom, and a collapsible member for protecting the hook points from entanglement with weeds, said collapsible member being of general spherical shape with a downwardly projecting tubular apron, the hook shaft extending through the center of the spherical portion and the tubular apron extending along the shank of the hooks, the hook points being close to but not in engagement with the outside walls of said spherical portion.

1,689,028. PROCESS OF PRODUCING A CHOCOLATE MILK COMPOSITION. WILBERT A. HEYMAN, New York, N. Y. Filed May 4, 1927. Serial No. 188,871. 6 Claims. (Cl. 99—11.)

1. The herein described process of producing a beverage compound or the like, which consists in mixing cocoa powder having a low fat content with a suitable liquid, heating said mixture to a temperature sufficiently high to break up the starch cells of the cocoa, homogenizing said mixture, mixing the homogenized mixture with a lactil fluid, heating said resultant mixture to such temperatures as will either sterilize or Pasteurize the same, and then removing the moisture from the liquid to reduce the solids to powdered form.

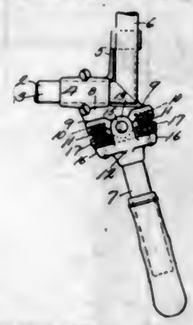
1,689,029. CHOCOLATE MILK COMPOSITION. WILBERT A. HEYMAN, New York, N. Y. Filed May 4, 1927. Serial No. 188,872. 6 Claims. (Cl. 99—11.)



1. A soluble food or beverage product in powdered form, consisting of acid neutralized cocoa having a low fat content, the latter having its starch cells broken up, and milk solids.

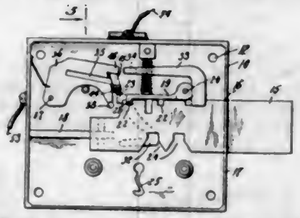
1,689,030. ACOUSTIC DIAPHRAGM. NEWMAN H. HOLLAND, Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 12, 1926. Serial No. 115,472. 1 Claim. (Cl. 181—32.)

An acoustic diaphragm comprising a thin metallic disc of porous construction.



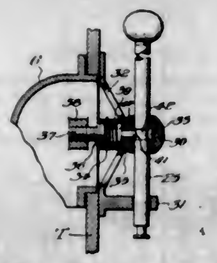
1,689,031. CASTER. BAPTISTE HOSSARD, Maspeth, N. Y. Filed Nov. 7, 1927. Serial No. 231,508. 3 Claims. (Cl. 16—18.)

1. A caster, comprising a bracket adapted for engagement in a socket member, and having hingedly connected side members adapted for convenient disconnection, a wheel rotatively arranged on the side members, bolts passing thru the tops of the bracket and thru the lugs and arranged for locking the side members in vertical positions, and means for holding the bolts against displacement.



1,689,032. TILLER FOR OUTBOARD MOTORS. HARRY L. JOHNSON, Indianapolis, Ind., assignor to Johnson Brothers Engineering Corp., a Corporation of Indiana. Filed July 2, 1926. Serial No. 120,174. 6 Claims. (Cl. 115—18.)

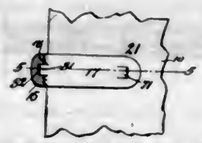
1. The combination with a marine motor rotatable in a horizontal plane for steering, a tiller pivotally connected to said motor, of yieldable connections between the tiller and motor at opposite sides of the pivotal point of and



substantially parallel with the tiller and forming means whereby vibrations of the motor are absorbed before reaching the tiller.

1,689,033. DOOR LOCK. BENJAMIN KOVACS, New Brunswick, N. J. Filed Feb. 24, 1927. Serial No. 170,539. 1 Claim. (Cl. 200—55.)

In a lock, the combination with a casing, of a locking bolt slidable therein, a tumbler co-operating with said bolt, an arm pivoted to said casing provided with a pin in the path of said tumbler, a metallic contact member fixed to said arm, a second metallic contact member normally disengaged from said first-mentioned contact member mounted upon and insulated from said casing, said contact members forming part of an electric circuit, the contact member on said arm being shifted into contact with said second-mentioned contact member when said tumbler is actuated for the purpose of disengaging the same from said locking bolt, said second-mentioned contact member being hinged to said casing so as to permit the same to be shifted out of the path of said first-mentioned contact member.

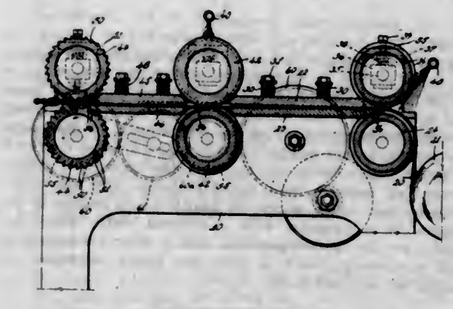


1,689,034. WASTE-VALVE MECHANISM. HERMAN W. KUEHL, Chicago, Ill., assignor to Brass Products Company, a Copartnership consisting of Harry W. Anderson and said Herman W. Kuehl, Chicago, Ill. Filed Nov. 21, 1927. Serial No. 234,574. 2 Claims. (Cl. 4—195.)

1. In combination with a receptacle having interconnected waste and overflow outlets, the latter being provided with a strainer plate and the former with a valve,

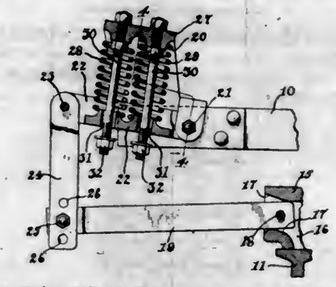
a lift rod connected with the valve and extending upwardly within the receptacle past the strainer plate, guiding means for the lift rod having a connection with the strainer plate, and a screw device carried by the guiding means adapted to engage with the connection from the overflow whereby to secure the strainer plate in place, substantially as described.

1,689,035. WINDSHIELD-WING MOUNTING. WILLIAM LA HODNY, Buffalo, N. Y., assignor to Standard Mirror Company Inc., Buffalo, N. Y., a Corporation of New York. Filed June 10, 1925. Serial No. 36,157. 1 Claim. (Cl. 296—84.)



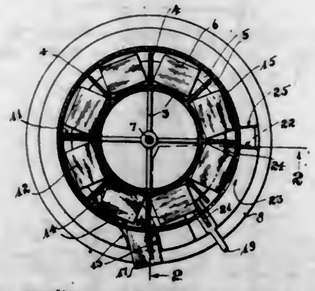
A mounting for windshield wings including a U-shaped head having jaws adapted to be arranged on opposite sides of the edge portion of a wing and provided on the end portions of their inner sides with front recesses and in the bight between said jaws with rear recesses; a U-shaped clip having its legs arranged between the jaws of the head and the sides of the windshield and having laterally projecting tongues stamped out of the end portions of said legs and engaging with said front recesses and also having a tongue stamped out of the turn of said clip and engaging with said rear recess; and a clamping screw arranged on one of said jaws and engaging with one of the legs of the clip.

1,689,036. WATER SOFTENING. PAUL E. LEISS, Youngstown, Ohio. Filed Nov. 1, 1923. Serial No. 672,224. 13 Claims. (Cl. 210—23.)



1. The process of softening water, comprising mixing barium carbonate and calcium hydroxide with water, and thereafter adding the mixture to the water to be softened, substantially as described.

1,689,037. MACHINE FOR MAKING ELASTIC PAPER. WILLIAM A. LORENZ, West Hartford, Conn., assignor to The Otaka Fabric Company, West Hartford, Conn., a Corporation of Connecticut. Filed Apr. 2, 1927. Serial No. 180,588. 7 Claims. (Cl. 92—69.)



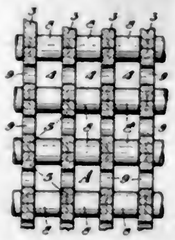
1. In a machine for longitudinally corrugating paper and narrowing it in width, a pair of plates provided on their opposed surfaces with corrugations in meshing relation, the corrugations converging towards the delivery end and gradually increasing in height towards that end, rollers for passing the paper between said plates, means for adjusting the distance between said plates, and means for resiliently urging said plates towards one another.

1,689,038. SPRING SUSPENSION FOR VEHICLES. GEORGE A. LUNZ, Buffalo, N. Y. Filed Mar. 30, 1927. Serial No. 179,638. 10 Claims. (Cl. 267—20.)

1. In a motor vehicle, the combination with the chassis thereof including a frame and axle, of resilient suspension means for connecting the frame and axle, comprising a pair of vertically-movable members disposed one above the other in substantially parallel relation one being fulcrumed on the axle and the other being fulcrumed on the frame, means for connecting the free ends of said members to each other, and cushioning means applied to one of said members for resisting relative movement of the frame and axle.

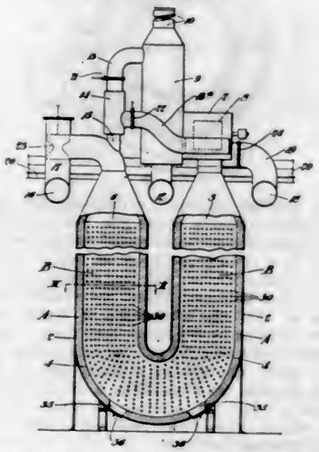
1,689,039. VENDING MACHINE. GEORGE MARSDEN, Los Angeles, Calif. Filed June 4, 1925. Serial No. 34,895. 2 Claims. (Cl. 312—64.)

1. In a vending machine, a base-member, a storing drum disposed rotatably above the base-member having vertically disposed sections in which articles may be held and moved in a circular path one on top of another preparatory to being vended, the base-member having a recessed path and guideway below the stored articles and of a form so that the whole pile of stored articles in any of the sections of the drum may drop to the extent of the depth of the recessed path upon reaching a position above the path, the guideway being curved outwardly from such circular path including a discharging opening in the base so that articles may be caused to discharge from the stored piles upon rotation of the drum, and means for rotating the drum.



1,689,040. ARCH-SUPPORT MARKER. PAUL F. MARRON, Santa Barbara Calif. Filed Nov. 22, 1926. Serial No. 150,017. 3 Claims. (Cl. 33—3.)

1. In an arch support marker, a measuring rod having a portion adapted to maintain a certain relation to a foot, and an indicator shiftable on the rod and being of a

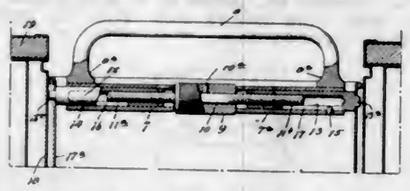


form equivalent to a forward-arch support-button and having a marking edge on its underside adapted to mark the contours of the indicator in a shoe.

1,689,041. CHECKERWORK FOR REGENERATIVE CHAMBERS. FRANK R. MCGEE, Steubenville, Ohio. Filed Aug. 6, 1926. Serial No. 127,650. 4 Claims. (Cl. 72—15.5.)

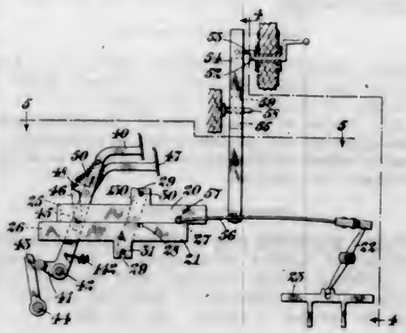
1. A checkerwork for regenerative chambers comprising a plurality of vertically disposed spaced partition walls forming gas channels, said walls being composed of a plurality of individual tiles laid edgewise one on the other, said tiles being recessed to provide transverse openings in said walls, some of said openings remaining unobstructed to form gas passagewnys between said gas channels, and solid tiles extending transversely of said gas channels and having their ends built into others of said openings and serving to maintain said walls in spaced relation and to baffle the gases passing through said channels.

1,689,042. HOT-BLAST STOVE. FRANK R. MCGEE, Steubenville, Ohio. Filed Aug. 9, 1926. Serial No. 128,251. 6 Claims. (Cl. 263—19.)



1. A single pass hot blast stove comprising a substantially U-shaped shell having frusto-conical end portions, a checkerwork built in said shell and terminating short of each end, the frusto-conical spaces at each end forming distributing and collecting chambers for the gases passing through said checkerwork.

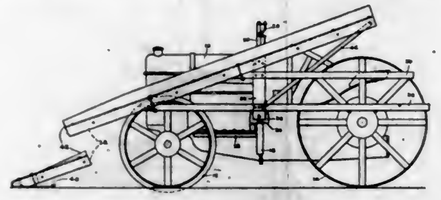
1,689,043. METHOD OF MAKING ALLOY STEELS. CHARLES MCKNIGHT, Jr., Sewickley, Pa., assignor to The International Nickel Company, New York, N. Y., a Corporation of New Jersey. Filed June 8, 1925, Serial No. 35,788. Renewed Mar. 13, 1928. 7 Claims. (Cl. 75—45.)



1. The method of stabilizing the solidification of an alloy steel casting formed from scrap initially having a high silicon content, which consists in melting the metal under oxidizing conditions until the silicon content is below a critical point, wherein the silicon does not exceed .1%, subjecting the metal to a reducing condition and adding alloying materials thereto.

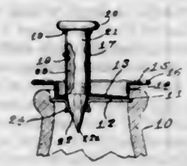
1,689,044. LIFTING AND CARRYING DEVICE. ADOLPH MEYER, Woodhaven, N. Y., assignor of one-third to Harry A. Elflein and one-third to Frederick C. Elflein, Woodhaven, N. Y. Filed June 10, 1926. Serial No. 114,912. 6 Claims. (Cl. 16—114.)

1. A detachable handle for receptacles and the like having openings located in the walls thereof, comprising a support, a hand grip associated therewith, elements embodying surfaces adapted to enter said openings mounted therein, a shaft having threaded engagement with each of said elements and means for rotating said shaft to simultaneously move said elements in opposite directions.



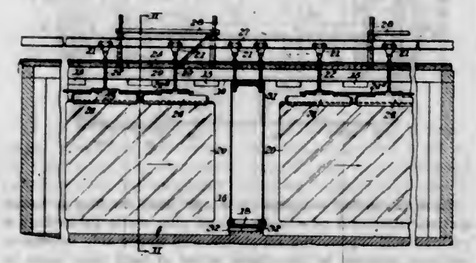
1,689,045. MECHANISM FOR ACTUATING CHANGE-SPEED GEARS. HENRY MORAN, London, England. Filed Oct. 6, 1927, Serial No. 224,409, and in Great Britain Oct. 18, 1926. 11 Claims. (Cl. 74—58.)

1. In gear-selecting mechanism of the character described, the combination with a plurality of sliders for controlling the gears, and a single gear-change lever adapted to be moved to engage any one of the sliders, of a clutch pedal, connections between the gear-change lever and said clutch-pedal which restore the sliders to neutral position upon movement of the clutch-pedal to disengage the clutch, a gear selector device adapted to be operated to select a gear before the clutch is disengaged, a yielding connection between said selector device and the gear-change lever which urges the gear-lever to engage or to remain in engagement with a selected slider when the sliders are in neutral position, and a lever connected to said gear-change lever to shift the latter thereafter to engage the selected gear.



1,689,046. STALK-LIFTING ATTACHMENT FOR TRACTORS. ROBERT W. OLSON, Amboy, Minn., assignor of one-half to Willard M. Bollenbach, Lamberton, Minn. Filed July 14, 1926. Serial No. 122,388. 2 Claims. (Cl. 56—119.)

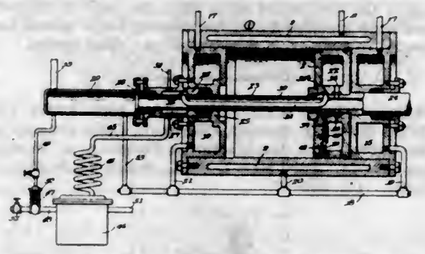
1. A stalk-lifting attachment for tractors employed for pulling harvesters for crops grown in rows comprising a bracket arranged for fastening directly to the tractor, a pickup frame mounted on said bracket and extending past the rear of the tractor, and an inclined guide for stalks carried by said frame in such manner that its forward end



is positioned adjacent the ground in advance of one of the front wheels of the tractor and its other end extends above the corresponding rear wheel of the tractor.

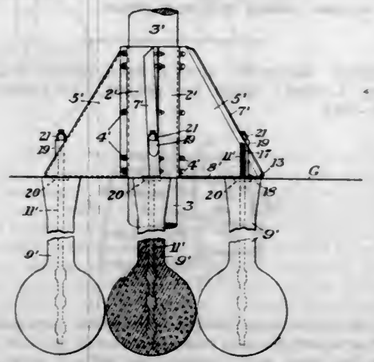
1,689,047. BOTTLE-CAP PIERCER. WARREN J. PACKER, Meriden, Conn. Filed Mar. 29, 1927. Serial No. 179,343. 10 Claims. (Cl. 164—119.)

1. In a device for piercing a hole in a milk bottle cap, a base shaped to fit upon the cap within the neck of said bottle, and a pointed plunger slidably carried by said base for penetrating said cap, said base having a laterally extending flange to fit over the edge of said bottle.



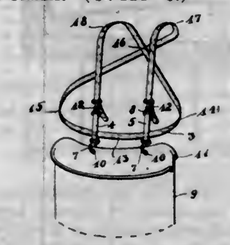
1,689,048. METHOD OF AND APPARATUS FOR ANNEALING GLASS. FRANK W. PRESTON, Butler, Pa. Filed May 5, 1927. Serial No. 189,095. 7 Claims. (Cl. 49—47.)

4. The method of annealing sheet glass, which comprises passing a plurality of sheets of glass through a lehr in tandem relation, preventing flow of air past the space between adjacent edges of said sheets, and subjecting each sheet to different temperature conditions.



1,689,049. VAPOR MOTOR OR ENGINE. JOSEPH G. PROSSER, Chicago, Ill. Filed Dec. 14, 1923. Serial No. 680,738. 3 Claims. (Cl. 121—181.)

3. An engine comprising a cylinder having a discharge for piston-condensate, a jacketed piston reciprocable in the cylinder, a conduit for supplying a heating-agent to the jacket of the piston, and having an inlet-opening, a conduit for discharging condensate from the jacket and having an outlet-opening, a tail-rod encompassing portions of the supply and discharge conduits, one of said openings being in the outer surface of the tail-rod and the other opening being so located in respect to the end of the tail-rod that the condensate may have



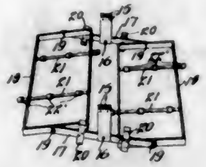
passage at that end when the tail-rod is withdrawn into the cylinder, and means for causing the pressure in the piston to expel from the engine condensate forming in the piston.

1,689,050. POLE SUPPORT. WAYNE RAWLEY, Pittsburgh, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Aug. 5, 1925. Serial No. 48,261. 2 Claims. (Cl. 248—38.)

1. A pole support comprising a plurality of sleeve sections each having a vertical substantially radial wing projecting therefrom at one vertical edge thereof and having a flange projecting therefrom on the other vertical edge whereby the wing of one section is adjacent the flange of an adjacent section, and securing means passing through the respective wings and flanges.

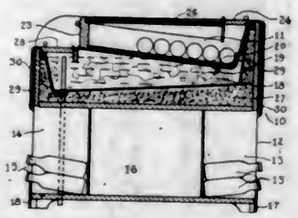
1,689,051. COMBINATION PAIL AND HARNESS. WILLIAM H. RICHARDSON, Roscoe, and EMIL F. MASL, Chatsworth, Calif. Filed June 27, 1927. Serial No. 201,935. 2 Claims. (Cl. 224—5.)

1. In a combination harness and pail structure, a strap made in a plain straight form having adjustable engaging means at both ends, comparatively short straps secured intermediate the ends of the first-named strap embodying securing means at the ends projecting from one side and



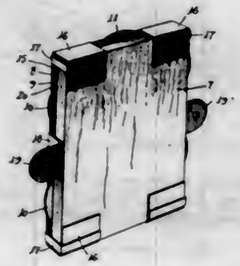
engaging means from the opposite side of the first-named strap, whereby any load applied to said securing means transmits pulling stresses directly through said short straps to the first-named strap when the ends of the first-named strap are placed over the shoulders of a person and connected to the engaging means of the short straps.

1,689,052. NOISE AND VIBRATION REDUCING DEVICE. HOMER L. ROGERS, Cincinnati, Ohio, assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed Mar. 1, 1926. Serial No. 91,422. 8 Claims. (Cl. 295—7.)



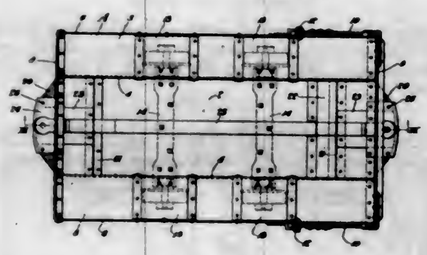
1. A noise reducing pad composed of an asphaltic rubber and fibrous composition having a major proportion of asphaltic material preformed to fit the contour of a portion of a movable mechanical device and means for holding said pad in close contact with said device.

1,689,053. HARROW. JOHN F. RUDE, Liberty, Ind. Filed Oct. 7, 1926. Serial No. 140,065. 11 Claims. (Cl. 55—88.)



1. A harrow comprising a main frame, adjustable supporting wheels for said frame, a series of pairs of hangers depending from said frame, a bar pivoted between each pair of hangers, frames pivoted to the ends of said bars, ground treating devices carried by said frames, and means for limiting the movement of said frames carried by said bars, substantially as set forth.

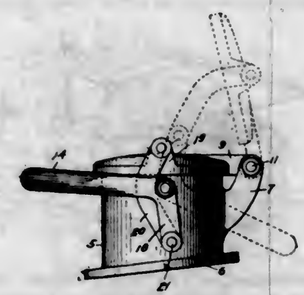
1,689,054. BOTTLE COOLER. JOSEPH SAMUELS, Toronto, Ontario, Canada. Filed June 22, 1927. Serial No. 200,648. 2 Claims. (Cl. 312—36.)



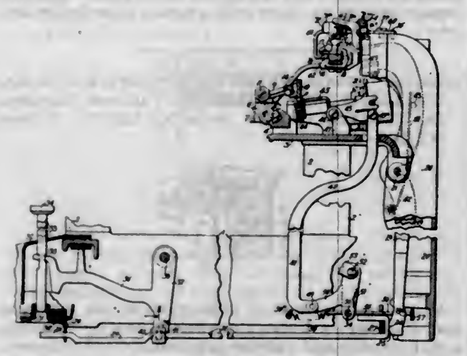
1. In a bottle cooler, an ice chamber and a reservoir chamber, an ice box in said ice chamber having the cover thereof divided off into a plurality of sections by flanges forming slideways for a corresponding number of pans adapted to contain a plurality of bottles, said ice box cover being on a slanting plane, a plurality of doors leading to said ice chamber for inserting the ice and bottles and a plurality of outward doors adapted for removing the bottles from said ice chamber.

1,689,055. RECORDING DEVICE. MORRIS B. SANDERS, Little Rock, Ark. Filed Mar. 7, 1928. Serial No. 259,853. 3 Claims. (Cl. 40—70.)

3. A device of the character described comprising a sheet having openings therein, a back behind said sheet, disks mounted for rotation between said sheet and back and having numerals to be exposed through said openings, and a frame in front of the marginal portion of said sheet and having rearwardly bent portions, some of which engage behind the back and the other portions having outstanding ears for the engagement of securing elements to fasten the device to an instrument board or other support, said disks projecting from said sheet and back between said portions.



1,689,056. MINE CAR. OTTO SANN, Johnstown, Pa. Filed Apr. 20, 1928. Serial No. 271,516. 4 Claims. (Cl. 105—364.)

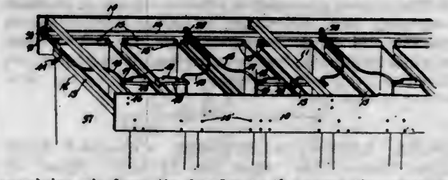


1. A mine car comprising a car body having a lower section composed of a bottom and side walls formed as a unitary self-supporting structure, and upper side extension portions secured to the upper edges of said side walls of said lower section and composed of horizontal and vertical walls, end walls for closing the ends of said body, at least one of said end walls being hinged, a pair of U-shaped combined axle and body stiffening members extending along and secured directly to the bottom and sides of said lower section of said body, spindle members projecting from the portion of said axle and stiffening members extending along the sides of the lower section of said body, and wheels journaled on said spindles.

1,689,057. CLOSURE. WILLIAM SCHWEMLEIN, Parkersburg, W. Va., assignor to The Parkersburg Rig & Reel Company, a Corporation of West Virginia. Filed Dec. 18, 1925. Serial No. 76,199. 4 Claims. (Cl. 220—36.)

1. A gauge hole cover including in combination a body member, a lid hinged thereto and mechanism for raising and lowering said lid including an operating lever and a link connecting said lever to said lid, a resilient member adapted to cooperate with said lid when in lowered position, said link being formed so that movement of said lever to compress said resilient member will lock said lid in closed position.

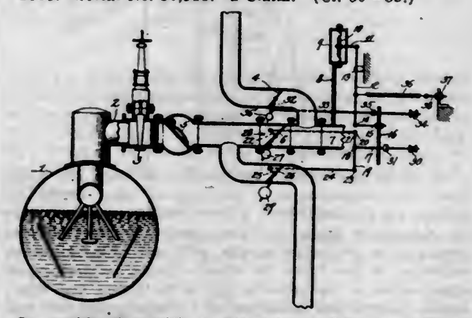
1,689,058. TYPEWRITING MACHINE. GEORGE A. SEIB, Ilion, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Feb. 19, 1926. Serial No. 89,350. 23 Claims. (Cl. 197—176.)



11. In a typewriting machine, the combination of a carriage, tabulating mechanism therefor comprising a set of key-controlled denominational tabular stops, anti-rebound rack-and-pawl mechanism comprising a pawl, and operative connections between said pawl and said denominational stops.

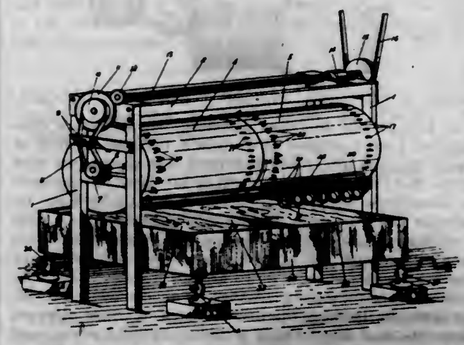
1689,059. METHOD OF PREVENTING DECOMPOSITION OF BICARBONATES IN SOLUTION. JOSEPH ALLAN SHAW, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Oct. 3, 1925. Serial No. 60,366. 7 Claims. (Cl. 23—244.)

1. The method of preventing the decomposition of bicarbonates in solution upon heating thereof, which includes covering the solution with a substantially immiscible liquid of low vapor pressure.



1,689,060. CAN GRID. NORMAN M. SMALL and LEON BUEHLER, Jr., Waynesboro, Pa., assignors to Frick Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Oct. 6, 1925. Serial No. 60,896. 11 Claims. (Cl. 62—159.)

1. A grid for holding a plurality of freezing cans comprising a frame, means on the inner surface of the frame for supporting said cans, a header on the inner surface of the frame above said supporting means, and means for

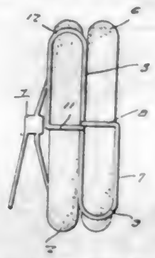


supplying air from the header to the respective cans, substantially as set forth.

1,689,061. STEAM-ACCUMULATOR CONTROL. CHARLES H. SMOOT, Maplewood, N. J. Filed Aug. 15, 1925. Serial No. 50,519. 1 Claim. (Cl. 60—39.)

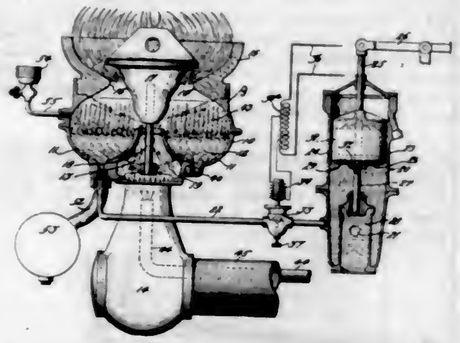
In combination with a steam accumulator, a delivery pipe leading therefrom, a control mechanism for regulating the pressure of steam in the delivery pipe comprising a low pressure valve regulating the supply to said pipe from the accumulator, a high pressure valve regulating the supply of high pressure steam to said pipe, a relief valve for opening a connection from said delivery pipe to a lower pressure, means responsive to the pressure in the delivery pipe, a loading means therefor and linkages connecting the three valves and the pressure responsive means comprising an intermediate member engaging in sequence the high pressure valve, the low pressure valve and the relief valve when moving in response to increasing pressure and in opposite sequence when the pressure falls with a limited movement between the said engagements, whereby as the pressure increases in the delivery pipe the high pressure valve will first be closed, then the low pressure valve and finally the relief valve opened.

1,689,062. PROCESS FOR ENAMELING ARTICLES. PAUL F. TITCHENER, Binghamton, N. Y., assignor to E. H. Titchener & Company, Binghamton, N. Y. Filed Aug. 18, 1926. Serial No. 129,964. 3 Claims. (Cl. 91—71.)



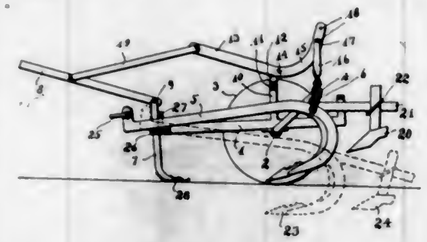
1. The process of enameling articles comprising the steps of dipping the articles in an enameling solution and before

drying dipping them in a thinning solution of said enameling solution and then drying said articles while in motion.



3. The process of enameling articles comprising the steps of sweeping them through an enameling solution, drying them while in motion; sweeping them through a second enameling solution and without drying, dipping them in a thinner of said second solution and then drying them while in motion.

1,689,063. EXTRA-TIRE SUPPORT. CHARLES P. TOMPKINS, Barnett, Mo. Filed Oct. 14, 1927. Serial No. 226,099. 1 Claim. (Cl. 224—29.)



An extra tire carrier for association with the usual spare tire supported on a conventional tire carrier, including an annular frame, a lower saddle construction at one side of the frame, said lower saddle construction consisting of a semi-circular side rail, said ride rail being connected to the frame by arcuate shaped connectors, an upper saddle at the opposite side of the frame, said upper saddle construction consisting of a semi-circular side rail, said side rail being connected to the frame by arcuate shaped connectors, the ends of said side rails being bent inwardly and connected to the annular frame wall on substantially a horizontal plane.

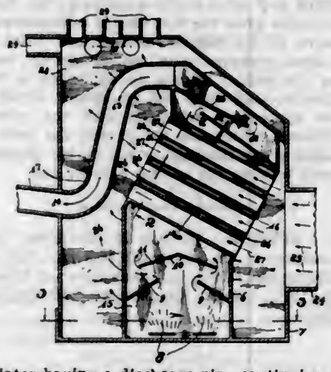
1,689,064. OIL BURNER. THOMAS F. WILLIAMS, Keyport, N. J., assignor to Inglis M. Uppercu, Deal, N. J. Filed Sept. 30, 1925. Serial No. 59,707. 3 Claims. (Cl. 158—92.)

1. A burner of the class described, comprising in combination a bowl adapted to contain a variable quantity of liquid fuel said bowl being so formed that the surface area of the fuel contained therein will be increased or decreased in accordance with the quantity of fuel, a member removably mounted upon said bowl said member providing a mixing chamber above the bowl, an element mounted upon said member and of relatively smaller inside diameter intermediate its ends so as to provide a constricted axial passage over said mixing chamber, an air conductor extending centrally through the bowl with an aperture disposed above the fuel level, and a deflector disposed above said air conductor and extending through said axial passage.

1,689,065. SUBSOIL PLOW. GEORGE W. WYCHE, Arcadia, Calif. Filed Apr. 10, 1926. Serial No. 101,104. 3 Claims. (Cl. 97—78.)

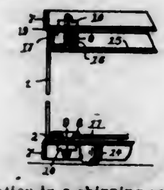
1. In a cultivator, an axle having straight wheel-supporting portions at its opposite ends and having a crank portion intermediate the straight ends, a frame pivotally supported on said straight ends having forwardly and rearwardly extending portions and having a central portion arched upwardly over said crank portion, a lever pivotally supported on said arched portion having one portion extending rearwardly and another portion extending forwardly, a link connecting the rearwardly extending portion of the lever with the crank portion of the axle, a subsoiler shiftably disposed in relation to the forward projecting portion of said frame and suspended from said crank portion, a handle member, and operating means mounted on and pivotally connected to the front end of the said frame in operative connection with the forwardly projecting portion of said lever.

1,689,066. AUTOMATIC SHUT-OFF DEVICE FOR LIQUID DISPENSERS. FREDERICK C. BAXTER, Belvidere, Ill. Filed June 11, 1926. Serial No. 115,221. 1 Claim. (Cl. 226—127.)



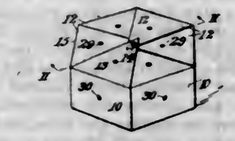
In combination with a delivery spout, an automatic shut off device comprising a partition in said spout defining a float chamber and a discharge passage, a vertically movable float disposed in said float chamber and carrying an upwardly projecting float rod, a hinged valve disposed in said liquid passage and a unitary substantially arcuate connecting member rigidly carried by said valve and projecting into said float chamber having sliding engagement with said float rod and terminating in an upwardly curved open loop adapted to be engaged by said float rod when said valve is open and said float is raised.

1,689,067. AIR HEATER. LOUIS A. BENNER, Anaheim, Calif. Filed May 24, 1926. Serial No. 111,304. 1 Claim. (Cl. 126—116.)



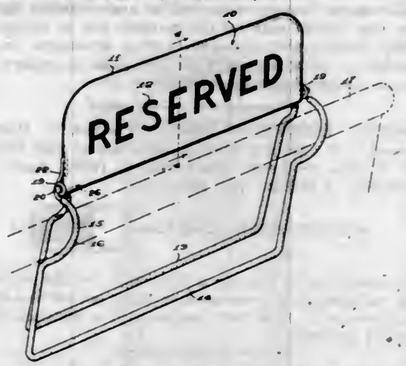
In an air-heater, a housing having an air inlet connection near the bottom at one side and air outlet connections in and near the top near the opposite side of the housing, and a radiator having a combustion chamber substantially in a vertical position and having an inclined portion continuing from the combustion chamber upwardly and transversely across the path from the inlet to the outlet connections in the said housing, the radiator being provided with air conduits in the said inclined portion transversely to the inclined portion and substantially in the direction of the path from the said inlet to the outlet connections and the outside of the radiator being laterally spaced from the inside of the said housing forming comparatively narrow additional air passages between the said inlet and outlet

connections, the radiator having an extension end substantially in a vertical position above the inclined portion adapted to collect and condense the products of combustion after passing around the said air conduits and having a comparatively small outlet in one side near the top, the



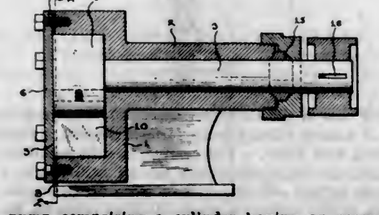
said radiator having a discharge pipe continuing from the said comparatively small outlet in the extension end and extending downwardly within the said housing passing through the rearside of the housing for discharging products of combustion from the radiator.

1,689,068. SHIPPING RECEPTACLE. ORIE O. BROWN, Roseville, Ohio. Filed Nov. 2, 1925. Serial No. 66,383. 9 Claims. (Cl. 220—5.)



1. The combination in a shipping receptacle, of a flexible body portion comprised of slats or bars united by metallic flexible means, separate rigid end pieces, and means comprising spaced bolts and nuts carried by the end pieces for detachably securing the ends of the slats or bars to the end pieces, whereby the end pieces can bodily be detached from the slats or bars and the body portion folded or rolled upon itself.

1,689,069. CHICK BOX. WALTER H. CARVER and WILLIAM H. YUTZ, Trenton, N. J. Filed July 25, 1927. Serial No. 208,180. 6 Claims. (Cl. 229—6.)



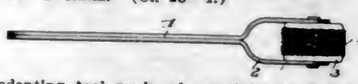
1. A chick box of hexagonal configuration having side, top, and bottom walls formed of a single piece of plane material, and comprising a single series of rectangular side walls, and two series of triangular flaps in unitary relation therewith, said flaps being constructed and arranged to overlap to form top and bottom walls; a column support arranged to prevent vertical collapsing of said box intermediate of its side walls, and rigidly connected with the top wall, and arranged to be rigidly connected with the top wall; and fastening means on one of said flaps adapted to be detachably engaged in closed position; whereby the flap provided with such fastening means may be open for inspection.

1,689,070. DETACHABLE SIGN. GEORGE A. ELLIOTT, New London, Iowa. Filed Nov. 15, 1927. Serial No. 233,477. 3 Claims. (Cl. 40—23.)

1. In a sign of the character described, a body portion for carrying the sign characters, a generally U-shaped jaw attached to the body portion, trunnions attached to the body portion, and a co-acting generally U-shaped jaw having sides bent to provide coiled springs mounted upon the trunnions, the ends of the sides being attached to the body portion.

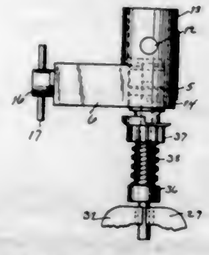
1,689,071. PUMP. DUNCAN R. FALCONER, Camden, N. J. Filed Sept. 22, 1925. Serial No. 57,841. 1 Claim. (Cl. 103—136.)

A pump comprising a cylinder having an eccentrically disposed hub, a detachable head closing the cylinder on the opposite side from the hub, an overhung rotor of a width corresponding to the width of the cylinder and of a diameter materially less than the latter, the rotor having a shaft journaled in the hub and having a continuous diametrical slot opening on that face opposite the shaft, and vanes carried in the slot of the rotor and in edge contact with the inner peripheral surface of the cylinder, the vanes being provided with a spring interposed between them and yieldingly forcing them into engagement with the peripheral wall of the cylinder, the cylinder head serving as a lateral retaining means to retain the vanes in the slot of the rotor, the cylinder being provided with intake and discharge ports disposed respectively on opposite sides of the shortest radial line from the axial center of the hub to the periphery of the cylinder.



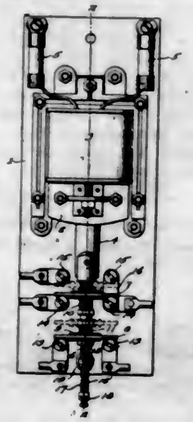
1,689,072. WRENCH. GUSTAVE GRIMSRUD, Antelope, Mont. Filed Mar. 10, 1927. Serial No. 174,374. 13 Claims. (Cl. 81—85.)

1. In a wrench structure of the character described including a handle body and a pair of jaw members asso-



ciated therewith one movable relative to the other, a lever member pivotally associated with said handle and swingable inwardly upon gripping the same and a pair of shiftable elements loosely connected to and actuated by the lever, one thereof shifting the movable jaw to article engaging position and the other acting subsequent to the engaging of an article between the jaws to engage and lock the shiftable jaw in position.

1,689,073. INDENTING TOOL. WILLIAM F. HARVEY, Lima, N. Y.; Mary J. Harvey, executrix of said William F. Harvey, deceased. Filed May 3, 1926. Serial No. 106,383. 1 Claim. (Cl. 25—1.)

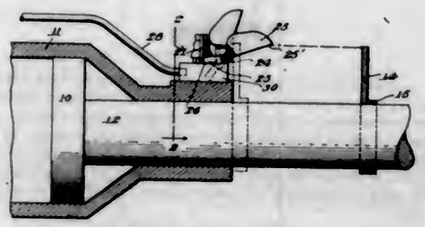


An indenting tool made of porcelain or like material with an irregularly roughened integral operative surface complemental to a surface composed of a multiplicity of sand-like particles.

1,689,074. TOOL FOR REPAIRING STARTER MECHANISMS. WALTER D. HUGHES, Santa Rosa, Calif. Filed July 13, 1927. Serial No. 205,457. 2 Claims. (Cl. 153—9.)

1. In a tool of the character described, a casting having a pair of axially aligned bores formed therein, a partition separating said bores, a rod carried in said partition and being centrally disposed within one of said bores, a pin positioned within said rod and in close proximity to said partition and a crimping wheel slidably mounted in said casting and adapted to have a portion of its periphery extending into one of said bores.

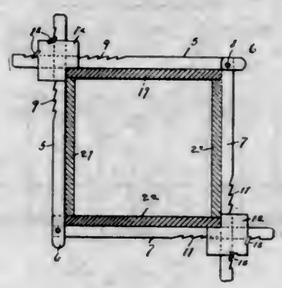
1,689,075. TRAFFIC-LIGHT CONTROL. OGDEN R. LEHMAN, Springfield, Ohio. Filed Jan. 28, 1927. Serial No. 164,253. 1 Claim. (Cl. 200—111.)



A circuit controller comprising a magnet, an armature therefor, an extension connected with the armature, a pair of disks movably mounted on the extension and insulated therefrom, springs for yieldingly holding the disks in position, two pairs of contacts adapted to be alternately engaged by one disk, one pair being arranged in an emergency circuit and the other pair in a regular circuit, a third pair of contacts adapted to be engaged by the second disks when the first disk is in engagement with the contacts of the regular circuit, said third pair of contacts being arranged in a regular circuit, means for energizing the magnet from a distant point to break the regular circuits and close the emergency circuit, a rod having its upper end connected with the extension, a bracket through which the rod passes, the lower end of the rod being screw threaded, a nut on the threaded part and a spring between the bracket and the nut.

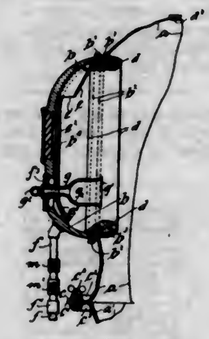
1,689,076. BUMPER. EDWARD H. MCCLOUD, Columbus, Ohio, assignor to The Central Brass and Fixture Company, Springfield, Ohio, a Corporation of Ohio. Filed Mar. 5, 1928. Serial No. 259,061. 10 Claims. (Cl. 293—55.)

1. In a bumper, spaced bumper bars and a supporting bar having bifurcated ends attached to the end thereof.



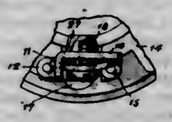
1,689,077. BRAKE-VALVE-BLEEDING DEVICE. JOSEPH MAHER, Stockton, Ill. Filed Sept. 20, 1926. Serial No. 136,577. 1 Claim. (Cl. 303—80.)

The combination with a bleed valve for an air brake cylinder, a piston within the cylinder, a rod connected with the piston, a stem for the valve, of a plurality of devices cooperating with the stem for opening the valve and constituting the arms of U-shaped valve operating means the middle portion of which engages the end of the valve stem, pivoted and weighted levers adapted to move respectively under said devices for retaininng them temporarily in position for opening the valve, and an element carried by the piston rod and adapted to engage either of the weighted levers for releasing them from the devices acting upon the valve.



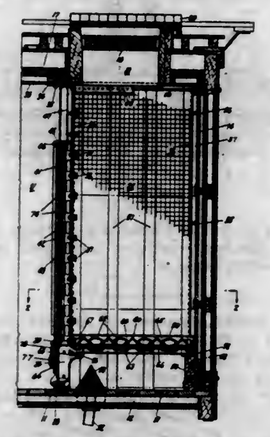
1,689,078. CLAMP. RUSSELL G. MERCER, San Francisco, and GEORGE W. MERCER, Covina, Calif. Filed Mar. 18, 1927. Serial No. 176,468. 1 Claim. (Cl. 144—291.)

In a clamp of the character described, a pair of arms pivoted to each other, a second pair of arms pivoted to each other, said arms having teeth formed thereon, the free ends of said arms of one pair overlying the free ends of the arms of the other pair, blocks slidably positioned upon said overlapping arms and means for locking said blocks to said arms, said means including a pair of



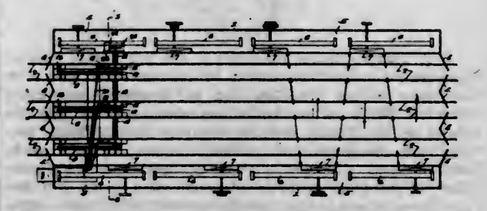
tapered wedge shaped members, each of said wedge shaped members engaging the teeth on one of said arms and its adjacent block.

1,689,079. DIVING DRESS. YASUKICHI MURAKAMI, Broome, Western Australia, Australia. Filed June 21, 1926, Serial No. 117,481, and in Australia May 3, 1926. 9 Claims. (Cl. 61—70.)



1. A helmet for a diver's suit, having a mask, a door removably carried by the mask, a mouthpiece carried by the door and in communication with the helmet, an escape valve in the helmet, and means for supplying fresh air to the mask, whereby the fresh air is inhaled through the nose of the wearer and exhaled through the mouth and mouthpiece to be exhausted into the helmet.

1,689,080. BINDING POST. ARVID H. NEBO, New Britain, Conn., assignor to The Arrow Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed Jan. 14, 1921. Serial No. 437,134. 4 Claims. (Cl. 173—259.)

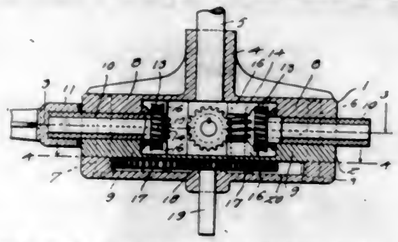


1. A binding post comprising a standard tapped to receive a binding screw and having an apertured side flange, an apertured independent clamping plate facing the standard and provided with a marginal lug freely engaged in the aperture in the side flange of the standard, together with a binding screw passing freely through the aperture in the clamping plate and engaging the tapped standard to press the clamping plate toward the standard.

1,689,081. REFRIGERATOR CAR. DAMIAN L. REYNOLDS, San Francisco, Calif., assignor of one-half to Luther L. Yates, San Francisco, Calif. Filed June 12, 1926. Serial No. 115,550. 16 Claims. (Cl. 62—19.)

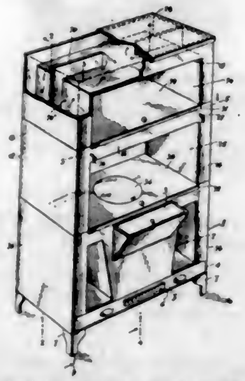
1. In an ice compartment for a cargo vehicle, a series of bars forming an ice grate, spacers between the bars, said spacers having portions overlapping the bars for preventing them from moving away from the spacers, and means for urging the spacers and bars together, located entirely below the bars.

1,689,082. PROCESS OF DRYING CERAMIC WARE AND APPARATUS THEREFOR. THOMAS H. RHOADS, Philadelphia, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 13, 1924. Serial No. 698,901. 2 Claims. (Cl. 34—46.)



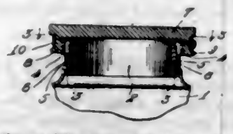
1. The process of drying ceramic and like ware comprising the moving of said ware continuously through a single elongated drying chamber, creating a plurality of independent currents of air at different places respectively along the drying chamber, heating the air currents to different temperatures gradually increasing from the inlet end to the discharge end of the drying chamber, circulating the respective heated currents of air transversely of the drying chamber, and causing the adjoining portions of adjacent air currents to blend with each other, whereby the temperature of the drying chamber will uniformly increase from the inlet end to the discharge end thereof.

1,689,083. ADJUSTING DEVICE FOR FAN BLADES. ELMER C. RINGEL, Alma, Kans. Filed Apr. 9, 1927. Serial No. 182,364. 1 Claim. (Cl. 170—163.)



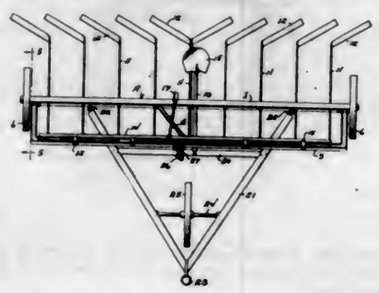
An adjustable device for fan blades, comprising a casing formed of a plurality of sections, two of said sections having mating recesses forming a chamber when the casing is assembled, fan blade supports journaled in said two sections, worm wheels secured to said supports, worm shafts journaled in said two sections and meshing with said worm wheels, the other sections of said casing having

a recess, the shafts aforesaid having one of their ends extended into said recess, pinions secured to the extended ends of said shafts, another shaft journaled in said



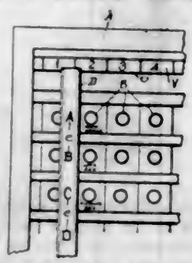
other casing section and manually operable, and a pinion secured to the last mentioned shaft and meshing with the first meshing pinions.

1,689,084. STOVE. ERASTUS W. ROGERS, Durham, N. C. Filed May 1, 1926, Serial No. 106,043. Renewed Mar. 20, 1928. 7 Claims. (Cl. 126—17.)



1. A heating device including a fire pot having lateral openings, a casing comprising superposable sections each including lateral branches and a transverse connecting member, the lower section fitting said openings and the upper section fitting suitable openings in said lower section, the transverse connecting member of said lower section being provided with a connection for a smoke pipe for drawing products of combustion from said fire pot through said casing thereby concentrating heat within the spaces bounded by said branches and transverse members, and means within said casing for directing the flow of products of combuation serially first through said upper transverse member and then through the transverse member of the lower section.

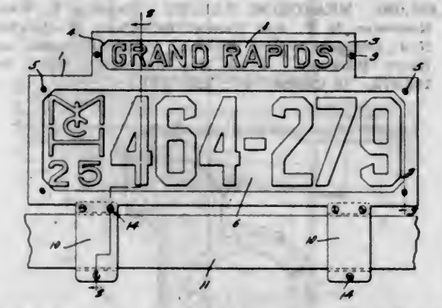
1,689,085. ICE-BAG CAP. CHARLES H. C. RUSSELL, Kansas City, Mo., and OSCAR F. MARCOTTE and LOUIS J. HUGUES, Topeka, Kans. Filed Mar. 23, 1927. Serial No. 178,384. 1 Claim. (Cl. 150—8.)



In combination with a container, a metal ring fitting in the mouth of the container, means for fastening the mouth of the container to the ring, the upper edge of the ring being bent over outwardly to form a flange which is spaced from the body of the ring and the walls of the mouth of the container, a cap having a depending flange of resilient material for engaging the flange of the ring, and a clamping ring engaging the cap for pressing it against the flange of the ring.

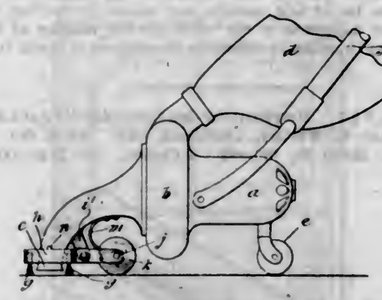
1,689,086. WEEDER. ORIEN R. SAUNDERS, Cove, Oreg. Filed Feb. 15, 1928. Serial No. 254,555. 2 Claims. (Cl. 97—144.1.)

1. An implement of the class described comprising a wheel supported frame, notches in the front and rear members of the frame, blades having their stems passing through the notches, the front end of each stem having a notch therein which is arranged in the front member of the frame, a sliding bar for engaging the notches for locking the stems in the front member, said bar having notches therein for registering with the notches in the stems to unlock the stems and manually operated means for moving said bar.



1,689,087. VOTING-MACHINE COUNTER READER. HIRAM B. SWARTZ, Wooster, Ohio. Filed Apr. 11, 1928 Serial No. 269,044. 2 Claims. (Cl. 235—51.)

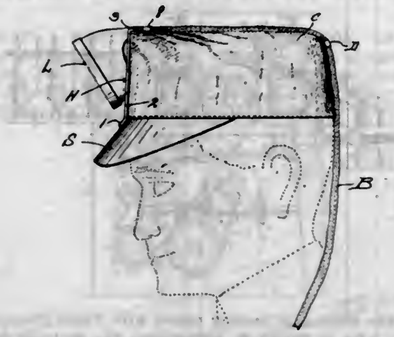
1. In a voting machine, the combination with a plurality of voting keys arranged in parallel party rows and vertical office columns on one side of the machine, and counters set opposite said voting keys, respectively on the opposite side thereof, of means for identifying the several counters with their companion voting keys, respectively, to ascertain the votes indicated thereon, comprising a pair of number strips, each having identical indicia spaced apart thereon, the indicia on both being identical, but arranged in reverse order on one from the other—one strip secured in alignment with the horizontal rows of voting keys, and the other, with the horizontal rows of counters, and so that like indicia on both are directly opposite each other, and a pair of lettered strips, having identical indicia spaced apart thereon like the counters in vertical columns, and means for removably and slidingly suspending said lettered strips vertically opposite each other upon said number strips, respectively, at identical insignia thereon, substantially as set forth.



1,689,088. LICENSE HOLDER. GEORGE TAPELSKI, Grand Rapids, Mich. Filed May 18, 1925. Serial No. 31,181. 1 Claim. (Cl. 40—125.)

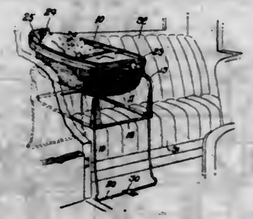
As a new article of manufacture, a holder for a license plate and a city name plate for automobiles, comprising a member stamped from a sheet of metal to include a main frame for the license plate and an auxiliary frame extending from the upper edge of the main frame for the city name plate, both of said frames having their corner edges inwardly flanged, means for removably securing the plates between the flanges of the frames, a

washer lying between the frame and plate, and flat depending ears on the main plate flush with the outer face thereof, and a U-shaped bracket adapted to be connected with said ears and designed for lapping engagement with a support and securing means for holding the U-shaped bracket to the ears.



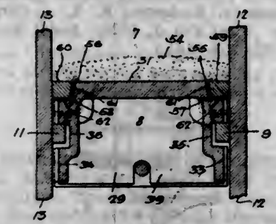
1,689,089. VACUUM CLEANER. ALFRED C. TEVES, Richmond Hill, N. Y. Filed July 3, 1923. Serial No. 649,192. 2 Claims. (Cl. 15—10.)

1. A vacuum cleaner embodying therein a casing, suction creating means therein, a nozzle communicating therewith and normally positioned above the surface to be cleaned, a handle attached to said casing, a roller support for said casing rearwardly of said handle, oscillatory frame means pivotally supported on said nozzle with the front portion thereof adjacent said nozzle, and the rear portion thereof adjacent said handle, a brush carried by the front portion of said frame means, rollers carried by the rear portion of said frame means, and a spring acting normally to raise the portion of said frame means carrying said brush and cause said rollers to support the cleaner adjacent said nozzle, whereby the bristles of said brush are normally held away from said surface, and increased pressure applied through said handle will impart movement to said oscillatory frame means to ensure a desired pressure engagement of the bristles of said brush with said surface.



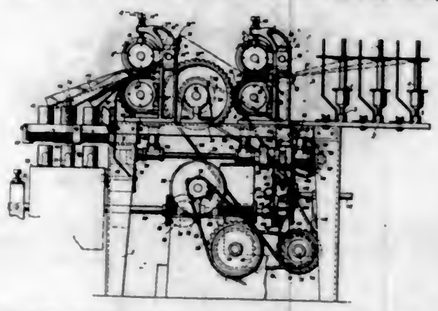
1,689,090. ELECTRIC-LAMP-HOLDING ATTACHMENT FOR MINERS' CAPS. CHARLES W. WATKINS, Kingston, Pa. Filed Sept. 28, 1926. Serial No. 138,252. 1 Claim. (Cl. 240—60.)

The combination with a lamp having on its upper portion a rearwardly directed stem; of a holder for the lamp comprising a substantially U-shaped plate having its end portions provided with angular disposed extremities, a resilient metallic strip attached at its end portions to said extremities and provided with an intermediate lower portion which is disposed between the end portions of the support, said lower portion receiving the stem of the



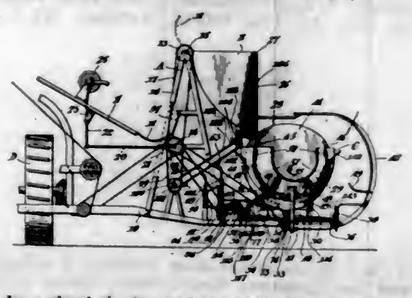
lamp, the end edges of the lower portion of the strip being twisted out of the plane in which the end portions of the strip lie, the lower portion of the lamp being received within the central opening provided by the substantially U-shaped member.

1,689,091. BASSINET. HOMER STUART WATT, Chicago, Ill., assignor to Gordon Motor Crib Company, Port Chester, N. Y., a Corporation of New York. Filed Dec. 15, 1926. Serial No. 154,943. 2 Claims. (Cl. 5—94.)



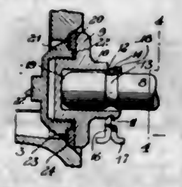
1. In a device of the class described, a rectangular frame and supporting legs therefor, angular vertically extending corner pieces mounted on the frame, generally S-shaped springs each connected at one end to one of the corner pieces and a bassinet supported on the other ends of the springs, the legs passing through the frame and means for adjustably clamping the upper ends of the legs within the corner pieces.

1,689,092. SIFTINGS PREVENTER FOR STOKERS. ANTHONY E. WEINGARTNER, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 21, 1924, Serial No. 687,534. Renewed June 22, 1928. 14 Claims. (Cl. 110—44.)



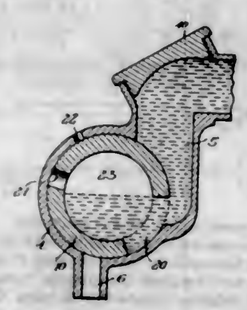
3. In combination, a pusher having a top surface and grooved side surfaces, and a sealing member in each side groove provided with locking lugs preventing longitudinal and vertical displacement beyond a predetermined extent.

1,689,093. METHOD OF AND APPARATUS FOR MAKING CURLED WIRE. JOSEPH A. WOLLE, Philadelphia, Pa., assignor to Union Bag and Paper Corporation, New York, N. Y., a Corporation of New Jersey. Filed Oct. 1, 1926. Serial No. 138,909. 15 Claims. (Cl. 29—4.5.)



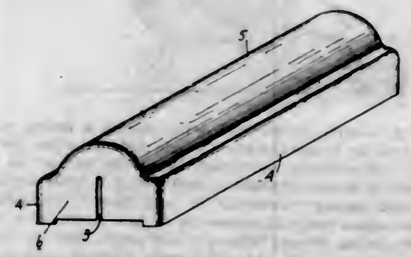
1. The method of making curled wire which comprises rolling wire to flatten it, maintaining the flattened wire while moving under tension, and causing the flattened wire while moving and under tension to pass over a curling edge which imparts to the wire an inherent tendency to curl.

1,689,094. SHEAF SHOCKER. ERNEST ALFRED WOOTTON, Maynooth, Ontario, Canada. Filed Sept. 20, 1926. Serial No. 136,703. 12 Claims. (Cl. 56—40.)



1. In a sheaf shocker and in combination, an elevator, a hopper timed from and thrown into gear by the elevator, a turnably mounted and slidably supported sheaf carrying basket timed from and thrown into gear by the hopper, and mechanism for causing the basket to assume a vertical position and to travel rearwardly, means for automatically causing the basket at a predetermined point in its rearward travel to discharge the shock, means for causing the basket to move forwardly, and means associated with the basket for supporting it in its travel to a vertical position.

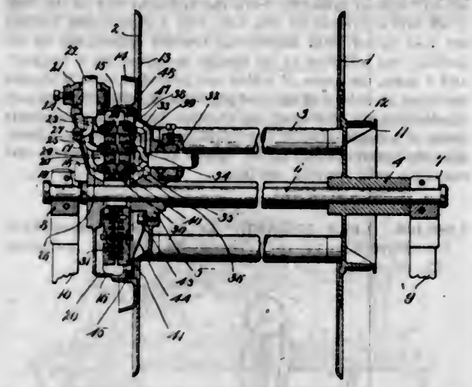
1,689,095. VALVE STRUCTURE. CHARLES F. WRAY, Rochester, N. Y., assignor to National Brass Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 1, 1926. Serial No. 85,212. 7 Claims. (Cl. 251—151.)



1. The combination with a valve stem, of a hollow disc member embracing the end of the valve stem and means for detachably holding the disc member on the valve stem comprising an annularly arranged yieldable spring retainer mounted on the disc member, the latter having an opening through which a portion of said spring retainer projects inwardly to engage a recess in the valve stem.

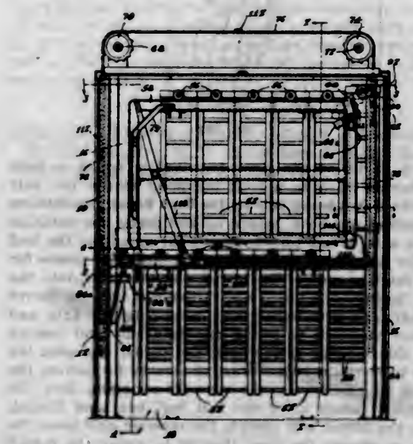
1,689,096. MEASURING FAUCET. CHARLES F. WRAY, Rochester, N. Y., and MANUEL BLICKMAN, Weehawken, N. J., assignors to Saul Blickman, Manuel Blickman, and Harry Blickman. Filed May 5, 1926. Serial No. 106,872. 15 Claims. (Cl. 221—107.)

1. The combination with a valve housing including inlet and outlet ports, of a hollow valve having a filling and discharging opening and movable to place said opening alternately in communication with said inlet and outlet ports, the valve when filling being arranged with the top of said opening below the top of the valve affording an air chamber above the top of said opening, and means for varying the extent of movement of the valve and the position of the top of said opening to determine the amount of liquid that enters.



1,689,097. METHOD OF MAKING RECEPTACLES. THOMAS B. WRIGHT, Cincinnati, Ohio. Filed Oct. 2, 1922. Serial No. 591,992. 4 Claims. (Cl. 113—116.)

1. A method of making a receptacle, consisting in cutting a blank out of sheet metal, also cutting oppositely disposed notches in the edge portions of said blank, and drawing and ironing the blank to provide a semi-cylindrical body portion and a rectangular shaped edge portion having plane side and end walls.

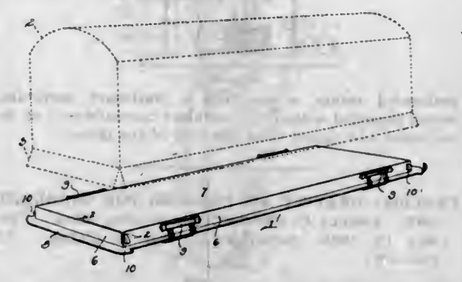


1,689,098. GROUNDING MECHANISM. CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 24, 1924. Serial No. 701,596. 6 Claims. (Cl. 191—12.)

1. In a mining apparatus, a reel, a stationary member coaxial therewith, said reel and member having portions cooperating to form a housing whose opposite end walls are respectively provided by said member and by said reel and whose peripheral wall is in part provided by both said member and said reel, a plurality of pairs of cooperating contacts operative whether said reel is stationary or rotating to maintain electrical circuits and enclosed in said housing, and means rotating with said reel and engaging

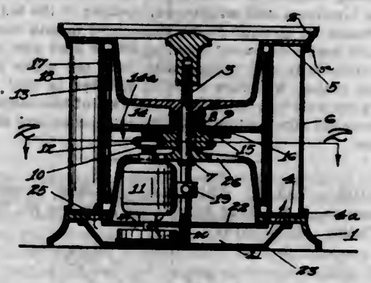
said stationary member for maintaining electrical connection of low resistance between them.

1,689,099. DRIER. DANIEL H. APPLEGATE, Jr., Red Bank, N. J., assignor, by mesne assignments, to Proctor & Schwartz, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 15, 1926. Serial No. 141,794. 26 Claims. (Cl. 34—12.)



1. A drier comprising, in combination, a pair of drying chambers, one above the other; independent carriers for material to be dried; guides for horizontal movement of the carriers through the chambers; means, at the end of travel through one of said chambers, for shifting carriers therefrom to the other of said chambers, and means operable by the carrier shifting means for moving the carriers into contact with each other, whereby the carriers are propelled through the receiving chamber.

1,689,100. WEBBING SUPPORT FOR UPHOLSTERY. KEGHAM BALIKJIAN, Newark, N. J. Filed Dec. 3, 1926. Serial No. 152,420. 1 Claim. (Cl. 155—179.)

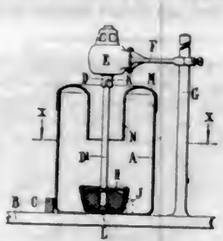


As an article of manufacture, a stirrup-like webbing support formed of a strip of sheet metal having a horizontal webbing-receiving broad member arched in cross section, and upright flat securing members the lower ends of which upright securing members present a twist, said twisted portions merging into the arched horizontal members.

1,689,101. FASTENING MECHANISM FOR GRAVE VAULTS. ALLEN F. BECK, Columbus, Ohio, assignor to The Clark Grave Vault Company, Columbus, Ohio, a Corporation of Ohio. Filed May 3, 1927. Serial No. 188,566. 3 Claims. (Cl. 292—175.)

1. In a grave vault, a casing, a bolt slidably mounted in said casing, a stem connected with said bolt and slidably projecting through said casing, a spring surrounding said stem and confined between said casing and said bolt to normally project the latter toward an operative position, and a frangible actuating portion formed with the outer end of said stem and arranged exteriorly of said casing.

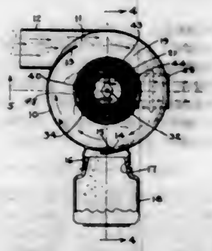
1,689,102. ANIMATED PICTURE DISPLAY. JOHN T. BRECHLYN, Worcester, Mass., assignor, by mesne assignments, to Haptograph, Inc., a Corporation of Massachusetts. Filed Sept. 18, 1924. Serial No. 738,483. 15 Claims. (Cl. 88—16.)



1. In an animated picture display device for presenting to direct view a series of pictures representing successive phases of an action, a flexible endless picture carrier, fluid pressure means acting on the inside of the carrier and means engaging the outside picture bearing surface of said carrier for confining it and determining its form.

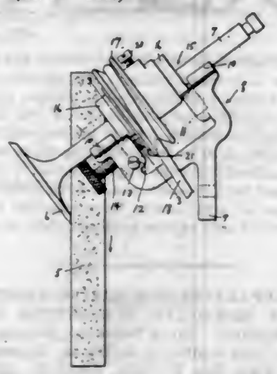
2. In an improved picture display device, a flexible picture carrier and fluid pressure means acting directly on the flexible surface of said carrier for presenting the picture bearing surface of said carrier to direct view in a predetermined form.

1,689,103. APPARATUS FOR MIXING LIQUIDS WITH SOLID OR SEMISOLID SUBSTANCES OR WITH OTHER LIQUIDS. NIELS BENDIXEN, London, England, assignor to John Godfrey Yule Delmar Morgan, London, England. Filed Nov. 27, 1926, Serial No. 151,194, and in Great Britain May 25, 1926. 7 Claims. (Cl. 259—96.)



1. A mixing device for liquids and other substances said device comprising a liquid container, a vertical shaft rotatably mounted in said container, a perforated screen

in the form of a figure of revolution fixed on said shaft, a propeller mounted on said shaft in the interior of said screen to direct the substances to be mixed against the said

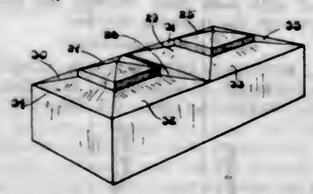


perforated rotary screen, and a stationary perforated screen arranged within the container concentrically of the container and spaced from the wall of the latter.

1,689,104. GRAVITY AIR CLEANER FOR CARBURETORS. ASHLEY C. BENNETT, Minneapolis, Minn. Filed May 18, 1925. Serial No. 31,064. 2 Claims. (Cl. 183—82.)

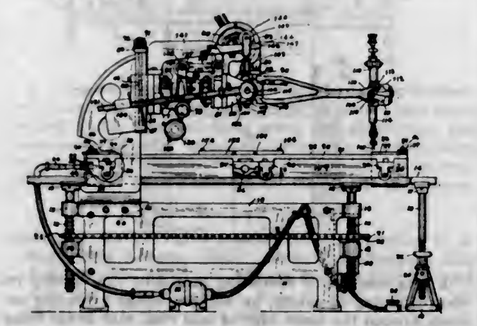
1. An air cleaner for carburetors comprising a cylindrical casing adapted to be mounted with its axis horizontal, means forming a dust-withdrawal opening at the bottom of said casing, an airtight receptacle secured to said casing below said dust-withdrawal opening, an air inlet pipe extending horizontally and tangentially from the upper portion of said casing, a hollow filtering member in said casing having its axis coinciding with the axis of the casing, and an air outlet pipe leading from the interior of said filtering member.

1,689,105. VALVE GRINDER. ROBERT BJORKLUND, Brooklyn, N. Y. Filed July 12, 1927. Serial No. 205,146. 1 Claim. (Cl. 51—131.)



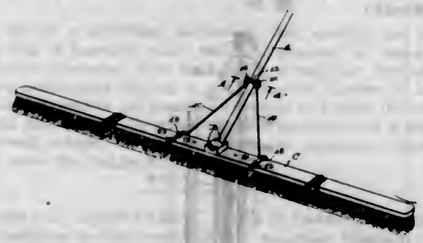
A valve grinder of the class described comprising a pulley including a tubular hub portion terminating in cylindrical end portions and having an internal V-shaped valve stem receiving pockets, said body also including an outstanding grooved flange formed on one side with a circular bearing surface spaced inwardly from the adjacent end of the hub, a set screw carried by the hub, and a supporting bracket for said pulley, said supporting bracket embodying an attaching lug adapted to be fixedly mounted on a support, and a yoke, the arms of which are provided with V-shaped seats for reception of the end portions of said hub, and outwardly spaced V-shaped valve stem bearings, said seats being of a depth greater than said bearings, and an adjustable abutment screw carried by one of the yoke arms and engaging said bearing surface.

1,689,106. LEAF TURNER. LOUIS BOYD, Connellsville, Pa. Filed Nov. 17, 1927. Serial No. 233,934. 2 Claims. (Cl. 40—104.)



1. In a device of the class described, a frame, a book holder having an arm, a book including leaves, the butt ends of the leaves being held by the book holder, mechanism for mounting the book holder on the frame for rotation about an axis, a leaf turner, means for mounting the leaf turner for movement in an orbit about the book, means for moving the free ends of the leaves, one at a time, into the path of the turner, whereby the turner will turn the leaves backwardly and downwardly with respect to said axis, and a reverser mounted to swing on the frame and resting against the last leaf of the book, the turner engaging the reverser to carry the book toward the means for moving the free ends of the leaves, the reverser swinging into the path of the turner after the last leaf has been turned, whereby the turner will operate the reverser and cause the reverser to engage the arm, thereby to swing the holder and the butt ends of the leaves around said axis and to restore the book to its original position.

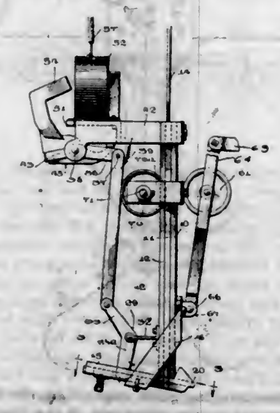
1,689,107. BUILDING BLOCK OR BRICK. FRANK L. BRADLEY, Cincinnati, Ohio. Filed Nov. 5, 1926. Serial No. 146,527. 1 Claim. (Cl. 72—38.)



A building block or brick comprising a substantially rectangular formation as to all but two faces, the opposite faces which constitute said exception being respectively anaglyptic and diaglyptic and duplicates of each other, the shape of said anaglyptic face consisting of two elevations spaced apart and from the edges of the face by surfaces inclined away from the elevations, the shape of the diaglyptic face being formed to fit the anaglyptic face.

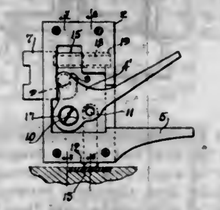
1,689,108. WOOD-CARVING MACHINE. ALFRED V. BREED, Jamestown, N. Y., assignor to Curtis Machine Corporation, Jamestown, N. Y., a Corporation of New York. Filed Mar. 29, 1926. Serial No. 98,065. 7 Claims. (Cl. 90—13.3.)

1. In a wood carving machine, a standard, uprights fixed to said standard, a cross beam supported by said uprights, operating mechanism, vertical hinges connecting said beam to said mechanism, a rectangular frame pivotally mounted in said standard and centers in said frame between which are carried the template and stock on which said mechanism operates.



1,689,109. BROOM-HANDLE BRACE. RICHARD REES BROCK, Brooklyn, N. Y. Filed July 8, 1926. Serial No. 121,218. 3 Claims. (Cl. 306—6.)

1. Means for connecting and bracing push broom handles, comprising a pair of braces having offset portions terminating in right angular ends, means for detachably securing the braces to the handle, and a pair of hooked elements adapted to be secured to the brush head to extend in spaced relation to the side of the head, the offset portions of the braces being adapted to be engaged by the hooked elements and their angular ends to overlie the top of the brush head.

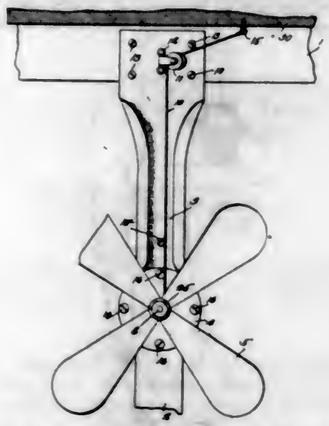


1,689,110. CUTTING DEVICE. WALTER W. BRUST, Weston, W. Va. Filed Jan. 18, 1927. Serial No. 161,902. 4 Claims. (Cl. 164—49.)

1. In a device of the character described comprising a frame, a knife slidably mounted in the frame, a track for guiding a strip of sealing paper through the frame and transversely of the knife, means for reciprocating the knife comprising a solenoid, an armature adapted to be oscillated by the solenoid, a shaft operatively connected with and adapted to be rocked by the solenoid, a bell crank lever having connections with the knife, means connecting the bell crank lever with the shaft whereby rocking of the shaft will cause oscillation of the bell crank lever and reciprocation of the knife, a roller located adjacent the strip of paper and adapted to be revolved continuously, an idle roller carried by the frame and adapted to be moved for

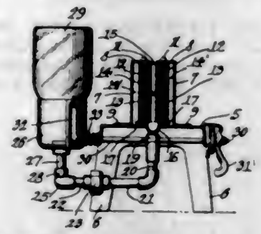
forcing paper in engagement with the revolving roller for periodically forcing the strip of paper through the frame, and means for periodically moving the idle roller into engagement with the paper.

1,689,111. SASH LIFTER AND LATCH. BENJAMIN F. BURT, Dayton, Ohio, assignor to The Dayton Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed June 9, 1927. Serial No. 197,550. 8 Claims. (Cl. 292—40.)



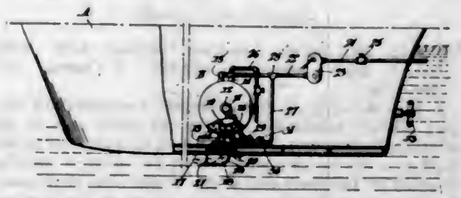
1. The combination with a window frame and a sliding sash therein of a housing mounted upon the sash, a lever extending into the housing, the said lever being fulcrumed adjacent one extremity thereof, the arm of the lever being eccentrically formed, a retractable latching member associated with the lever and in operative relationship therewith, a second member pivoted to the said lever and normally abutting on the window frame, and a bearing carried by the lever arm for the end of the said second member and adjacent the pivot point thereof, whereby upon operation of the lever the said latching member will be retracted and the pivoted member simultaneously actuated against the window frame to force the said sash away from its seat.

1,689,112. FLY SHOO. ART CAIN, Indianola, Nebr. Filed Nov. 8, 1927. Serial No. 231,825. 2 Claims. (Cl. 230—244.)



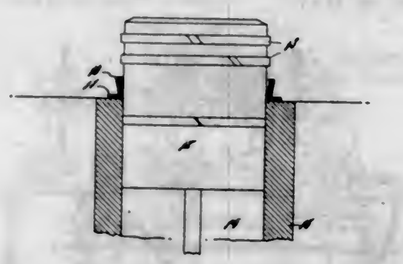
1. In a device of the class described, a substantially vertical bracket, means for securing the upper end of the bracket to a door, a shaft journaled on the lower end of the bracket, a fan on the outer end of the shaft, a housing mounted on the lower end of the bracket, the shaft passing through the housing, a torsion spring in the housing, means for securing the inner end of the spring to the shaft, means for anchoring the outer end of the spring, a flexible element wound about the shaft and secured at one end to

the shaft and located between the fan and the housing, means for holding the opposite end of the flexible element,



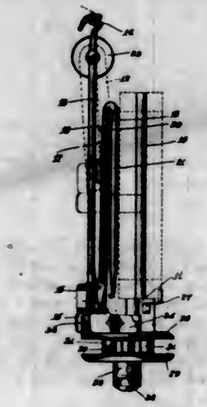
and a direction-changing guide engaged by the flexible element and mounted on the upper end of the bracket.

1,689,113. OIL BURNER. ARBA IRA CARNINE, North Madison, Ind. Filed Oct. 20, 1927. Serial No. 227,581. 2 Claims. (Cl. 158—91.)



1. A liquid fuel burner including a base, a fuel trough supported on the base and having flanges, said fuel trough having a slot to admit fuel to the trough, a burner block including spaced tiers, the space between the tiers constituting a vertical passageway, said tiers being mounted on the flanges, each tier embodying a plurality of superposed bars, each bar having a groove formed longitudinally thereof providing parallel flanges having notches formed therein, said notches constituting passageways communicating with the vertical passageway, and a casing forming a part of the burner block and spaced from the bars providing lateral passageways communicating with the vertical passageway through the notches.

1,689,114. AUXILIARY POWER MEANS FOR SHIPS AND THE LIKE. JOHN ALBERT CHOQUETTE, Ottawa, Ontario, Canada. Filed Mar. 3, 1925. Serial No. 12,929. 3 Claims. (Cl. 115—0.5.)

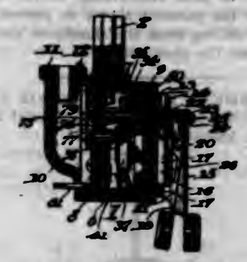


1. Hydraulic power mechanism for boats comprising a turbine having discharge ports and intake ports, a water intake for the boat communicating with a turbine intake port, means operatively connecting the intake ports, pressure generating means operatively connected to the discharge ports whereby on the turbine being operated the pressure generating means are simultaneously operated to create a vacuum in the turbine.

1,689,115. RING COMPRESSOR. BERTIE M. COLEMAN, Worton, Md. Filed June 6, 1925. Serial No. 35,323. 1 Claim. (Cl. 29—86.4.)

A ring compressor consisting in a split ring having its wall diverging upwardly, an annular flange extending entirely around the lower edge of said ring, said flange being designed to overlie the end of a cylinder and form a broad bearing support for the ring, and a means for adjusting the ring, said means including strips connected to the respective ends of the ring and a bolt adjustably connecting the strips, one of said strips bridging the open juncture of the ring at all times to form a guiding means in the adjustment of the ring.

1,689,116. CARRIER FOR TUBULAR BRAIDING MACHINES. WILLIAM E. COOK, New York, N. Y. Filed Jan. 11, 1926. Serial No. 80,400. 14 Claims. (Cl. 96—13.)



1. A carrier for tubular braiding machines embodying therein an upper plate adapted to bear upon the top plate of a braiding machine, a spindle for a bobbin or cop carried by said plate, a stem having an eye formed therein carried by said plate and parallel with said spindle, a tensioning traveler slidably mounted in relation to said stem and having an eye formed thereon for the thread, means constantly acting upon said traveler to impart a movement thereto away from the eye of said stem, a looped guide for the thread carried by said plate parallel with and intermediate said spindle and said stem, and a tensioning device adapted to engage the thread interpediate said guide and said traveler.

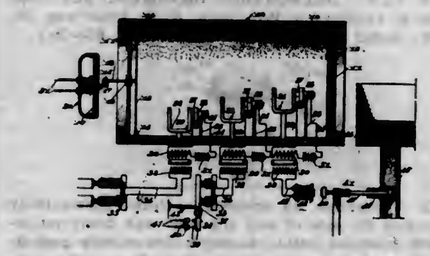
1,689,117. SIGN. EMIL H. DIEBOLD, Newark, N. J. Filed Aug. 5, 1927. Serial No. 210,948. 2 Claims. (Cl. 40—140.)

1. A sign of the character described comprising a frame, strips forming the marginal outline of letters and being secured to the frame at their lower and upper ends, and foraminous material arranged across the space between the margins of said letters whereby the scenery in the rear of the sign can be seen through the margins of said letters.

1,689,118. SWITCHING MECHANISM. CHARLES F. A. EDDY, New London, Conn. Original applications filed July 20, 1923, Serial Nos. 652,809 and 652,810. Divided and this application filed Mar. 6, 1926. Serial No. 92,931. 18 Claims. (Cl. 200—6.)

15. In a switching mechanism, the combination of a casing, a movable shaft mounted therein, an operating handle connected with said shaft, a stop-bar carried by the casing and having a notch formed therein, a lock-latch pivoted to the handle in position to engage the notch and hold the handle in an adjusted position, and a spring housed within the movable shaft for resiliently tending to move the lock-latch into the notch.

1,689,119. CORD FABRIC. RHYS D. EVANS, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 18, 1925. Serial No. 15,233. 9 Claims. (Cl. 139—426.)

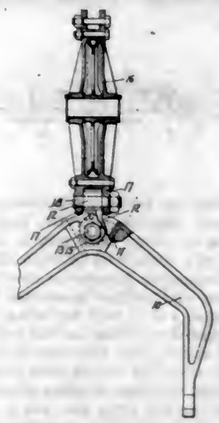


4. A cord fabric comprising a plurality of cords each cord having a cable twist, a strand twist and a yarn twist, the cable and strand twists being in the same direction.

1,689,120. CHAIN TIGHTENER AND FASTENER. ISAAC J. D. FAIRHURST, Manchester, Iowa. Filed Nov. 17, 1927. Serial No. 233,995. 1 Claim. (Cl. 24—68.)

A chain tightener and fastener comprising an elongated bar having one end directed laterally, then tapered and bent into the form of an eye for pivotally connecting said end with one end of a chain, said laterally directed portion being of greater transverse dimensions than other parts of the device whereby said portion is adapted to resist wear and strain, the other end of said bar being directed laterally in the same direction as said one end and then directed laterally at right angles, then upwardly to form a tapered hook bill, parallel with and spaced from said laterally directed adjacent end, the right angular connecting portion between said end and bill being flat, and a small hook on the bar between its ends and facing toward its pivotal end, whereby a link of the chain may be passed over the bill carrying end of the bar and engaged with said small hook, whereupon a lever action may be effected by swinging the bar away from the link, causing tightening of the chain, said hook bill being engageable with a link of the chain, the flat right angular connecting portion of the hook bill fitting closely between the sides of the chain link, whereby accidental disengagement of the hook bill from the link is prevented.

1,689,121. ELECTRIC CONTROL APPARATUS. WILLIAM S. FERDON, Omaha, Nebr. Filed June 13, 1923. Serial No. 645,157. 3 Claims. (Cl. 177—353.)



1. In an apparatus of the character described, a vibration and sound excluding container, a diaphragm within the container, means for hingedly connecting the diaphragm to the walls of the container, means whereby the diaphragm may be set into vibration for producing sound waves of different pitch values, a plurality of tuning forks within the container, each adapted to respond to sound waves of a different pitch, and means whereby different electrical circuits may be established with the vibration of said forks.

1,689,122. BAIL FOR EXCAVATING DIPPERS AND THE LIKE. BERLIN S. FERGUSON, Marion, Ohio, assignor to The Marion Steam Shovel Company, Marion, Ohio, a Corporation of Ohio. Filed July 22, 1926. Serial No. 124,174. 9 Claims. (Cl. 214—145.)

1. In a device of the character described, a bail having a socket formed in the transverse portion thereof and

opening through the upper edge of the same, and a connecting member pivotally mounted in said socket and ex-

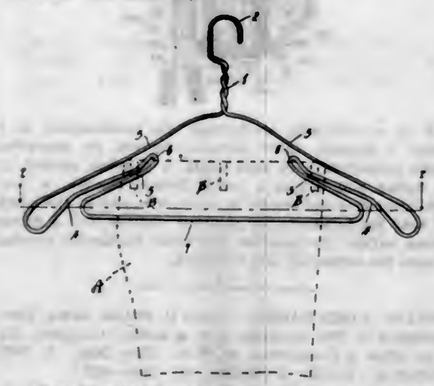
tending above the same for connection with a supporting member.

1,689,123. METHOD OF CONSTRUCTING WEARING SURFACES OF ROADS AND THE LIKE. SAM EVERETT FINLEY, Atlanta, Ga. Filed July 28, 1926. Serial No. 125,594. 4 Claims. (Cl. 94—23.)

1. The method of constructing and applying wearing surfaces to road structures which comprises covering the structure with bitumen of suitable consistency, adding to the bitumen coating mineral aggregate, and kneading and thoroughly admixing the bitumen and aggregate to mature the composite surface coating and unite the same with the original road structure.

1,689,124. DETACHABLE ORNAMENT SETTING. JOHN E. FITZGERALD, Providence, R. I. Filed Aug. 26, 1926. Serial No. 131,647. 5 Claims. (Cl. 63—29.)

1. In combination, an ornament, a frame substantially surrounding the side of said ornament and firmly retaining said ornament within having a downwardly projecting resilient wall having a groove extending continuously around the outer side thereof spaced from the end thereof and terminating in an inwardly projecting continuous lip below said groove and an article of jewelry having a socket therein having an upwardly and inwardly projecting wall substantially terminating in an inwardly projecting continuous resilient lip slightly larger circumferentially than the lower end of the inwardly projecting frame lip and smaller circumferentially than the wall of said frame, whereby when said frame is pressed within said socket to expand said resilient walls, said inwardly projecting resilient socket lip may engage within said frame groove to secure said frame and contained ornament within said socket.



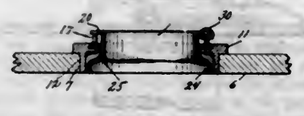
1,689,125. WOMAN'S GARMENT. JULIA FOERCH, Wilkes-Barre, Pa. Filed June 19, 1924. Serial No. 721,087. 2 Claims. (Cl. 2—112.)

1. A loosely fitting garment of the character described provided with shoulder straps, reinforcing back strips secured to the shoulder straps adjacent the inner edge thereof and adjacent the juncture of the strap and the top of the garment, front reinforcing strips secured to the body of the garment adjacent the inner edge of the shoulder straps and substantially in line with said inner edge, all of the strips extending entirely to the bottom

of the garment, and stocking attaching devices secured to the lower ends of said reinforcing strips, whereby the strain put upon the garment serves to prevent the shoulder straps from falling from the shoulders, and to support the garment from the shoulders.

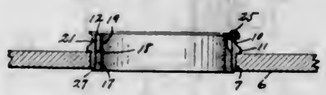
1,689,126. GARMENT HANGER. CONRAD P. GASS, Tacoma, Wash. Filed Oct. 21, 1926. Serial No. 143,172. 1 Claim. (Cl. 223—62).

A garment hanger formed of a single strand of wire and provided with a cross bar intermediate of its ends, the wire at each end of the cross bar having inwardly and upwardly reentrant portions rebent to form inwardly directed and upwardly inclined hooks for engagement with trousers loops, the wire at the ends of said hooks rebent to form coat supporting portions, and the ends of the wire joined and formed with a suspending hook.



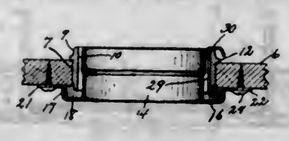
1,689,127. SUPPORT FOR RING TRAVELERS. GEORGE H. GILLIGAN, Providence, R. I., assignor to U. S. Ring Traveler Company, Providence, R. I., a Corporation of Rhode Island. Filed Jan. 16, 1928. Serial No. 247,012. 3 Claims. (Cl. 118—59.)

1. In a spinning or twisting machine, a ring for supporting a traveler, a holder plate upon which the ring



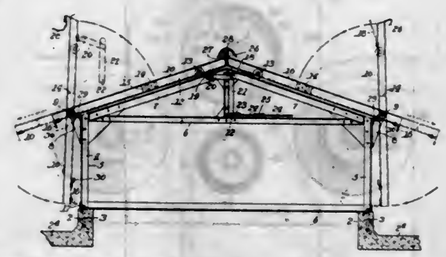
is mounted, and an imperforate ring shield comprising a base plate arranged beneath the holder plate and on which the holder plate rests, said shield having a cylindrical wall extending from the base of the ring to substantially the horizontal plane of the top of the traveler ring encircled by the ring and spaced therefrom to form an annular recess for a traveler.

1,689,128. SUPPORT FOR RING TRAVELERS. GEORGE H. GILLIGAN, Providence, R. I., assignor to U. S. Ring Traveler Company, Providence, R. I., a Corporation of Rhode Island. Filed Jan. 16, 1928. Serial No. 247,014. 2 Claims. (Cl. 118—59.)



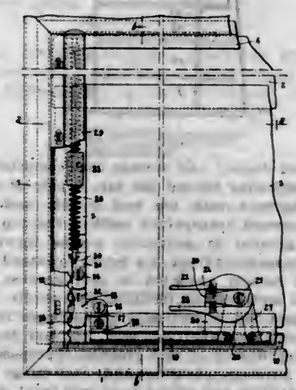
1. In a support for ring travelers, an annular ring holder provided with a vertical split and with an internal channel in its upper face, a traveler ring seated in the channel and an imperforate tubular shield embraced by the holder and frictionally held therein and extending from the lower edge of the ring to approximately the horizontal plane of the ring top and spaced from the ring to form a raceway for a traveler.

1,689,129. SUPPORT FOR RING TRAVELERS. GEORGE H. GILLIGAN, Providence, R. I., assignor to U. S. Ring Traveler Company, Providence, R. I., a Corporation of Rhode Island. Filed Jan. 16, 1928. Serial No. 247,015. 2 Claims. (Cl. 118—59.)



1. In a support for a ring traveler, a cylindrical traveler ring, a horizontal annular head upon the top of the ring, and an imperforate tubular shield extending from the bottom of the ring to substantially the top portion thereof, said shield comprising a broad lower portion frictionally engaging the interior face of the ring, and a retracted upper portion spaced from the ring.

1,689,130. SUPPORT FOR RING TRAVELERS. GEORGE H. GILLIGAN, Providence, R. I., assignor to U. S. Ring Traveler Company, Providence, R. I., a Corporation of Rhode Island. Filed Jan. 16, 1928. Serial No. 247,016. 5 Claims. (Cl. 118—59.)

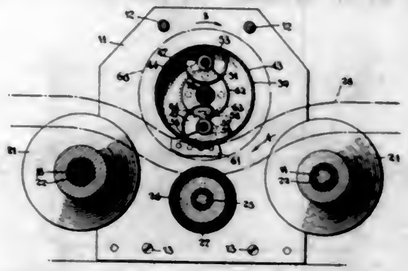


1. In a spinning or twisting machine, a ring rail provided with a spindle orifice, a vertical traveler ring fixed in the rail in the orifice and projecting above the rail, and an imperforate tubular shield member concentrically disposed within the ring extending from the bottom to substantially the top of the ring and spaced therefrom and supported from the bottom of the rail.

1,689,131. ROOF STRUCTURE. JOHN H. GOODWIN, Greensburg, Pa., assignor to W. F. Overly & Son, Greensburg, Pa., a Corporation. Filed July 22, 1927. Serial No. 207,727. 17 Claims. (Cl. 108—16.)

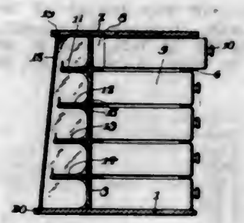
1. A roof structure, comprising a plurality of relatively movable roof members meeting in a common joint, and a pivotally mounted ridge member on one of the roof members for sealing the joint.

1,689,132. WINDOW FOR DOORS OF MOTOR CARS AND THE LIKE. GEORGES HAARNAGELL, Courbevoie, France. Filed Feb. 26, 1926, Seral No. 90,936, and in France Mar. 21, 1925. 2 Claims. (Cl. 296—48.)



1. In a window of the class described, a frame, vertical rack bars at opposite sides of the frame, a glass movable vertically in the frame, catches mounted on the glass for engagement with the racks, a pair of gripper levers mounted on the glass for manual manipulation and each connected to one of the catches and a spring active on said gripper levers to normally keep the catches in engaged position, each catch being pivotally mounted and provided with a lug having a gripping collar, each lever having an arm and each lever arm being connected to one of the gripping collars by a rod which extends through and is adjustable in said collar.

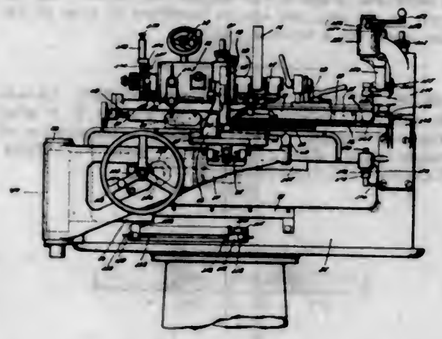
1,689,133. METHOD OF AND MACHINE FOR PERFORATING LAMINATED FABRICS. JORGEN I. HAASE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 7, 1926. Serial No. 127,754. 15 Claims. (Cl. 154—1.)



15. A machine for liberating air from between the sheets of a laminated material comprising rollers adapted pro-

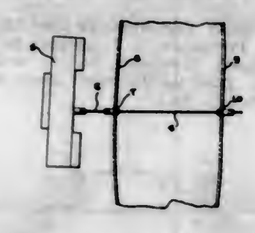
gressively to compress the material, a needle associated and movable with respect to both rollers, and means to

thrust the needle into and retract it from the material while the latter is under compression between the rollers.



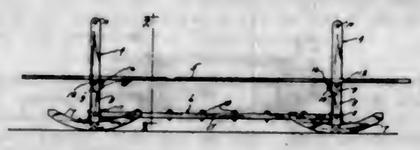
1,689,134. DISPLAY CASE. OMER A. HANSEN, Green Bay, Wis. Filed Oct. 19, 1927. Serial No. 227,248. 1 Claim. (Cl. 312—119.)

A combined display and storage case comprising a top, a bottom projecting beyond the top, a pair of end walls positioned between said top and bottom and each including a forward transparent section, the top and bottom being grooved in proximity to the forward edges thereof, a transparent front of a length to extend from said top to said bottom, mounted in said grooves, abutting against said sections and inclining rearwardly from said bottom to said top, a vertically disposed partition interposed between and abutting said top and bottom and positioned rearwardly of said grooves, superposed, spaced supporting members abutting and projecting forwardly from said partition and spaced from said front, superposed sets of article receptacles arranged rearwardly of said partition between said top and bottom, the sets corresponding in number to the number of said supporting members, and sets of spaced, opposed pairs of superposed divisional members projecting forwardly from said partition, the divisional members of each pair arranged against the upper and lower faces of a supporting member at the rear thereof, each pair of divisional members positioned in alignment with a side of a receptacle, the distance between certain of the opposed pairs being greater than that between the other of the opposed pairs.



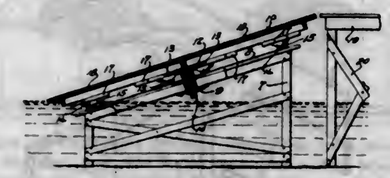
1,689,135. METAL-WORKING MACHINE. BENGT M. W. HANSON, Hartford, Conn.; Elnar A. Hanson executor of said Bengt M. W. Hanson, deceased. Filed Mar. 11, 1922. Serial No. 543,109. 32 Claims. (Cl. 51—225.)

1. In a machine of the character described, cutter holding means and a grinding wheel having a transverse convex cutting edge, said means and wheel being mounted for movement longitudinally and laterally one relative to the other during the grinding operation, means for guiding said holding means and grinding wheel one relative to the other in a predetermined path corresponding to the contour to be given to the teeth of the cutter,



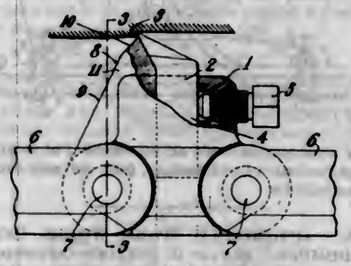
and means for supporting said grinding wheel for angular movement about the center of curvature of the cutting edge thereof.

1,689,136. RADIO ATTACHMENT FOR STRING INSTRUMENTS. GEORGE T. HASTINGS, New York, N. Y. Filed Sept. 13, 1927. Serial No. 219,296. 2 Claims. (Cl. 179—109.)



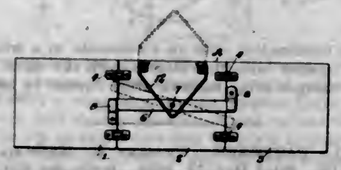
1. In combination a musical stringed instrument having a finger board, a radio electric unit, a member mounted upon the finger board for supporting in attached relationship thereto the radio unit, the member comprising a wooden block fastened to the finger board, a driving pin in the radio electric unit arranged to pass through the stringed instrument.

1,689,137. BOB ROCKER. MERRILL J. HIRE, Minneapolis, Minn., assignor to Playground & Gymnasium Equipment Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Apr. 9, 1927. Serial No. 182,513. 3 Claims. (Cl. 155—57.)



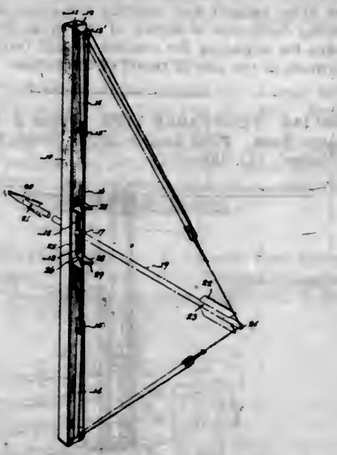
3. A bob rocker comprising rocker-equipped end members, said end members including pairs of upright posts and crossbie rods connecting the posts of each pair and affording handles, a seat board pivotally supported from the posts with its ends extending outwardly to form seat portions, and a foot rack pivotally supported from the posts below the seat board.

1,689,138. BATHERS' INCLINED ROTARY WATER PLATFORM. MERRILL J. HIRE, Minneapolis, Minn., assignor to Playground & Gymnasium Equipment Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 15, 1927. Serial No. 226,493. 2 Claims. (Cl. 275—51.)



1. A bathers' amusement device comprising a suitable support and on said support a rotary disk-like platform set in an oblique plane for rotation on an oblique axis, said platform being free for rotation in either direction, the direction of rotation depending on the preponderance of weight on the one side or the other thereof, said platform being arranged to be set with its lower portion approximately at the water level and being free from adjacent obstructions for the discharge of bathers from the lower portion of said platform and into the water, said platform being substantially flat and free from obstructions.

1,689,139. CUTTER CHAIN. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Nov. 1, 1924. Serial No. 747,816. 11 Claims. (Cl. 262—33.)

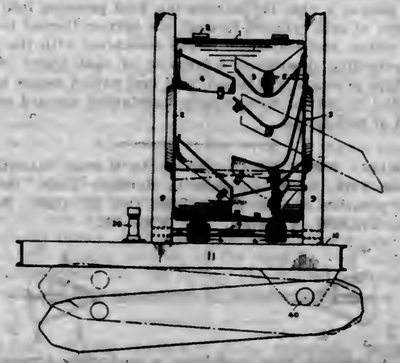


1. The combination with a cutter chain and a cutter bit having lateral cutting edges, of means carried by the cutter chain and projecting between said cutting edges for guarding a substantial portion of the cutting surface of the bit, said means having a guard surface inclined rearwardly from said chain to its outer extremity.

1,689,140. FOLDING LICENSE PLATE. HERMAN JASCHUN, Brooklyn, N. Y., assignor of one-half to Robert Winston, New York, N. Y. Filed Sept. 13, 1927. Serial No. 219,294. 3 Claims. (Cl. 40—125.)

1. A folding license plate, comprising a plurality of sections, link hinges connecting the sections and located in recesses of adjacent sections, and means on the intermediate section for engagement with the end sections to hold the sections in alinement.

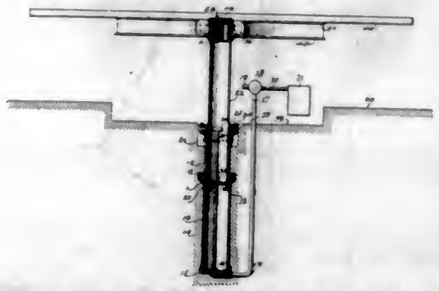
1,689,141. BOW AND ARROW. HENRY B. KELLER, Philadelphia, Pa. Filed Aug. 4, 1927. Serial No. 210,586. 3 Claims. (Cl. 124—7.)



1. A bow including a rigid bow shaft and an elastic string, the bow shaft having an opening and communicating slots therein through which an arrow shaft and feather are adapted to pass, the slots having tapered walls for the purpose described, and notched ears projecting inwardly from the bow shaft constituting hand guards and bow string guides.

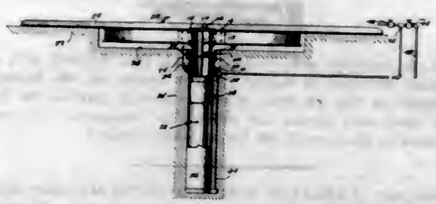
1,689,142. FOUNTAIN PEN. HEINRICH KÖHLER, Hamburg, Germany. Filed May 6, 1927, Serial No. 189,353, and in Germany Oct. 21, 1926. 2 Claims. (Cl. 120—48.)

1. A fountain pen having an ink feed formed with a conical terminal to engage the pen barrel, an ink feeding channel in the ink feed, a pen removably carried by the ink feed, and means for adjustably tensioning the pen to control the flow of ink through the channel.



1,689,143. CARRIAGE FOR CONCRETE MIXERS AND DISTRIBUTORS. JOSEPH C. LUKACHOVIC, Chicago, and HARRY C. PETERS, Oak Park, Ill. Filed Apr. 13, 1926. Serial No. 101,635. 8 Claims. (Cl. 83—73.)

1. In a device of the character described, the combination of a mixer comprising a rotary drum having blades therein mounted to rotate therewith and to move concrete aggregates toward and from its ends, and in other directions

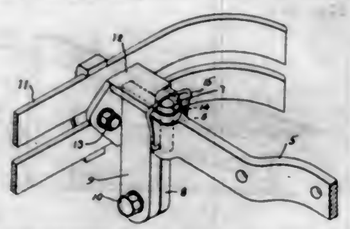


and to mix them, said drum having a charging opening in one end and a discharge opening in the other, a support on which said drum is fixed, traction means mounted on said drum support and carrying the same, and means for varying the degree of mixing of said drum including tilting means for adjusting the relation of said traction means to the drum in the line of travel of the former.

1,689,144. TURNTABLE LIFT. PETER J. LUNATI, Memphis, Tenn. Filed June 9, 1925. Serial No. 36,019. 7 Claims. (Cl. 138—9.)

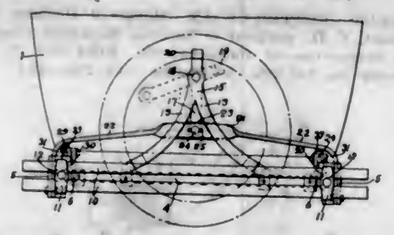
1. A hydraulic lift comprising a cylinder, a reciprocating piston arranged therein, means for supplying fluid pressure to the interior of said cylinder to lift and hold said piston, a liquid container carried by the piston and communicating at its upper end with the interior of said cylinder so as to receive the lifting and holding fluid pressure, and a discharge pipe having its lower end arranged near the bottom of said container.

1,689,145. TURNTABLE LIFT. PETER J. LUNATI, Memphis, Tenn. Filed Feb. 6, 1926. Serial No. 86,569. 22 Claims. (Cl. 138—9.)



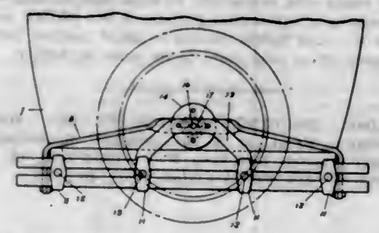
1. Apparatus of the character described comprising a cylinder, a piston mounted to reciprocate vertically therein, vehicle supporting means mounted on the upper end of said piston, a pipe for introducing fluid pressure into the interior of said cylinder through the bottom thereof to lift said piston, and automatic means associated with the pipe for retarding downward movement of said piston when the fluid pressure is released, said last named means being adapted to permit substantially unretarded upward movement of said piston.

1,689,146. NEON TUBE. RAYMOND ROBERT MACHLETT, New York, N. Y., assignor to Rainbow Light, Inc., a Corporation of New York. Filed Oct. 20, 1926. Serial No. 142,839. 4 Claims. (Cl. 176—122.)



1. A luminous tube containing a conducting atmosphere of a monatomic inert gas, electrodes therein having an area less than one square decimeter per ampere and a deposited mirror of an electro-positive metal on the walls of the tube adjacent to the cathode, as set forth.

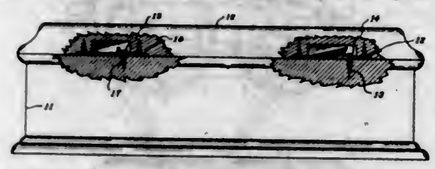
1,689,147. AUTOMOBILE BUMPER. EDWARD H. MCCLOUD, Columbus, Ohio, assignor to The Central Brass & Fixture Company, Springfield, Ohio, a Corporation of Ohio. Filed Dec. 27, 1927. Serial No. 242,842. 6 Claims. (Cl. 293—55.)



1. The combination with an automobile bumper proper, of attaching means by which such bumper may be mounted on the machine, the attaching means including a pin adapted to permit the bumper to be adjusted alternately in a normal position and an abnormal position and spring means for holding the pin in position.

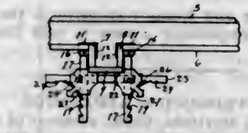
1,689,148. AUTOMOBILE BUMPER AND TIRE CARRIER. EDWARD H. MCCLOUD, Columbus, Ohio, assignor to The Central Brass & Fixture Company, Springfield, Ohio, a Corporation of Ohio. Filed Jan. 23, 1928. Serial No. 248,688. 10 Claims. (Cl. 293—55.)

1. The combination with an automobile, of a pivotally connected tire carrier and bumper, both movably connected to the automobile.



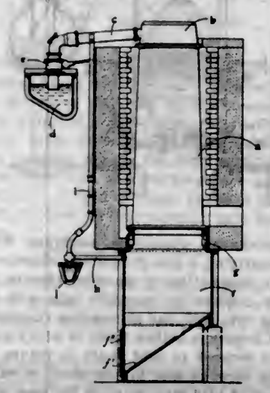
1,689,149. AUTOMOBILE SPARE-WHEEL CARRIER AND BUMPER. EDWARD H. MCCLOUD, Columbus, Ohio, assignor to The Central Brass & Fixture Company, Springfield, Ohio, a Corporation of Ohio. Filed Feb. 6, 1928. Serial No. 252,088. 8 Claims. (Cl. 293—55.)

1. The combination with an automobile, of a wheel carrier and bumper connected thereto, both the wheel carrier and the bumper being movable from normal to abnormal position.



1,689,150. FASTENER. CHARLES H. MENSCH, Boyertown, Pa. Filed Mar. 13, 1923. Serial No. 624,799. 2 Claims. (Cl. 292—303.)

1. A fastener as for a casket and cover having supplemental securing means, said fastener comprising a headed member at one end of the body of the casket, an anchoring plate carried by the cover, a recess formed in the cover under the plate, said anchoring plate having a spring tongue and an adjoining slot, in the path of the entrance to which the tongue is positioned, and whereby upon yielding of said tongue, the headed member may enter the slot, said tongue having an upturned lug lying in the path of

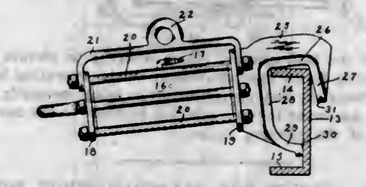


the headed member to prevent removal of such member from the slot, said tongue having a finger piece whereby the tongue may be operated to permit the cover to be removed to allow the headed member to disengage from the slot.

1,689,151. CONCRETE-FORM CLAMP. RUSSELL G. MERCER and GEORGE W. MERCER, San Francisco, Calif. Filed Sept. 10, 1927. Serial No. 218,702. 3 Claims. (Cl. 25—131.)

1. In a device of the character described, a securing element adapted to be retained in contact with the form boards of a concrete form, anchor bars formed integral with said securing element, a draw bar pivoted to said anchor bars and a clamping element carried by said draw bar for the purpose specified.

1,689,152. APPARATUS FOR THE DISTILLATION OF COAL AND SIMILAR CARBONACEOUS SUBSTANCES. CHARLES HENRY PARKER, Codsall, England. Filed Jan. 27, 1928. Serial No. 249,965, and in Great Britain Sept. 25, 1926. 1 Claim. (Cl. 202—14.)



Apparatus for the distillation of coal and other carbonaceous substances comprising a vertical retort and a casing having a secondary storage chamber therein below said retort, said storage chamber having substantially the same capacity as said retort and having a sloping bottom and a side discharge outlet, a door at the bottom of the retort by which the charge from the retort may be allowed to fall into the secondary storage chamber, a gas outlet pipe communicating with the upper end of the retort and a tar main into which the said outlet pipe extends, a second gas outlet pipe communicating with the upper end of said secondary storage chamber adjacent said door, an ascension pipe with which the last-mentioned outlet pipe is connected, the said ascension pipe communicating at its upper end with the outlet pipe from the upper end of the retort, and a second hydraulic main into which the lower end of said ascension pipe extends.

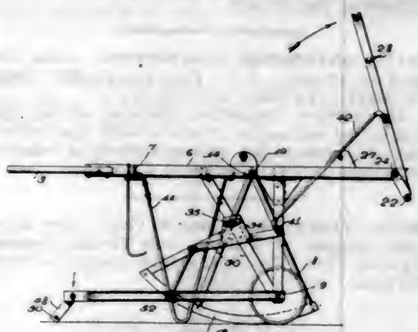
1,689,153. ANTIFREEZE COMPOSITION. JAMES ROBERT PAUL, Charlotte, N. C. Filed Feb. 17, 1927. Serial No. 169,141. 4 Claims. (Cl. 252—5.)

3. An antifreeze composition consisting of the liquid formed by the combination of substantially equal parts of sodium thiosulphate and calcium chloride, a relatively small amount of tartaric acid, and water.

1,689,154. VIBRATOR. GEORGE B. PICKOP, New Haven, Conn., assignor to Malleable Iron Fittings Company, Branford, Conn. Filed Jan. 2, 1926. Serial No. 78,837. 23 Claims. (Cl. 259—144.)

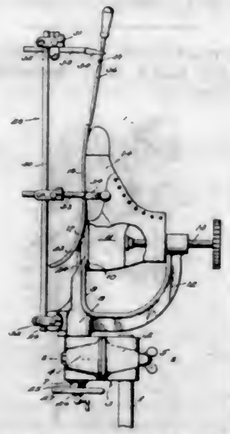
1. A vibrator comprising a casing and a jaw member rigidly secured thereto, said jaw member being provided with an opening adapted to receive a part of a member to be vibrated and to support the vibrator thereon.

1,689,155. DISPLAY CARD. PAUL L. RITTENHOUSE, Chicago, Ill. Filed June 2, 1926. Serial No. 113,318. 13 Claims. (Cl. 40—7.)



1. A relatively large display card, composed of relatively light stock, adapted for attachment to a carton or the like, comprising a central display portion, having laterally bendable wings, each wing having a basal flange adapted to be bent at right angles to the wing, one of said flanges extending beyond the line of bend of the wing and being slotted whereby when said wings are bent at an angle to said display portion and said flanges are bent at right angles to said wing portions and inserted under the top flap of the carton, said slotted portion of the flange will permit the display portion of the card to bow slightly dingonally across the top face of the carton, whereby to maintain the display portion in upright position.

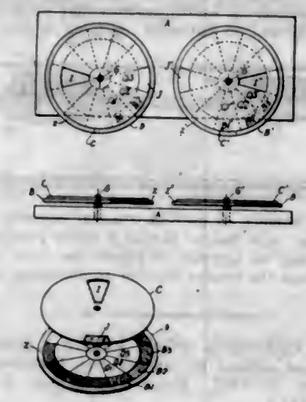
1,689,156. HAND TRUCK. EARL RUFFNER, Wichita Falls, Tex. Filed Sept. 26, 1927. Serial No. 222,054. 6 Claims. (Cl. 214—82.)



1. In a hand truck a wheeled frame, a load ejecting frame pivotally attached thereto and normally disposed

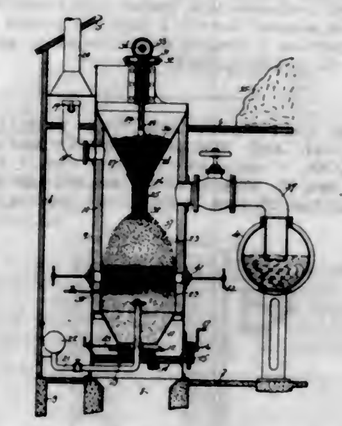
horizontally thereon, a lever pivotally mounted beneath the frame intermediate its ends to swing about a horizontal axis, an operating lever operatively connected with one end of the first mentioned lever and an operative connection between the opposite end of the first mentioned

lever and the load ejecting frame whereby to elevate the load ejecting frame upon movement of the operating lever in one direction, the operating lever being normally retained in an out-of-the-way position incident to the normal position of the ejecting frame.



1,689,157. DEVICE FOR ATTACHING SHOE SOLES TO THE UPPERS. FRANK SAHR, Columbus, Ohio. Filed Dec. 26, 1923. Serial No. 682,601. 1 Claim. (Cl. 12—7.)

A lasting apparatus comprising a last clamp adapted for the reception of a last upon which is receivable a shoe upper and sole, a bearing provided in connection with said clamp, an adjustable rod mounted for longitudinal movement in said bearing and having its upper end provided with a hook shaped projection adapted for the reception of a flexible securing member employed in binding the shoe upper to the sole, threaded means carried by said clamp for controlling the longitudinal positions of said rod, and means operating independently of said threaded means for permitting of the rotation of said rod about its longitudinal axis.

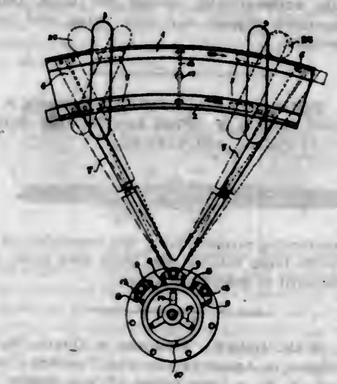


1,689,158. TOY GAME COLOR CHART. ALFRED A. SCHEUER, New York, N. Y., assignor of one-fourth to Harry Victor and one-tenth to Adele Palmer, New York, N. Y. Filed Nov. 30, 1927. Serial No. 236,769. 14 Claims. (Cl. 273—161.)

1. In a device of the class described embodying means for framing an interrogatory, means for exposing a color combination corresponding to the framed interrogatory, means independent of the framing means for setting up the

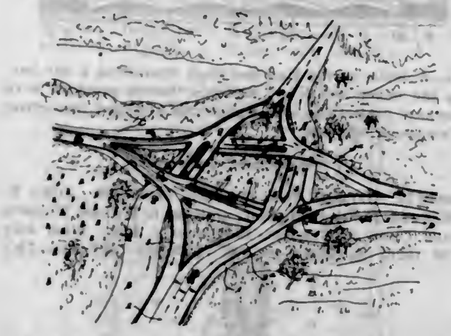
color combination and means responsive to the latter for exposing the corresponding answer to said framed interrogatory.

1,689,159. GAS-PRODUCING APPARATUS. WILBUR L. SHEPARD, West Hartford, Conn., assignor of one-half to Edward A. Beals, West Hartford, Conn. Filed June 11, 1925. Serial No. 36,346. 3 Claims. (Cl. 48—86.)



2. A gas producing apparatus combined with a fuel feeder and comprising a gas generating chamber arranged for the partial combustion of material therein, means for feeding air for combustion purposes into said chamber, a hopper opening into said gas generating chamber, a worm located in said hopper, a hollow shaft to which said worm is secured, means secured to said shaft to rotate it, a valve stem projecting through said hollow shaft, a valve secured to the lower end of said stem to close the opening from the lower end of the hopper, and means located on said stem to close said valve.

1,689,160. TURNTABLE FOR MOTOR-DRIVEN VEHICLES. HERMANN SIEGRIST, Frankfort-on-the Main, Germany. Filed Aug. 16, 1927, Serial No. 213,378, and in Germany Aug. 23, 1926. 5 Claims. (Cl. 104—38.)

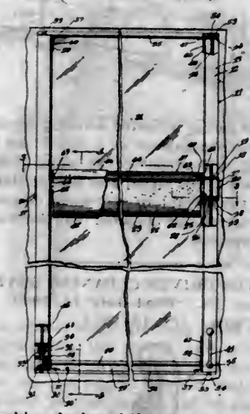


2. An electrically driven turn-table for motor and like vehicles operated from the driver's seat of the vehicle, comprising a driving motor for the turn-table, and movable

contacts controlling the supply of current to the driving motor the movement of which contacts is effected by ro-

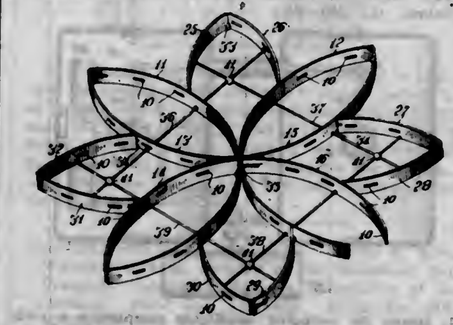
tation of the front wheels of the vehicle operated by the driver thereof by means of the steering wheel.

1,689,161. HIGHWAY CROSSING. CHARLES A. SKULTIN, Toledo, Ohio. Filed Nov. 6, 1925. Serial No. 67,405. 2 Claims. (Cl. 94—1.)



2. In a crossing, a plurality of corner structures, the corner structures being provided with inclined approaches having arms diverging inwardly of the crossing, viaducts connecting the adjacent arms of adjacent structures, a passage extending from each viaduct downwardly and inwardly of the crossing toward the next succeeding viaduct and having its lower end at road level, the space between the upper portion of said passage and the ground being open to permit vehicles to pass beneath said upper portion of the passage.

1,689,162. AIR-COOLING SYSTEM. LESLIE E. SMITLEY and FRANK S. MOORE, Los Angeles, Calif. Filed Oct. 25, 1927. Serial No. 228,660. 4 Claims. (Cl. 98—14.)



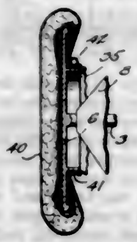
1. An air cooling system comprising a plurality of ventilators each adapted for supplying cooled air under pressure to reduce the temperature of an enclosed space, a cooled air supply line provided with branches each connected to a ventilator and with each branch having a normally closed spring controlled valve mechanism for closing the branch to the ventilator with which it is associated, means for cooling air under pressure, said means permanently communicating with said line, and time controlled electrically operated mechanisms for successively opening said valve mechanisms for a predetermined period to provide for the supplying of the cooled air under pressure to said ventilators for discharge into the enclosed spaces.

1,689,163. WINDOW-WASHING DEVICE. PHILIP H. SUKERT, Chicago, Ill. Filed Sept. 30, 1927. Serial No. 223,177. 3 Claims. (Cl. 15—254.)

1. In a washing device of the class described, two brushing elements two squeegee structures, one brushing element and one squeegee structure being adapted to be disposed on one side of the window pane and the other brush element and squeegee structure being adapted to be disposed on the other side of the window pane in parallel relation with the said one of the brush and squeegee structure, means connecting said brush elements and squeegee structures together for unison operation, and means for supplying a washing fluid to said brush elements, said brush elements and squeegee structures adapted to extend transversely of said window pane, means for moving said brush elements and squeegee structures longitudinally with respect to said window pane, and means operable by said operating means and operation of said brush elements for moving said brush elements and squeegees into and from contact with the window pane when said brush elements and squeegee structures reach their upper-most and lower-most positions.

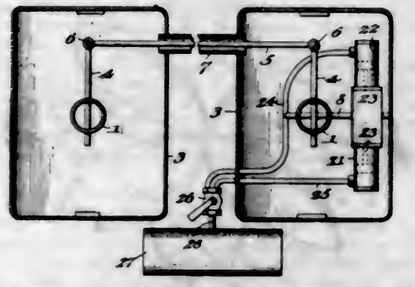
1,689,164. GRILLE. PASCAL SYLVESTER, Chicago, Ill., assignor to Pascal Sylvester, Inc., a Corporation of Illinois. Filed Sept. 7, 1926. Serial No. 133,800. 4 Claims. (Cl. 94—3.)

4. An element for making ornamental terrazzo flooring comprising a metal grille unit composed of a plurality of united relatively wide but thin metal strips arranged on



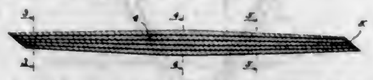
edge and positioned to form the desired pattern, said strips having their upper narrow edge faces located in a plane common to all, and constituting the top plane of the unit, and a plurality of reinforcing members disposed below said top plane, extending between and anchored to some of said strips for maintaining the strips in said arrangement.

1,689,165. RAILROAD-CROSSING SIGNAL. CHARLES H. TAYLOR, Calhoun Falls, S. C. Filed May 17, 1927. Serial No. 192,012. 7 Claims. (Cl. 246—293.)



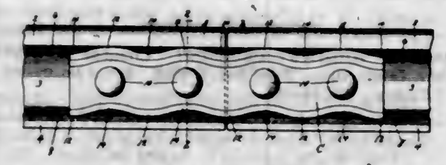
1. In a vehicle energy actuated warning device for a railroad crossing the combination of a signal; an undeformed section of track rail supported at usual intervals; and connections between said signal and said section to actuate said signal by the weight of a vehicle disposed on said section, said connections mounted independently of said section and its support.

1,689,166. POWER-DRIVEN CLEANING DEVICE. SALLIE VARNER, Elton, Pa. Filed July 14, 1926. Serial No. 122,417. 1 Claim. (Cl. 15—98.)



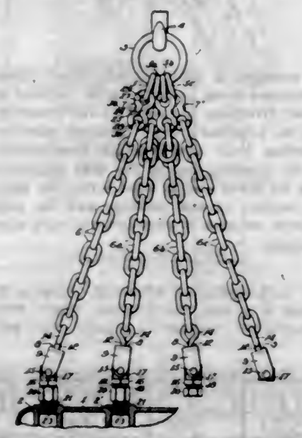
A cleaning device of the class described comprising a casing, a shaft rotatably mounted therein, a mop carrying member attached to one end of the shaft, a motor connected with the casing and having its shaft extending into the same, gears for connecing the shafts together, a handle connected with the motor casing, a mop, detachably secured to said mop carrying member, a cover including a strip of cloth surrounding the mop and lapping over the edges of the mop carrying member, an annular flange on said mop carrying member, and a ring for clamping said strip of cloth to said flange.

1,689,167. SWINGING AUTOMOBILE HEADLIGHT. JOHN RAPHAEL CAMBRON, Evansville, Ind. Filed Jan. 2, 1926, Serial No. 78,873. Renewed Sept. 12, 1928. 5 Claims. (Cl. 240—61.)



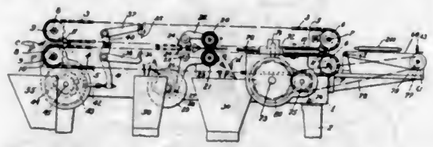
1. Means for swinging headlights comprising a rockably mounted member for turning the headlights, a latch mounted independently of said rockably mounted member adapted for latching the member in its respective positions, and a movable actuator adapted, when operated, to first mechanically automatically release the latch from the rockably mounted member and then swing said rockably mounted member.

1,689,168. STRIP FOR CORD TIRES. FREDRICK S. DICKINSON, New York, N. Y. Filed July 7, 1922. Serial No. 573,460. 12 Claims. (Cl. 154—52.)



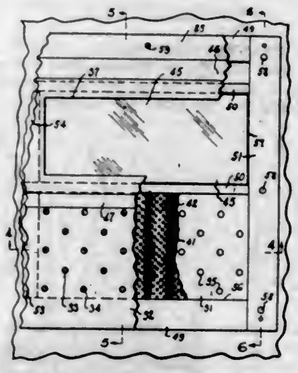
10. A reinforcing member for a tire consisting of a plurality of cords lying side by side, each cord being dimensionally distorted in different planes.

1,689,169. RAIL JOINT. NICHOLAS A. DOYLE, St. Louis, Mo., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 28, 1928. Serial No. 273,609. 7 Claims. (Cl. 238—243.)



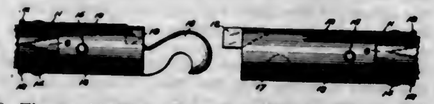
1. A device of the kind described comprising a bar having the upper and lower surfaces thereof provided with alternate projections and depressions arranged respectively staggered relation.

1,689,170. HITCH FOR ENGINE LIFTERS. JOHN F. FARMER, Indianapolis, Ind., assignor to William Wonders and Clara J. Wonders, Indianapolis, Ind. Filed July 30, 1926. Serial No. 126,003. 2 Claims. (Cl. 294—78.)



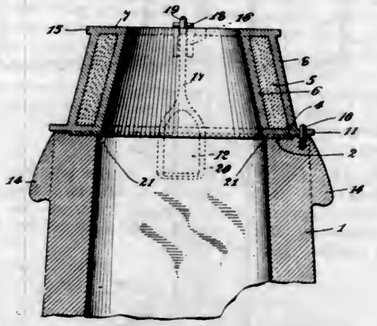
1. A hitch for engine lifters including a plurality of cables detachably connected together at one end thereof, the opposite ends of the cables having yokes swiveled thereto respectively, a plurality of hitch blocks pivoted to the yokes respectively and having each a screw-threaded plug thereon, and a plurality of adapters having socket members screwed on to the plugs respectively and provided respectively with screw-threaded plugs.

1,689,171. TOBACCO HANDLING AND STEMMING MACHINE AND METHOD. CLAIBORNE W. GOOCH, Jr., and ALEXANDER L. EWERS, Lynchburg, Va., assignors to Tobacco Stemming Machine Company, Lynchburg, Va., a Corporation of Delaware. Filed Aug. 11, 1925. Serial No. 49,526. 20 Claims. (Cl. 131—57.)



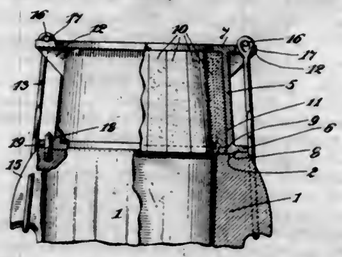
16. A tobacco stemming machine comprising feed belts having adjacent parallel stretches and transverse grippers thereon arranged to converge at the feed end of the belts and grip between them a tobacco leaf near its mid-length and convey the leaf tip-first longitudinally through the machine, complemental stripper rolls arranged at opposite sides of the adjacent belt stretches, and means for moving the rolls divergently to permit passage of the grippers, and convergently to engage the leaf close behind the grippers and strip from the stem the membrane portions back of the grippers and subsequently acting cutting means to sever the portion of the stem extending behind the grippers.

1,689,172. VISITOR'S PARTITION FOR JAILS AND THE LIKE. GEORGE J. KOSTERS, Covington, Ky., assignor to The Stewart Iron Works Company, Covington, Ky., a Corporation of Kentucky. Filed Aug. 8, 1927. Serial No. 211,466. 6 Claims. (Cl. 189—5.)



1. A visitor's partition of the character described, comprising front and rear perforate plates and an intermediate perforate layer between said plates extending across the perforations in said plates, said intermediate perforate layer formed with recurrent elevations and depressions and with slanting portions extending slantingly between perforations of opposite ones of said plates for the purpose described.

1,689,173. ROD COUPLING. ALFRED B. PARKER, Wollaston, Mass., assignor to Waldo Bros. and Bond Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 17, 1924. Serial No. 699,623. 6 Claims. (Cl. 287—119.)

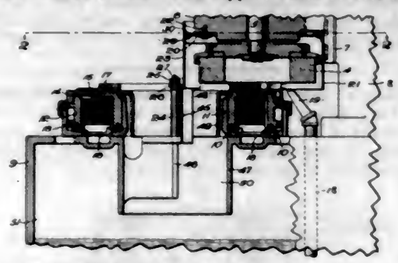


2. The combination of a rod presenting a tapered terminal portion; a ferrule member presenting a tapered socket receiving said tapered terminal portion, said member presenting two lateral openings; and spaced reinforcing ribs intermediate said openings; and a fastening element extending through said rod and through said ferrule member across said openings and between said ribs.

1,689,174. SEPARABLE HOT TOP FOR INGOT MOLDS. JOHN EDMUND PERRY, Sharon, Pa., assignor to Valley Mould & Iron Corporation, Hubbard, Ohio, a Corporation of New York. Filed Apr. 24, 1926. Serial No. 104,258. 8 Claims. (Cl. 22—147.)

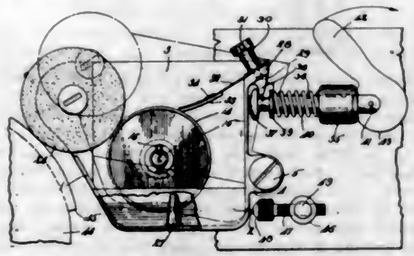
5. The combination of an ingot mold having a smooth seating surface on the mouth end thereof, a hot top member having a metal base provided with a smooth seating surface on the bottom thereof and forming a tight metal to metal joint with the end of the mold and with a portion of said surface extending over and above the matrix of the mold, heat insulating material within said hot top, locking lugs upon said mold adjacent the mouth thereof, and means extending from said locking lugs to said hot top to tightly clamp said hot top to the end of said mold so that said mold and said hot top may be used as an entity for a plurality of heats.

1,689,175. HOT TOP FOR INGOT MOLDS. WILLIAM HAIG RAMAGE, Girard, Ohio, assignor to Valley Mould & Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed Jan. 18, 1926. Serial No. 81,920. 11 Claims. (Cl. 22—147.)



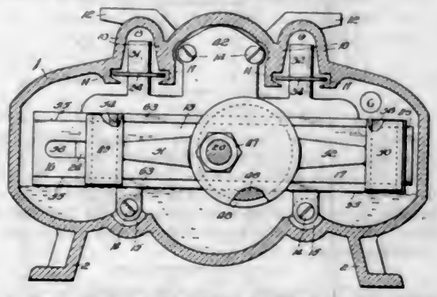
1. A hot top for ingot molds comprising a cast iron shell the lowermost part of which is a plane bottom adapted to rest on an ingot mold, internally extending flanges with the upper flange of less diameter than the lower flange, and fire brick permanently cemented between said flanges to form a refractory lining for the hot top, and with a portion of said brick covering the lateral face of the lower flange.

1,689,176. GRINDING MACHINE. HENRY K. SPENCER, Watertown, Mass., assignor to The Blanchard Machine Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Feb. 17, 1923. Serial No. 619,738. 12 Claims. (Cl. 51—26.)



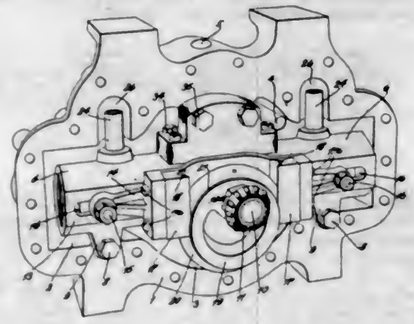
1. In an abrading machine, the combination of an abrading tool, means for supplying fluid to cool said tool

and the work and to carry away the material removed by said tool, an annular work-support which rotates about



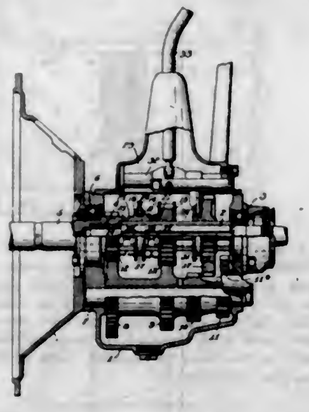
a generally vertical axis, a bearing for said work-support, and a guard encircled by said bearing and protecting the same from said fluid and said material.

1,689,177. INKING DEVICE. FREDERICK W. STORCK, Somerville, Mass., assignor to Standard Mailing Machines Company, Everett, Mass., a Corporation of Massachusetts. Filed July 29, 1924. Serial No. 728,877. 5 Claims. (Cl. 101—351.)



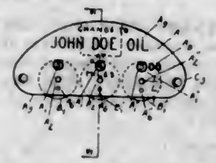
1. In a device of the character specified the combination of an ink pot, an ink roller, a lug provided with a slot projecting from the back of said ink pot, said lug having a cylindrical bore to support a shaft, a shaft loosely mounted in said bore, said shaft being provided with an offset extension, a feed roller mounted on said extension, a cap attached to said shaft, and a coil spring, one end of which enters said slot and the other end of which is attached to said cap, said spring being adapted to rotate said shaft and swing said feed roller mounted on said extension thereof toward said ink roller.

1,689,178. PUMP. GEORGE L. STREBLER, St. Louis, Mo., assignor to Strebler Appliances, Inc., St. Louis, Mo., a Corporation of Delaware. Filed Dec. 4, 1925. Serial No. 73,106. 26 Claims. (Cl. 230—192.)



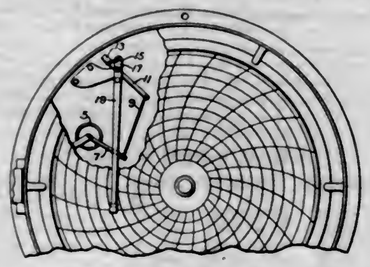
1. In a pump of the class described, piston driving mechanism including a pair of arms having facially slotted heads at each end thereof and disposed at right angles to the center line of the piston driving mechanism, and means to move the driving mechanism in fixed circular orbital paths in sliding relation with the pistons.

1,689,179. COMPRESSOR. GEORGE L. STREBLER, St. Louis, Mo., assignor to Strebler Appliances, Inc., St. Louis, Mo., a Corporation of Delaware. Filed May 12, 1926. Serial No. 108,527. 11 Claims. (Cl. 230—192.)



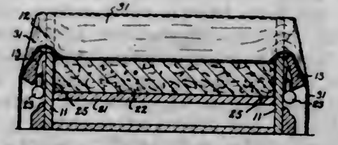
1. A compressor comprising a cylinder having an inlet and an outlet passage, a piston within the cylinder, means controlling the passage of air or gas from said inlet passage through the piston and through said outlet passage from said cylinder, a sliding frame at the side of the cylinder connected with said piston, means to support the frame for sliding movement, a pair of bearing shoes attached to said frame, an eccentric between said shoes, a ring rotative on said eccentric and engaging said shoes, and means for rotating said eccentric and thereby reciprocating said frame and said piston.

1,689,180. TRANSMISSION GEAR. SAMUEL O. WHITE, Muncie, Ind., assignor to Warner Gear Company, Muncie, Ind., a Corporation of Indiana. Filed Nov. 10, 1924. Serial No. 748,823. 2 Claims. (Cl. 74—59.)



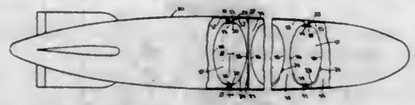
1. In an automobile transmission the combination with a casing, a shaft extending into said casing and having that portion thereof arranged within the casing continuously splined from end to end, a plurality of gears on said shaft certain of which have splined connection with the splines of the shaft and certain others of which are freely rotatable on said splines, a counter-shaft, a plurality of gears on said counter-shaft held against axial displacement by the side walls of the casing certain of said gears meshing with the freely rotatable gear on the first mentioned shaft and inter-engaging means therebetween for holding the freely rotatable gear axially stationary.

1,689,181. OIL-CHANGE RECORDER. DANIEL M. WINANS, Binghamton, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a Corporation of New York. Filed Apr. 29, 1927. Serial No. 187,454. 3 Claims. (Cl. 40—70.)



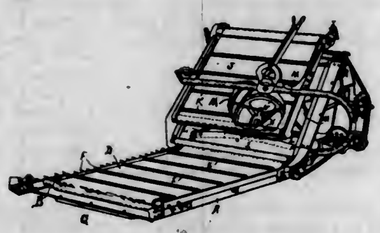
1. In an oil change registering device comprising a dial plate equipt with a plurality of spaced peek holes, a separate individually manipulative disc provided with numerical indices pivotally mounted behind each such hole and adapted to selectively register a numeral therethrough for collectively fixing upon a definite recorded dial reading, each of said discs having a periphery portion disposed in overhanging relation to one edge of said plate and adapted to be manually tilted away from the adjacent face of said plate, spring means serving to independently urge the several discs toward said adjacent plate face, and separate latch means for each of the discs adapted to be disengaged by tilting said overhanging edge thereof.

1,689,182. SEPARABLE-ARM CONSTRUCTION FOR MEASURING INSTRUMENTS. EDGAR H. BRISTOL, Foxboro, Mass., assignor to The Foxboro Company, Foxboro, Mass., a Corporation of Massachusetts. Filed Nov. 19, 1927. Serial No. 234,468. 13 Claims. (Cl. 116—129.)



1. In a measuring instrument, a two part index arm, the elements thereof having abutting portions and respectively provided with elements of a resilient separable fastener arranged to be engaged and released by a force exerted longitudinally of the arm and when engaged serving to hold said abutting portions together.

1,689,183. BURIAL CASKET. MICHAEL F. DAVORAN, Cincinnati, Ohio, assignor to The Crane & Breed Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 14, 1927. Serial No. 168,153. 1 Claim. (Cl. 27—4.)

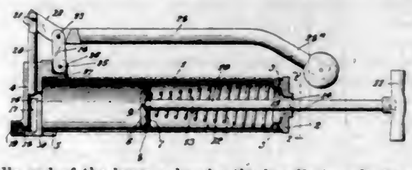


A burial casket comprising a body portion having rigid end walls of full height and side walls, each of said side walls having rigid end portions of full height and a rigid median portion of partial height, said rigid median portion of partial height extending throughout the major portion of said side wall, the inner ends of said rigid end portions of full height of each of said side walls having sloping inner ends in the plane of said rigid end portions and sloping inwardly and downwardly toward said rigid median portion of partial height, a body-support of substantially the height of said rigid median portions of partial height, said body-support located between said walls, each of said side walls thus formed provided with a gap above said rigid median portion thereof of partial height between said sloping inner ends, movable sections for both said side walls, each of said movable sections provided with sloping outer ends complemental to said sloping inner ends, a removable lid provided with an upwardly extending dome above said body-support, the inner space of said dome being higher than the height of said movable sections, and releasable securing means between said lid and said body-portion.

1,689,184. GAS CELLS FOR AIRSHIPS. EUGEN SCHOETTEL, Akron, Ohio, assignor to Goodyear-Zeppelin Corporation, Akron, Ohio, a Corporation of Delaware. Filed Nov. 25, 1927. Serial No. 235,454. 5 Claims. (Cl. 244—3.)

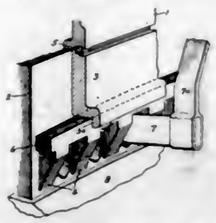
1. A rigid airship comprising spaced transversely disposed main rings, gas cells disposed between the main rings and normally having cavities formed by the end walls thereof and means connecting the end walls of the gas cells in gas-tight relation to form gas chambers within the inner circumference of the main rings.

1,689,185. ATTACHMENT FOR SELF-BINDERS. MILES L. SHUTE, near Richmond, Ind. Filed June 17, 1926. Serial No. 116,607. 1 Claim. (Cl. 56—207.)



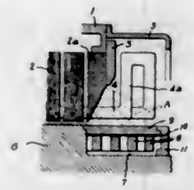
In combination with a harvesting machine having a horizontal traveling apron, an upwardly extending traveling apron adapted to receive material from the horizontal apron, a stationary platform located under the horizontal apron, a brace secured in its center with its outer portions extending downward and outward at angles opposite to each other with its ends permanently secured; a sheet metal plate of oblong shape having its upper corners bent centerward and around the angular portions of the brace, from which brace it curves downward and outward, tongues formed by incisions cut in the outer edge of said plate and engaging the inner edge of the said platform which is located under the horizontal apron.

1,689,186. LUBRICATING DEVICE. CHARLES L. ZABRISKIE, New York, N. Y., assignor, by mesne assignments, to Rogers Products Co., Inc., a Corporation of New Jersey. Filed Jan. 27, 1926. Serial No. 84,101. 4 Claims. (Cl. 221—47.3.)



1. In combination, a grease supplying cylinder, a pump cylinder extending transversely of said supply cylinder, an outlet from the supply cylinder into said pump cylinder, a single acting pump plunger within said pump cylinder, a lever handle extending along the supply cylinder and

pivoted to the pump plunger, and a fulcrum for said lever on said supply cylinder, between the plunger pivot and the



handle end of the lever, whereby the handle is pulled away from the supply cylinder, on expulsive movement of the plunger.

1,689,187. DYNAMO-ELECTRIC MACHINE. ROBERT POHL, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Feb. 17, 1927, Serial No. 169,049, and in Germany Mar. 29, 1927. 11 Claims. (Cl. 171—252.)

1. In a dynamo-electric machine, a stator including laminations of nmgnetic material transversely aligned to form a surface adapted to substantially conform to a rotor, and a group of laminations adjacent the end of the stator having their edges presented toward the axis of the stator and at different distances from the axis of the stator in order to reduce eddy current losses due to end strap field flux.

1,689,188. DYNAMO-ELECTRIC MACHINE. ROBERT POHL, Berlin, Germany, and HENRY G. REIST, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Mar. 29, 1927, Serial No. 179,298, and in Germany Apr. 19, 1926. 6 Claims. (Cl. 171—252.)

1. In a dynamo-electric machine, a stator including laminations transversely aligned to form a surface adapted to substantially conform to a rotor, clamping members for retaining said laminations in said stator, and a group of said laminations between said clamping members and adjacent the end of the stator having their edges at different distances from the axis of the stator in order to reduce eddy current losses due to end stray field flux, said group of laminations being of substantially the same outer diameter as said stator laminations.

Patents Nos. 1,689,189 to 1,690,092.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 375—No. 5. TUESDAY, OCTOBER 30, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mail'ed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Disclaimers.

1,385,141.—*Philip A. Myers*, Ashland, Ohio. POWER HEAD. Patent dated July 19, 1921. Disclaimer filed October 12, 1928, by the assignee by mesne assignments, *The F. E. Myers & Bro. Company*, the patentee, *Philip A. Myers*, concurring.

Hereby enters a disclaimer limiting claim 7 of said patent as follows:

By restricting the elements "vertical reciprocating member mounted in the casing" to a single slide on a single guide; and

By restricting the element "operated (referring to the reciprocating member) by such shaft and gearing" to include a pitman.

1,393,306.—*Philip A. Myers*, Ashland, Ohio. POWER HEAD. Date of Patent October 11, 1921. Disclaimer filed October 12, 1928, by *The F. E. Myers & Bro. Company*, the patentee, *Philip A. Myers*, concurring.

Hereby enters a disclaimer limiting claim 1 of said patent as follows:

By restricting the element "vertical guide" of said claim 1 to a single guide;

By restricting the element "slide mounted on said guide" to a single slide;

By restricting the element "means" for connecting said slide to the apparatus to be operated, to an arm on one side of the slide; and

By restricting the element "operating connection" between the slide and the actuating mechanism, to a pitman.

NOTICE.

WITHDRAWING CASES FROM ISSUE.

RECORDING ASSIGNMENTS.

The job of printing the Official Gazette with approximately 1,200 original cuts each week and of issuing over 1,200 patents, designs, and trade-marks each Tuesday, is so stupendous that it has been necessary for the Patent Office to rigidly enforce Rules 165 and 188 in order to make certain that the Gazette and patents will be issued on the day they are dated. The first of these rules is against withdrawing a case from issue after the final fee has been paid and the other makes it necessary for an assignment to "be recorded in the Patent Office at a date not later than the day on which the final fee is paid." Every now and then a request is made for the Office to make exceptions to one or the other of these rules. Therefore this notice is published so that those doing business with this Office may know that these rules are of necessity being rigidly enforced and that no exceptions can be made to them.

Oct. 18, 1928.

THOMAS E. ROBERTSON,
Commissioner.

Condition of Applications Under Examination at Close of Business October 19, 1928.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

BROWNE *v.* HARRISON. HARRISON *v.* BROWNE.

Nos. 1,903 and 1,904. Decided June 4, 1928.

INTERFERENCE—PRIORITY.

Priority *Held* properly awarded to B. as to certain counts of the issue, and *Held* further that B. is entitled to priority as to the other counts since "The change of construction was but a mere alteration of elements already obvious in Browne's invention, and can not entitle Harrison to priority. The same conclusions arise with reference to the downwardly-extending antenna of Harrison. Moreover it is apparent that both of these elements were considered by Browne when constructing his device before the time when Harrison entered the field."

CROSS APPEALS from a decision of the Commissioner of Patents. Affirmed in part; reversed in part.

Mr. Robert S. Blair for Browne.

Mr. Frank B. Fox and *Mr. E. G. Mason* for Harrison.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

MARTIN, *C. J.*:

The invention involved herein relates to marine mines which are designed to be submerged in the sea and by force of their explosion to destroy hostile vessels. Such mines became critically important during the World War as a means of defense against enemy submarines.

The issues of the interference are stated in 7 counts, reading as follows, to wit:

1. A marine ordnance apparatus comprising an electro detonator and means for operating said detonator embodying elements submerged in the sea and organized to utilize the condition of electrical potential caused by the action of the sea water on a marine hull in contact with one of said elements.

2. A submarine device comprising a submerged mine having a conductor extending therefrom, and means by which the mine is exploded by the conditions of electrical potential due to the electro-chemical action of sea water upon it and a vessel's hull in contact with it.

3. A submarine mine adapted for submersion in sea water, an antenna having a length equal to several times the diameter of the mine extending from said mine so that contact may be made therewith by the hull of a vessel; and means whereby, when said contact is made, said mine is exploded.

4. In marine mine firing-gear requiring electric power in substantial amount for its operation, a battery device as source of such power having a pole element negative with respect to ferrous metal exposed to the sea water, and means for combining the vessel to be attacked with said pole element to form a complete galvanic battery with the sea water as electrolyte, polarization thus taking place on the attacked vessel.

5. A marine mine equipment having electrical firing means; intrinsically complete in situ, as regards provision for energy supply for operating such firing means, when in the sea; and comprising as source of such energy, a battery device whereof the water of the immediate environment is electrolyte.

6. In marine mine firing-gear having electrical firing means, a battery device whereof the sea water is electrolyte as source of energy for operating such firing means, and means automatically responsive to conditions of attack for causing operation of the firing means, said responsive means being enabled to respond by energy from said battery device.

7. The combination with a marine mine firing by combination of the vessel to be attacked in a galvanic-couple circuit, of an anchor cable therefor comprising a conductor electrically insulated from the mine case and connected to serve as a circuit-forming contact antenna for firing the mine.

The Commissioner of Patents, affirming the unanimous decisions of the lower tribunals of the Patent Office, awarded priority of invention as to counts 1, 2 and 3 to Browne, the senior party. The Commissioner dissolved the interference as to count 4, and awarded priority of invention as to counts 5, 6 and 7 to Harrison, the junior party. Cross appeals were taken from these awards.

The type of mine involved in the interference embodies a novel application of certain elementary electrical laws. It has long been known that if two metal plates of dissimilar electrical potentials, as for example plates composed respectively of steel and copper, be placed in salt water and connected together by a conductor, an electric current will be produced as in an ordinary electric cell or battery, the salt water serving as the electrolyte and the metal plates as the electrodes. The present invention makes use of this principle in a device for firing submerged marine mines. A copper plate is mounted upon the mine, and a conductor called the antenna extends from it through the firing device, and thence upwardly for a suitable distance to a float submerged below the surface of the water. Accordingly when the vessel having a steel hull contacts with the antenna an electric current is produced, the sea water serving as electrolyte and the steel hull of the vessel and the copper plate of the mine serving as electrodes. This combination is termed a sea battery, and the mine is fired, either directly or indirectly, by means of the electric current so produced. It is said that prior to this invention there was no effective marine mine which could be exploded by a hostile vessel unless the vessel came into actual contact with the mine; and therefore in order to protect a sea area of even moderate size a large number of mines would be required. But this mine is exploded when a hostile vessel contacts with the antenna, and this may be extended to a distance from the mine restricted only by the effectiveness of the explosive charge contained in it, and a single mine may be equipped with multiple antennæ extending in different directions. Accordingly a given sea area may be protected by a greatly-decreased number of mines.

The party, Browne, first conceived the idea of a marine mine embodying these elements and first reduced the conception to practice. According to his plan of construction the electric current passing through the mine was not sufficiently strong to directly fire the detonator of the mine. This current therefore was used in a relay circuit which operated to close a second circuit equipped with dry cells, whereby a greater current was brought to the detonator, thus firing it and exploding the mine. Browne's invention was practicable and effective, and came at a time in the World War when the submarine peril was acute. The Navy Bureau of Ordnance ordered large numbers of the mines, and it is correctly said that the invention became a potent factor in overcoming the submarine menace; and that it formed the substance of the so-called North Sea barrage of mines planted in the latter part of the war and extending from the north

of Scotland to Norway, which assisted in preventing the egress of enemy submarines from the North Sea, and thereby reduced their destructiveness toward the end of the war. It is said that the use of this mine, officially called Mark VI mine, reduced the number of mines required for the barrage across the North Sea by two-thirds. See "Navy Ordnance Activities, World War, 1917–1918," pp. 107 et seq.

It clearly appears that Browne's mines of the Mark VI type, were under production at a factory located at Cambridge, Mass., before Harrison first came upon the scene. He appeared there as a naval inspector to supervise the manufacture of Browne's mines, and received full information from the factory as to their construction. The broad claims of Browne's invention, taken from his application, are to be found in counts 1, 2 and 3 of the issue. It is contended by Harrison that these counts—

are lacking in invention and not patentable because they state indefinite and incomplete combinations in terms of function merely.

This contention was denied by the Law Examiner, and overruled by the Examiner of Interferences, whose decision upon that subject was successively affirmed by the Examiners in Chief and the Commissioner of Patents. We approve of the decision as to these counts upon the grounds sufficiently set out by the tribunals of the Patent Office.

Counts 5, 6 and 7 of the issue are taken from Harrison's application, and form the basis of his claim. The alleged invention of Harrison consists in taking a mine of the Browne type and increasing the size and altering the form of the copper plate serving as one of its electrodes, thus increasing the wattage of the electric current set up by the sea battery, so that the current thus generated may be connected to the detonator of the mine, thereby exploding the mine directly by means of the sea battery current without the aid of a relay circuit or of dry cells. This method of operating the mine is called "direct firing." In addition to this Harrison extends an antenna downward from the mine and anchors it in place. These additions are the basis of Harrison's claims, as set out in counts 5, 6 and 7 of the issue.

The decisions of the Patent Office as to these counts are not uniform. The Examiner of Interferences awarded priority of invention as to them to Harrison. The Examiners in Chief held that priority as to count 5 should be awarded to Harrison, but recommended that the claim be rejected as unpatentable; and that priority as to counts 6 and 7 should be awarded to Browne. The Commissioner of Patents awarded priority as to counts 5, 6 and 7 to Harrison.

In our opinion Harrison's "direct firing" device does not amount to invention over Browne's structure. It is well said by the Law Examiner that—

in the present development of the electrical art, structures are equivalent though one has a local circuit and relay and the other does not.

The change of construction was but a mere alteration of elements already obvious in Browne's invention, and can not entitle Harrison to priority. The same conclusions arise with reference to the downwardly-extending antenna of Harrison. Moreover it is apparent that both of these elements were considered by Browne when constructing his device before the time when Harrison entered the field.

The decision of the Commissioner of Patents as to counts 5, 6 and 7, involved in appeal 1,003, is reversed, and priority of invention as to these counts is awarded to the senior party, Browne. The decision of the Commissioner of Patents involved in appeal 1,004, awarding priority of invention as to counts 1, 2 and 3 to Browne is affirmed.

Patent Suits.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, Oct. 16, 1928.*

The Cafico Chemical Company Inc., its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of The Apex Electrical Manufacturing Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of The Cafico Chemical Company Inc., of 154 Pearl Street, Pittsburgh, Pa., No. 158,911, dated September 19, 1922, and the notice of such proceeding sent by registered mail to the said The Cafico Chemical Company Inc. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said The Cafico Chemical Company Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,614,133, E. W. Kellogg, Vibration damper, decided September 22, 1928, claims 1, 2, 3, 4, 5, 6, and 8.

Pat. 1,669,072, G. H. Vinette, Vehicle brake, decided September 22, 1928, claim 2.

Final decision in interference has been rendered against the following trade-mark:

T. M. 92,394, Eggs, G. Bowles, Westport, Conn. Registered July 8, 1913. Decided September 18, 1928.

Patent Appeals in the Court of Appeals of the District of Columbia—November Call.

U. S. PATENT OFFICE, *Washington, Oct. 13, 1928.*

This office is to-day in receipt of a letter from the clerk of the Court of Appeals of the District of Columbia reading as follows (see notice in GAZETTE of October 16, 1928, 375 O. G. 475):

The court has instructed me to advise you that there will be 20 cases on the patent appeals docket assigned for hearing on the second Monday of November next.

The notices required by Rule XXII of the court of appeals will be sent to the parties in due course.

THOMAS E. ROBERTSON,
Commissioner.

Adjudicated Patents.

(D. C. Conn.) Knight patent, No. 976,267, for golf club with tubular metallic shaft as limited to torsionless structure, claims 3 and 4 *Held* valid but not infringed. *Knight v. Union Hardware Co.*, 27 F. (2d) 946.

(C. C. A. N. Y.) Douglas patent, No. 1,082,682, for concentrated compound containing soluble pectin for jelly-forming substances, *Held* valid and infringed. *Douglas Pectin Corporation v. Armour & Co.*, 27 F. (2d) 814.

(C. C. A. N. Y.) Dwight patent, No. 1,102,982, for ore-sintering apparatus, claims 3 and 4 *Held* not infringed. *Dwight & Lloyd Sintering Co. v. Greenawalt*, 27 F. (2d) 823.

(C. C. A. Wash.) McMichael patent, No. 1,127,660, for method and apparatus for transporting and treating concrete, claims 1, 2, 17, 18, 24, 29, and 35 *Held* invalid and not infringed. *Concrete Mixing & Conveying Co. v. R. C. Storrie & Co.*, 27 F. (2d) 838.

(C. C. A. Ill.) King patent, No. 1,158,058, for centrifugal oil burner, claims 1, 2, 5, and 10 *Held* valid and infringed. *Hardinge Bros. v. Marr Oil Heat Mach. Corporation*, 27 F. (2d) 779.

(C. C. A. N. Y.) Douglas patent, No. 1,235,666, for jelly-making product and process of making it, *Held* valid and infringed. *Douglas Pectin Corporation v. Armour & Co.*, 27 F. (2d) 814.

(C. C. A. N. Y.) Dwight patent, No. 1,254,316, for ore-treating process, claims 1, 4, 6, and 8 *Held* invalid. *Dwight & Lloyd Sintering Co. v. Greenawalt*, 27 F. (2d) 823.

(D. C. Conn.) Whelan patent, No. 1,273,703, for closet seat with cemented layers of wood veneer, *Held* valid but not infringed. *Brunswick-Balke-Collender Co. v. Seamless Rubber Co.*, 27 F. (2d) 925.

(C. C. A. N. Y.) Douglas patent, No. 1,304,166, for decreasing boiling time for making jelly by use of pectin, *Held* valid and infringed. *Douglas Pectin Corporation v. Armour & Co.*, 27 F. (2d) 814.

(C. C. A. N. Y.) Dwight patent, No. 1,348,407, for ore-treating apparatus, claims 13, 21, 48, and 49 *Held* not infringed. *Dwight & Lloyd Sintering Co. v. Greenawalt*, 27 F. (2d) 823.

(C. C. A. N. Y.) Dwight patent, No. 1,433,349, for ore-sintering apparatus, claims 1, 2, and 3 *Held* invalid. *Id.*

(C. C. A. N. Y.) Dwight patent, No. 1,433,350, for ore-sintering apparatus, claims 8, 9 and 10 *Held* invalid because patent granted on renewal of a divisional application renewed more than two years after the first allowance of the original application.

(C. C. A. N. Y.) Dwight patent, No. 1,433,352, for ore-treating apparatus, claims 1 and 5 *Held* invalid. Id.

(C. C. A. N. Y.) Langsdorf patent, No. 1,447,090, for improvements in necktics, claims 1, 2, and 4 *Held* valid and infringed. *Franc-Strohmenger & Cowan v. Arthur Siegman, Inc.*, 27 F. (2d) 785.

(D. C. Conn.) Hawie patent, No. 1,497,273, for rustless back buckle, claims 2, 3, 4, 6, and 7 *Held* valid and infringed. *Hawie Mfg. Co. v. Hatheway Mfg. Co.*, 27 F. (2d) 937.

(D. C. Mass.) Stanczyk patent, No. 1,551,069, for automatic blowtorch, claims 14, 15, and 16 *Held* infringed. *Lenk v. Lasher-Peerblow Co.*, 27 F. (2d) 958.

(D. C. Conn.) Bell patent, No. 1,565,305, for fuel economizer in steam-generating plant, claim 2 *Held* infringed *Power Specialty Co. v. Connecticut Light & Power Co.*, 27 F. (2d) 928.

(D. C. Conn.) Fleming patent, No. 1,646,086, relating to ash stands, claims 1 to 6 *Held* invalid. *Smokador Mfg. Co. v. Tubular Products Co.*, 27 F. (2d) 948.

(D. C. Conn.) Hawie reissue patent, No. 15,982, for improvement in rustless buckle, *Held* valid and infringed. *Hawie Mfg. Co. v. Hatheway Mfg. Co.*, 27 F. (2d) 937.

TRADE-MARKS

OFFICIAL GAZETTE, OCTOBER 30, 1928.

[VOL. 375. No. 5.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

Raw or Partly-Prepared Materials.

Ser. No. 268,971. CO-OPERATIVE GRANGE LEAGUE FEDERATION EXCHANGE, INC., Syracuse, N. Y. Filed July 2, 1928.

G. L. F.

For Garden Seeds, Vegetable Seeds, and Lawn and Golf-course Seeds.

Claims use since Apr. 2, 1924.

Ser. No. 269,539. HERF L. WEINSTEIN, New York, N. Y. Filed July 12, 1928.

The word "Sharkskin" is disclaimed apart from the other features of mark in the drawing. The lining shown in the drawing represents shading only.

For Shark Skins.

Claims use since Apr. 7, 1928.

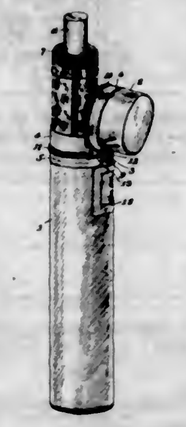
11,304.—*Title:* THICK, MELTINGLY TENDER STEAKS . . . FRIED OYSTERS . . . For Tomato Ketchup. H. J. HEINZ COMPANY, Pittsburgh, Pa. Published September 15, 1928.

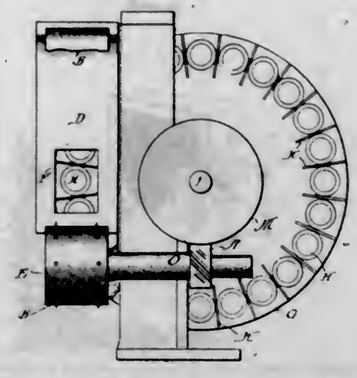
11,305.—*Title:* HARVA COMBS FOR MEN. For Combs. JULIUS SCHMID, INC., New York, N. Y. Published September 6, 1928.



11,306.—*Title:* HARVA POCKET COMBS. For Combs. JULIUS SCHMID, INC., New York, N. Y. Published September 6, 1928.

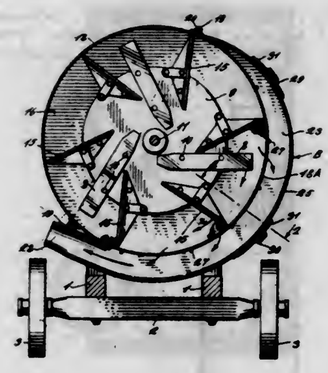
11,307.—*Title:* SHAGGY-TEX, THE VERSATILE COAT FOR TOWN AND COUNTRY. For Ladies' Coats. SHAGGY-TEX, INC., Philadelphia, Pa. Published June 12, 1928.

REISSUES



OCTOBER 30, 1928.

17,118. RUG BAG. GERTRUDE VAN GIESEN GRANGER, Savannah, Ga., assignor to Mothproof Rug Bag Company, Chatham County, Ga., a Corporation. Filed Aug. 17, 1927. Serial No. 213,939. Original No. 1,581,535, dated Apr. 20, 1926, Serial No. 44,327, filed July 17, 1925. 4 Claims. (Cl. 150—52.)

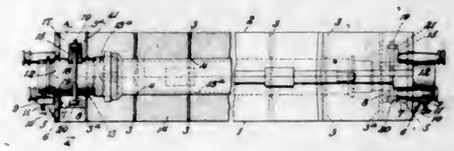


1. In a tubular bag, a top, the top attached to the bag by means of a section of the bag, said section acting as a hinge, a closure means, the closure means having a triangular clasp between the edges of the closure means in order to keep the bag in a semi-open position.

17,119. HIGH-SPEED CAMERA. CHARLES FRANCIS JENKINS, Washington, D. C. Filed Jan. 21, 1926. Serial No. 82,760. Original No. 1,481,288, dated Jan. 22, 1924, Serial No. 461,427, filed Apr. 14, 1921. 5 Claims. (Cl. 88—16.8.)

1. The combination with a camera casing having a light aperture and film feeding devices, of a disk carrier having fixed in its peripheral zone an annular series of duplicate, closely adjacent lenses in position to pass said aperture successively, radial partitions fixed to the carrier, separating each lens from its neighbors and extending substantially to the film, and means for moving the lenses and film at identical speeds across the path of light from said aperture, said carrier, lenses, and partitions moving as if integral.

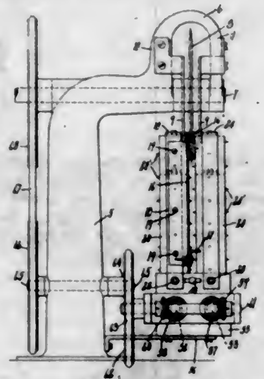
17,120. ENSILAGE CUTTER. CHARLES W. KEITH, Denver, Colo., assignor to D. K. Stephenson, Denver, Colo. Filed Aug. 7, 1928. Serial No. 298,073. Original No. 1,621,510, dated Mar. 22, 1927, Serial No. 99,810, filed Apr. 5, 1926. 11 Claims. (Cl. 146—107.)



1. In an ensilage cutter, a rotor, fan blades and cutter blades mounted thereon, a casing enclosing said rotor and a foraminous partition curved about the center of rotation of the rotor and lying closely adjacent the peripheries of the fan blades to provide an exhaust passage for material passing through said partition.

17,121. MEANS FOR SUPPORTING CORE BARS IN FLASKS. JAMES R. MCWANE, Birmingham, Ala. Filed July 25, 1928. Serial No. 295,284. Original No. 1,601,450, dated Sept. 28, 1926, Serial No. 29,094, filed May 9, 1925. 16 Claims. (Cl. 22—184.)

1. Means for supporting a core bar in a flask comprising a bottom support consisting of machined webs, and



independent elements carried by the flask and bearing on top of the core bar, properly spaced from the webs in the

direction of the ends of the core bar, and adapted to exert a leverage to raise the latter at its central portion.

17,122. TAP SPLITTING MACHINE. WALTER J. RANCOURT, Boston, Mass. Filed July 26, 1928. Serial No. 295,588. Original No. 1,514,100, dated Nov. 4, 1924, Serial No. 637,192, filed May 7, 1923. 16 Claims. (Cl. 69—16.)

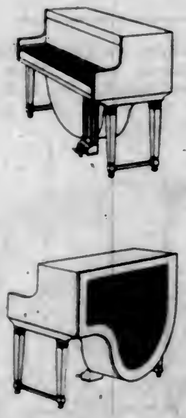
1. A tap splitting machine having in combination, a rotary cutter, feeding means for feeding a tap edgewise past said cutter comprising a pair of feed rolls on the approach side of said cutter having ends overlying the cutting edge and adapted to control the portion of the tap being split while the cutter is operating thereon, and other feed rolls beyond the said pair in the direction of

feed extending to close by the edge of the cutter in position to engage the unsplit portion of the tap as the tap moves past said cutter.

DESIGNS

OCTOBER 30, 1928.

76,731. BOTTLE. FRED AICHINGER, Cleveland, and JOSEPH J. KOPACKA, East Cleveland, Ohio. Filed June 28, 1928. Serial No. 27,313. Term of patent 14 years.

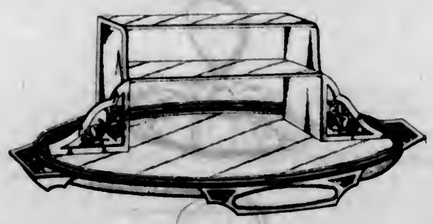


The ornamental design for a bottle, as shown.

76,732. FRATERNITY BADGE. FRANK W. BRYANT, West Lafayette, Ind., assignor to The Phi Kappa Tau Fraternity, Indianapolis, Ind., a Corporation of Ohio. Filed Mar. 11, 1927. Serial No. 21,112. Term of patent 14 years.

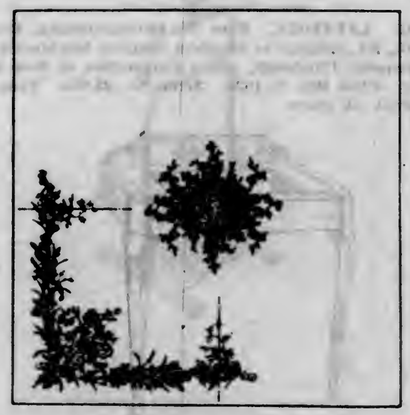
The ornamental design for a fraternity badge as shown.

76,733. PIANO CASE. CHARLES E. BYRNE, Chicago, Ill. Filed May 7, 1928. Serial No. 26,592. Term of patent 14 years.



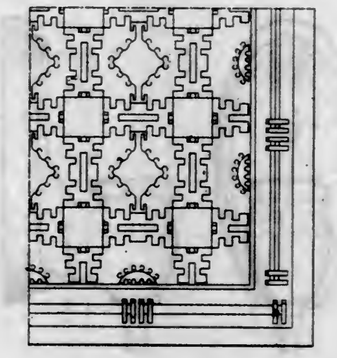
The ornamental design for a piano case substantially as shown.

76,734. ESCUTCHEON MONOGRAM PLATE. MICHAEL CHERNOW, Brooklyn, N. Y. Filed June 2, 1928. Serial No. 26,975. Term of patent 7 years.



The ornamental design for an escutcheon monogram plate as shown.

76,735. TRAY OR SIMILAR ARTICLE. LEON A. DANCO, Rockville Center, N. Y., assignor to McKesson & Robbins, Incorporated, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 17, 1928. Serial No. 27,864. Term of patent 14 years.



The ornamental design for a tray or similar article substantially as shown.

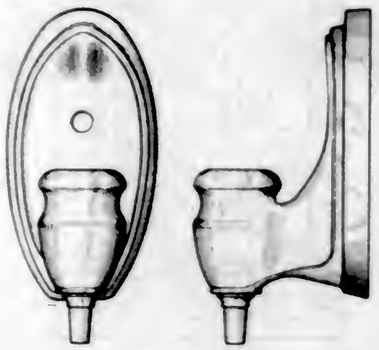
76,736. TABLE COVER OR SIMILAR ARTICLE. HENRY W. DIECK, Brooklyn, N. Y., assignor to The Standard Textile Products Company, New York, N. Y., a Corporation of Ohio. Filed Feb. 8, 1928. Serial No. 25,279. Term of patent 3½ years.

The ornamental design for a table cover or similar article, as shown and described.

76,737. RUG OR SIMILAR ARTICLE. EDYTH P. WYATT, Denver, Colo. Filed June 22, 1928. Serial No. 27,225. Term of patent 7 years.

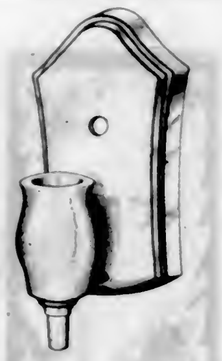
The ornamental design for a rug, as shown and described.

76,738. RUG. AGNES DOUGLASS, Platteville, Wis., assignor to Waite Carpet Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed June 11, 1928. Serial No. 27,073. Term of patent 7 years.



The ornamental design for a rug, as shown.

76,739. SPECTACLE TEMPLE. LOUIS DUNKELSBERG, Brooklyn, N. Y. Filed May 14, 1926. Serial No. 17,721. Term of patent 14 years.



The ornamental design for a spectacle temple as shown.

76,740. LIGHTING BRACKET. JACOB DYM, Pittsburgh, Pa., assignor to Porcelier Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 20, 1928. Serial No. 24,944. Term of patent 14 years.

The ornamental design for a lighting bracket as shown.

76,741. LIGHTING BRACKET. JACOB DYM, Pittsburgh, Pa., assignor to Porcelier Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 20, 1928. Serial No. 24,945. Term of patent 14 years.

The ornamental design for a lighting bracket as shown.

76,742. CHANDELIER. WALTER JAMES FIELDING, Birmingham, England, assignor to Skinner-Hill Co., New York, N. Y., a Corporation of New York. Filed July 18, 1928. Serial No. 27,517, and in Great Britain Mar. 24, 1928. Term of patent 3½ years.

The ornamental design for a chandelier as shown.

76,743. CHANDELIER. WALTER JAMES FIELDING, Birmingham, England, assignor to Skinner-Hill Co., New York, N. Y., a Corporation of New York. Filed July 18, 1928. Serial No. 27,518, and in Great Britain Mar. 24, 1928. Term of patent 3½ years.

The ornamental design for a chandelier as shown.

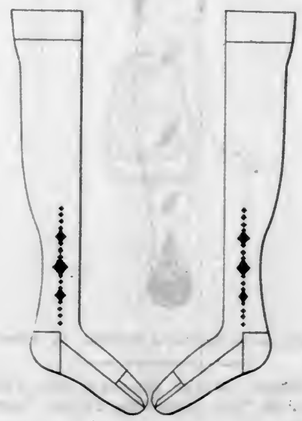
76,744. TRAY. SOLOMON FORMAN, New York, N. Y. Filed Dec. 31, 1927. Serial No. 24,718. Term of patent 3½ years.

The ornamental design for a tray as shown.

76,745. LAVATORY. FRED W. FRANKENBERGER, Louisville, Ky., assignor to Standard Sanitary Manufacturing Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Mar. 3, 1928. Serial No. 25,654. Term of patent 14 years.

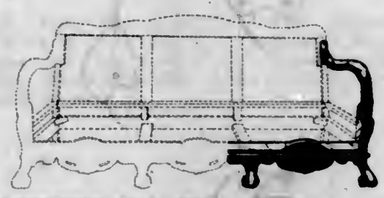
The ornamental design for a lavatory, substantially as shown.

76,746. COMBINED LAMP AND MOUNTING. MORRIS L. GOLDBERG, Brooklyn, N. Y. Filed May 7, 1928. Serial No. 26,593. Term of patent 14 years.



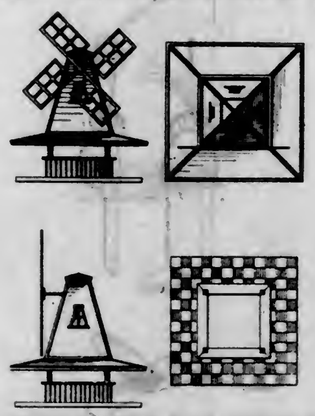
The ornamental design for a combined lamp and mounting as shown.

76,747. CLOTHES HANGER. HELAN HAILLS-KARLEBACH, New York, N. Y. Filed July 21, 1928. Serial No. 27,554. Term of patent 7 years.



The ornamental design for a clothes hanger, as shown.

76,748. STOCKING. JOSEPH HAINES, Jr., Meadowbrook, and HAROLD T. PAGET, Philadelphia, Pa., assignors to Haines Hosiery Mills, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 26, 1928. Serial No. 25,047. Term of patent 3½ years.



The ornamental design for a stocking, as shown.

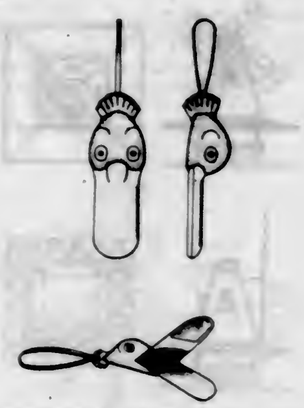
76,749. SETTEE FRAME OR SIMILAR ARTICLE. JACOB M. HANSEN, Chicago, Ill., assignor to Hartmann-Malcom Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 10, 1928. Serial No. 27,773. Term of patent 3½ years.

The ornamental design for a settee frame or similar article as shown and described.

76,750. REFRESHMENT STAND. THOMAS W. HILL and EUGENE J. REED, Swissvale, Pa. Filed Dec. 14, 1926. Serial No. 20,046. Term of patent 7 years.

The ornamental design for a refreshment stand, as shown.

76,751. STOCKING. ABRAHAM HILLER, New Orleans, La. Filed Feb. 13, 1928. Serial No. 25,427. Term of patent 14 years.

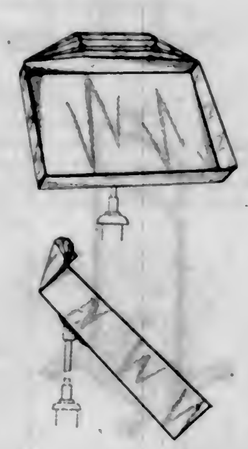


The ornamental design for a stocking, as shown.

76,752. PURSE. WYNNE HOLCOMB, New York, N. Y. Filed Dec. 30, 1927. Serial No. 24,701. Term of patent 7 years.

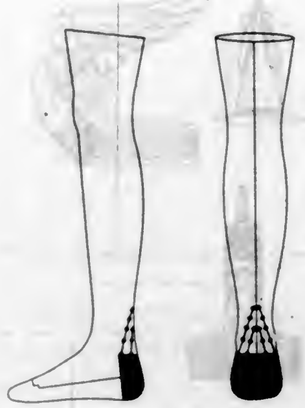
The ornamental design for a purse, as shown.

76,753. PURSE. WYNNE HOLCOMB, New York, N. Y. Filed Dec. 30, 1927. Serial No. 24,702. Term of patent 3½ years.



The ornamental design for a purse, as shown.

76,754. LACE MEDALLION. ULRICH HUCKENTOBLER, Union City, N. J., assignor to Charles Comora Embroidery Company, Inc., Weehawken, N. J., a Corporation of New Jersey. Filed July 31, 1928. Serial No. 27,642. Term of patent 7 years.

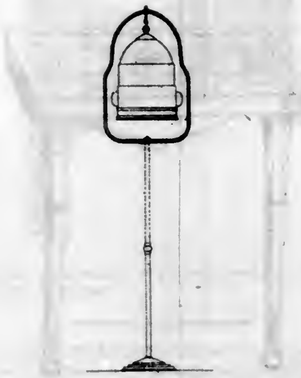


The ornamental design for a lace medallion, as shown and described.

76,755. MUSIC STAND. JOHN H. KLIEGL, New York, N. Y. Filed Jan. 9, 1928. Serial No. 24,786. Term of patent 7 years.

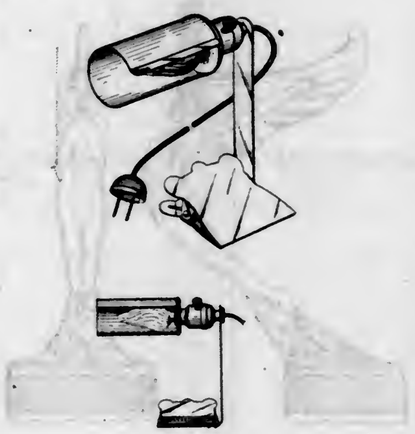
The ornamental design for a music stand, as shown.

76,756. STOCKING. RUBY LEFI, New York, N. Y. Filed May 14, 1928. Serial No. 26,664. Term of patent 14 years.



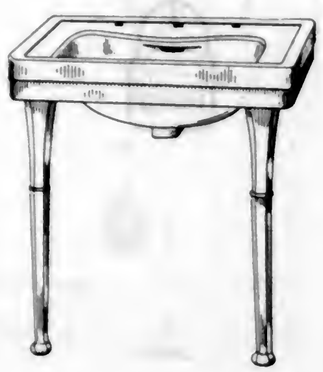
The ornamental design for a stocking substantially as shown and described.

76,757. STOCKING. RUBY LEFI, New York, N. Y. Filed July 20, 1928. Serial No. 27,545. Term of patent 14 years.



The ornamental design for a stocking substantially as shown.

76,758. LOOP FOR BIRD-CAGE STANDS. LEWICKI J. LEON, West Chicago, Ill. Filed Dec. 12, 1927. Serial No. 24,449. Term of patent 14 years.



The ornamental design for a loop for bird cage stands, as shown.

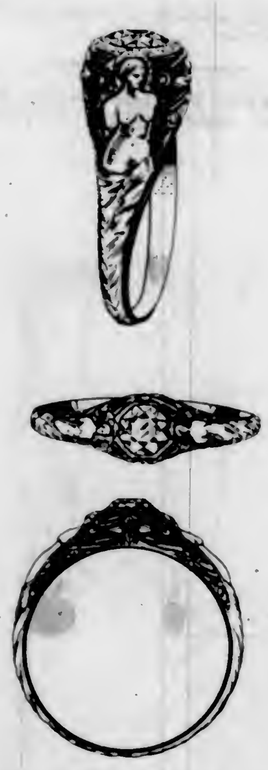
76,759. PORTABLE ELECTRIC LIGHT. WILLIAM E. MCCORMICK, New York, N. Y., assignor to Melodelite Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 9, 1928. Serial No. 27,752. Term of patent 14 years.

The ornamental design for a portable electric light as shown.

76,760. LAVATORY. CHARLES B. NASH, Pittsburgh, Pa., assignor to Standard Sanitary Manufacturing Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 21, 1928. Serial No. 25,521. Term of patent 14 years.

The ornamental design for a lavatory, substantially as shown.

76,761. RADIATOR CAP. FREDERICK C. RUPPEL, Grand Rapids, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 8, 1927. Serial No. 24,411. Term of patent 14 years.



The ornamental design for a radiator cap, substantially as shown.

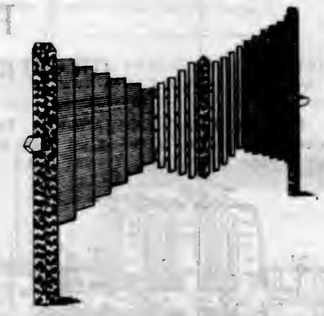
76,762. RADIATOR CAP. FREDERICK C. RUPPEL, Grand Rapids, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 8, 1927. Serial No. 24,412. Term of patent 14 years.

The ornamental design for a radiator cap, substantially as shown.

76,763. FINGER RING. IRVING H. SEGAL, Detroit, Mich. Filed Jan. 16, 1928. Serial No. 24,897. Term of patent 7 years.

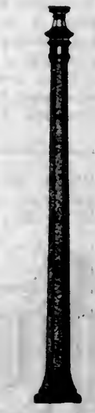
The ornamental design for a finger ring, as shown.

76,764. BADGE. SAMUEL SEIDES, New York, N. Y. Filed May 28, 1928. Serial No. 26,884. Term of patent 14 years.



The ornamental design for a badge as shown.

76,765. ELECTRIC POPCORN POPPER. HARRY A. STEERE, San Francisco, Calif. Filed Apr. 25, 1928. Serial No. 26,458. Term of patent 14 years.

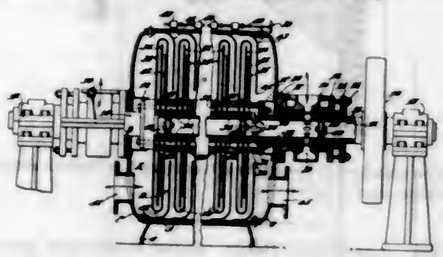


The ornamental design for an electric popcorn popper, substantially as shown.

76,766. FENCE PANEL OR SIMILAR ARTICLE. WILLIAM HOMER TAYLOR, Memphis, Tenn. Filed Sept. 19, 1927. Serial No. 23,459. Term of patent 14 years.

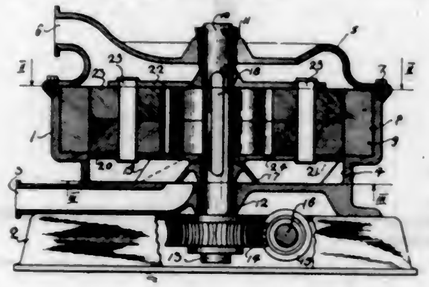
The ornamental design for a fence panel or similar article as shown and described.

76,767. LAMP STANDARD. FRANK G. WELSCH, South Bend, Ind., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 24, 1927. Serial No. 22,541. Term of patent 14 years.



The ornamental design for a lamp standard substantially as shown.

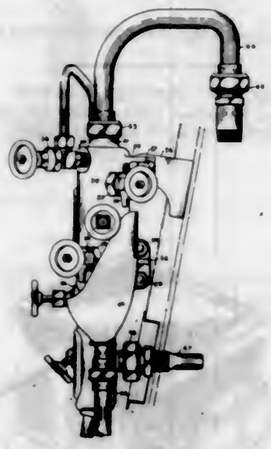
PATENTS



GRANTED OCTOBER 30, 1928.

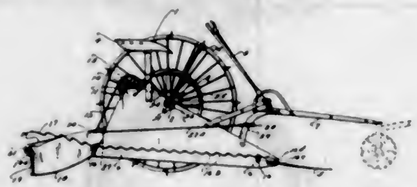
1,689,189. **ROTARY HEAT EXCHANGER.** FRANK S. BROADHURST, Watertown, Mass. Filed Mar. 30, 1925. Serial No. 19,240. 11 Claims. (Cl. 257—79.)

3. A heat exchanger, having, in combination, a shell, a series of partitions each having a central opening secured to the internal peripheral surface of the shell, a hollow disk having non-central openings mounted between adjacent partitions, hubs for each disk having openings communicating with the openings in the disk, said internal peripheral surface, partitions, openings therein, and the exterior surface of the disks forming a tortuous conduit for a fluid, the interior of the disks, openings therein and in the hubs forming a tortuous conduit for another fluid, and means for simultaneously rotating the series of hubs and disks.



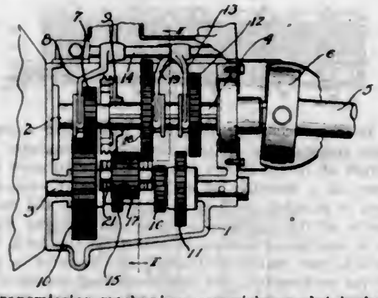
1,689,190. **ROTARY REFINER.** EDMUND P. ARPIN, Jr., Port Edwards, Wis. Filed Aug. 8, 1927. Serial No. 211,276. 7 Claims. (Cl. 92—26.)

1. A rotary refiner for paper stock, pu'p and the like, comprising a casing having inlet and outlet ports, a shaft journalled therein, an impeller secured to said shaft, a pair of spaced plates mounted upon said shaft, pins rigidly secured at their respective ends in said plates, refining members pivotally mounted upon said pins between said plates, one of said plates having openings, and deflecting means associated with said openings for directing stock between said refining members and said casing inner wall.



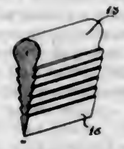
1,689,191. **WATER COLUMN.** WILLIAM O. ASHE, New York, N. Y., assignor to Nathan Manufacturing Company, New York, N. Y., a Corporation of New York. Filed June 16, 1921. Serial No. 477,872. 3 Claims. (Cl. 73—54.)

1. In combination a sloping boiler head, a water column attached thereto and having a body adapted to lie its entire length close to said sloping boiler head, gage cocks secured to said body, a water gage mounted adjacent said body, a controllable valved communication between the water column and the water gage, waste pipes communicating with said body, gage cocks and water gage respectively, a sub-casing adjacent said body and means for lighting said water gage mounted in said sub-casing.



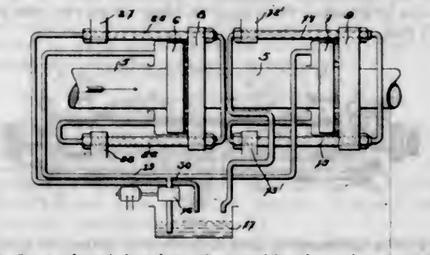
3. In combination a sloping boiler head, a water column attached thereto having a body adapted to lie its entire length close to said sloping boiler head, gage cocks secured to said body, a water gage mounted adjacent thereto, a valved communication between the water column and the water gage, waste pipes communicating with said body, gage cocks and water gage respectively, and a bracket extending from said water gage for supporting means for lighting said water gage.

1,689,192. **AGRICULTURAL MACHINE.** ELMER ASTOLA, Deep River, Wash. Filed Mar. 15, 1924. Serial No. 699,440. 5 Claims. (Cl. 209—329.)



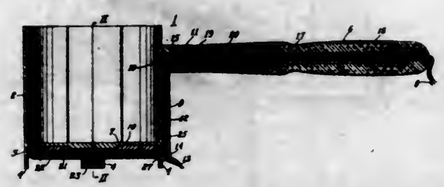
1. In an implement of the class described, crank shafts parallelly disposed, screen members mounted on said crank shafts, and means to revolve said crank shafts to impart an accelerated motion thereto during a part of each revolution, comprising driven sprockets loosely mounted on said crank shafts, slotted disks mounted to said sprockets, pins disposed on said crank shafts and engaging the slot in said disks and a tension spring alternately resisting and assisting each revolution of said crank shafts.

1,689,193. **TRANSMISSION MECHANISM.** RICHARD E. BISSELL, Cleveland Heights, Ohio, assignor to Thompson Products, Inc., Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 17, 1927. Serial No. 168,865. 15 Claims. (Cl. 192—4.)



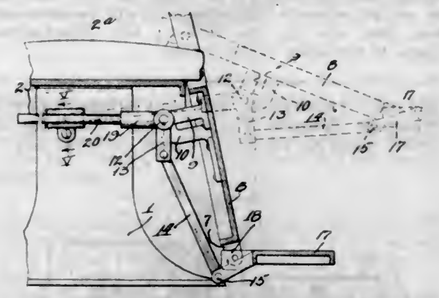
5. Transmission mechanism comprising a clutch shaft, a propeller shaft, gear mechanism adapted to connect said clutch and propeller shafts, a control shaft rotatably connected to that portion of said driving and gear mechanism which is driven in the same direction irrespective of the direction of rotation of the propeller shaft, a brake member concentric with respect to said control shaft, an internally threaded member, an externally threaded member engaged therewith, both members being concentrically arranged with respect to said control shaft, one of said members being rigidly and the other slidably and rotatably mounted on said control shaft to allow the former to move the latter longitudinally in one direction when the former is rotated in one direction and in the opposite direction when the direction of rotation is reversed, and a clutch for operatively connecting said brake and slidable members when the latter is moved longitudinally in one direction only.

1,689,194. **CREVICE MOLDING.** LESTER G. CLARK, Ferndale, Mich. Filed Oct. 14, 1926. Serial No. 141,462. 3 Claims. (Cl. 280—150.)



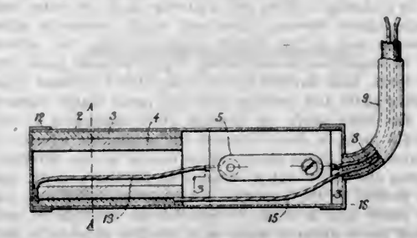
1. A trim molding adapted for insertion into a crevice comprising an elongated metallic easily bendable wedge shaped body; a head mounted on one edge of said body; and longitudinally extending corrugations on opposite faces of said body.

1,689,195. **THRUST-COLLAR EQUALIZATION.** DAVID C. DAVIS, Chester, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 6, 1922. Serial No. 592,881. 8 Claims. (Cl. 308—160.)



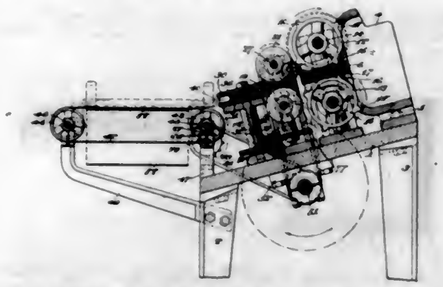
8. In a thrust bearing, the combination of a movable element, a plurality of thrust flanges secured to the movable element, thrust receiving collars cooperating respectively with the flanges, means for supporting the thrust collars, said supporting means being so constructed and arranged as to cause a relative movement between the collars in response to heat generated at the respective collars whereby the thrust is distributed therebetween.

1,689,196. **POURING LADLE.** JOHN STRUTHERS DUNN, Philadelphia, Pa. Filed Feb. 10, 1925. Serial No. 8,136. 9 Claims. (Cl. 219—44.)



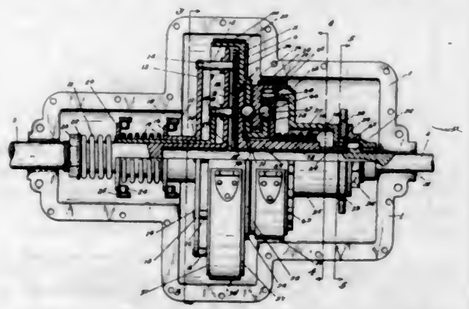
6. A metallic ladle comprising a body portion, a funnel-like spout forming one side thereof, and an electric heater element disposed adjacent the bottom of said spout so that an appreciable part of the heat from said element is transmitted to the melt within said spout.

1,689,197. **AUTOMATIC ADJUSTABLE FOOT REST.** JOHN RUSSELL EMMERT and JOHN J. POZDRO, Chicago, Ill., assignors to Emil J. Paidar Co., a Corporation of Illinois. Filed Aug. 12, 1927. Serial No. 212,372. 3 Claims. (Cl. 155—171.)



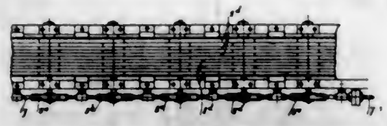
3. In a reclining chair, a swingable leg rest, a slidable and pivotally mounted supporting means therefor, a foot rest pivoted to said leg rest, an arm rigid upon said supporting means, and a link pivotally connecting said arm and foot rest.

1,689,198. **IMMERSION HEATER.** FRANCIS F. GAGELMAN, New York, N. Y. Filed Nov. 22, 1926. Serial No. 149,999. 5 Claims. (Cl. 219—41.)



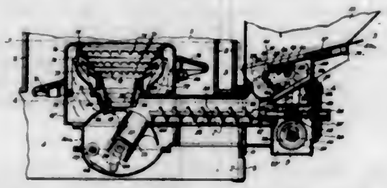
1. In a heater for liquid, a substantially cylindrical casing, a heating unit in one end thereof, and an electric circuit therefor and a thermostatic device in said circuit and in the other end of the casing, said device including a supporting block of insulating material frictionally braced along a substantial diameter between the walls of the casing.

1,689,199. FEEDING, CUTTING, ROLLING, AND FORMING MACHINE FOR PLASTIC MATERIAL. WILLIAM GANZ and HENRY GANZ, Ridgefield Park, N. J., assignors to The Sweets Company of America, Inc., New York, N. Y., a Corporation of Virginia. Filed Aug. 27, 1920. Serial No. 406,477. 3 Claims. (Cl. 107—4.)



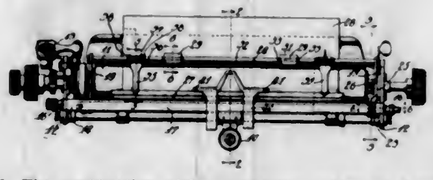
1. A machine of the character described comprising, a receiver for the plastic material, said receiver being provided with a forwardly projecting mouth having diametrically opposed slots therein; a pair of feeding rolls mounted to rotate in certain of said slots with their feeding surfaces flush with the inner walls of the mouth, a second pair of feeding rolls provided with feeding surfaces and cutting means alternately arranged thereon and mounted to rotate in other of the slots, said feeding surfaces disposed flush with the inner walls of the mouth and said cutting means arranged to pass through their slots into the receiver, whereby the feeding rolls will simultaneously feed, form and cut the material into predetermined lengths in the mouth of the receiver.

1,689,200. TWO-SPEED AND REVERSING CLUTCH. THEODORE GENSMER, Portland, Oreg. Filed Aug. 28, 1926. Serial No. 132,235. 4 Claims. (Cl. 74—34.)



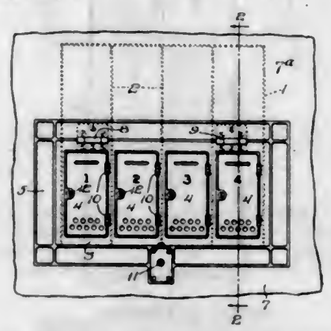
1. In a clutch, a drive and a driven shaft, an outer and an inner clutch element upon each shaft, means to cause a selected one of the clutch elements upon the driven shaft to engage a corresponding clutch element upon the drive shaft, balls carried by the outer clutch element upon the drive shaft and bearing upon the inner clutch element upon the drive shaft, an annular plate supported by the aforesaid balls, a sleeve splined for movement axially of the drive shaft, said sleeve when moved in one direction engaging the inner clutch element on the drive shaft, and when moved in the opposite direction engaging said annular plate, and a brake to prevent the rotation of said annular plate whereby when said annular plate is so prevented from rotating, at a time the inner clutch element is rotated by means of the aforesaid sleeve, rotation in the same direction at a lesser speed will be transmitted from the last mentioned inner clutch element, through the medium of said balls, to the outer clutch element upon the drive shaft, and upon engagement of the two aforesaid outer clutch elements ultimately to the driven shaft.

1,689,201. CONVEYER OPERATED AT ACCELERATED SPEED. GEORGES HALTER, Paris, France. Filed June 12, 1923, Serial No. 645,001, and in France June 17, 1922. 5 Claims. (Cl. 198—76.)



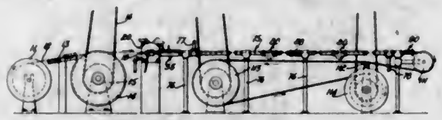
1. In a transporting apparatus comprising a series of endless transporting sections disposed in sequence in the direction of travel of the load and wherein each section consists of a plurality of endless funicular elements arranged in parallel position, imbricated with the funicular elements of the adjacent sections and forming with the same a continuous surface of travel for the load, pulleys on which said funicular elements are mounted, a driving shaft for each section, the combination of the drive shafts of all the sections with rigid driving connections controlled by a single device and actuating the successive sections as a whole in the same direction at speeds which are accelerated from one section to the next.

1,689,202. FURNACE STOKER. WILFRED A. HARE, Detroit, Mich. Filed Nov. 23, 1922. Serial No. 602,098. 7 Claims. (Cl. 110—46.)



1. In a device of the character described, the combination with a hopper having a discharge throat, a casing beneath said hopper, a measuring device mounted for turning movement in said casing and having an inlet opening to receive fuel from said throat and a discharge opening, a trough member to the outer end of which said casing is attached, said trough member being positioned with its outer end in position to receive fuel discharged from said measuring device, a conveyor in said trough for conveying fuel discharged thereinto by the measuring device, means for operating the conveyor, means for rocking said measuring device about its axis, a plate adapted to project beneath the hopper throat and over the measuring device, and means for operating said plate in timed relation to the rocking movement of said measuring device.

1,689,203. WORK-HOLDING BAIL FOR TYPEWRITERS. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed June 11, 1923. Serial No. 644,549. 5 Claims. (Cl. 179—139.)



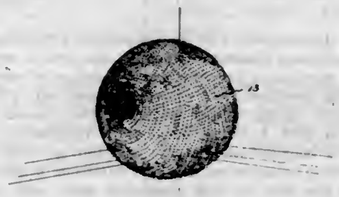
1. The combination with a typewriter platen, of a work holder bar extending longitudinally thereof and having a portion of the face thereof flattened, a spring finger having ears journaled on said bar, and a leaf spring interposed between said ears and the flat portion of said bar and arranged to bear on said bar to resiliently hold said fingers against rotation and frictionally retain said fingers in longitudinal adjustment along said bar.

1,689,204. BOX FOR MAIL AND THE LIKE. SAMUEL R. HUNTER, Mishawaka, and JOHN W. ARNOLD, South Bend, Ind. Filed July 16, 1924. Serial No. 726,295. 5 Claims. (Cl. 232—25.)

5. A mail receptacle consisting of a casing situated in a wall opening and having a back wall, top, bottom and side walls extending outwardly perpendicularly to said back wall, certain of said perpendicularly extending walls being shorter than the other perpendicular walls so that a portion of the casing will be flush with the outer edge of the wall supporting the same and the remaining portion will be concealed beneath said wall, said casing being divided into compartments, a master door for all the compartments and individual doors in said master door giving access to each compartment.

1,689,205. METHOD OF AND APPARATUS FOR CONTINUOUSLY SHEATHING CORES. LESLIE FAWCETT LAMPLOUGH, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 29, 1926, Serial No. 112,600. Renewed Sept. 13, 1928. 23 Claims. (Cl. 18—3.)

1. In an apparatus for producing sheathed articles, a device for applying a sheathing of a vulcanizable substance on a core, a vulcanizing chamber connected directly thereto, means for causing relative movement between the sheathed core and the chamber, and means for admitting a non-oxidizing vulcanizing medium under pressure into the chamber in direct contact with the vulcanizable substance, whereby the sheathing substance is vulcanized.

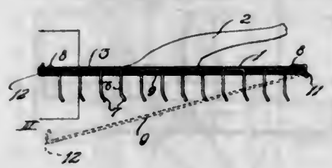


1,689,206. APPARATUS FOR TREATING VULCANIZABLE MATERIAL. LESLIE FAWCETT LAMPLOUGH, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 16, 1926, Serial No. 155,194. Renewed Mar. 22, 1928. 10 Claims. (Cl. 18—6.)

2. In an apparatus for treating vulcanizable material, a vulcanizing chamber, means for admitting a hot, non-oxidizing vulcanizing medium into the chamber under pressure, means for advancing a core sheathed with a vulcanizable material through the chamber, and a seal for permitting the withdrawal of the sheathed core from the chamber and for retaining the vulcanizing medium within the

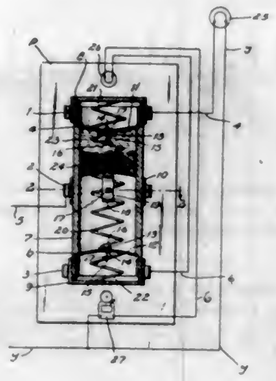
chamber comprising a member for connecting the seal to the chamber and a plurality of interchangeable, selectively operable sealing units.

1,689,207. SCOURING BALL. RUSSELL B. KINGMAN, Orange, N. J., assignor to Metal Textile Corporation, West Orange, N. J., a Corporation of Rhode Island. Filed Apr. 13, 1927. Serial No. 183,319. 2 Claims. (Cl. 15—209.)



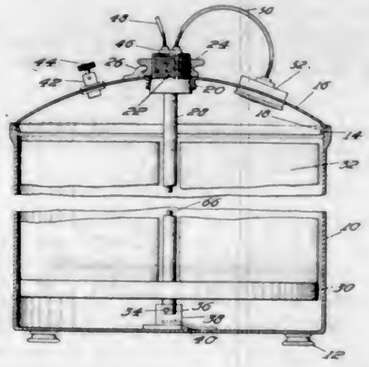
1. A scouring ball comprising an interior filling mass of balled up metallic wire, and an exterior tubular cover body of knitted metallic fabric, the free open end portions of said cover body being in-turned and gathered together to form end closures, and means to hold said end closures against opening.

1,689,208. PROCESS OF IMPARTING A WOOL FINISH TO COTTON CLOTH. MORTIMER J. MACK, Summit, N. J. Filed July 28, 1927. Serial No. 209,181. 2 Claims. (Cl. 26—1.)



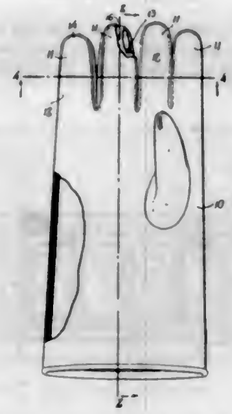
1. The herein described process of treating a cotton fabric which consists of bleaching, dyeing, napping, mercerizing, sizing and re-brushing in the order named.

1,689,209. BRUSH CLEANER. CLARA MAJEWSKI, Chicago, Ill. Filed Dec. 2, 1926. Serial No. 152,239. 2 Claims. (Cl. 15—142.)



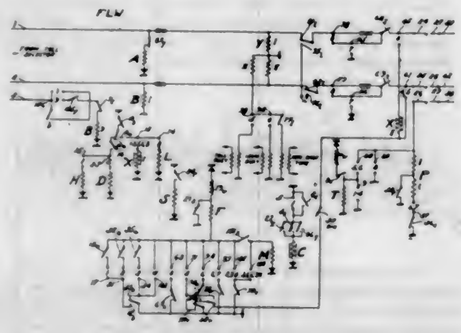
1. A brush cleaner comprising a substantially flat metallic back plate, a grooved and apertured bristle holding plate, relatively stiff metallic bristles passing through the apertures in the said holding plate and extending therebelow, said bristles having integral portions resting in the grooves of said holding plate and connecting adjacent longitudinally alined bristles to form rigidly positioned pairs of bristles, and threaded means for removably securing said back plate in contact with the bristle holding plate and with the integral portions of the bristles in the grooves.

1,689,210. THERMOSTATICALLY-OPERATED ELECTRIC SWITCH. ROGER W. MCBRIEN, Alton, Ill. Filed May 4, 1927. Serial No. 188,728. 3 Claims. (Cl. 200—123.)



1. A thermostatic switch comprising a receptacle of a non-conducting material, a cap on one end of said receptacle, a perforated partition having electrical conductivity within the receptacle and spaced from said cap, a conductor within the casing, means for connecting one end of said conductor with a circuit outside the receptacle, a second conductor disposed between the partition and cap and having electrical connection with the partition, means for connecting one end of said conductor with said circuit, a fusible insulating wall within the receptacle and spaced from the partition, and a fluent conductor confined between the partition and wall and having electrical connection with the partition.

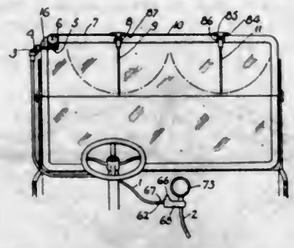
1,689,211. PRESSURE BOILER. FOLKE S. PETERSON, Chicago, Ill. Filed Jan. 3, 1928. Serial No. 244,698. 6 Claims. (Cl. 53—1.)



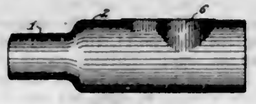
1. A pressure steam boiler, including in combination, a body cylindrical in shape, a cover adapted to fit upon the said body, and a locking element positioned in an opening in the cover, said locking element comprising a block cylindrical at its upper end, its lower end terminating in the shape of a frustrum of a cone, a hollow rod integrally attached to said block and extending downwardly therefrom, a platform, circular in shape and integrally attached to the said rod, and means for anchoring the rod in the bottom of the body of the boiler.

1,689,212. X-RAY PROTECTIVE GLOVE. JAMES PICKER, New Rochelle, N. Y. Filed May 17, 1927. Serial No. 191,962. 2 Claims. (Cl. 2—164.)

1. A protective X-ray glove having a finger member, said finger member comprising oppositely disposed and separated portions made of protective material and of sufficient width to protect the finger of the operator, said portions of protective material being connected by non-protective porous material.



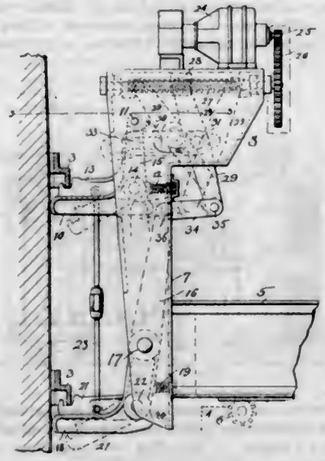
1,689,213. TELEPHONE SYSTEM. ALFRED SCHECNERT, Charlottenburg, Germany, assignor to Siemens & Halske Aktiengesellschaft Wernerwerk, Siemensstadt, near Berlin, Germany. Filed June 20, 1924, Serial No. 721,338, and in Germany July 5, 1923. Renewed Mar. 23, 1928. 7 Claims. (Cl. 179—18.)



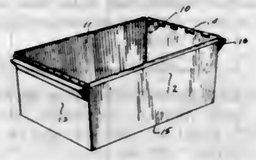
1. In a telephone system, means including a numerical switch and a non-numerical switch in serial relation for extending connections to idle lines in a group, said lines terminating in the bank of said non-numerical switch, and means in said numerical switch for testing said lines.

1,689,214. AUTOMOBILE WINDSHIELD WIPER. JAMES W. SMALL, Chicago, Ill. Filed Mar. 12, 1924. Serial No. 698,598. 9 Claims. (Cl. 15—253.)

1. In mechanism for wiping wind shields, an actuating bar extending longitudinally of the wind-shield, means at one end of said bar for reciprocating it, a pivotally mounted wiper arm, a pinion on the pivot of the wiper arm frictionally engaging said wiper arm, and operating connections between said bar and said pinion to effect the oscillation of said wiper arm through said frictional engagement with the pinion, the latter permitting manual oscillation of the wiper arm independently of said operating connections.



1,689,215. DRAG LINK. WILLIAM H. SPIRE, Cleveland, Ohio, assignor to Thompson Products, Incorporated, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 4, 1921. Serial No. 512,738. 3 Claims. (Cl. 287—90.)

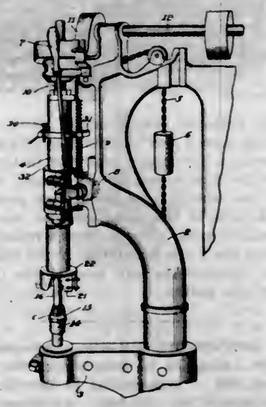


1. A drag link member comprising a cylindrical socket portion of substantially uniform gauge throughout, a keyhole slot in the wall thereof bounded by an upstanding peripheral flange of substantially the same gauge as the body of the socket portion, the end of the flange lying in a plane surface.

1,689,216. BOTTOM-TILTING-DOOR EXTRACTOR. IVOR D. THOMAS, Palmyra, Ohio, assignor to The Wellman Seaver Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 3, 1925. Serial No. 20,421. 17 Claims. (Cl. 254—84.)

1. A door extracting mechanism comprising a support adapted to be positioned in front of a door to be extracted and to be moved toward and from the door opening, upper and lower door engaging hooks carried by the support, the lower hook being movable bodily on the support toward and from the door opening, and means for moving the hooks into door engaging position and for shifting the lower of the hooks outwardly in advance of the upper hook to tilt the door.

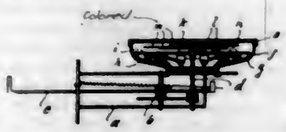
1,689,217. RECEPTACLE. WILLIAM KING WHITE, Cleveland, Ohio. Filed June 10, 1927. Serial No. 197,849. 7 Claims. (Cl. 220—97.)



1. In a container, a rectangular bottom wall therefor, a pair of end and a pair of side walls extending upwardly from the bottom wall, a pair of handles connected to the upper edge portions of opposite end walls and adapted to be rotated thereon to alternative positions within and without the container, each of said handles comprising portions extending parallel to said end walls, and adapted to engage the end walls in both alternative positions, said portions having three sides, one of said sides adapted to engage by a portion adjacent its lower edge the outer surface of the end wall when the handle is disposed in position exteriorly of the container, said side forming a surface for engaging another container by its bottom wall when the handle is rotated to its interiorly disposed alternative position, to support the other container.

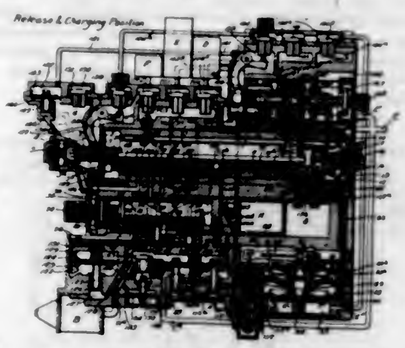
1,689,218. METHOD OF FORMING TURNBUCKLES. LOREN L. WHITNEY, Hammond, Ind., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed July 24, 1924. Serial No. 727,914. 5 Claims. (Cl. 29—175.)

1. The method of forming turnbuckles or the like from a tubular blank which comprises heating the central portion of the blank, enclosing the central portion of the blank in dies limiting its outward expansion, applying means to the inside of the blank whereby its inward deformation is prevented and applying force longitudinally of the blank whereby the middle portion is forced outwardly against the dies.



1,689,219. CLEAT-TRIMMING MACHINE. WILLIAM H. ALBEE and ARTHUR G. DAVIS, Marlboro, Mass., assignors to Koehler Manufacturing Company, Marlboro, Mass., a Corporation of Massachusetts. Filed Nov. 17, 1926. Serial No. 148,836. 13 Claims. (Cl. 12—1.)

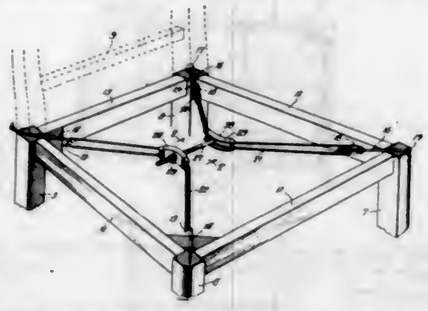
1. In a machine for trimming football cleats, the combination of a holder including a member having a seat on which to support a cleat, said member being tapered ad-



jacent to the cleat corresponding to the taper to be given to the cleat, said holder including a plunger for engaging the top of the cleat and holding it seated on said member, and a cutter cooperating with said holder to trim said cleat to a taper forming substantially a continuation of the taper of said member.

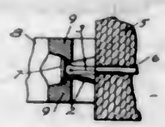
1,689,220. SPARK-PRODUCING TOY WITH CHANGING COLORS. CARL ARNOLD, Nuremberg, Germany. Filed Aug. 1, 1927, Serial No. 209,879, and in Germany July 8, 1927. 2 Claims. (Cl. 46—32.)

1. A spark-producing toy with changing colors, comprising in combination with the spark producing mechanism consisting of a driving gear and of a vertical driving shaft, a disk having apertures keyed on said driving shaft, cerium-stones attached to said disc, a casing in which said disk with apertures is located, an emery layer on the inner wall of said casing, a removable lid closing said casing, upwardly directed projections on a portion of said disk with apertures, and colored transparent disks loosely mounted in said casing and resting on said projections so that when said disk having apertures is rapidly rotated said transparent disks are pressed by the action of the centrifugal force against the inner wall of said casing so that their circulating movement is braked and the colored light changes rapidly.



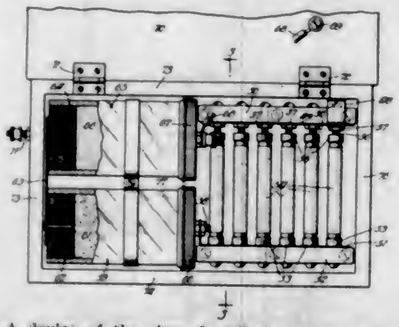
1,689,221. AIR-BRAKE APPARATUS. WILLIAM ASTLE, Brooklyn, N. Y., assignor to Automatic Straight Air Brake Company, Wilmington, Del., a Corporation of Delaware. Filed July 15, 1927. Serial No. 206,101. 43 Claims. (Cl. 303—38.)

31. A fluid pressure brake control valve comprising a valve operating upon a service reduction of brake pipe pressure to connect an air supply reservoir to the brake cylinder for a service application of the brakes; means operated by a service reduction of brake pipe pressure to connect the brake pipe to the brake cylinder, said means closing said communication after a predetermined time interval, to thereby limit the amount of brake pipe air flowing to the brake cylinder through said means in service applications of the brakes.



1,689,222. FURNITURE BRACE. ABRAHAM BALINKY, Chicago, Ill., assignor to Everlasting Furniture Brace Co., Chicago, Ill., a Corporation of Illinois. Filed June 10, 1926. Serial No. 114,946. 4 Claims. (Cl. 155—197.)

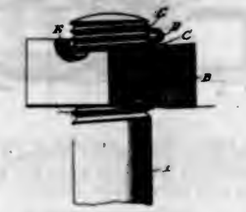
1. A brace of the character described comprising corner-stays, a saddle, a closed wire loop whose extremities are mounted upon said corner-stays and whose intermediate portion passes over said saddle to provide a pair of wire strands between said corner-stays, and a bolt for



adjustably securing said saddle in position so as to exert a strong pull upon said corner-stays, said bolt also serving to maintain the strands out of contact with each other on the saddle.

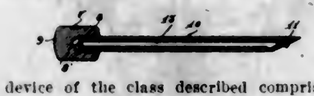
1,689,223. HEAD-SPACING DEVICE. JOHN H. BAUSCHARD, Erie, Pa. Filed Mar. 11, 1926. Serial No. 93,838. 4 Claims. (Cl. 85—50.)

2. A head spacing device for nails comprising a short plate bent into V-shaped and perforated at the apex and having the opposing slopes of the plate brought together at the ends.



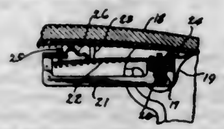
1,689,224. RADIO RECEIVING APPARATUS. JAMES A. BISHOP, Mascoutah, Ill.; Lulu H. Bishop administratrix of said James A. Bishop, deceased. Filed June 10, 1926. Serial No. 115,007. 8 Claims. (Cl. 250—20.)

1. A device of the class described comprising in combination an insulating panel, two oppositely disposed pairs of busbars thereon, a plurality of conductors for radio current joining together the busbars of each pair, electrically insulating material on each of the said wires, a sheathing of magnetic material substantially surrounding the insulation on each wire, a layer of insulation surrounding each sheathing, a substantially large electrostatic dissipation plate in close proximity to all of said devices and having a large number of relatively sharp electrostatic dissipation points, an electric connection between all of the sheathing layers and said plate, a plurality of radio current conductors connecting together



the diagonally opposite busbars of the two pairs, an electrostatic dissipation shell surrounding each of said diagonally connecting wires but insulated therefrom, a large number of sharp points on each of said shells and terminal connections to the other diagonally opposite busbars for received and delivered radio current substantially as described.

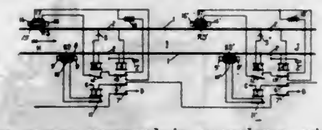
1,689,225. LOCK NUT. JAMES HOYT BROWN, Boston, Mass., assignor to Brown Lock Nut Company, a Corporation of Delaware. Filed May 2, 1925. Serial No. 27,451. 5 Claims. (Cl. 151—21.)



1. A lock-nut comprising a threaded nut-body slotted near one end to provide a ring resiliently connected with one side of said nut-body, said ring loosely surrounding approximately three quarters of the circumference of a bolt, said ring having, at the side opposite that at which it is joined to the nut-body, a lip, said lip exerting a resilient pressure on one side of the thread of the bolt.

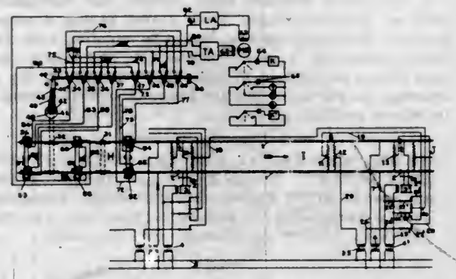
1,689,226. COMBINATION PIPE CLEANER. WILFRED J. BROWN, New York, N. Y. Filed June 11, 1926. Serial No. 115,293. 3 Claims. (Cl. 131—13.)

2. A device of the class described comprising a head having a threaded bore formed at one side thereof; a tubular stem threaded into said bore and detachable therefrom at will, one end of said stem being closed and provided with a sharpened edge, and a flexible cleaning member doubled upon itself and positioned in said stem, said cleaning member projecting beyond the end of said stem when threaded into said bore.



1,689,227. SEAT-SIGNAL SYSTEM. WILLIAM C. BURRELL, Kankakee, Ill. Filed May 13, 1925. Serial No. 29,937. 3 Claims. (Cl. 200—85.)

1. A circuit closer including a frame having a supporting clamp at one end and a contact element at its opposite end, and a yieldable contact member anchored at one end in connection with the first mentioned end of the frame and adapted to flex into and out of engagement at its free end with said contact element.

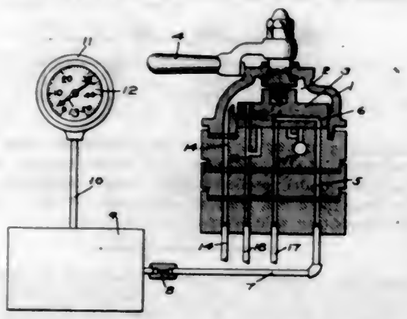


1,689,228. AUTOMATIC TRAIN-CONTROL SYSTEM. CHARLES S. BUSHNELL, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Original application filed Oct. 25, 1923, Serial No. 670,701, now Patent No. 1,620,188, dated Mar. 8, 1927. Divided and this application filed Nov. 26, 1926. Serial No. 150,901. 14 Claims. (Cl. 246—63.)

1. Trackway apparatus for automatic train control systems comprising, a track electro-magnet for producing a magnetic field, a source of energy, a track circuit, a relay connected in series with said track circuit near the energy end of the track circuit, a circuit for energizing said electro-magnet including a front contact of said relay, the winding of said magnet, said source and suitable circuit

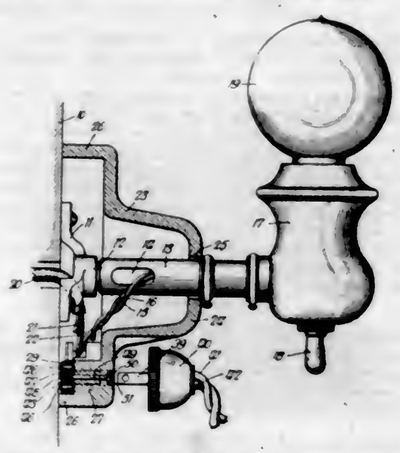
controlling means governed in accordance with traffic conditions ahead, whereby said electro-magnet is only energized under predetermined traffic conditions ahead provided there is a train on said track circuit to increase the current in said relay.

1,689,229. TRAIN CONTROL. CHARLES S. BUSHNELL, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed June 28, 1924. Serial No. 723,047. 7 Claims. (Cl. 246—63.)



1. Car-carried apparatus for automatic train control systems of the continuous inductive type comprising, a pair of coils located in inductive relation to the track rails connected to cumulatively detect currents flowing in opposite directions in the track rails ahead of a car, two pairs of coils each pair of which is connected to cumulatively detect currents flowing in the same direction in the two track rails under the car, amplifying devices for amplifying the potentials detected from said currents, electro-responsive means connected to said amplifying devices, and means for changing the connections of said coils so as to cause them to properly detect the currents in the track rails when the direction of the movement of the car is reversed.

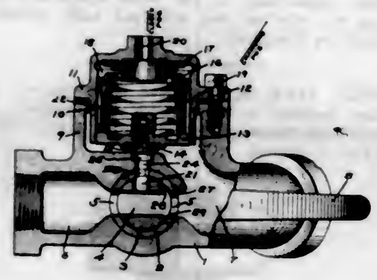
1,689,230. LOCKING DEVICE FOR SWITCH KEYS. HARRY J. CHRISTOPHER, Westfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 27, 1926. Serial No. 157,328. 2 Claims. (Cl. 200—166.)



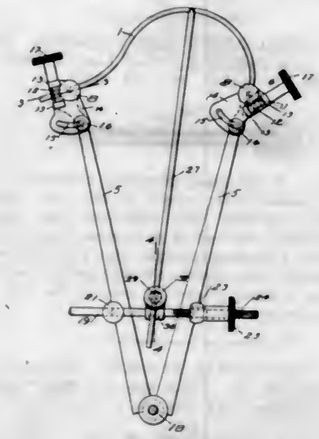
1. The combination with a switching appliance, a supporting frame having springs affixed thereto, a rocking lever journaled in the supporting frame and adapted to be set in different angular positions thereon, means provided with a series of openings in spaced relation from each other adapted to be clamped to the rocking lever through a selected opening and coacting with the frame to confine the range of movement of said lever in accordance with the selected opening in said means to predetermined engagement with desired springs.

1,689,231. BRAKE-INDICATING DEVICE. WILLIAM E. DEAN, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Jan. 8, 1927. Serial No. 159,845. 3 Claims. (Cl. 161—15.)

1. In a fluid pressure brake system, the combination with an engineer's brake valve device having a release position, of a reservoir adapted to be supplied with fluid under pressure at a predetermined rate, and a gage operated by the increase in pressure in said reservoir for indicating the period of time the brake valve device remains in release position.



1,689,232. ELECTRICAL FIXTURE WITH CONVENIENCE OUTLET. VICTOR R. DESPARD, Valparaiso, Ind., assignor to McGill Manufacturing Company, Valparaiso, Ind., a Corporation of Indiana. Filed June 18, 1924. Serial No. 720,778. 2 Claims. (Cl. 173—334.)

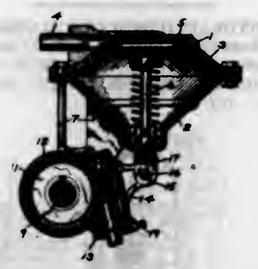


1. In a device of the character described, a cup-like member having a central projection provided with an opening therein and having a flattened wall portion provided with a pair of openings spaced from said first mentioned opening, a contact carrying member detachably mounted in the hollow of said cup-like member and on the inner face thereof opposite said pair of openings and a pair of contacts on said contact carrying member extending into said paired openings.

1,689,233. ANGLE-COCK DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 17, 1927. Serial No. 226,581. 4 Claims. (Cl. 303—86.)

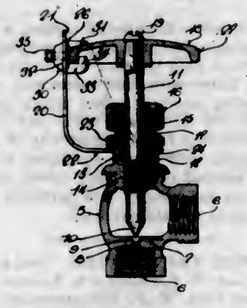
4. An angle cock device comprising a key having a water-way adapted to establish communication from one side of the key to the other in the open position, said waterway having a port opening to one side of the key in a position intermediate the open and the closed positions and the angle cock device having a restricted port which communicates with said waterway at the other side of the key in said intermediate position.

1,689,234. VARIABLE CURVE-FORMING DEVICE. CHRISTIAN G. FILZER, Erie, Pa., assignor of one-half to Herman Steinruck, Erie, Pa. Filed Apr. 20, 1925. Serial No. 24,403. 2 Claims. (Cl. 33—177.)



1. In a variable curve forming device, the combination of a flexible curve forming element; pivotal mountings in which the element is slidingly mounted; screws for locking the element in the pivotal mountings; worm gears on the pivotal mountings; worms for actuating the gears; pivoted arms on which the mountings are pivotally mounted and the worms journalled; and means for adjusting the arms to vary the distance between the pivots of the mountings.

1,689,235. BRAKE SLACK ADJUSTER. LESTER A. FOWLER, Oakland, Calif., and HENRY D. HUKILL, Pittsburgh, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 15, 1924. Serial No. 692,968. 1 Claim. (Cl. 188—196.)

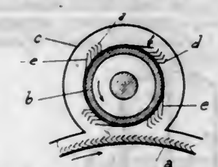


The combination with a diaphragm brake chamber comprising casing members and an interposed flexible diaphragm and a diaphragm rod operable by said diaphragm, of a bracket secured to one of said casing members, a cam shaft mounted in bearings in said bracket, a casing

mounted on said shaft intermediate the bracket bearings and pivotally connected to said diaphragm rod, a worm wheel mounted in said casing and secured to said shaft,

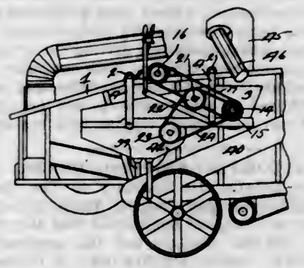
and a rotatable worm mounted in said casing and meshing with said worm wheel for varying the angular position of the cam shaft with respect to said casing.

1,689,236. VALVE STRUCTURE. JOHN FRASER, Jr., Milwaukee, Wis., assignor to Milwaukee Valve Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 14, 1925. Serial No. 75,306. 3 Claims. (Cl. 116—125.)



2. A valve structure, comprising a valve body having an inlet and an outlet, a port connecting the inlet and outlet, a valve member operable to close the port, a stem extending from the valve member outwardly of the valve body, an operating member on the stem, an indicating finger carried by the valve body and cooperating with delineations on the operating member to indicate the position of the valve, a substantially U-shaped stop member engaged over the periphery of the operating member and adjustable thereabout, one arm of the stop member providing a setting finger cooperating with the delineations on the operating member for the setting of the stop member, the other arm thereof engaging the valve member stem, and means for fixing the stop member with relation to the operating member, whereby the stop member cooperates with the indicating finger in the setting of the valve member at a desired point.

1,689,237. MANUFACTURE OF FINISHING LIME. VICTOR M. FREY, York, Pa. Filed Feb. 12, 1925. Serial No. 8,687. 7 Claims. (Cl. 23—188.)



5. A process for manufacturing finishing lime which consists in grinding impure dolomite, in decarbonating the ground dolomite without admixture of other solid substances, while agitating the same at a temperature below that necessary to produce sintered or hardened particles, and in hydrating the product thus obtained.

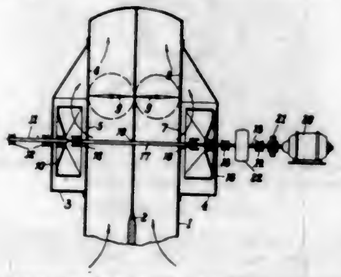
1,689,238. CLEARING MECHANISM FOR PREPARATORY MACHINES FOR TEXTILE FIBER. CHARLES GÉGAUFF and JULES PELIMLIN, Mulhouse, France. Filed July 22, 1927, Serial No. 207,794, and in Germany July 30, 1926. 5 Claims. (Cl. 19—98.)

1. In a preparatory machine for textile fiber, a clearing roll provided with fiber-engaging teeth, said roll having a shield disposed in advance of the teeth, to direct flying fibers away from the base of said teeth.

1,689,239. CLOVER HULLER. JOHN GEIGER, Minden, Iowa. Filed Apr. 27, 1926. Serial No. 104,931. 2 Claims. (Cl. 130—2.)

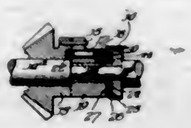
1. The combination with a grain threshing machine, means for operating said threshing machine, an inclined conveyor to one side of the threshing machine and below the same, of a clover hulling machine to one side of the threshing machine and above the conveyor, operating connections between the threshing machine and the clover hulling machine, means for discharging hulls from the clover hulling machine onto the conveyor, and means for discharging hulled clover to the outside of the conveyor.

1,689,240. REMOVABLE BUCKLE HOLDER FOR SHOES. LOUIS W. GORDON, New York, N. Y. Filed Oct. 21, 1926. Serial No. 143,210. 7 Claims. (Cl. 2—245.)



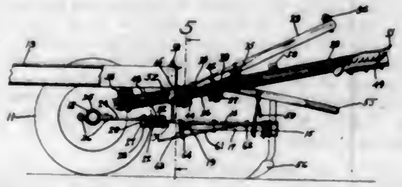
1. An ornament supporting device for slippers, comprising two spring arms connected by a bend or loop at one end, said arms crossing one another X fashion and having their free ends adapted to be inserted over the vamp of a slipper when their two connected ends are pressed together, said free ends being bent substantially in the same direction transversely of said arms, and forming surfaces substantially following the outline of and adapted to clamp said vamp, securely holding the device in position when the pressure is released.

1,689,241. MECHANICAL-DRAFT INSTALLATION. EUGEN HABER, Berlin-Charlottenburg, Germany. Filed Nov. 30, 1927, Serial No. 236,711, and in Germany Dec. 29, 1926. 3 Claims. (Cl. 110—162.)



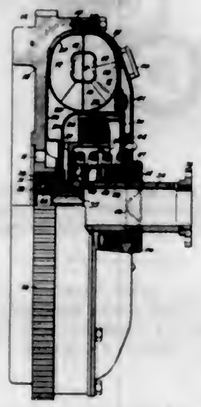
1. A mechanical draft installation, comprising in combination with a chimney having in each of two opposite side

walls an upper aperture and a lower aperture, a vertical central partition subdividing said chimney into two compartments, a blower casing on each of said opposite side walls of said chimney covering the corresponding two apertures, a blower consisting of a vane wheel in each casing for sucking the flue gases from the corresponding compartment into the blower casing and for returning said flue gases through the corresponding upper aperture into the



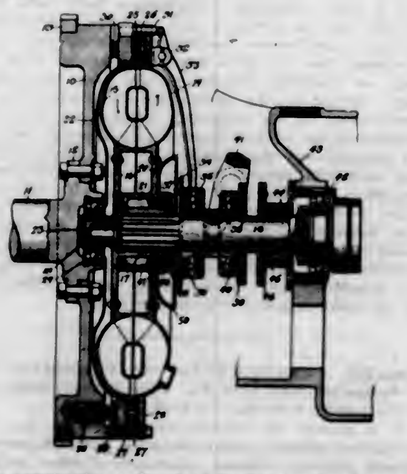
chimney, regulating flaps in each chimney compartment between said two apertures, a short shaft projecting from the outer side into each blower casing and carrying the corresponding vane wheel, means for driving one of said short shafts, a transverse rod extending from one short shaft to the other short shaft through said partition, and an elastic clutch at each end of said transverse rod for elastically coupling said two short shafts the one with the other.

1,689,242. AUTOMATIC STOPPING MEANS. SEVERIN HALVORSEN, Chicago, Ill., assignor to The Newspaper Stuffing Machine Company, Seattle, Wash., a Corporation of Washington. Original application filed May 20, 1922, Serial No. 562,462. Divided and this application filed June 5, 1924. Serial No. 718,169. 2 Claims. (Cl. 192—150.)



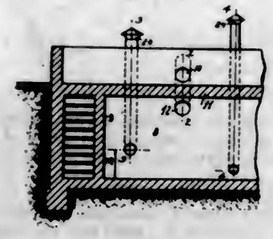
2. The combination of separate shaft sections, one of which is provided with a metallic member having an insulating block and the other of which is provided with an insulating sleeve carrying a commutator ring and a metallic member mounted on said insulating sleeve and containing an insulating sleeve having a pin adapted normally to contact with said insulating block, a spring tending to push said pin outwardly, a pin between the metallic members on said shaft sections and a brush on the metallic member on the second mentioned shaft section.

1,689,243. CULTIVATOR. SAMUEL KENNEDY, Jr., Clear Lake, Iowa. Filed Mar. 14, 1925. Serial No. 15,650. 7 Claims. (Cl. 97—47.)



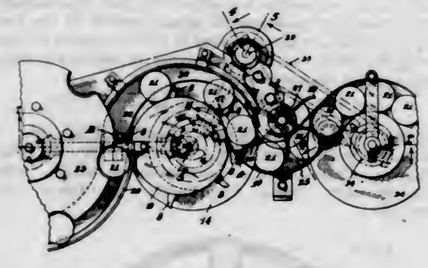
1. The combination with a draft yoke, of a tool frame having a forward rail, and a tool bar and ground-working tools carried thereby, side bars connecting said tool bar with said rail, said side bars comprising diverging upper and lower members, said upper members when connected to said rail holding the tools of such tool bar at a certain angle to the ground line and the other side bars when connected to said rail holding said tools at a different angle to the ground line.

1,689,244. HYDRAULIC-POWER TRANSMITTER. GUSTAV A. KLIMEK, East Rutherford, N. J., assignor to Turbine Patents Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 7, 1925. Serial No. 7,468. 10 Claims. (Cl. 60—54.)



1. In combination a fly wheel including a body portion and a casing member secured to the periphery thereof to define a chamber, a fluid impeller within the fly wheel and secured to the latter with fluid inlets and outlets facing toward said casing member, a fluid driven member within said casing member with fluid inlets and outlets facing toward the outlets and inlets respectively of said impeller, a partition engaging said fly wheel adjacent to the center of the latter and secured to said fluid driven member, and a mechanical clutch encircled by said partition and having a clutch part secured to said partition.

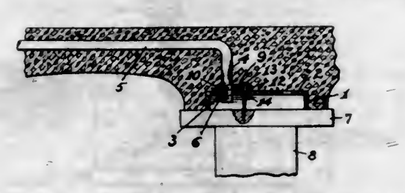
1,689,245. POWER TRANSMITTER. GUSTAV A. KLIMEK, East Rutherford, N. J., assignor to Turbine Patents Corporation, New York, N. Y., a Corporation of Delaware. Filed July 28, 1926. Serial No. 125,343. 8 Claims. (Cl. 60—54.)



2. In combination a fly wheel having a pair of spaced clutch parts adjacent to the periphery thereof, and relatively movable axially, a hydraulic power transmitter, including an impeller member and a turbine member, said impeller member having a clutch part juxtaposed between said first mentioned clutch parts.

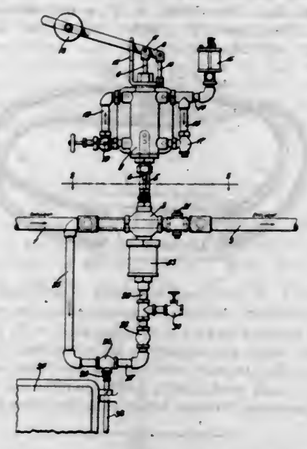
1,689,246. SYSTEM OF VERTICAL DIFFERENTIAL VENTILATION. ACHILLE KNAPEN, Brussels, Belgium. Filed Jan. 29, 1927, Serial No. 164,496, and in Belgium Jan. 30, 1926. 2 Claims. (Cl. 98—32.)

1. In a system for the ventilation of a chamber or the like, a substantially vertical duct connecting the upper portion of said chamber with the external atmosphere whereby the upper strata of air in said chamber may pass upwardly and outwardly, and a second duct of relatively smaller cross section and longer length than said first mentioned duct, connecting the lower portion of said chamber with the atmosphere whereby air from the exterior may flow downwardly and into said chamber thus causing a continuous flow of air through said chamber.



1,689,247. CONVEYING AND ACCELERATING DEVICE. PAUL H. LANGE, Bridgeport, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Filed Sept. 17, 1926. Serial No. 136,047. 6 Claims. (Cl. 198—22.)

1. A conveying and accelerating device including: two rotatable members eccentrically disposed with respect to each other, a body engaging arm pivotally connected to one of said members, a pin and slot connection between said arm and the other member whereby the one member is driven from the other, and a support for the body driven at a speed slightly less than that of the arm at the point where it first engages the body.

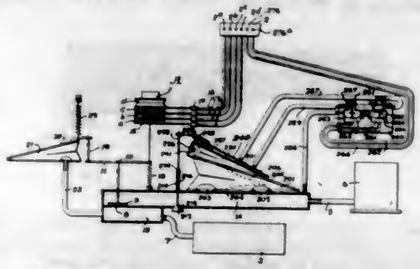


1,689,248. LOCK NUT FOR ELECTRICAL CONDUITS. JOHN A. MALCOLM, Cleveland, Ohio. Filed Dec. 27, 1923. Serial No. 682,990. 3 Claims. (Cl. 247—15.)

1. The combination of a concrete form, an outlet-box having its open end against the inner surface of said concrete form, said outlet-box having an opening through its bottom for receiving the conduit, a member resting upon the outer face of the bottom of said outlet-box adapted to hold the conduit in said opening of the outlet-box to prevent movement of the conduit, the outlet-box having an aperture in its bottom, the member having an aperture

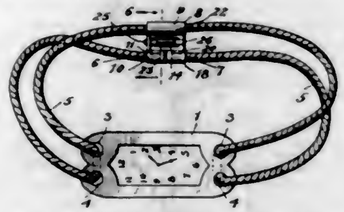
adapted to register with the aperture in the bottom of the outlet-box, and a fastening means adapted to pass through said apertures and be secured to said concrete form.

1,689,249. STEAM AND LIQUID CONTROL MECHANISM. WALTER C. MITCHELL, St. Louis, Mo. Filed Feb. 25, 1927. Serial No. 171,021. 9 Claims. (Cl. 137—139.)



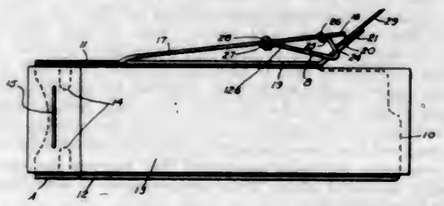
1. Mechanism for controlling the passage of fluids comprising a valve housing, an influent pipe to said housing, an effluent pipe from said housing, a valve in said housing for opening and closing communication between said pipes, a by-pass pipe from said influent pipe to said effluent pipe, a device in said by-pass pipe adjustable to permit a desired amount of fluid to pass continuously from said influent pipe to said effluent pipe, a piston for opening said valve, a pipe for conducting fluid from said influent pipe to one side of said piston, a rotary valve for opening and closing said last-named pipe, and optionally operable means in connection with said last-named pipe between the valve therein and said piston permitting exhaust of fluid from said last-named pipe.

1,689,250. AUTOMATIC MUSICAL INSTRUMENT. CHARLES F. STODDARD, New York, N. Y., assignor to American Piano Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 21, 1924. Serial No. 707,798. 9 Claims. (Cl. 84—41.)



1. In an automatic musical instrument having player pneumatics and a source of pneumatic power, in combination, a throttle valve interposed between said player pneumatics and source of pneumatic power, and influenced by the force of exhaust from said source of pneumatic power toward open position; an accordion bellows connected to said throttle valve comprising sections having different extents of movement; means to collapse said sections selectively to thereby vary the degree of exhaust applied to

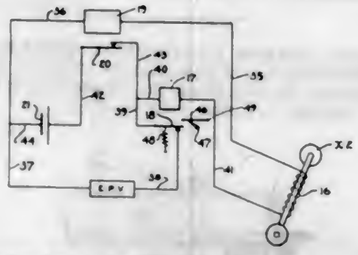
said player pneumatics; and additional pneumatic means connected to said throttle valve to maintain at said player



pneumatics the degree of exhaust established by said varying means whether one or many notes be sounded simultaneously.

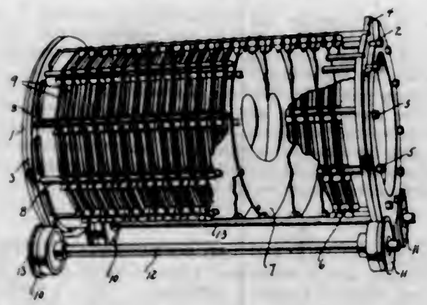
1,689,251. FASTENING DEVICE FOR WRIST WATCHES. BENJAMIN OGUSH, New York, N. Y., assignor to Katz & Ogush, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 27, 1928. Serial No. 273,224. 5 Claims. (Cl. 24—123.)

1. A clasp of the class described comprising a pair of fastener members, one of said members having an opening, the other member having a stud adapted to fit therein and detachably unite the members, an attaching cord, means on each of the fastener members for receiving and holding one end of said cord, and a guide member on one of the fastener members through which said cord may freely slide.



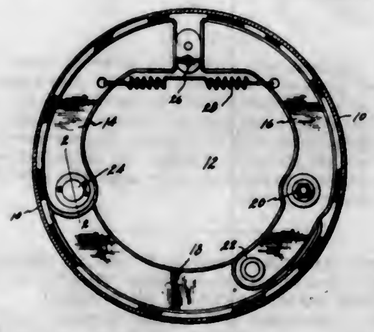
1,689,252. CHECK-NOTCHING DEVICE. CHARLES T. RASCHICK, St. Paul, Minn. Filed Feb. 5, 1923. Serial No. 617,004. 4 Claims. (Cl. 206—40.6.)

1. In combination with a check holder and cutter, a body adapted to hold a pad of checks, a cutter having a cutting tongue positioned edgewise of said checks and a stop formed on said cutting tongue positioned perpendicularly thereto and extending longitudinally thereof and adapted to pass between the checks of said pad when the cutting tongue is depressed.



1,689,253. AUTOMATIC TRAIN-CONTROL SYSTEM OR THE LIKE. OSCAR A. ROSS, New York, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Apr. 20, 1921, Serial No. 462,801. Renewed Apr. 19, 1927. 10 Claims. (Cl. 246—63.)

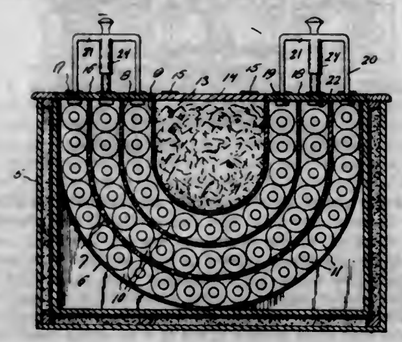
8. In a train control device, in combination: an inductive device including a coil; a train control device; a relay including an armature; two circuits, one including the train control device and the other including a coil of



the inductive device the relay and the relay armature and means included in said circuits whereby a lack of integrity causes an operation of the train control device.

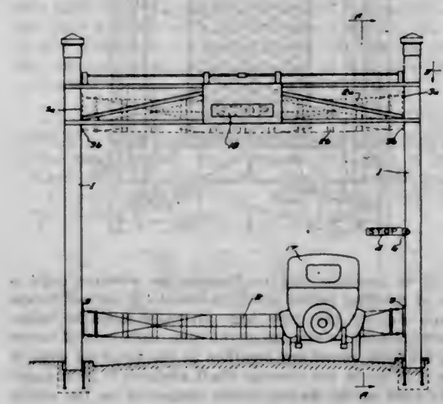
1,689,254. STRING-BEAN GRADER. FRANK PITTIS RYDER, Niagara Falls, N. Y. Filed May 13, 1927. Serial No. 191,090. 6 Claims. (Cl. 209—98.)

1. A string bean grader having in combination inner and outer cylindrical members of different diameters so interlocked that rotation of one will rotate the other, positively driven means for supporting and rotating one of the cylindrical members and means carried by the positively driven means and mounted to rotate thereon for supporting the other cylindrical member in definite relation to the rotated member.



1,689,255. VEHICLE BRAKE MECHANISM. ROY S. SANFORD, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 28, 1927. Serial No. 171,503. 22 Claims. (Cl. 188—78.)

16. A brake comprising a drum and retarding means engageable with the drum, in combination with means for holding at least a portion of the retarding means in any

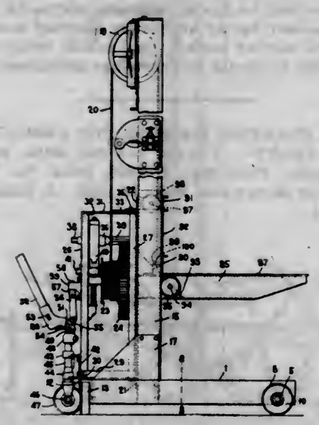


position to which it is shifted, the eccentricities of the drum serving to shift said portion of the retarding means to a position slightly spaced from the drum when the brake is released.

1,689,256. BOTTLE-DISPENSING REFRIGERATOR. JAMES E. SAPP, Bainbridge, Ga., assignor of one-half to Perry D. Rich, Bainbridge, Ga. Filed Apr. 2, 1928. Serial No. 266,684. 6 Claims. (Cl. 312—36.)

1. A bottle refrigerator comprising a casing, and a plurality of semi-cylindrical tubs nested in spaced relation within said casing to form water-communicating U-shaped channels through which rows of bottles are adapted to be passed in horizontal side by side relation, a single hinged cover for the intake ends of all of the channels, and a manually depressible ejecting device carried by said cover for simultaneously moving all of the rows of bottles and partially ejecting a bottle at the delivery end of each of said channels.

1,689,257. YIELDABLE BARRIER WITH MECHANICAL STOP SIGNAL. EMERSON D. SAWYER, Chicago, Ill. Filed Nov. 2, 1925. Serial No. 66,298. 1 Claim. (Cl. 39—1.)

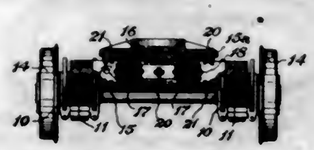


The combination consisting of a yieldable barrier carried by movable carriages, the carriages being mounted to slide in columns at each end of the barrier, a stop signal semaphore mounted on a flexible arm, said arm attached to a shaft revolvably mounted within a bearing on said column, a crank attached to the shaft, a connecting rod connected to the crank, the connecting rod being pivotally mounted at its upper end to a slidable hook and the tip of said hook cushioned and set so as to be in contact with the movable carriage of the barrier during the first increment of the downward travel of said carriage and during the last increment of the upper travel of the carriage, together with a spring means for forcing the hook downward, all substantially as described and shown.

1,689,258. APPARATUS FOR PHOTOGRAPHIC COLOR PROCESSES. MERRILL W. SEYMOUR, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 22, 1927. Serial No. 214,541. 24 Claims. (Cl. 95—2.)

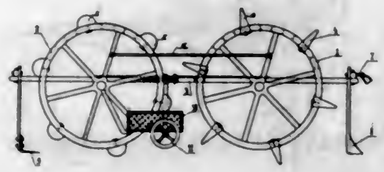
1. In combination in an optical system for use in a color process, a color screen and a light obstructing device, the color screen comprising distinct, differently colored, light transmitting areas and the light obstructing device having portions corresponding in position to said areas and transmitting to said several areas respectively amounts of light predetermined in accordance with the ascertained requirements of the process.

1,689,259. PORTABLE LOAD CARRYING AND HOISTING MACHINE. FREDERICK J. SHEPARD, Jr., Auburndale, and NATHANIEL WARSHAW, Boston, Mass., assignors to Lewis-Shepard Company, Watertown, Mass., a Corporation of Massachusetts. Filed May 3, 1926. Serial No. 106,366. 15 Claims. (Cl. 187—11.)



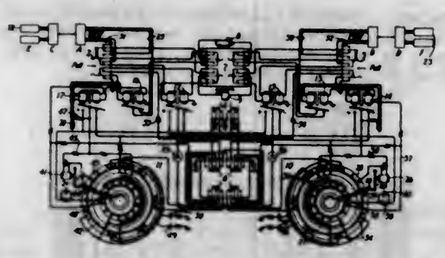
9. A portable hoisting machine having a base frame comprising side girders and a transverse girder of angle iron fitting upon and connecting the front ends thereof, standards rigidly secured to said side girders, at a distance from their front ends, forming guides for upwardly movable load supporting means, a standard-connecting girder located at a distance from said base frame, a rectangular supplemental frame for the elevating mechanism having its base supported upon the central portion of said transverse girder, and detachably secured thereto, and means connecting the upper rear corner of said supplemental frame to the central portion of said standard-connecting girder, whereby the supplemental frame and the elevating mechanism carried thereby may be readily removed as a unit similar supplemental frame having other elevating mechanism substituted.

1,689,260. CUSHION ARCH SUPPORT. JOHN STROOTMAN, Buffalo, N. Y. Filed Sept. 2, 1925. Serial No. 54,034. 1 Claim. (Cl. 36—71.)



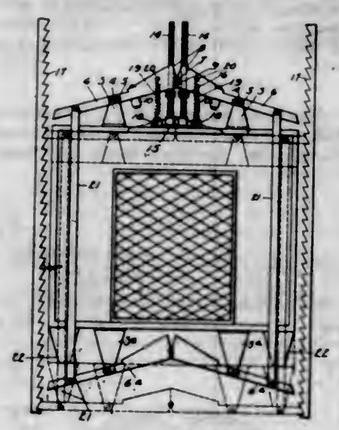
A removable arch-support, comprising a flexible cushion having a cavity to receive the heel and the arch of the foot, the outer side-wall of the cavity being substantially straight and its inner side-wall convex to fit the concavity of the inner side of the arch.

1,689,261. LATERAL-RESISTANCE DEVICE. CHARLES W. TODD, Schenectady, N. Y. Filed Aug. 27, 1926. Serial No. 131,937. 4 Claims. (Cl. 105—189.)



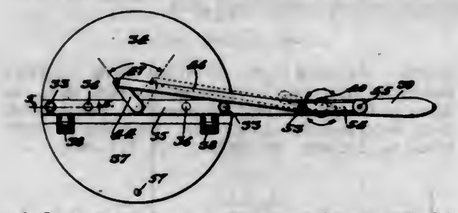
1. A roller seat for lateral resistance devices for railroad trucks, said seat having alternately reversed toothed inclines on its bearing surface, the inclines being substantially straight at the top and curved at the bottom.

1,689,262. PLANTING MACHINE FOR CABBAGE AND OTHER PLANTS. THOMAS VAN DEN ENDE, Maasdijk, Netherlands. Filed Sept. 2, 1926, Serial No. 133,249, and in the Netherlands Sept. 2, 1925. 1 Claim. (Cl. 111—91.)



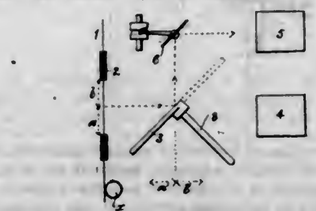
A planting machine for cabbage or other plants comprising a frame, a wheel rotatably mounted on said frame and provided with a plurality of planting spades equally spaced about the periphery thereof and extending therefrom, and a second wheel rotatably mounted on said frame behind said first wheel and provided with a plurality of pressing feet equally spaced about the periphery thereof and extending therefrom, said pressing feet being spaced about the periphery of said second wheel a distance equal to the peripheral distance between the planting spades on said first wheel and adapted to rotate in a vertical plane laterally spaced from the vertical plane of rotation of said planting spades, whereby said pressing feet are adapted to exert a sideward pressure to close the holes made by said planting spades.

1,689,263. PRINTING TELEGRAPHY. GILBERT S. VERNAM, River Edge, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 8, 1926. Serial No. 134,252. 16 Claims. (Cl. 178—71.)



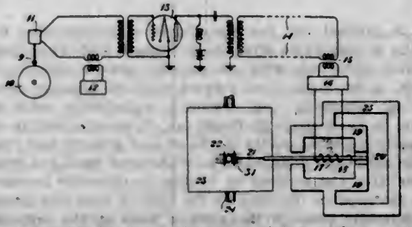
1. In a telegraph system adapted for transmission alternately in each direction, two line sections, an intermittently operated timing device, means for operating said device under the direct control of both sections to receive, regenerate, and repeat signal impulses from one section to the other section when the other section is in a receptive condition and for retaining said device in normal position when the said other section is not in a receptive condition.

1,689,264. ELEVATOR-STOP MECHANISM. JOHN S. VRAHORITIS, Detroit, Mich., assignor of one-half to Stanley J. Abromaitis, Detroit, Mich. Filed July 11, 1927. Serial No. 204,743. 3 Claims. (Cl. 187—84.)



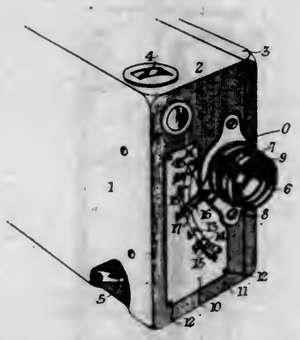
3. In an elevator stop mechanism, an elevator cage, a series of hoisting cables attached thereto, a pair of levers at each side of the cage each pivotally mounted intermediate its ends on the top of the cage, each pair of levers being hingedly connected together at the abutting ends, a series of racks in the elevator shaft adapted to be engaged by the ends of the levers, means supported on the cables normally holding the levers out of engagement with the racks, a series of springs tending to throw the levers into engagement with the racks upon breakage of the elevator cables, a series of levers pivotally mounted on the bottom of the cage corresponding in position to the levers on the top of the cage, an arm pivotally connecting each lever on the top of the cage with the respective lever on the bottom of the cage for simultaneously actuating the lower lever with the respective upper lever, each pair of levers being provided with faces at the abutting ends arranged to come into contact as the ends of the levers are moved into the racks to limit turning movement of the levers on their pivots.

1,689,265. CORN POPPING AND VENDING APPARATUS. ALBERT R. WALKER, St. Louis, Mo. Filed Nov. 19, 1923. Serial No. 675,564. 3 Claims. (Cl. 53—4.)



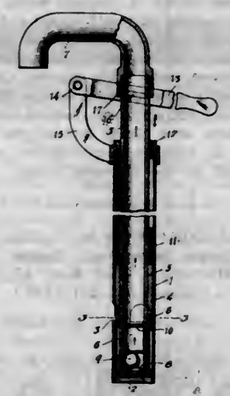
1. In a corn popper, a stove comprising a cylindrical shell having a heating element in the lower portion thereof, a supporting spider above said heating element, a series of inwardly projecting spacing elements arranged annularly on the inner face of said shell above said supporting spider, and a kettle rotatably seated on said supporting spider and between said spacing elements in concentric spaced relation to said shell.

1,689,266. PROJECTION APPARATUS AND METHOD. HARRY WATSON, Yorkshire, England. Filed Nov. 20, 1922, Serial No. 602,047, and in Great Britain Dec. 21, 1921. 18 Claims. (Cl. 88—16.8.)



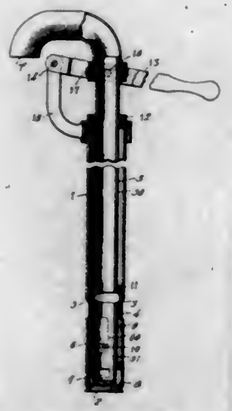
1. In an apparatus of the class described, a gate member exposing two stationary pictures of a picture strip, an objective in front of one of said pictures, a mirror moving in an angular plane to said pictures and between the latter and said objective, a second objective laterally spaced from the first objective, a second mirror disposed to reflect light from the first mirror through said second objective, said first mirror in its movement reflecting the other of said pictures to the second mirror and through the second objective whereby the projection of said other picture is imposed upon that of the first named picture.

1,689,267. METHOD AND APPARATUS FOR PICTURE TRANSMISSION. ALLAN WEAVER, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 15, 1923. Serial No. 681,001. 11 Claims. (Cl. 178—13.)



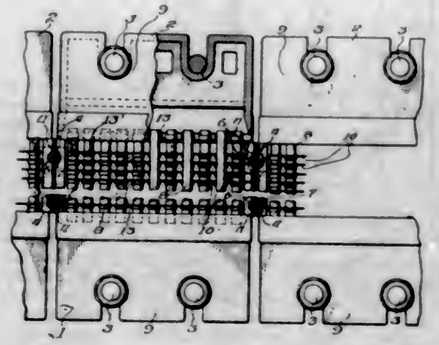
1. A member having a picture receiving surface, a stylus in engagement therewith, means to traverse the said member relatively to the stylus, means to produce a sustained alternating carrier current, means to modulate said carrier current with respect to its amplitude, means to transmit said carrier current modulated corresponding to a picture to be transmitted, and means to apply the received modulated carrier current to vibrate the stylus in correspondence with the received carrier current.

1,689,268. DIAPHRAGM-ADJUSTING MECHANISM FOR CAMERAS. OTTO WITTEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 5, 1927. Serial No. 189,131. 7 Claims. (Cl. 95-64.)



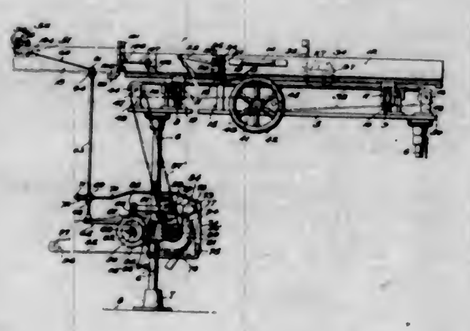
1. In an optical equipment for cameras, the combination with a support, of a slotted objective mount slidably carried thereby, an axially slotted diaphragm member carried by the mount and a diaphragm adjusting member projecting into the two slots whereby longitudinal movement of the diaphragm relative to the diaphragm is permitted, and the diaphragm and adjusting member may be radially turned together.

1,689,269. PUMP. JOSEPH W. WOODRUFF, Elizabeth, N. J. Filed Nov. 19, 1925. Serial No. 70,013. 4 Claims. (Cl. 103-188.)



1. A pump comprising a cylinder closed at one end and having an inlet opening in spaced relation to said closed end, a piston sleeve formed of a substantially straight tube reciprocable in said cylinder and having a sliding fit therewith, said sleeve having a slot spaced from the inner end thereof to establish communication between said inlet opening and the passage through said sleeve, a substantially straight outlet and operating tube slidably fitting within said piston sleeve to open and close communication through said slot, said outlet tube having a valve seat at its inner end facing inwardly of said tube, a check valve cooperating with said seat to permit flow of fluid from said cylinder into said tube, means connecting said piston sleeve and said outlet tube to permit limited movement of said tube relatively to said piston sleeve in opposite directions to open and close said slot and to cause movement of said sleeve with said tube after said slot has been opened or closed, and means for reciprocating said outlet tube.

1,689,270. PUMP. JOSEPH W. WOODRUFF, Elizabeth, N. J. Filed Sept. 18, 1926. Serial No. 136,222. 4 Claims. (Cl. 103—188.)

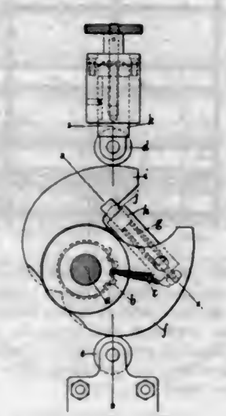


1. A pump comprising a cylinder closed at one end and having an inlet opening in spaced relation to said closed end, a plunger in said cylinder having a longitudinal channel closed at its inner end and lateral openings into said channel adjacent said inner end, a sleeve slidable in said cylinder and upon said plunger adapted to close and open said openings upon the outward and inward strokes of said plunger respectively, a passage being provided between said inlet opening and said closed end of the cylinder, and means for limiting movement of said sleeve relatively to said plunger whereby communication through said passage between said inlet opening and the closed end of said cylinder is established on the outward stroke of said plunger and cut off on the inward stroke and communication between said closed end of the cylinder and said channel in the plunger is established on the inward stroke and cut off on the outward stroke.

1,689,271. RADIATOR. FRED M. YOUNG, Racine, Wis., assignor to Perfex Corporation, Racine, Wis., a Corporation of Wisconsin. Filed Sept. 17, 1926. Serial No. 136,094. 1 Claim. (Cl. 257—130.)

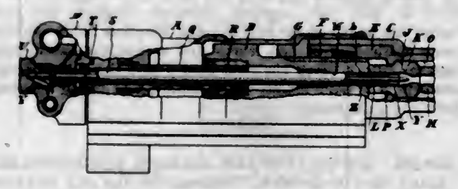
A radiator fin structure comprising a metallic sheet apertured to receive water tubes and transversely slotted at points between the water tube apertures and having the slotted portions offset to form closed bottom scoops adjacent the slots, each scoop being open at the slot end, whereby some of the air passing along said sheet is most efficiently directed through said sheet.

1,689,272. PACKER AND FEEDER FOR CARTON BLANKS. WILLIAM C. YOUNG, Battle Creek, Mich., assignor to Postum Company, Incorporated, Battle Creek, Mich., a Corporation of Delaware. Filed May 18, 1927. Serial No. 192,402. 30 Claims. (Cl. 271—62.)



1. In combination, a receiver, a support adjacent thereto, and a blank holding magazine mounted on said support for movement to a delivery position aligned with said receiver and to a loading position at one side thereof.

1,689,273. DIVIDED RIM. EMIL ZIPPER and WALTER ZIPPER, Vienna, Austria. Filed Mar. 7, 1927, Serial No. 173,501, and in Austria July 9, 1926. 3 Claims. (Cl. 152—21.)

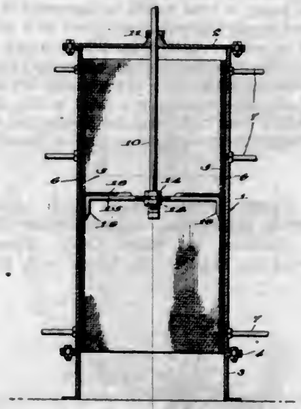


3. A divided rim for the wheels of automobiles, comprising a removable rim flange formed with two oblique guiding slots and with an annular groove opening inwards, a fixed rim part formed with an annular groove opening outwards and normally registering with the groove in the removable flange, an expansible locking ring normally engaging partly in one of said grooves and partly in the other and adapted to be withdrawn from the groove in the fixed rim member by having its diameter increased, pins fastened to the ends of the locking ring and projecting laterally through the guiding slots in the removable rim flange for the purpose of being actuated by a suitable key to alter the diameter of the ring, undercut heads on the extremities of the bent ends of the locking ring, to facilitate secure engagement with said key, a locking plate pivoted to the removable rim flange and adapted in one position to cover up the greater part of the guiding slots when the ring is in the locking position, and collars on the bent ends of the locking ring, the locking plate being adapted to engage under said collars.

1,689,274. GRINDING OF GEAR-WHEEL TEETH. HARRY HALES ASBRIDGE, Ashton-on-Mersey, England, assignor to The Churchill Machine Tool Company Limited, Broadheath, near Manchester, England. Filed Dec. 27, 1927, Serial No. 242,801, and in Great Britain Oct. 18, 1927. 3 Claims. (Cl. 51—52.)

1. In machines of the type specified for grinding gear wheel teeth, the combination comprising a single templet arranged in operative connection with the toothed wheel, an abutment with which the templet co-operates, a spring one end of which acts upon the templet, a cam member which is acted on by the other end of the spring and is movable relatively to the templet, and a second abutment with which the cam member co-operates, substantially as described.

1,689,275. CLEANSING-FLUID-CONVEYING TUBE FOR ROCK DRILLS. LEWIS C. BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 3, 1928. Serial No. 258,888. 4 Claims. (Cl. 121—10.)

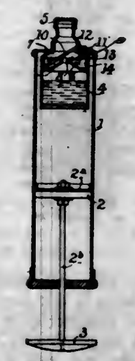


1. In a rock drill, the combination of a cylinder and a hammer piston, a front head for the cylinder, a hollow drill steel extending into the front head, an anvil block for transmitting the blows of the hammer piston to the drill steel, a tube extending through the piston and into the anvil block for conveying cleansing fluid into the drill steel, and a neck on the tube to prevent contact between the tube and the rearward end of the anvil block.

1,689,276. ZIRCONIUM-TREATED IRON-CHROMIUM ALLOY. FREDERICK M. BECKET, New York, N. Y., assignor to Electro Metallurgical Company, a Corporation of West Virginia. Filed May 8, 1926. Serial No. 107,796. 3 Claims. (Cl. 75—1.)

1. A wrought article composed of a ferrous alloy containing zirconium and between 10% and 60% of chromium, said alloy having working properties superior to those of an alloy free from zirconium but otherwise identical in composition.

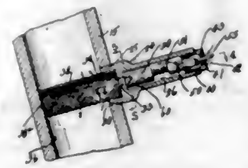
1,689,277. CLEANER FOR FILTERING ELEMENTS. CHARLES ST. CLAIR BURNS, Port Arthur, Tex., assignor of one-half to Foist Kay, Port Arthur, Tex. Filed Sept. 24, 1927. Serial No. 221,739. 3 Claims. (Cl. 210—152.)



1. The combination with a filter having a reticulated filtering element; of a cleaner for said element, comprising a shaft mounted for reciprocable and rotary movement through the filter, a spider fixed to said shaft and having scraper blades, and wire brushes also carried by said spider adjacent to and rearwardly of said blades.

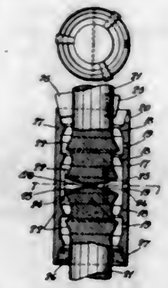
1,689,278. RAILROAD CROSSING. GEORGE D. CRABBS, Cincinnati, Ohio, assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed June 29, 1926. Serial No. 119,299. 6 Claims. (Cl. 238—8.)

4. A railroad crossing consisting of rails and a traffic surface, said surface composed of a plurality of independent preformed non-laminated units of bituminous material containing a pulverulent mineral material having the characteristics of having been formed under pressure into independent slabs adapted to withstand strains and stresses without fracture.



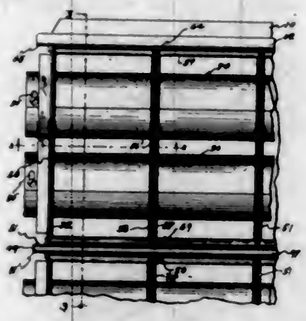
1,689,279. SPRAYING DEVICE. JEAN DORMOY, Levallois-Perret, France. Filed July 9, 1926, Serial No. 121,444, and in France July 17, 1925. 1 Claim. (Cl. 299—88.)

In a spraying device, the combination of a hand-operated air pump, a receptacle which is adapted to contain the



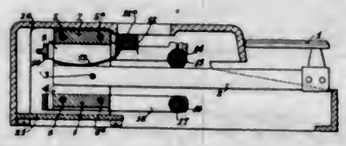
spraying liquid and is disposed within the said pump, a cap which closes both the pump body and the said receptacle, a filling plug mounted on the said cap, said pump including a conduit affording an atmospheric connection with the interior of the pump, a tube which is immersed in the said receptacle and opens into the atmosphere at a point adjacent the end of said conduit, a partition having the form of an annular trough which is disposed in the said receptacle and divides the latter into two unequal chambers, the inner end of said tube opening at a point within said annular trough, and a removable plug for closing the outer end of said tube when the spraying apparatus is inoperative.

1,689,280. FUEL ECONOMIZER AND AIR-INLET VALVE FOR INTERNAL-COMBUSTION ENGINES. ISAIAH J. FANSLER, Sr., Watts, Calif. Filed June 7, 1926. Serial No. 114,359. 5 Claims. (Cl. 251—144.)



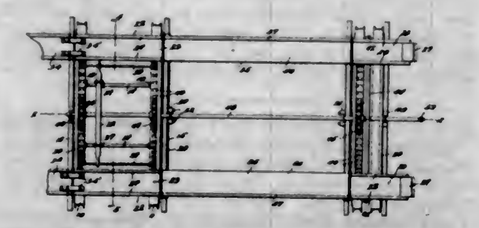
4. As an article of manufacture an air inlet valve for internal combustion engines comprising an elongated tubular casing having an elongated compartment therein, said casing at one end having an annular flange extending into the compartment to provide a reduced exit port, the opposite end of the casing being internally screw threaded, a detachable cap in said screw threaded opening having a reduced inlet port to the compartment, a valve for cooperation on the cap at the reduced inlet port within the compartment, a bifurcated seat member mounted on the annular flange in the compartment in straddling relation with the exit port, said seat member at the end thereof facing the valve member having a socket therein, and a spring seated in said socket and engaging the valve to force the latter to close the air inlet opening.

1,689,281. JOINT IN IRON STRUCTURES AND REENFORCING MEMBERS. CARL ABRAHAM FORSSELL, Stockholm, Sweden. Filed Oct. 4, 1924, Serial No. 741,749, and in Sweden Oct. 29, 1923. 11 Claims. (Cl. 72—114.)



8. In a joint of the character described, a sleeve provided with internal swells, a rod provided with a funnel shaped head arranged concentrically within the sleeve, guiding ribs arranged longitudinally with the sleeve for guiding the head of the rod, and a filling material for anchoring the rod within the sleeve.

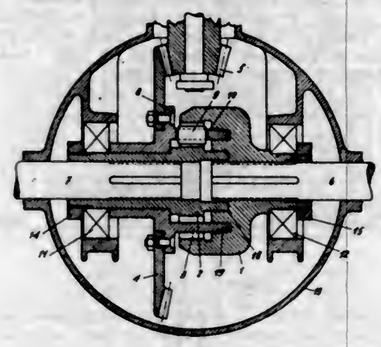
1,689,282. COMPOSITION BUILDING-BLOCK MOLD. OLIVER P. FULLER, Detroit, Mich. Filed Mar. 12, 1925. Serial No. 14,872. 1 Claim. (Cl. 25—121.)



In a sectional block mold of the class described, side walls having openings formed therein; core forming members projected through said openings transversely of said walls, said core forming member being composed of a plurality of collapsible parts; and a truncated triangular pyramidical spreader for insertion into said cores for expansion of the same.

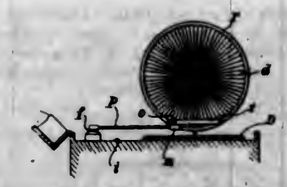
1,689,283. STENOGRAPHIC MACHINE. MARC GRANDJEAN, Paris, France, assignor to Societe Anonyme Stenotype Grandjean, Paris, France. Filed Feb. 18, 1927, Serial No. 169,380, and in France Mar. 16, 1926. 8 Claims. (Cl. 197—9.)

1. In a stenographic machine, the combination of key-levers, an axle about which pivot the said key-levers, rigid flat blades disposed between the said key-levers and traversed by said axle, spacing members between the said blades, the width of the said spacing members being slightly larger than that of the levers and means for assembling together into a block the said blades and the said spacing members, the said blades being adapted to guide between them the said levers.



1,689,284. APPARATUS FOR TILTING AUTOMOBILES. JOLLY ROY HOLCOMBE, Columbia, S. C., and FRANCIS FICKLING DUNBAR, Augusta, Ga., assignors to The Auto Cradle Company, Orangeburg, S. C., a Corporation of South Carolina. Filed Mar. 1, 1927. Serial No. 171,825. 11 Claims. (Cl. 214—1.)

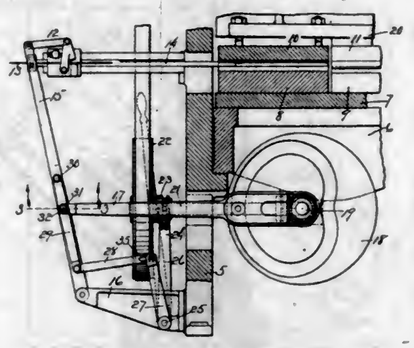
1. In a device for tilting vehicles, in combination, a pair of spaced, tiltable cradles, wheel troughs on each cradle, intermediate runways between the wheel troughs of the two



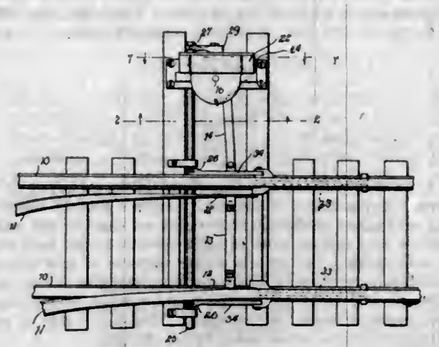
cradles when they are in a substantially horizontal position, and means to automatically move said runways laterally when said cradles are tilted.

1,689,285. DIFFERENTIAL GEAR FOR SELF-PROPELLED VEHICLES. HERMANN KNAB, Nuremberg, Germany, assignor of one-half to Gottfried Weidmann-Meier, Zurich, Switzerland. Filed July 29, 1926, Serial No. 125,759, and in Germany Oct. 6, 1925. 4 Claims. (Cl. 74—7.)

1. A differential gear for self-propelled vehicles having a bisected rear axle, comprising in combination a driving member, two coupling members, each adapted to be rigidly fixed to one of the coaxial shafts, said driving member being in mesh with one of said coupling members, said members having a great but unequal number of cams on their concentric opposing faces, the inner member having the larger number and preferably but one cam in excess of the outer member, rollers between said faces and engaging simultaneously by the cams of both members, the cams of the inner members being inverted with reference to the outer cams, the angles in which a roller acts on the inner and the outer members being different to produce equal torques on the rear axle parts.



1,689,286. TALKING MACHINE EMPLOYING LARGE DIAPHRAGM. LOUIS LUMIÈRE, Lyon, France. Filed Nov. 4, 1924, Serial No. 747,860, and in France Nov. 28, 1923. 9 Claims. (Cl. 181—31.)

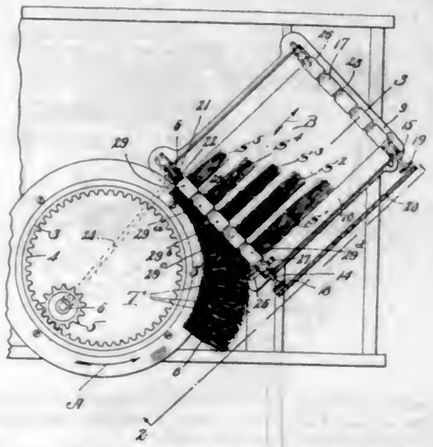


2. In combination with a casing, a horizontally swinging arm pivoted to said casing, a diaphragm adapted to occupy a substantially vertical playing position, and pivotal means for securing the diaphragm to said arm, and permitting movement of the diaphragm in its own plane and also in a plane at right angles thereto, the major portion of said diaphragm being located above said arm when the diaphragm is in playing position.

1,689,287. STOP-MOTION MECHANISM. GEORGE FRANKLYN MATTESON, Rocky Hill, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed May 2, 1925. Serial No. 27,577. 12 Claims. (Cl. 192—150.)

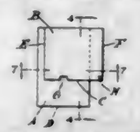
1. A stop motion mechanism including a member movable to stop operation of the machine, an operating device, and a connection between said movable member and said operating device, said connection including a member operable independently of said movable member under normal conditions, and a member adapted to move under abnormal conditions to increase the movement of said operable member and thereby cause a stopping movement of said independently operable member.

1,689,288. RAILWAY SWITCH AND LOCK MECHANISM. JOHN ROBERT MCKINNIS, San Bernardino, Calif. Filed June 23, 1927. Serial No. 200,943. 7 Claims. (Cl. 246—448.)



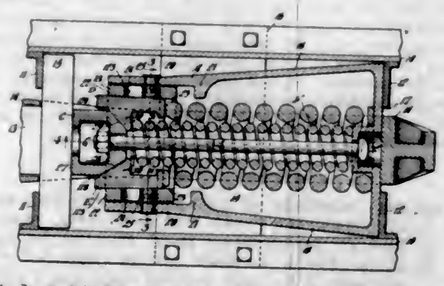
1. In a railway switch, the combination with the switch points and lock members therefor, of operating means including a rack bar, a coacting gear wheel in mesh with the teeth of the rack bar, a pinion, teeth projecting from the rack bar and adapted to operate the pinion during a portion of the movement of the rack bar, a manually operable member for actuating the said gear wheel, connecting means between said manually operable member and the lock mechanism, and connecting means between the said pinion and the switch, the parts being disposed so that during the initial movement of said manually operable member the loc kmechanism is actuated and in a continued movement the switch is thrown and in a final movement the lock mechanism is reset to secure the switch.

1,689,289. PROCESS OF AND APPARATUS FOR PREPARING TEXTILE FIBER FOR SPINNING. NORMAN H. MIDGLEY, Newton Center, Mass. Filed Dec. 16, 1926. Serial No. 155,154. 6 Claims. (Cl. 19—122.)



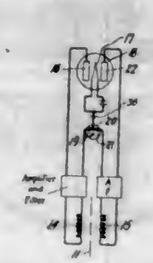
1. Apparatus of the class described comprising a rotary circular comb ring having teeth for confining one end of the fibers of a mass, the other ends of said fibers being free and extending radially of the comb ring, a series of co-

axial pairs of roller elements, and means for rotating the comb ring and turning the roller elements, the axes of said roller elements being so disposed relating to the comb ring



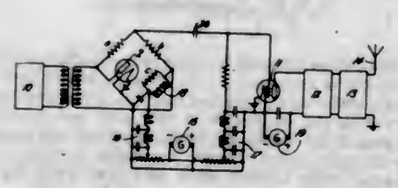
that the roller elements at one end of the series are nearer to the circumference of the comb ring than those at the other.

1,689,290. SHINGLE. GEORGE W. MILLS, Jr., Cincinnati, Ohio, assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed May 16, 1922. Serial No. 561,405. 8 Claims. (Cl. 108—8.)



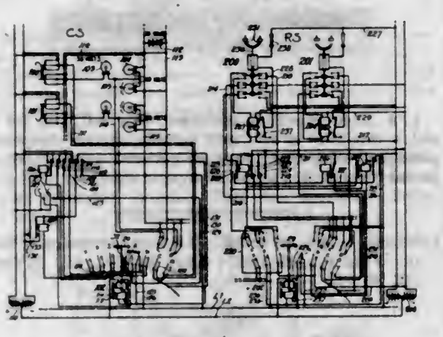
1. In a shingle of varying thickness so arranged as to form upper surfaces in different planes, a surface connecting said upper surfaces and forming an edge on the upper side of said shingle substantially parallel to the butt edge of said shingle, one of said upper surfaces of said shingle adapted to be covered by overlapping shingles whose butt edges overlie the edge on the upper side of said shingle, and means arranged in the edge on the upper side of said shingle to space apart overlapping shingles.

1,689,291. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 31, 1927. Serial No. 164,885. 3 Claims. (Cl. 213—24.)



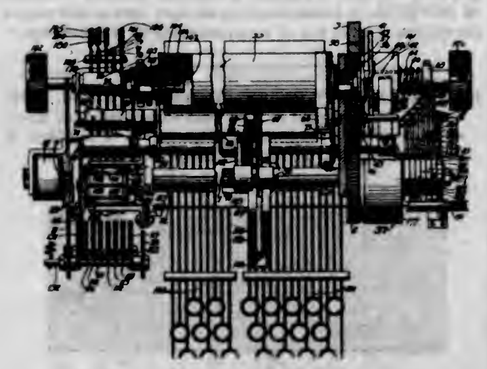
1. In a friction shock absorbing mechanism, the combination with a spring cage element; of a removable friction shell element telescoped within the cage element, said elements having relative movement limited to less than the full compression stroke of the mechanism; stop means on the cage element for limiting inward movement of the shell element; means for limiting outward movement of the shell element, said means including a fixed pin on one of said elements working in a slot on the other element; friction means co-operating with the shell; and spring resistance means within the cage co-operating with the friction means.

1,689,292. NAVIGATION-DIRECTING SYSTEM. HENRY W. O'NEILL, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 25, 1923. Serial No. 647,494. 2 Claims. (Cl. 177—385.)



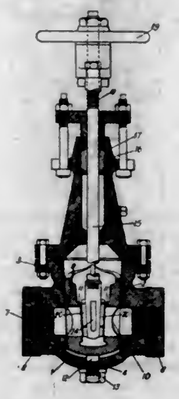
1. A navigation directing system for a vessel comprising a conductor carrying a current of a certain frequency, a receiving circuit comprising two coils oppositely disposed on the vessel in a field of force emanating from said conductor, means for selectively amplifying the currents induced in said coils by the current in said conductor, a full wave vacuum tube rectifier for rectifying the amplified currents, a differential galvanometer having one winding connected in circuit with one space path of said rectifier so as to be responsive to the rectified currents flowing therethrough, and having a second winding connected in circuit with the other space path of said rectifier so as to be responsive to the rectified currents flowing therethrough, and a source of potential connected in circuit with both space paths of said rectifier so as to oppose the rectified currents therein, for stabilizing the indications of said galvanometer.

1,689,293. SIGNALING SYSTEM. ARTHUR A. OSWALD, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 20, 1925. Serial No. 31,475. 13 Claims. (Cl. 178—44.)



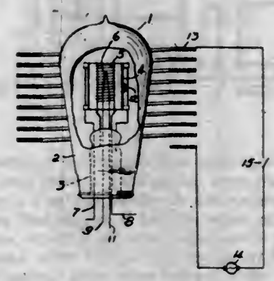
1. In a transmission system, a source of waves having a component of given frequency, an output circuit to which said waves are applied, and means interposed between said source and said output circuit for maintaining an unbroken connection between said source and the output circuit and for limiting the amplitude of the component of said frequency applied to the output circuit to a predetermined value irrespective of the amplitude of the waves applied from said source.

1,689,294. REMOTE CONTROL AND INDICATING SYSTEM. LOUIS M. POTTS, Tenafly, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 27, 1925. Serial No. 71,873. 4 Claims. (Cl. 177—353.)



1. In a remote control system, a control station, a remote station, line conductors joining said stations, a pair of distributors one at each station associated with said conductors, devices at the remote station to be operated, circuits at the remote station controlling the operation of the same, keys at the control station for said devices, means including said conductors whereby the distributor at the control station and said keys prepare the individual circuits jointly with the other distributor, means actuated by the distributor at the control station, after said circuits have been prepared, for transmitting a definite code of impulses to the other distributor, and means at said distributor actuated thereby to complete the prepared circuits.

1,689,295. PRINTING TELEGRAPH. LOUIS M. POTTS, Tenafly, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 10, 1926. Serial No. 87,228. 20 Claims. (Cl. 178—25.)



1. In a printing telegraph receiver, a rotatable and axially movable typewheel, a main driving shaft, a printing platen, means controlled by said shaft for imparting a rocking motion to said platen to bring the paper into engagement with said typewheel, and means for rotating said platen to feed the paper forward.

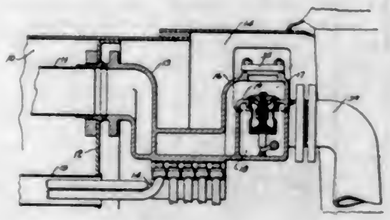
1,689,296. VALVE FOR HIGH-PRESSURE AND HIGH-TEMPERATURE PURPOSES. ORRION D. REDDING, Columbus, Ohio, assignor to The Valve Equipment Company, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 2, 1927. Serial No. 172,124. 10 Claims. (Cl. 251—59.)

1. In a high temperature valve structure, a valve casing having a valve chamber disposed therein, a valve cage adapted to interfit with said valve chamber, said valve cage having internally raised valve seats integral therewith and said valve cage being adjustable by means externally of said casing to shut off the flow of fluid through the valve structure while repairs or adjustments are being made to the said valve structure.

1,689,297. VACUUM DEVICE AND METHOD OF EXHAUSTING SAME. HARVEY CLAYTON RENTSCHLER, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Aug. 16, 1922. Serial No. 582,261. 8 Claims. (Cl. 250—27.5.)

1. The method of evacuating an electron device or the like including a plate, comprising attaching a piece of aluminum to said plate, sealing the plate into a bulb, exhausting said bulb to a moderate vacuum, heating said plate to drive off occluded gases therefrom and continuing said heating until the aluminum thereon is vaporized and eliminates the residual gases in the device.

1,689,298. BOTTLE CAPPER. HAROLD G. RICE, Chicago, Ill. Filed Feb. 5, 1927. Serial No. 166,095. 15 Claims. (Cl. 226—84.)



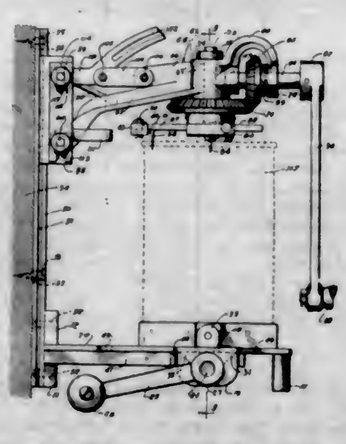
2. In a bottle capper, a frame of concave-convex cross-section having an upright portion with a tubular part and parallel side portions extending therefrom, a notched bar

secured between said side portions, means for holding the frame in an upright position, a rider slidable on the upright portion of the frame over the notched bar and

having a tubular portion fitting the first-mentioned tubular portion, a lever pivoted on the rider and having a notched segment engaging the notched bar, and a capping head on the rider.

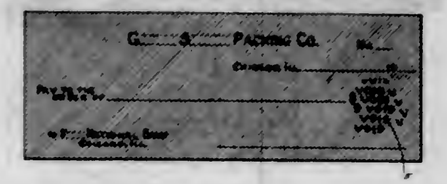
1,689,299. THROTTLE VALVE. CHARLES RINGEL, North Hawthorne, N. J., assignor to the Superheater Company, New York, N. Y. Filed Dec. 16, 1926. Serial No. 155,285. 2 Claims. (Cl. 277—37.)

1. A balanced valve unit comprising a cylindrical valve cage having an open end forming a valve seat, a plurality of side wall ports and a closed end having a central opening therein, a main valve adapted to engage said seat and having a hollow stem terminating in a piston engaging said cage adjacent its closed end, a pilot valve adapted to seat in said main valve, a pilot valve stem having a fluted portion passing through said main valve stem and an extended portion passing through and closing said central opening, and a projection on said pilot valve stem adapted to engage said piston to lift the main valve.



2. In a locomotive, an elongated header, a partition dividing it longitudinally into two chambers, a plurality of alined apertures in the partition, connections to deliver steam to one of said chambers, connections to take off steam from the other, a plurality of balanced valve units each constructed according to claim 1 and each fixed in one of said apertures, access means in the chamber wall opposite each unit through which it can be inserted and removed, the extended portions of the pilot valve stems being in alinement, a shaft in proximity to and parallel to said extended portions, a series of cams on said shaft and adapted to engage said portions and to actuate the valves when the shaft rotates.

1,689,300. TRACK PAVEMENT. HOMER L. ROGERS, Cincinnati, Ohio, assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed Feb. 18, 1927. Serial No. 169,343. 19 Claims. (Cl. 238—8.)

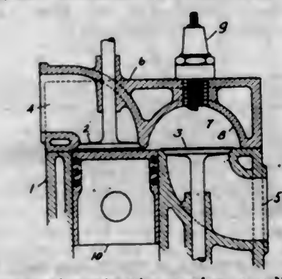


1. A track pavement composed of a rail, ties for said rail, a rail filler in said rail, a traffic surface composed of preformed slabs of bituminous material and a filler, supported on said ties adjacent to said filler.

1,689,301. CAN OPENER. ANDREW RUCKMAN, Chicago, Ill. Filed Jan. 22, 1927. Serial No. 162,914. 15 Claims. (Cl. 30—3.)

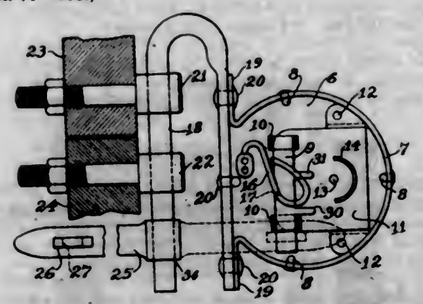
1. In a can opener, the combination of a supporting base having an upright standard, with means to retain a can in fixed position on said base, a frame adjustably mounted on said standard, a bearing movably mounted on said frame, a measuring stop on said frame, and means for cutting out the top of a can mounted in said bearing.

1,689,302. SAFETY PAPER. BURGESS W. SMITH, Rochester, N. Y., assignor to The Todd Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Mar. 6, 1924. Serial No. 697,258. 5 Claims. (Cl. 283—8.)



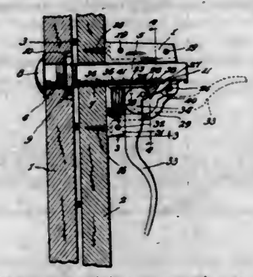
1. A safety paper having an inherently warning character printed thereon in ink of an indelible character adapted to have its color conspicuously altered by reaction with chemical eradicators, and having additional matter adapted to camouflage said warning character printed on said paper in indelible ink to obscure said warning character until the latter is rendered conspicuous by the application of said eradicators.

1,689,303. LEAF SPRING. FRANCIS J. SMITH, Gary, Ind. Filed June 14, 1926. Serial No. 116,034. 1 Claim. (Cl. 267—47.)



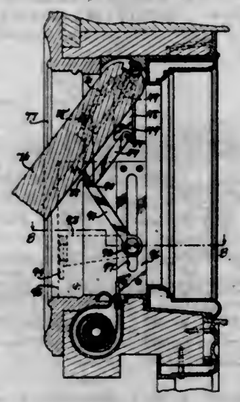
A suspension spring comprising a group of graduated, flat leaves, arranged to be loaded from beneath and a heavy, main leaf, whose normal shape when not carrying a load, approximates the shape of the rest of the spring after a load has been applied thereto.

1,689,304. INTERNAL-COMBUSTION-ENGINE CYLINDER HEAD. JOHN REGINALD CRISPIN SMITH, Victoria, British Columbia, Canada. Filed Apr. 29, 1927. Serial No. 185,293. 1 Claim. (Cl. 123—191.)



In an internal combustion engine, a cylinder, a piston operative in the cylinder, a dome-shaped combustion chamber offset from the plane of the cylinder, said combustion chamber including a base substantially in line with the upper end of the cylinder and a curved upper wall which extends to and in part inwardly overlies the wall of the cylinder, whereby to provide a communication between the cylinder and combustion chamber opening directly into said chamber, an inlet gas passage leading to the cylinder, an inlet valve controlling the passage and directly overlying the cylinder, said inlet valve having a diameter greater than half the diameter of the cylinder, an exhaust valve in the base of the combustion chamber having a diameter greater than half the diameter of the cylinder, the communication between the combustion chamber and cylinder being less than half the transverse sectional area of the cylinder to give turbulence to the firing charge, and a spark plug arranged in the dome of the combustion chamber.

1,689,305. PADLOCK. SALVATORE SPANO, Ensley, Ala. Filed Mar. 19, 1927. Serial No. 176,787. 5 Claims. (Cl. 70—108.)

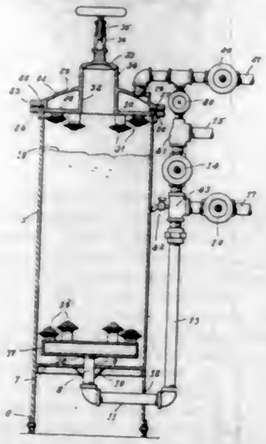


1. A padlock comprising a lock casing rigidly mounted on a U-shaped shackle, in combination with a lock arm having means to detachably mount it pivotally on the shackle, and a bolt in the casing and engaging the lock arm to secure the arm in locked position on the shackle, the shackle being adapted to be inserted through elements secured to the several parts to be locked.

1,689,306. WIRE-STRETCHER CLAMP. JOHN B. STEELE, Boone, N. C. Filed July 7, 1926. Serial No. 120,998. 6 Claims. (Cl. 254—83.)

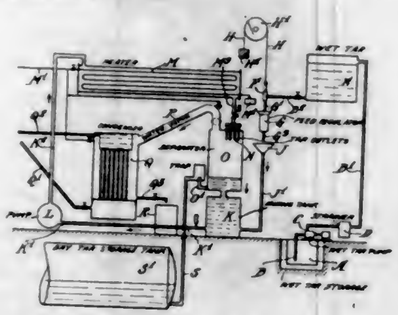
1. A wire clamp comprising companion sections, a pin rigidly carried by one section and passed through an opening in the other section to slidably connect the sections, said pin being provided with longitudinally extending rack teeth, a housing secured against the outer face of the second section and formed with a barrel slidably receiving said pin and a chamber adjacent said barrel communicating therewith, said chamber having a slot formed in its wall, a lever extending into said chamber through said slot, a head at the inner end of said lever formed with an arcuate peripheral face and rotated in the chamber when the lever is moved, a pawl pivotally connected with said head, a spring in said chamber engaging said pawl to move the pawl into engagement with the rack teeth of said pin when the head is rotated in one direction, and spring means in said chamber bearing against said head to frictionally resist rotation thereof.

1,689,307. TRANSOM-OPERATING MEANS. HARRY B. STEIN, Chicago, Ill. Original application filed June 30, 1927, Serial No. 202,632. Divided and this application filed Oct. 13, 1927. Serial No. 225,862. 8 Claims. (Cl. 268—111.)



3. Mechanism for swingably mounting and operating a sash, comprising combined hinge plates and toggle links pivotally and frictionally connected together and to said plates placed at the side edge of the sash-operating means including a slidable handle and members slidable therewith, and a swingable link connected with one end to said links and with the other end to said slidable members.

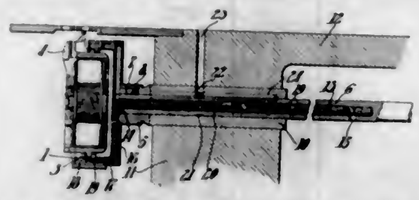
1,689,308. HAND-CONTROLLED WATER SOFTENER. CHARLES A. STICKNEY, Rockford, Ill., assignor to Stickney Hydraulic Co., Rockford, Ill., a Corporation of Illinois. Filed Apr. 18, 1927. Serial No. 184,520. 1 Claim. (Cl. 210—24.)



In a tank adapted for use as a water softener, a closure for one end of said tank, and means for detach-

ably securing said closure to said tank whereby the tank proper on the one hand and the closure on the other are separable units, said closure being preferably in the form of a hollow casting providing an inner wall and an outer wall in spaced relation, the inner wall serving as a strainer wall permitting the passage of fluid therethrough but preventing the exit of material from said

tank while the outer wall has means connected therewith providing fluid communication with said tank, and an integrally cast tubular neck connecting the outer wall with the inner wall and opening through both walls to afford direct communication from the outside of the tank with the inside thereof for the purpose described, and a closure for said neck arranged to be opened when desired.

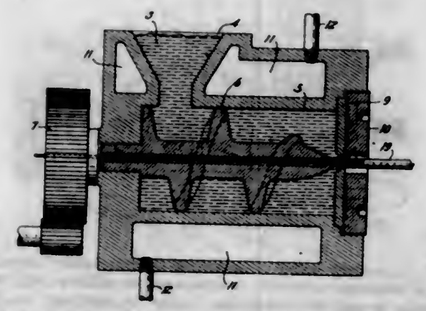


1,689,309. METHOD AND APPARATUS FOR DEHYDRATING TAR. ARTHUR W. WARNER, Media, Pa. Filed June 12, 1924. Serial No. 719,655. 8 Claims. (Cl. 196—5.)

1. In the operation of a dehydrating apparatus for liquid comprising a heater, a separator into which the heater delivers the heated liquid, a conduit leading from the separator to the heater and a circulating pump located in said conduit, the method of operating the same for the dehydration of fluid mixtures of liquid mixed with water which consists in circulating a comparatively dehydrated mixture of the liquid through the apparatus mixing with said dehydrated liquid as it passes from the separator and before it reaches the pump, a limited amount of the liquid to be dehydrated so as to reduce the temperature of the mixture below a point at which frothing will occur in the pump, raising the temperature of the mixture in the heater to a point at which the water in the mixture passes freely into vapor form, drawing off separated water vapor from the separator and drawing off from the mixture after separation of water and before the addition of fresh liquid to be dehydrated a quantity of the dehydrated liquid substantially equal to the amount of the liquid added in admixture with water.

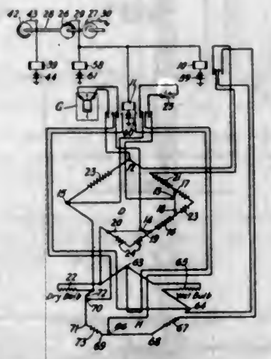
3. Apparatus for dehydrating fluid mixtures and material mixed with water, comprising in combination a circuit including a separator, a heater with a conduit opening into the top of the separator, a mixing tank located below and connected with the separator, a conduit connecting the mixing tank with the heater and a pump in said last mentioned conduit, means for feeding a mixture to be dehydrated into the mixing tank, means for drawing off water vapor from the separator and means for drawing off dehydrated material from the separator.

1,689,310. LUBRICATING MEANS FOR SEWING MACHINES. MAX L. WATERMAN, Fairfield, and GEORGE A. FLECKENSTEIN, Stratford, Conn., assignors to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Apr. 23, 1926. Serial No. 104,027. 5 Claims. (Cl. 112—256.)



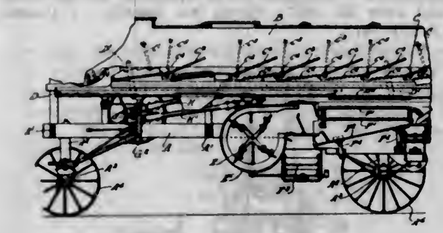
1. In a sewing machine, a rotary loop-taker body provided with a substantially radial bore, a bobbin-case raceway in said body, a duct relatively wide with respect to said radial bore connecting the bore with said raceway, and lubricant-conducting wicking compressed in said bore extending through said duct to the raceway.

1,689,311. INSULATED WIRE. EDMUND B. WHEELER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 9, 1924. Serial No. 742,498. 6 Claims. (Cl. 173—264.)



1. Means for flame-proofing a conductor comprising a coating of finely-divided selenium and cellulose acetate.

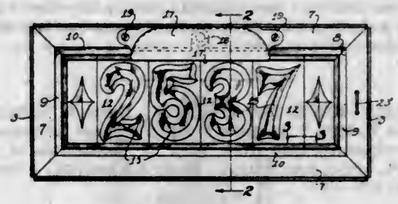
1,689,312. METHOD OF INSULATING CONDUCTORS. ROBERT R. WILLIAMS, Roselle, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 2, 1924. Serial No. 703,660. 8 Claims. (Cl. 18—59.)



1. The method of insulating a conductor which consists in forming thereabout a contiguous and continuous single layer of prevulcanized hard rubber.

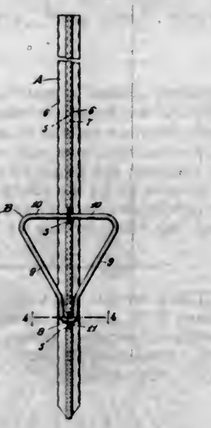
1,689,313. DIRECT-HUMIDITY RECORDER. ERNEST B. WOOD, Chatham, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 18, 1926. Serial No. 95,572. 4 Claims. (Cl. 234—1.5.)

1. A method of indicating values of a quantity, which is a function of two variables, which comprises balancing a Wheatstone bridge in which two of the arms have resistances proportional to the two variables, and the other two arms have resistances depending upon the resistance of one of said first mentioned arms.



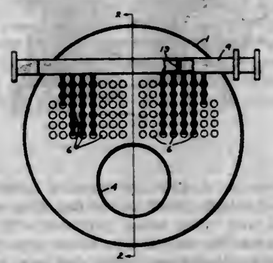
1,689,314. THRASHING MACHINE. WAYNE H. WORTHINGTON, Battle Creek, Mich., assignor to Advance-Rumely Company, La Porte, Ind., a Corporation of Indiana. Filed Jan. 25, 1926. Serial No. 83,478. 15 Claims. (Cl. 130—25.)

1. In combination in a machine a plurality of reciprocating parts the length of travel of which differs one from another and means for driving them in balanced relation, whereby they all reverse their direction of movement at the same time.



1,689,315. ILLUMINATED HOUSE-NUMBER DEVICE. RALPH C. YAGER, Oakland, Calif., assignor to Yager Sheet Metal Co., Oakland, Calif., a Copartnership consisting of Isabelle Yager, George L. Yager, and Ralph C. Yager. Filed May 21, 1928. Serial No. 279,436. 1 Claim. (Cl. 40—130.)

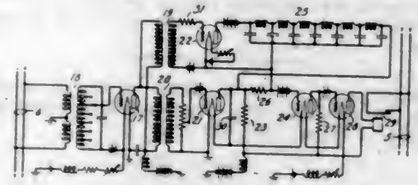
A device for the described purpose comprising a housing having an open front and a stop wall therein, an open frame removably positioned within the housing through its open front, its insertion thereinto being limited by said stop wall, the top and bottom edges of said frame opening being bent to provide opposing open ended number plate securing grooves, a plurality of detachably interlocked number plates slidably positioned endwise within said grooves with the faces of said plates exposed through the frame opening, a deflecting hood carried by the frame, an electric lamp beneath the hood, said hood having an



open bottom through which opening the light rays from said lamp are directed upon the faces of said number plates.

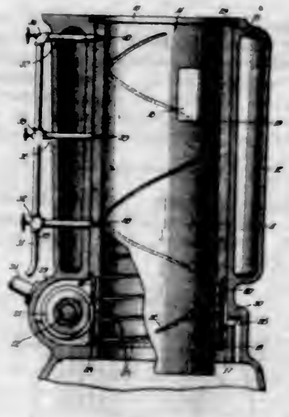
1,689,316. FENCE-POST ANCHOR. MARTIN E. ANDERSON, De Kalb, Ill. Filed Mar. 20, 1926. Serial No. 96,337. 3 Claims. (Cl. 189—29.)

1. The combination with a post having a hole therein, of an anchor therefor projecting laterally from the post at opposite sides thereof comprising a triangular member of resilient material having its apex lowermost and threaded through said hole, the upper base portion of said triangular member being split transversely to adapt it to be held in position by frictional engagement with the post.



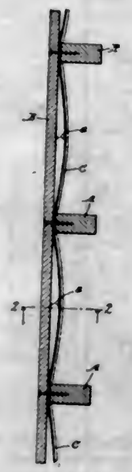
1,689,317. SUPERHEATER. JOHN A. BARNES, Chappaqua, N. Y., assignor to The Superheater Company, New York, N. Y. Filed Nov. 11, 1925. Serial No. 68,406. 2 Claims. (Cl. 122—462.)

1. In apparatus of the class described, the combination of a superheater inlet header; an outlet header; tubular superheater elements the two ends of each of which are se-



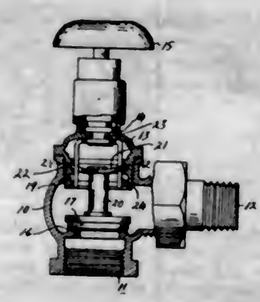
cured to the two headers respectively; the outlet header having two outlet connections; and a partition in the outlet header between the two outlet connections and in such position that some of the elements deliver steam to one side of it and the remaining ones to the other; there being a duct adapted to carry steam from one side of the partition to the other.

1,689,318. REPEATER CIRCUITS. BJÖRN G. BJÖRNSON, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 6, 1927. Serial No. 196,763. 6 Claims. (Cl. 178—44.)



1. In a signaling system, a path for wave impulses of short duration and for relatively constant waves, branch paths connected thereto, a rectifier in each of said branches, an amplifier, a connection from each of said paths to the input of said amplifier, and means in one of said branches whereby for constant waves the effects of said branches on said amplifier substantially annul each other, while for the wave impulses the effect of one of said branches predominates.

1,689,319. LUBRICATING MEANS. CLARENCE E. BONNER, New York, N. Y., assignor, by mesne assignments, to Bonner-Charter Corporation, Dover, Del., a Corporation of Delaware. Filed Apr. 13, 1923. Serial No. 631,754. 4 Claims. (Cl. 123—80.)

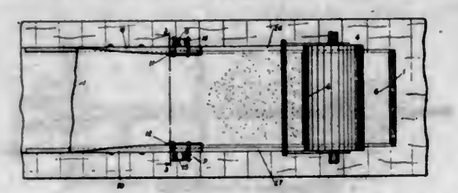


1. In an internal combustion engine a cylinder, a rotary sleeve valve enveloping and closely engaging said cylinder, said cylinder and valve being provided with cooperating grooves to cause the distribution of oil over the engaging surface of said cylinder and valve and means providing a plurality of oil feed passageways positioned to deliver oil to said cylinder at regions spaced longitudinally of said cylinder.

1,689,320. BUILDING AND METHOD OF CONSTRUCTION. GEORGE E. BRADBURY, Chicago, Ill. Filed Mar. 25, 1926. Serial No. 97,166. 4 Claims. (Cl. 20—4.)

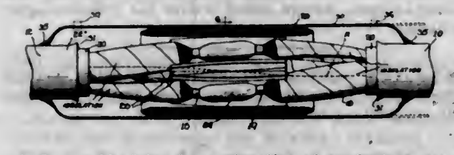
2. A building formed of a framework, an outer sheathing and an inner sheathing including in itself dead air spaces and being throughout the major portion of its area inwardly spaced away from such outer sheathing, such inner sheathing being in contact with the outer sheathing throughout a portion of its area.

1,689,321. VALVE. FRED BRITP, Detroit, Mich., assignor, by mesne assignments, to Bohn Aluminum & Brass Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 22, 1927. Serial No. 200,673. 7 Claims. (Cl. 251—47.)



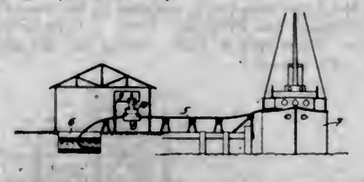
1. In a valve structure, a valve body formed with a spiral groove, a valve, a disk-like spiral element secured to said valve and provided with slots, and a rotatable yoke engaging said slots for rotating said spiral element through said groove.

1,689,322. APPARATUS FOR MAKING PLASTER WALL BOARD. HARRY E. BROOKBY, Evanston, Ill., and CARL ABSMEIER, Grand Rapids, Mich., assignors to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1926. Serial No. 91,297. 7 Claims. (Cl. 154—1.)



1. In plaster wallboard apparatus, means for advancing a continuous cover sheet, edge forming devices for engaging the margins only of the cover sheet as it advances, said

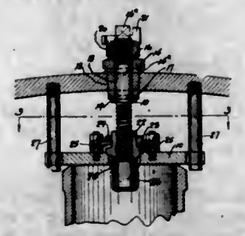
edging devices comprising means for first folding over the margin of the sheet inwardly, contact plates engaging the folded edge on the inside and outside and continuously



crimping and reducing the height of the folded edge as it passes along, and means for maintaining the folded edge after it is formed.

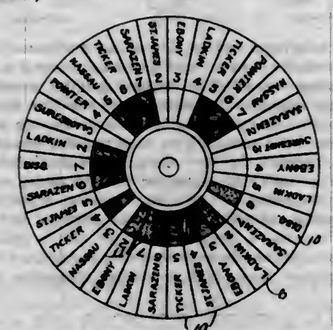
1,689,323. CABLE JOINT. NELSON E. BUCK, DENNEY W. ROPER, and ALEXANDER P. THOMS, Chicago, Ill. Filed Dec. 16, 1921. Serial No. 522,761. 8 Claims. (Cl. 173—168.)

4. In a cable joint for a plurality of conductors, means for splicing the ends of the conductors together, said separators each comprising a rigid section of formed insulation having curved longitudinal edges, an insulating sleeve encircling said separators, said separators being loosely disposed within said sleeve with their edges making line contact with the inner periphery of the sleeve, said separators being positioned so as to make substantially only point contact with each other, and a filling substance for covering said separators and the spliced conductor ends, said point contact aiding in the elimination of voids and gas pockets between the separators thereby preventing destruction of the insulation by ionization of trapped gases.



1,689,324. MANUFACTURE OF CONTINUOUSLY-LOADED ELECTRICAL CONDUCTORS. OLIVER E. BUCKLEY, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 31, 1924. Serial No. 689,620. 9 Claims. (Cl. 178—45.)

1. In a method of manufacturing a continuously loaded conductor, the step of improving the magnetic properties of said loaded conductor throughout its length by passing it through a magnetizing coil.

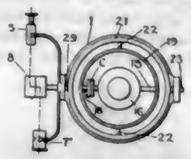


1,689,325. LOCOMOTIVE STOP VALVE. WILLIAM CASEY, Kingston, Ontario, Canada. Filed July 21, 1927. Serial No. 207,366. 5 Claims. (Cl. 277—35.)

5. In a locomotive, the combination of a steam dome comprising a dome sheet, a dry-pipe extending into the steam dome and having its end shaped to form a valve seat, a disc-shaped valve adapted to engage said seat, a plug in the dome sheet, a rod extending through the plug and adapted to operate the valve, a collar on said rod adapted to seat against the inner end of the plug to form a steam-tight joint, said rod having a screw thread on its outer end, a nut on said end, the main body portion of said valve having a perforation alined with said rod, the outer end of the perforation having a seat, a screw-threaded element forming a part of the valve and having a corresponding seat to engage the seat at the perforation, a second element secured to said main body portion of the valve and adapted to be engaged by the first element to lift the valve, said rod having a threaded portion to engage the screw-

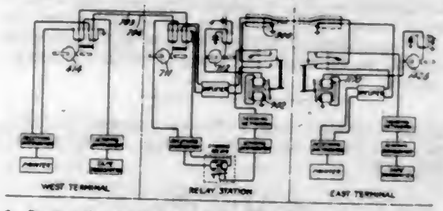
threaded element, and means to keep the valve from rotating, whereby when the valve is open the collar may be pulled against the plug by means of the nut, and when the valve is closed the collar may be forced against the plug and the first-named element against the seat at the perforation and the valve against its seat by means of a rotation of the rod.

1,689,326. GAME. JAMES CRAIGIE, Chicago, Ill. Filed Dec. 23, 1925. Serial No. 77,168. 1 Claim. (Cl. 273—135.)



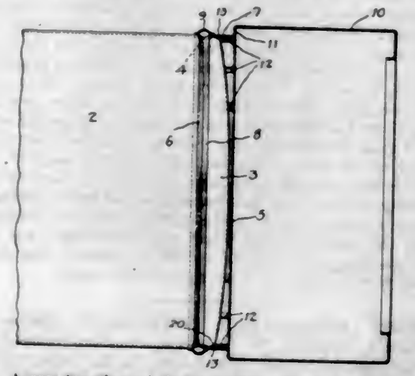
A game comprising a chart and a spinning wheel, said wheel having a plurality of sectors marked on its sides, every sector including a name, a number and a color, the periphery of said wheel having a plurality of spaces therein co-incident with said sectors, every space indicating the name and the number appearing on its sector and the color of the next following sector, said chart having a plurality of sectors thereon, every sector being divided into a plurality of parts, every sector containing a name and the parts thereof a number, a ring encircling said sectors with said names therein opposite said sectors, the chart outwardly of the ring having various colors thereon with indicia on said colored parts, a central circle divided into a plurality of numbered sectors, said wheel being arranged within a casing, said casing having apertures through which the indicia on said wheel may be observed, and the chart having corresponding indicia to indicate the total points won by a player on a spin of said wheel.

1,689,327. FIRE-CONTROL INSTRUMENT. GEORGE B. CROUSE, Woodcliff, N. J., assignor to Ford Instrument Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Feb. 7, 1925. Serial No. 7,665. 33 Claims. (Cl. 89—41.)



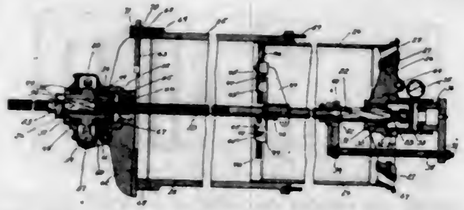
1. In a fire-control instrument for use on a body subject to oscillation, a sighting device adapted to have its line of sight disposed angularly to the axis of oscillation of the body and comprising an optical part constructed to oscillate with the body and an optical part free from such constraint,

and means stabilizing the second optical part about an axis perpendicular to the line of sight including a member stabilized about intersecting axes, one of which is parallel to



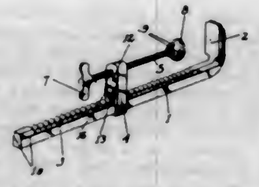
the line of sight and another member stabilized by said first member about an axis perpendicular to said line of sight and connected to the second optical part.

1,689,328. SUBMARINE TELEGRAPH SYSTEM. AUSTEN M. CURTIS, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 30, 1926. Serial No. 119,537. 11 Claims. (Cl. 178—63.)



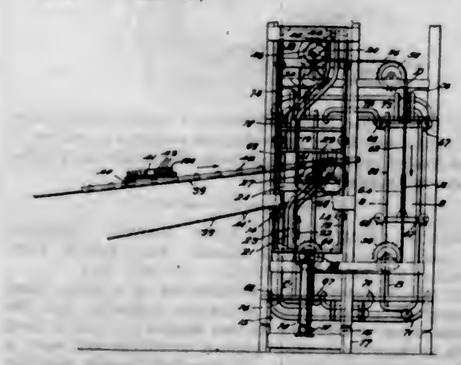
1. In a telegraph system, a sending distributor having alternate impulse sending and grounding elements, transmitting means connected to impulse sending elements for transmitting impulses of positive and negative polarities, a long cable, a sending shaping network having one terminal connected alternately to said impulse sending and grounding elements by the operation of said distributor and the other terminal connected to said cable, receiving apparatus connected to the other terminal of said cable, said apparatus comprising means for shaping and amplifying the signals, a telegraph printer and a distributor operating synchronously with said first distributor for supplying impulses from said receiving apparatus to said printer.

1,689,329. END STRUCTURE FOR TANKS. AUGUSTINE DAVIS, Jr., Cincinnati, Ohio. Filed Jan. 22, 1927. Serial No. 162,704. 10 Claims. (Cl. 220—1.)



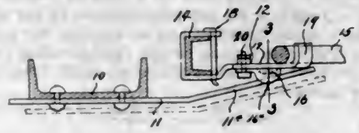
1. A construction of the character described comprising a tank including a shell and an end head having a peripheral flange, and a box welded to the end of the tank, characterized by said head being disposed with its head wall outward and its flange inward, the flange being set into the tank shell and welded thereto, and a connection between the box and the tank being telescoped over the end of the tank and welded thereto.

1,689,330. BUSHING PULLER. BERNHARD E. DELLE, Brooklyn, N. Y. Filed July 5, 1927. Serial No. 203,293. 10 Claims. (Cl. 29—88.2.)



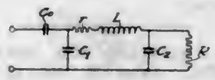
1. In a bushing-puller, the combination with a cylinder-engaging fixture and bushing-engaging fixture, of an externally-threaded pull-rod, an internally-threaded member carried by one of the said fixtures and engaging the threads of the said pull-rod, and reduction-gearing for causing relative rotation between the said pull-rod and member, whereby the pull-rod may be placed under tension and the said bushing-engaging fixture pulled toward the cylinder-engaging fixture.

1,689,331. QUICK-ADJUSTMENT CLAMP. ANGELO DISIBIO, Pittsburg, Calif. Filed Apr. 15, 1927. Serial No. 183,963. 1 Claim. (Cl. 144—303.)



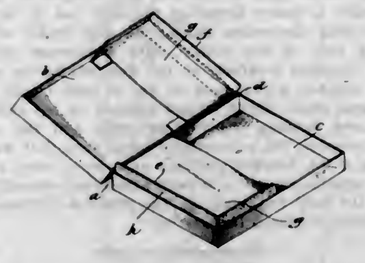
In a clamp, a bar, a block slidable therealong, a screw mounted in the block parallel to the bar, ratchet teeth along that face of the bar which is adjacent the screw, a pawl slidably enclosed within the block and normally engaging the teeth, said pawl being disposed at an angle to the bar and having a notch in one side thereof intermediate its ends, and a key turnably mounted in the block and having a radial tongue projecting into the notch.

1,689,332. TRAY-STACKING MACHINE. LESLIE B. EATON, San Francisco, Calif., assignor to National Fibre-Form Company, San Francisco, Calif., a Corporation of Delaware. Filed May 9, 1923. Serial No. 637,639. 4 Claims. (Cl. 214—6.)



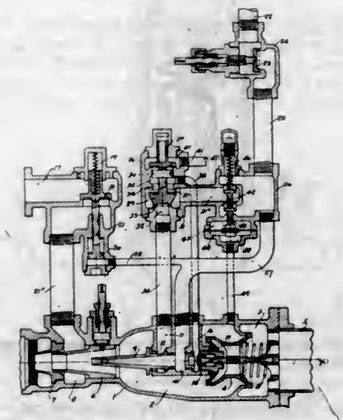
1. A means for operating the conveyors of a stacking machine comprising, a movable frame, an air cylinder for moving the frame, two cams on the frame, gear trains each having a follower for the corresponding cam, each gear train being connected to a conveyor.

1,689,333. ADJUSTABLE THIRD OR FOURTH POINT SUPPORT FOR BRAKE BEAMS. HERBERT W. EKHOLM, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 25, 1927. Serial No. 186,283. 15 Claims. (Cl. 188—213.)



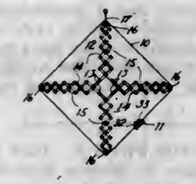
1. An auxiliary support for brake beams comprising a member adapted to be carried by a brake beam part, and a sliding chair adapted to be supported on an inclined track member and adjustable on said member in a substantially horizontal plane to vary the distance between said brake beam and said inclined track member.

1,689,334. ARTIFICIAL LINE. RICHARD FELDTKELLER, Charlottenburg, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, Berlin, Germany, a Company of Germany. Filed Mar. 31, 1926, Serial No. 98,642, and in Germany Dec. 9, 1924. 2 Claims. (Cl. 178—45.)



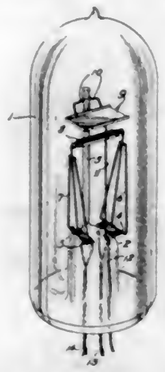
1. An impedance network for simulating the impedance of the long coil-loaded line, comprising an unsymmetrical H type net-work corresponding in form to one section of the line to be simulated, and having approximately the same nominal characteristic impedance, but being proportioned in accordance with a higher cut-off frequency than that of the line, and an ohmic resistance connected to two terminals of said net-work, said ohmic resistance having a value substantially equal to the nominal characteristic impedance of the line.

1,689,335. CIGARETTE CONTAINER. ELISHA M. FRIEDMAN, Brooklyn, N. Y. Filed Apr. 9, 1926. Serial No. 100,797. 1 Claim. (Cl. 229—43.)



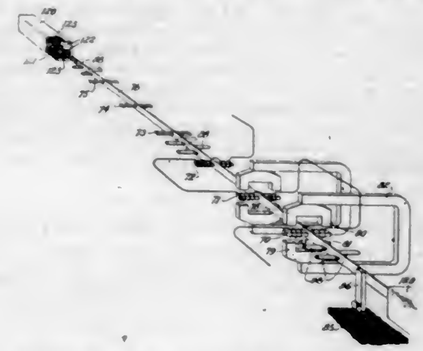
A cigarette container comprising two companion sections, a positioning flange secured to one of said sections, and a roughened outer surface on the flange which contacts with the other sections whereby the container will be more effectively retained in a closed position.

1,689,336. EXHAUST-STEAM INJECTOR. JOSEPH F. GRIFFIN, Teaneck, N. J., assignor to The Superheater Company, New York, N. Y. Filed Mar. 3, 1927. Serial No. 172,396. 7 Claims. (Cl. 103—265.)



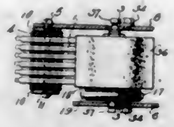
1. The combination with an exhaust steam injector having a plurality of conduits connected therewith for supplying water, exhaust steam from an engine, supplementary live steam and auxiliary live steam to said injector, of means for automatically controlling the admission of auxiliary live steam to said injector, said means comprising a valve for closing the auxiliary live steam conduit, and fluid pressure actuated means in communication with the interior of said injector for controlling said valve in accordance with the working conditions within said injector.

1,689,337. ANTENNA. ARTHUR HADDOCK, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 22, 1923. Serial No. 664,178. 1 Claim. (Cl. 250—33.)



A loop antenna comprising a flat multiple conductor, comprising a plurality of equally spaced conducting strands parallel to a single plane interwoven with a fabric of insulating material, mounted upon a plurality of adjustable arms, and a connecting block of two sections having conducting pieces on each section connected to the ends of said conducting strands and so arranged that when the two sections of said connecting block are joined together a continuous solenoidal winding results with the individual strands so cross-connected that the distributed capacity of the antenna is reduced to a minimum.

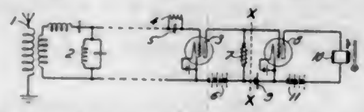
1,689,338. ELECTRON-DISCHARGE DEVICE. JAMES E. HARRIS, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 19, 1921. Serial No. 516,297. 5 Claims. (Cl. 250—27.5.)



1. In an electron discharge device, a cathode composed of mischmetal.

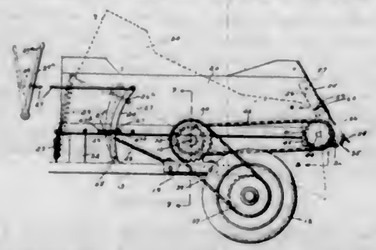
1,689,339. ENERGY-TRANSLATION SYSTEM. HENRY C. HARRISON, Port Washington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 15, 1923. Serial No. 680,816. 8 Claims. (Cl. 178—44.)

1. In combination, an electric wave filter of a plurality of consecutive sections and a mechanical wave filter of a plurality of consecutive sections, each of a plurality of the sections of said electric filter being coupled to a section of said mechanical filter and arranged to transfer energy in the same direction between said coupled sections.



1,689,340. SELECTOR SWITCH. JOHN F. HEARN, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 14, 1923. Serial No. 674,637. 4 Claims. (Cl. 175—306.)

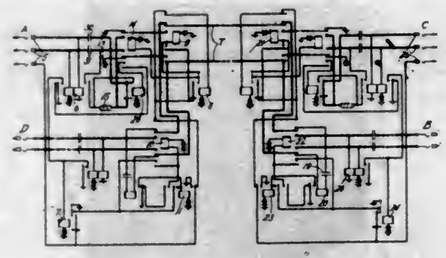
1. A method of constructing a terminal bank for a rotary switch which consists, in assembling a group of insulated terminals in a layer in the general form of the arc of a circle to form a unit, of securing a plurality of the units together to form a bank, of assembling a grinding unit in the place of the rotatable switch member, and of rotating the grinding unit for grinding the ends of the terminals thus assembled to produce a plurality of contacting terminal ends in the same cylindrical surface.



3. Method of re-aligning the contacting surfaces of the terminals of a terminal bank of a selector switch which consists in replacing the rotatable member of the selector switch by a grinding wheel and of rotating the grinding wheel by a suitable driving means, thus grinding the contacting surfaces of the terminals to align them all in the same cylindrical plane.

1,689,341. HIGHLY-SELECTIVE SIGNAL RECEPTION. RAYMOND A. HEISING, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1923. Serial No. 682,857. 7 Claims. (Cl. 250—8.)

6. The method of receiving a signal element which consists in producing a current wave of amplitude varying approximately as the time summation of the energy of the waves comprising the signal element and producing under the control of said wave, a wave of instantaneous amplitudes proportional to instantaneous rates of change of said current waves.

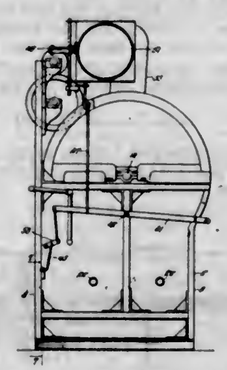


1,689,342. MACHINE FOR SPREADING SAND, GRAVEL, ETC. ISAAC E. HILLER, Marion, Mass. Original application filed May 18, 1925, Serial No. 110,041. Divided and this application filed Dec. 14, 1926. Serial No. 154,675. 4 Claims. (Cl. 275—2.)

1. A spreading machine comprising a motor vehicle, a load-carrying body, means connecting the body with the vehicle and including a shaft fixed to the chassis, and bearing blocks fixed to the body and adapted to turn on the shaft, a rotary feeder at the rear end of the body, and driving mechanism connecting said feeder with the driving axle of the vehicle, said mechanism including clutch members rotatable on the fixed shaft, one member being slidable, a cam face on one of said blocks, and a cam-faced sleeve keyed to and slidable on the shaft, and interposed between the bearing block and the slidable clutch member, the arrangement being such that when the body is tilted, the bearing-block and sleeve exert pressure on the slidable member and render the clutch operative, and when the body is horizontal, the pressure is relaxed and the clutch rendered inoperative.

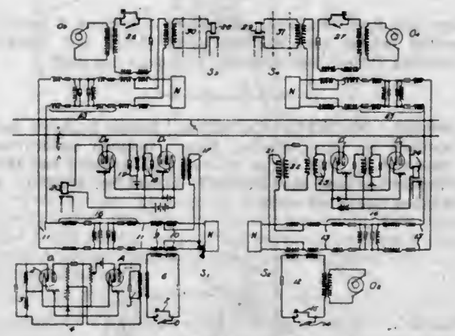
1,689,343. TELEPHONE SYSTEM. EDWARD E. HINRICHSEN, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 26, 1927. Serial No. 194,323. 7 Claims. (Cl. 179—18.)

1. In a telephone system, a two-way trunk, means for automatically seizing said trunk at either end, means for automatically extending said trunk at either end, means responsive to the seizure of the trunk at one end for transmitting a current impulse to the opposite end,



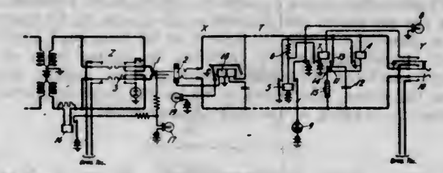
means at said opposite end responsive to said current impulse for disabling the trunk seizing means and responsive to the cessation of said impulse for connecting the trunk extending means to the trunk at said end.

1,689,344. CAN OPENING AND SEALING DEVICE. WILLIAM H. HUNT, National City, Calif. Filed Aug. 30, 1924. Serial No. 735,078. 8 Claims. (Cl. 220—51.)



1. In a can opening and sealing device composed of a single piece of a comparatively narrow strip of metal, a connecting portion horizontally flat relatively to the can when used, provided with flat lugs one at each end thereof turned downwardly flatwise over its whole width and at right angles to said connecting portion, said lugs being reduced, forming shoulders, and then extending straight and provided with cutting portions at their ends.

1,689,345. CLOTHES DRIER. CARL W. KELLMAN, Chicago, Ill. Filed Oct. 10, 1925. Serial No. 61,657. 16 Claims. (Cl. 34—5.)

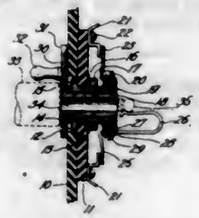


1. A clothes drier comprising in combination a casing having a plurality of openings therein, a clothes container in said casing, means for establishing air currents in a definite direction for drying the clothes in said container, means for first heating said air currents, and damper mechanism cooperating with said openings for changing the direction of said air currents whereby cold air is admitted into said casing to cool the clothes and to carry heat from said heating means away from said clothes.

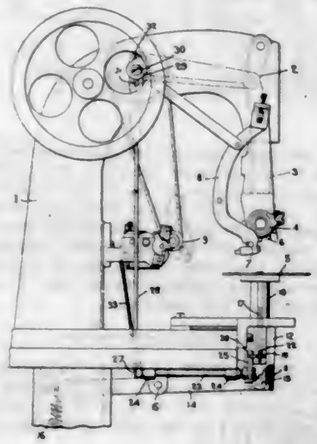
1,689,346. METHOD AND SYSTEM OF CARRIER-WAVE TELEGRAPHY. BURTON W. KENDALL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 31, 1919. Serial No. 334,682. 7 Claims. (Cl. 178—51.)

1. In a multiplex system, stations connected by a line, a network for substantially balancing said line for signal frequencies supplied thereto, means for transmitting current waves of different constant frequencies from each of said stations to said line, at each of said stations a plurality of signal receiving means each supplied with a wave outgoing from said station due to unbalance, and means for selecting combinations of two of said waves to actuate each of said receivers.

1,689,347. TELEPHONE SYSTEM. FRANKLIN A. KORN, Elizabeth, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 29, 1927. Serial No. 202,250. 7 Claims. (Cl. 179—41.)



1. In a telephone system a line, a relay and a condenser in series connected in bridge of said line, switching means adapted when operated to open said bridge and when released to momentarily connect said condenser in bridge of said line to the exclusion of said relay.

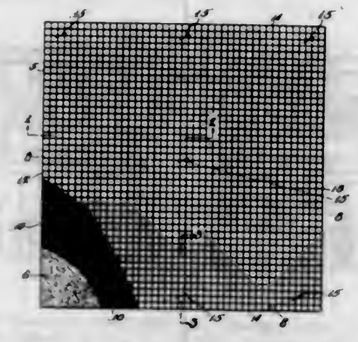


1,689,348. COMBINED JACK AND SELECTING SWITCH. JOHN J. KUHN, Elizabeth, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1924. Serial No. 758,528. 5 Claims. (Cl. 200—51.)

1. A combined jack and selecting switch comprising a panel having an aperture therein, terminals arranged on

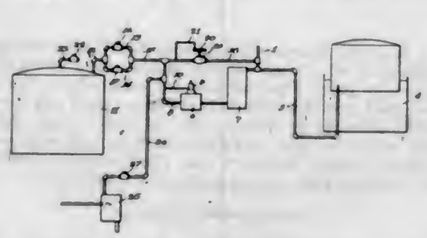
said panel around said aperture, a metallic sleeve rotatably mounted in said aperture, a number of brushes arranged to rotate with said sleeve and to successively engage said terminals when said sleeve is rotated, a contact located behind said aperture, said sleeve and contact providing circuit terminals for a cooperating plug.

1,689,349. MARKING MACHINE. ELMER L. LANG and GEORGE H. LANG, Boston, Mass. Original application filed Oct. 9, 1922, Serial No. 593,416. Divided and this application filed Jan. 15, 1927. Serial No. 161,317. 4 Claims. (Cl. 101—316.)



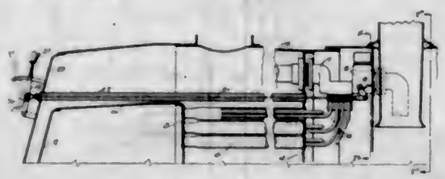
1. In a marking machine, the combination with a yieldingly-supported platen to receive the work, of a one-way lock for the platen which permits the platen at all times to be depressed to the full extent of its downward movement but which normally restrains the platen from upward movement, a printing head movable toward and from the platen, and means to render the lock inoperative during the making of the printed impression.

1,689,350. SHOE CONSTRUCTION. RALPH L. MARTEAU and GEORGE A. SCHROETER, Brooklyn, N. Y. Filed Dec. 28, 1925. Serial No. 78,034. 5 Claims. (Cl. 36—71.)



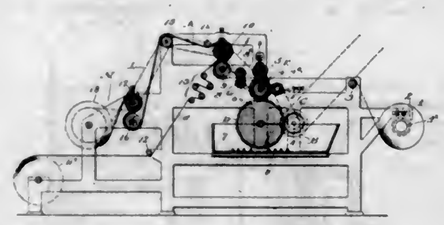
1. In an arch supporting member for a shoe, a heel portion secured to the shoe, a forward flap portion disposed under the arch of the foot, an extensible connecting piece between the heel and forward portions, and means insertible in the forward portion to support the anterior metatarsal arch of the foot.

1,689,351. ICE-SAVING PAD. FREDERICK C. MAUSSNER, Collingswood, N. J. Filed July 10, 1925. Serial No. 42,858. 2 Claims. (Cl. 62—31.)



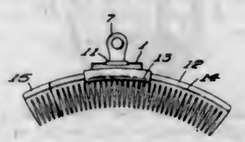
1. An ice saving pad adapted for separating ice from direct contact with the lining of a refrigerator comprising a filler of porous, non-absorbent hair, a covering of relatively heavy wire cloth embracing said filler, and a sheet of relatively finer wire cloth interposed between said filler and said heavier cloth for preventing the hair from adhering to the ice.

1,689,352. SYSTEM FOR GATHERING GAS FROM OIL TANKS, ETC., OF REFINERIES. HARRY R. MAXON, Muncie, Ind. Filed May 19, 1926. Serial No. 110,060. 2 Claims. (Cl. 220—85.)



1. In a system of the class described, a gathering line, means for maintaining a slight superatmospheric pressure on the gathering line, a closed tank for containing oil, and connections between the line and tank including means permitting the passage of gas from the tank into the gathering line and means for permitting the passage of gas from the gathering line to the tank when the pressure in the tank drops below atmospheric but preventing such passage as long as atmospheric pressure is maintained in the tank.

1,689,353. LOCOMOTIVE. NEAL T. MCKEE, Bronxville, N. Y. Filed Dec. 1, 1926. Serial No. 151,938. 3 Claims. (Cl. 122—462.)



1. In a locomotive, a boiler having a forward flue sheet, a back head and a crown sheet, a smoke-box located forward of said sheet, a throttle located in said smoke-box, a tube connected to said flue sheet and said head and passing through the boiler above the level of said crown sheet, a throttle operating rod passing through said tube, and packing means adjacent the back head between said tube and said rod.

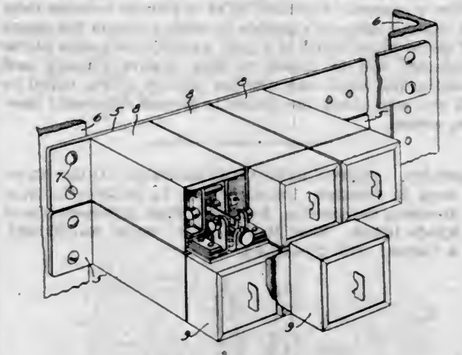
1,689,354. METHOD OF FORMING COMBINED PAPER AND FABRIC MATERIAL. JAMES R. MCKENNA, Cleveland, Ohio. Filed Mar. 11, 1925. Serial No. 14,647. 1 Claim. (Cl. 154—35.)

The method of uniting crimped or crinkled paper with woven fabric, which consists in providing a crimped or crinkled paper, stretching the same to temporarily remove the crimps and produce a smooth surface, applying an ahesive coating to the smooth surface of the paper, laying the coated paper against the fabric, relieving the paper of stretch to permit the crimps to reform, and subjecting the combined material to pressure to cause the crimps of the paper and the adhesive to become embedded in the meshes of the fabric.

1,689,355. HAIR-WAVING DEVICE. THERESA MCMILLAN, Chicago, Ill. Filed Jan. 27, 1928. Serial No. 249,895. 5 Claims. (Cl. 132—38.)

1. In a hair waving device, a spring clip, a bracket carried thereby, a comb fixedly carried by said spring clip, and a comb slidably carried by said bracket.

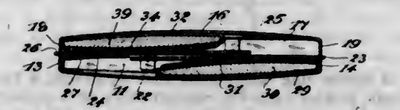
1,689,356. METHOD OF PRODUCING COMPLEX METAL ALCOHOLATES. HANS MEERWEIN, Konigsberg in Prussia, Germany, assignor to Chemische Fabrik auf Actien (vorm. E. Schering), Berlin, Germany. Filed Nov. 1, 1926, Serial No. 145,711, and in Germany Nov. 12, 1925. 11 Claims. (Cl. 260—11.)



1. The process of producing readily soluble complex metal alcoholates, comprising causing the alcoholates of different metals to react with each other.

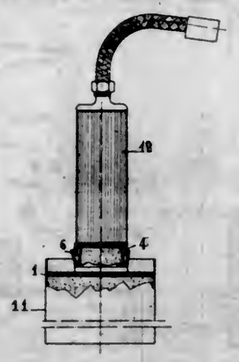
1,689,357. FOOD PRODUCT. IRVING S. MERRELL, Syracuse, N. Y., assignor, by mesne assignments, to Merrell-Soule Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Sept. 27, 1923. Serial No. 665,166. 8 Claims. (Cl. 99—11.)

4. As a new article of manufacture, a self-sustaining solid containing a compressed baked milk powder.



6. The process of producing a new article of manufacture comprising baking a molded milk powder to form a unitary self-sustaining article of manufacture.

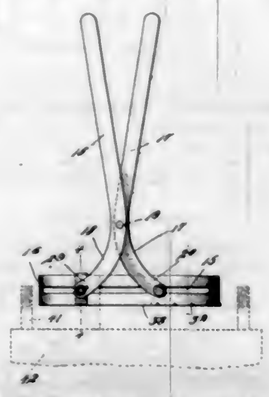
1,689,358. MAGNETIC SHIELD. DANIEL D. MILLER, New York, N. Y., assignor, by mesne assignments, to Soule Company, Inc., New York, N. Y., a Corporation of of New York. Filed Jan. 22, 1925. Serial No. 3,917. 3 Claims. (Cl. 179—174.)



1. A magnetic shield for electrical apparatus comprising a cover portion composed of a material having a permeability higher than that of iron for low magnetizing forces and a cap portion cooperating therewith to form a dust-proof housing, said cap portion being composed of a non-magnetic material.

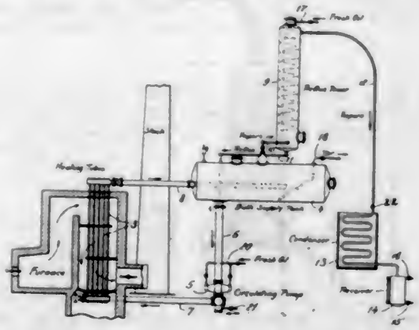
1,689,359. COMPACT CONTAINER. FELIX B. MILLER, Attleboro, Mass., assignor to Fillkwik Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Apr. 19, 1928. Serial No. 271,300. 6 Claims. (Cl. 132—83.)

1. In a compact container, in combination, a lower compartment; an upper compartment carried by and longitudinally slidable over the lower compartment, the open portions of the compartments facing each other; a hinged cover for each compartment having a reflecting surface and means limiting the slidable movement of the compartments.



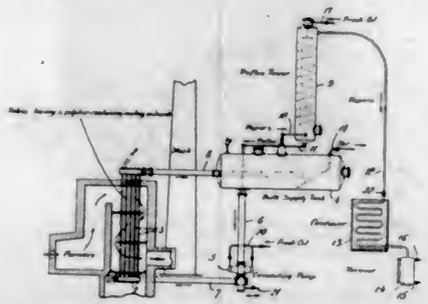
1,689,360. GREASE-GUN-FILLING DEVICE. ROBERT MONNOT, Clichy, France. Filed June 9, 1927, Serial No. 197,696, and in France July 20, 1926. 2 Claims. (Cl. 221—47.5.)

1. A grease gun filling device, comprising a piston adapted to rest upon the surface of the grease in an opened grease container and having a central opening of relatively large



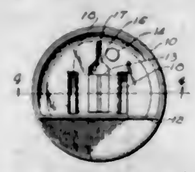
size formed through it; an upstanding inner metal ring fitted at its lower end in said opening and rigidly secured to the edge thereof; and an outer ring encircling and rigidly secured to the inner ring, the two rings having their mutually-adjacent inner surfaces inclined away from each other in opposite directions so as to provide between them an annular space of V-section to receive therein the mouth of the inverted barrel of a gun, whereby the grease in the container will be forced to pass upward through said opening and inner ring into the interior of the barrel to fill the same when the piston is pressed downward upon the grease.

1,689,361. PISTON-RING-COMPRESSING TOOL. CLARENCE B. PERKINS, Providence, R. I., assignor to Apco Mossberg Corporation, Attleboro, Mass., a Corporation of Rhode Island. Filed Mar. 8, 1928. Serial No. 260,067. 4 Claims. (Cl. 29—86.4.)



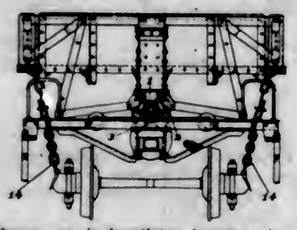
1. A piston ring compressing tool comprising a band of a length greater than the circumference of a piston it is intended to encircle to overlap a portion of itself a substantial distance and having a slot extending longitudinally thereof, a pair of handles pivoted together near one end, means extending through said slot and securing one end of one of said handles to one portion of said band, and means for adjustably securing the end of the other handle to another portion of said band.

1,689,362. ART OF CRACKING HYDROCARBONS. JOHN PERL, New York, N. Y., assignor to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Nov. 20, 1924. Serial No. 750,992. 3 Claims. (Cl. 196—133.)



1. In a pressure still for cracking hydrocarbon oils, a tubular heater, connections adapted for circulating and recirculating a liquid body of oil in the still therethrough, and means for circulating heating gases externally about the tubular elements of the heater, the internal surface of the tubular heater elements having a tin-containing coating thereon.

1,689,363. ART OF CRACKING HYDROCARBON OILS. JOHN PERL, New York, N. Y., assignor to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Nov. 20, 1924. Serial No. 750,993. 14 Claims. (Cl. 196—47.)



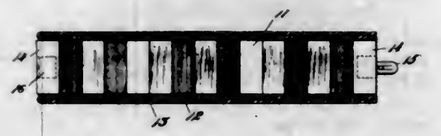
5. In cracking hydrocarbon oils by distillation under pressure, the improvement which comprises heating a liquid body of the oil to the cracking temperature by heat transferred thereto through an externally heated wall having an iron sulphide coating in contact with the oil.

1,689,364. PUZZLE. JAMES A. RADCLIFFE, Jersey City, N. J. Filed Mar. 20, 1928. Serial No. 263,085. 8 Claims. (Cl. 273—153.)

1. In a puzzle of the class described, a box having a compressible side, a sheet metal spring member supported therein and including a loop portion disposed against said side, and a ball normally free within the box and adapted to roll in under the loop when engaged and spread by a compressed movement of said side.

1,689,365. DUMP-CAR-BODY-TILTING BEARING. ALFRED C. SCHMOHL, Beaver Falls, and JOHN P. ANDERSON, Koppel, Pa., assignors to Koppel Industrial Car and Equipment Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 25, 1927. Serial No. 208,174. 6 Claims. (Cl. 105—264.)

1. In a dump car, body tilting bearings having central and eccentric bearing surfaces supporting a car body, independent pivots on an upper member, for each dumping or carrying position, bearing in suitably disposed coplanar sockets of a supporting member.



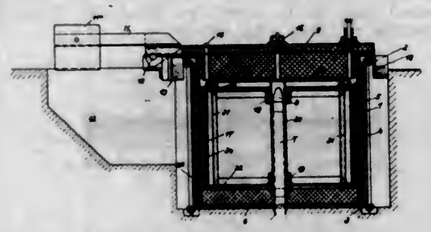
1,689,366. METAL MERCAPTO ACID ESTERS AND PROCESS OF MAKING SAME. WALTER SCHOELLER, Berlin-Westend, and HANS GEORG ALLARDT, Berlin-Reinickendorf-West, Germany, assignors to the Firm Schering-Kahlbaum A. G., Berlin, Germany. Filed Dec. 16, 1927, Serial No. 240,629, and in Germany Dec. 16, 1926. 6 Claims. (Cl. 260—11.)

1. As new products, metal mercapto acid esters having the formula—

$$Me(-S-X-O-Alc)_n,$$

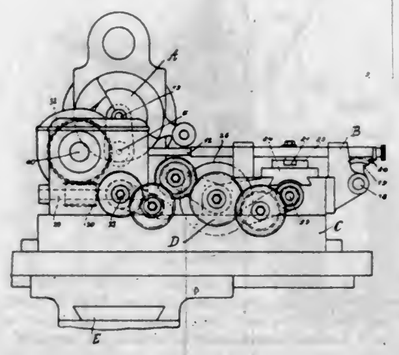
wherein Me is a metal, X an organic acid radical and Alc an alcohol radical, while n indicates the valence of the metal.

1,689,367. CHAIN BAND. CARL SCHRAYSSHUEN and FRIEDRICH RENZ, Providence, R. I., assignors to Speidel Chain Co., Providence, R. I., a Firm composed of Frederic Speidel and Eugen Speidel, Pforzheim, Germany. Filed June 7, 1927. Serial No. 197,161. 7 Claims. (Cl. 63—4.)



6. An ornamental chain for jeweler's use, embodying a series of thin plates having their edges which are transverse to the length of the chain adjacent to and free from each other, and flexible means attached to the ends of all of the plates between the edges thereof.

1,689,368. PRINTING INK. KARL STEPHAN, Berlin-Charlottenburg, Germany, assignor to the Firm Chemische Fabrik auf Actien (vorm. E. Schering), Berlin, Germany. Filed Apr. 14, 1927, Serial No. 183,912, and in Germany May 5, 1926. 4 Claims. (Cl. 134—36.)

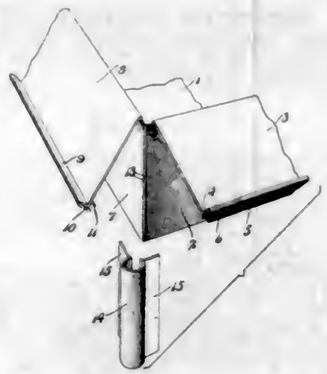


1. As a new composition of matter printing ink comprising manganese dioxide (MnO_2), 100 ccms. of which, when loosely heaped, do not weigh more than 100 grams.

1,689,369. ELECTRIC FURNACE FOR GLOWING METAL BANDS BY INDUCTION CURRENTS. MANUEL TAMA, Messingwerke, near Eberswalde, Germany. Filed Nov. 29, 1927, Serial No. 236,505, and in Germany Sept. 17, 1927. 17 Claims. (Cl. 266—1.5.)

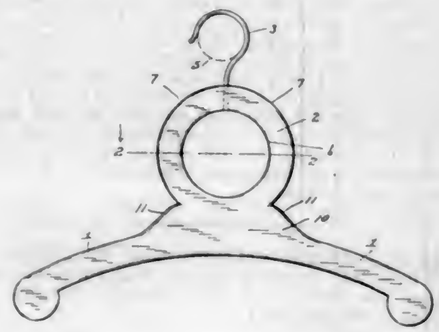
3. An electric furnace for annealing metal-strips by induction current, comprising a drum adapted to receive the metal-strip to be annealed and adapted to be coiled thereround; and a coil adapted to form one of the coils of a transformer and to generate the induction current, said metal-strip forming the other coil of the transformer.

1,689,370. MACHINE FOR GENERATING AND MARKING CAMS. KARL TESSKY, Esslingen, Germany. Filed June 9, 1925, Serial No. 35,898, and in Germany June 7, 1924. 2 Claims. (Cl. 90—15.)



1. A machine for generating the faces of cams which cooperate with rollers on rocking levers, comprising a frame, a chuck on said frame for holding a blank, a tool support in the shape of a rocking lever of a length equal to that of the cam lever in a machine of which said cam-and-lever-unit will form part, said rocking lever being pivoted on said frame in a position with respect to said blank which corresponds to the relative position of the finished cam and the pivot of its cooperating rocking lever, a tool carried on said support in a position corresponding to the roller of said cooperating rocking lever, a carriage adapted to reciprocate on said frame, a slide bar supported on said carriage, and means for connecting said slide bar with said tool-supporting rocking lever so as to transmit the reciprocation of said carriage to said rocking lever at a ratio corresponding to the adjustment of said slide bar with respect to said carriage.

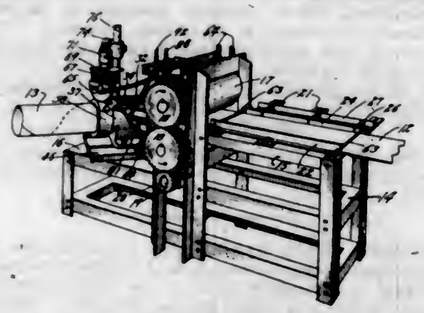
1,689,371. KITCHEN CABINET. EARL M. TRAMMELL, El Paso, Tex., assignor to El Paso Sash & Door Co., El Paso, Tex. Filed Dec. 2, 1927. Serial No. 237,215. 1 Claim. (Cl. 312—107.)



A kitchen cabinet having two units with adjacent side walls, each side wall having a right-angular cut-out in its front inner corner, a front member having its ends projecting into said cut-outs, the depth of the cut-outs being less than the thickness of said front member, a filler strip having its ends abutting the ends of the front members, its rear face abutting the ends of the side walls, and an integral shelf extending across both of said units.

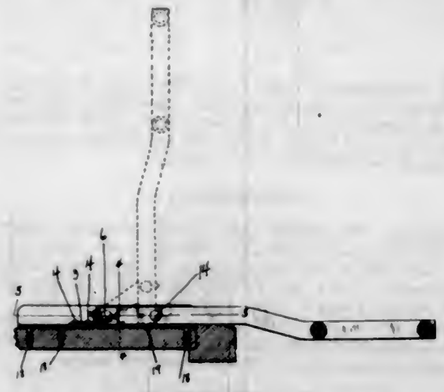
1,689,372. DESK TRAY. PETER M. WEGE, Grand Rapids, Mich., assignor to Metal Office Furniture Co., Grand Rapids, Mich., a Corporation of Michigan. Filed Nov. 22, 1927. Serial No. 235,021. 5 Claims. (Cl. 220—75.)

1. A tray comprising, a bottom, vertical sides and ends extending upwardly from said bottom, each of said sides and ends comprising an inner section and an outer section connected to said inner section and lying parallel therewith, said outer section at its lower end having an inwardly extending portion lying against the under side of said bottom and secured thereto.



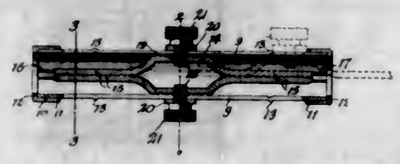
1,689,373. GARMENT HANGER. BENJAMIN WEINBERG, Troy, N. Y. Filed Aug. 27, 1926. Serial No. 131,837. 1 Claim. (Cl. 223—64.)

A garment hanger comprising a wooden body having an elongated neck provided with upwardly curved shoulders for supporting the collar of a garment carried by said hanger, rigid unconnected arms extending from said neck and in prolongation of said shoulders, the upper portion of said neck terminating in an annular enlarged head for permitting handling of the garment without danger of soiling the same, said neck, arms and head being integral with said body, and a hanger suspending member connected to said head at a point remote from said neck.



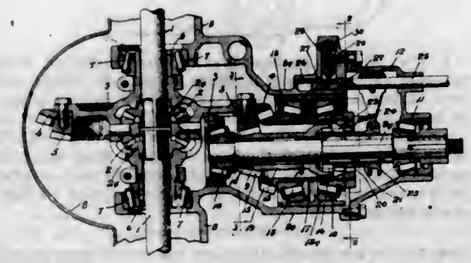
1,689,374. MACHINE FOR ELECTRICAL-RESISTANCE WELDING OF SHEET-METAL PIPE. FREDERICK L. WILLIAMS, Denver, Colo. Filed Sept. 25, 1920. Serial No. 137,785. 21 Claims. (Cl. 219—6.)

1. In a tube forming device having pushing rolls and an external former adapted to receive a strip of metal on its interior from said rolls and form same into a spiral; an internal former spaced from said external former; and



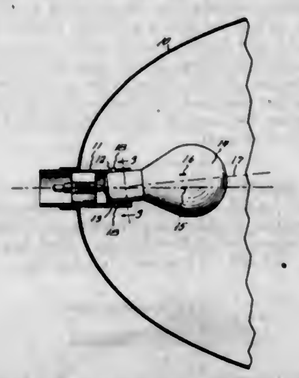
means surrounding said internal former and adapted to force said spiral away from said external former and against said internal former.

1,689,375. LOADING BRACKET FOR VEHICLES. FREDERICK W. YELLS, Geneva, N. Y. Filed May 3, 1927. Serial No. 188,463. 3 Claims. (Cl. 214—84.)



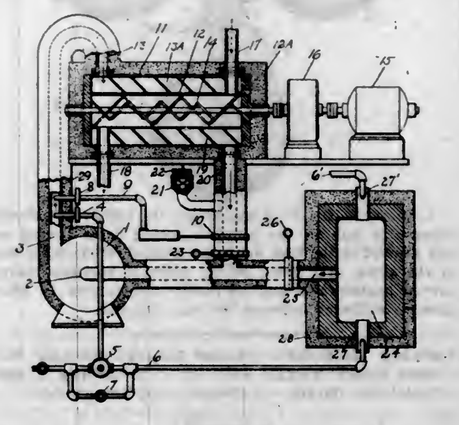
1. In a vehicle loading device, a rear section, an intermediate section pivotally mounted thereon, a loading section pivotally mounted on said intermediate section, means for securing said loading section in loading position, and spring means for securing said loading section in an inoperative position within the vehicle body.

1,689,376. MULTIPLE BIT TOOL. JOHN ZILLIOX, Orchard Park, N. Y. Filed June 22, 1927. Serial No. 200,669. 1 Claim. (Cl. 145—64.)



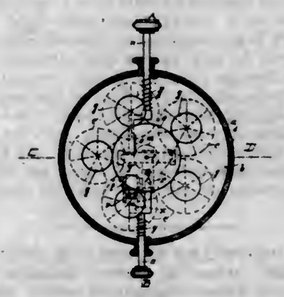
A multiple bit tool comprising a tubular casing, two bars slidable lengthwise in said casing and each having an outwardly deflected central guide part which slidingly engages with the inner side of the casing and inwardly deflected flat end portions which terminate in bits and which slidingly engage the corresponding flat end portions of the other bar, said casing being provided on opposite sides with longitudinal slots, clamping screws slidable in said slots and connected with the outwardly deflected parts of said bars and bearing against the outer side of said casing, and stops which are arranged on the exterior of said casing which are adapted to be engaged by said screws for holding the latter against lengthwise movement on the casing.

1,689,377. TWO-SPEED AXLE-GEARING CONSTRUCTION. WALTER S. AUSTIN, Grand Rapids, Mich. Filed June 14, 1920, Serial No. 388,801. Renewed Feb. 27, 1926. 4 Claims. (Cl. 74—59.)



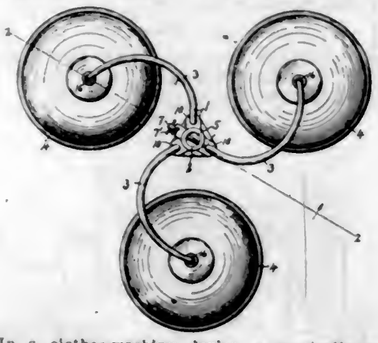
1. In a change speed gearing for motor vehicles, the combination of a rear axle and differential gearing, a housing enclosing the same and having a forward extension, a cap detachably secured to the front end of and closing said front end of said extension, an inner and an outer bevelled gear located in the housing around the differential gearing and operatively connected therewith to drive the rear axle, a drive shaft located within the housing extension and having a bearing in the closing cap, an inner sleeve mounted on the drive shaft, an outer sleeve mounted in bearings carried by the housing, means to selectively couple the shaft with either sleeve, and pinions on the inner and outer sleeves in mesh with the inner and outer bevelled gears, respectively, said shaft, sleeves and bearings therefor being detachably mounted for ready removal from the housing on removal of the detachable front closing cap, substantially as and for the purposes described.

1,689,378. AUTOMATIC HEAD LAMP. BERLIN ARTHUR BROUGHTON, Cleveland Heights, Ohio, assignor to Delta Engineering Laboratories, Inc., Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 18, 1926. Serial No. 81,873. 2 Claims. (Cl. 240—41.)



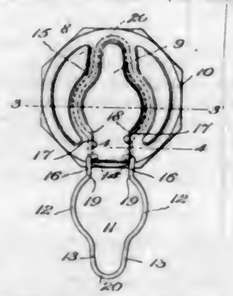
1. The combination with a reflector, of a fixed centrally disposed socket having bayonet slots in the upper and lower sides thereof, said slots being arranged out of alignment and a bulb having two filaments, said filaments being spaced equidistant above and below the longitudinal axis of the bulb so that when said bulb is inserted in the forward end of the socket one of the filaments will be positioned upon the axis of the reflector and the other one above said axis.

1,689,379. APPARATUS FOR HEAT APPLICATION. WILLIAM A. DARRAH, Chicago, Ill. Filed Dec. 29, 1924. Serial No. 758,705. 8 Claims. (Cl. 237—2.)



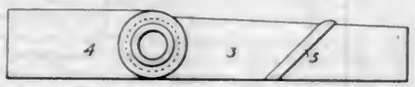
1. An apparatus for applying heat, comprising a combustion chamber, a blower, a device to be heated, a connection between said blower and said device, an outlet connection between said device and said blower, a relief opening in said outlet connection, a connection between said combustion chamber and said outlet connection, a means for supplying fuel to said combustion chamber, and a thermostatic means controlling said fuel supplying means.

1,689,380. GAME INSTRUMENT FOR POKER AND SIMILAR CARD GAMES. ERVIN GUSTAVE DE BARY, Amsterdam and Kottach-Tegernsee, Germany. Filed Apr. 30, 1921, Serial No. 465,866, and in Germany May 12, 1920. Renewed Aug. 18, 1927. 18 Claims. (Cl. 275—142.)



1. The herein described game-instrument for poker and similar games of cards comprising simultaneously rotatable, and arrestable disks bearing card pictures belonging to a pack and movable each behind an opening through which one card is exhibited by the rotating disk when arrested, and in combination therewith another series of similar disks bearing other card pictures belonging to the same pack exhibited on the reverse side of the instrument.

1,689,381. MECHANICAL CLOTHES WASHER. MARK A. DEFIBAUGH, Syracuse, N. Y., assignor to Syracuse Washing Machine Corporation, Syracuse, N. Y., a Corporation of Delaware. Filed Apr. 2, 1926. Serial No. 99,272. 7 Claims. (Cl. 259—144.)

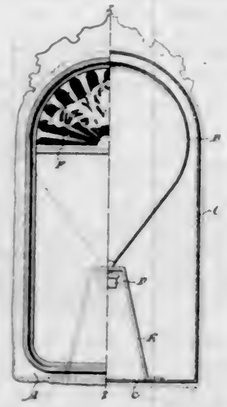


1. In a clothes-washing device, a vertically movable plunger, a hub on the plunger, spring arms having one end secured to the hub, and cups secured to the other ends of the arms, said arms having different portions thereof curved horizontally and vertically respectively to afford greater resiliency between the cup and hub.

1,689,382. ELECTRIC FLASH LIGHT. RICHARD MAXWELL EATON, Niagara Falls, N. Y. Filed Aug. 2, 1926. Serial No. 126,401. 5 Claims. (Cl. 240—10.5.)

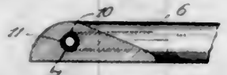
2. The combination of a cap for a flash light adapted to serve as a base for the flash light when the same is stood on end, and a suspension loop for said flash light pivoted on said cap and foldable from a collapsed inoperative position to a non-collapsed flash light supporting position, said loop comprising a resilient body bent upon itself adjacent its mid portion and diverging therefrom to its ends, and an irregular shaped channel formed in said cap corresponding to the shape of the loop for receiving and housing the loop when the same is in collapsed inoperative position, said loop having its ends turned inwardly and forming pivots for the loop, and said channel being provided with undercut portions for receiving the diverging portions of the loop adjacent their inturned ends.

1,689,383. PROPELLER BLADE FOR DISHWASHING MACHINES. HARRY M. GOWDY, Westfield, Mass., assignor to The Planet Company, Westfield, Mass., a Corporation of Massachusetts. Filed Aug. 12, 1926. Serial No. 128,817. 2 Claims. (Cl. 170—159.)



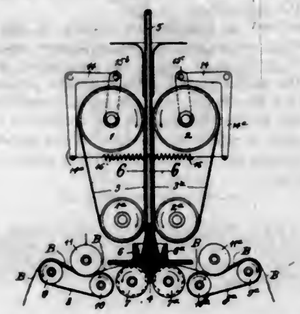
1. A single propeller blade which is designed to revolve in a horizontal plane for a dishwashing machine comprising a member which is formed with a uniform curvature on its upper surface from the tip to the base portion of the same, the curvature being concavo-convex with the concave surface on the upper side of the blade.

1,689,384. LOOM FOR WEAVING PILE FABRICS. JOHN ERNEST GROSVENOR, Hagley, and WILLIAM THOMAS PICKING, Kidderminster, England, assignors, by mesne assignments, to M. J. Whittal Associates, Ltd., a Voluntary Association of Massachusetts. Filed Jan. 27, 1928, Serial No. 249,920, and in Great Britain Dec. 4, 1926. 3 Claims. (Cl. 139—47.)



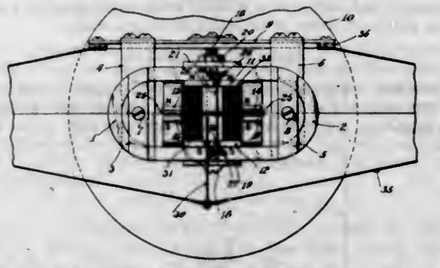
1. Pile forming mechanism for looms including hook members extending longitudinally of the pile warps and each having a substantially straight shank portion adapted to be arranged substantially centrally with respect to its group of pile threads, the under part of said straight shank portion adjacent the hook having a warp-engaging surface offset upwardly and out of alignment with respect to the corresponding surface of the rest of said straight shank portion.

1,689,385. COMBINED MIRROR OR PICTURE FRAME AND RADIOHORN. HARRY L. HAHN, Lancaster, Pa. Filed Apr. 27, 1927. Serial No. 187,009. 6 Claims. (Cl. 181—27.)



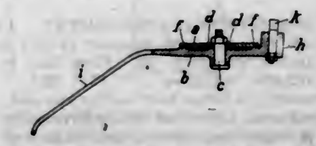
4. A frame for a mirror or picture having an upper end portion of louver-window-like construction combined with a radio horn having its mouth arranged behind the louver front thereof; said horn being of oblong form supported upon a sound-reproducing device and enclosed within a casing consisting of the frame and a shallow box-like structure having side and end flanges turned toward and abutting against the back of the frame to which said box-like structure is secured.

1,689,386. MOLDED ARTICLE AND METHOD OF MAKING THE SAME. WILFORD J. HAWKINS, Montclair, N. J., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Apr. 18, 1927. Serial No. 184,499. 9 Claims. (Cl. 18—55.)



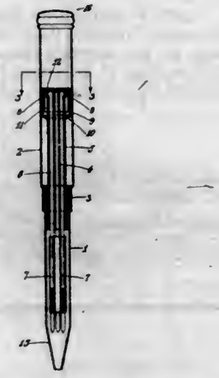
1. A molded article comprising a body of plastic material requiring curing after formation and provided with means embedded in said body whereby a liquid curing agent may be directed to the interior of the material.

1,689,387. APPARATUS FOR OBTAINING THE BAST OF STALKED PLANTS. ERNST LUDWIG ANDREAS HEIMLICH, Bremen, Germany. Filed Feb. 3, 1927, Serial No. 165,744, and in Germany Feb. 6, 1926. 4 Claims. (Cl. 130—31.)



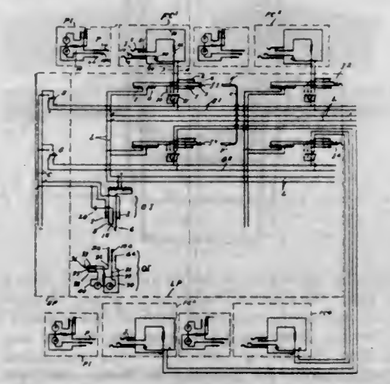
1. In an apparatus for treating stalks to remove the fiber, a stalk feeding means comprising endless belts travelling in parallel relation to grip and feed the stalk, a cutter arranged at the end of the feeding means to divide the stalk in half, means for deflecting the halves of the stalks in opposite directions, and cutting discs for removing the woody envelopes of the stalks immediately at the point of their deflection.

1,689,388. TELEPHONE RECEIVER. WILLIAM F. HENRY, Ossining, N. Y., assignor to Manhattan Electrical Supply Company, Incorporated, New York, N. Y., a Corporation of Massachusetts. Filed July 9, 1924. Serial No. 725,056. 3 Claims. (Cl. 179—119.)



1. In a telephone receiver, two magnets, two plates, one contacting with the N and the other with the S poles of said magnets, two pole pieces projecting from each plate, an armature between said pole pieces, a spacer of non-magnetic material, means for drawing said magnet poles and said plates together against said spacer, resilient means engaging at least one of said plates for balancing said armature around a pivot point, two coils surrounding said armature near its center on the two sides of its pivot point, a diaphragm, and a strut having one end attached to said diaphragm and the other end to said armature between said coils.

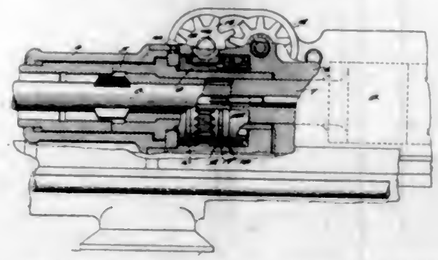
1,689,389. THREAD-GUIDE LEVER FOR BRAIDING MACHINES. GUIDO HORN, Weissensee, near Berlin, Germany. Filed Jan. 21, 1927, Serial No. 162,633, and in Germany Dec. 19, 1925. Renewed Jan. 26, 1928. 4 Claims. (Cl. 96—6.)



4. In a braiding machine, the combination of a spool carrier having a bearing surface, a thread guide lever pivoted on the carrier and having a bearing surface engaging the bearing surface of the carrier, one of the bearing surfaces being arcuate and at a considerable distance from the pivot.

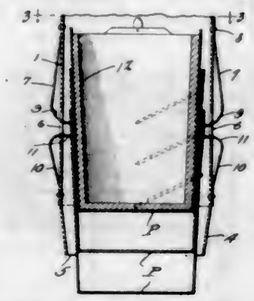
1,689,390. PENCIL CASE. ALAN JOHNSTONE, Carshalton, England. Filed July 7, 1927, Serial No. 204,088, and in Great Britain July 8, 1926. 1 Claim. (Cl. 120—14.)

A pencil case comprising two concentric tubes displaceable and rotatable with respect to each other, a series of longitudinally slotted guide tubes mounted in the rear end of the inner of said concentric tubes and extending into the outer of said concentric tubes, a series of rods sliding in said guide tubes, a lead carrier on the forward end and a nose on the rear end of each of said rods, said noses projecting through the longitudinal slots in the guide tubes, a pair of parallel flanges on the outer concentric tube for engaging the noses on said rods, one to extrude and the other to retract the selected lead, and additional flanges which enter the spaces between the slotted guide tubes and prevent relative rotation between the two concentric tubes during longitudinal movement.



1,689,391. TELEPHONE SYSTEM AND APPLIANCES. JOSEPH S. JONES, Brooklyn, and SAMUEL N. MEAD, Jr., Baldwin, N. Y., assignors to Chas. Cory & Son, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 28, 1925. Serial No. 65,352. 2 Claims. (Cl. 179—41.)

1. An intercommunicating telephone systeam comprising a plurality of group-line busses, each with local station instruments, connector busses, and means for connecting the busses of any group line with the connector busses line supply busses, means for connecting any group line lins to the line supply busses, each of said means including bal-

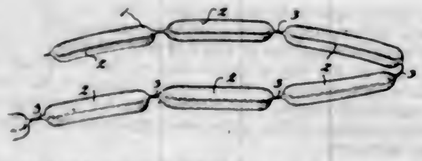


ancing impedances and a plurality of distant-station connecting switches for each group-line, and means for connecting the group-lines selectively, all said items located at a main or control station, distant stations connected to said distant station connecting switches, and means enabling the connection of any distant station to any group line other than its own group line.

1,689,392. CHUCK-ROTATING MECHANISM. AUGUST H. KATTERJOHN, Denver, Colo., assignor, by mesne assignments, to The Gardner-Denver Company, Quincy, Ill., a Corporation of Delaware. Filed July 21, 1923. Serial No. 652,996. 6 Claims. (Cl. 121—7.)

1. The combination with a rotary driven sleeve member having an external annular shoulder, of a motor for rotating the sleeve member and including a worm shaft, a worm wheel slidable and rotatable on the sleeve and operated by the worm shaft, a friction washer interposed between the shoulder and the worm wheel, a second friction washer that bears against the opposite side of the wheel to the first mentioned friction washer, the sleeve adjacent to said second washer having a thread, the pitch of which is in the direction of rotation of the sleeve, and a nut threaded on said sleeve and automatically operating against the adjacent washer and the worm wheel and first washer to clamp all sufficiently tight and against the shoulder to effect the rotation of the sleeve and to take up wear.

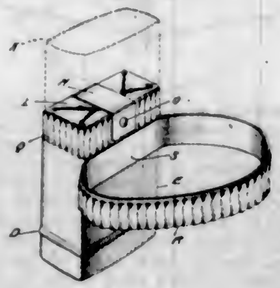
1,689,393. DISPENSING APPARATUS. GEORGE S. KLEIN, Granger, Wash. Filed Aug. 31, 1926. Serial No. 132,763. 1 Claim. (Cl. 312—43.)



Dispensing apparatus including an elongated casing having an upper inlet and a lower outlet, a pair of oppositely extending springs connected to each of two opposed walls of the casing, jaws extending from the springs and projecting into the casing, said jaws being superposed and constituting means for gripping the lower container of a nested stack to support the stack with the lower container within and below the outlet and to bind said lower container inwardly against the next lowest container, said lower container being removable downwardly forcibly from contact with the jaws to drag the next lowest container into position between and in engagement with the jaws.

1,689,394. ARTICLE MADE OF FIBROUS MATERIAL AND METHOD OF PRODUCING SAME. WILLIAM HOFFMAN KOBBÉ, New York, N. Y., assignor to Texas Gulf Sulphur Company, Bay City, Tex., a Corporation of Texas. Filed Mar. 14, 1927. Serial No. 175,430. 4 Claims. (Cl. 18—56.)

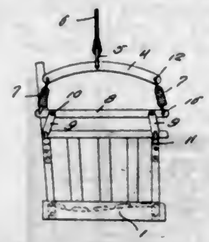
1. The method of making an article of the character described which comprises treating a fibrous material with wet calcined gypsum, forming the so-treated fibrous material into the shape of the desired article before the gypsum associated therewith becomes hard, permitting the so-formed article to set, drying the set article at a temperature above that at which calcination of the gypsum begins, and impregnating the dried article either wholly or in part with the sulfur.



1,689,395. FLAT WIENER. WILLIAM KOUBIM, Willoughby, Ohio, assignor to Willoughby Sausage Company, Willoughby, Ohio. Filed July 27, 1927. Serial No. 208,845. 3 Claims. (Cl. 99—11.)

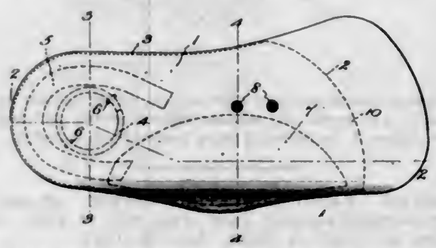
1. As a new article of manufacture a wiener having opposed substantially parallel flat sides adapting it for sandwiching purposes.

3. The method of manufacturing wiener sausage which comprises the formation of a sausage, compressing said sausage while in the raw state to produce a flat sided sausage, and curing said sausage while compressed to cause the flattened shape to be retained after curing.



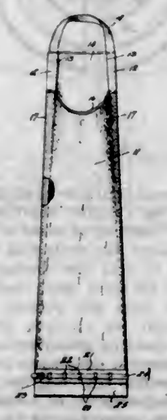
1,689,396. WATERPROOF BATHING CASE. CAROLINE ELIZABETH LANG, New York, N. Y. Filed Mar. 8, 1927. Serial No. 173,623. 3 Claims. (Cl. 150—1.)

1. A waterproof bathing case comprising a receptacle of relatively stiff material, a lid therefor, an elastic waterproof closely fitting jacket adapted to seal the joint between the lid and the receptacle, said jacket being formed as an open ended rubber bag, and means for closing and fastening the open end of said bag.



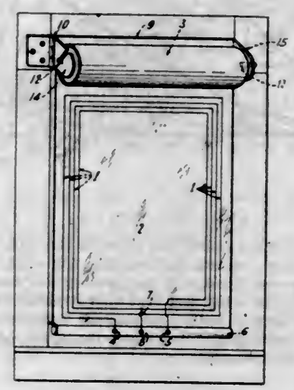
1,689,397. PORCH-SWING ATTACHMENT. CHARLES WILLIAM LEE, St. Louis, Mo., assignor of fifty per cent to Jessie Heying, St. Louis, Mo. Filed May 19, 1927. Serial No. 192,621. 2 Claims. (Cl. 155—68.)

1. In combination, a bench body having end arms, hooks fixed to said end arms, apertured links receiving said hooks, a lower bar pivotally connected to said links and having apertured end portions, an upper suspension bar adapted to be connected with suspending means and having apertured end portions, retractile springs interposed between the end portions of the said bars and having integral lower



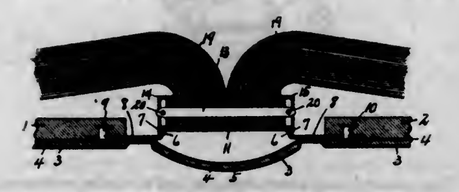
hooks disposed in the apertures of the lower bar, and hook means adjustably connected to the upper portions of the springs and disposed in the apertures of the upper bar.

1,689,398. INSOLE FOR BOOTS AND SHOES. F. PAUL LIOY, Passaic, N. J. Filed June 6, 1927. Serial No. 196,715. 4 Claims. (Cl. 36—71.)



3. An insole for shoes comprising upper and lower parts joined along the edges of the heel and side portions only, the meeting ends at the toe portion of said parts providing a ventilating opening arranged beneath said upper part, said upper part also provided with ventilating openings, a spring interposed between said parts at the heel portion and a rubber cushion interposed between said parts at the arch portion.

1,689,399. COTTON-PICKING SACK. ROBERT H. MALONE, Eaton, Tenn. Filed Feb. 24, 1927. Serial No. 170,587. 2 Claims. (Cl. 150—2.)

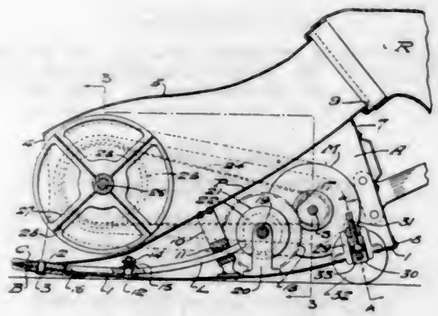


1. A cotton picking bag comprising a back breadth and a front breadth, the back breadth extending in both directions beyond the front breadth, a shoulder strap attached to the upper end of the back breadth, a reenforcing member attached to the face of the front breadth adjacent its lower end and formed with a plurality of loops, the lower end of the back breadth being reenforced and formed with openings adapted to receive said loops when the back breadth is turned up over the front breadth to close the bag, a buckle attached to the bag on one side of said loops, and a strap attached to the bag on the other side of the loops, the strap being adapted to pass through said loops and engaged with the buckle.

1,689,400. LOOP ANTENNA. LEE LINCOLN MANLEY, Brooklyn, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Mar. 14, 1922. Serial No. 543,611. 17 Claims. (Cl. 250—33.)

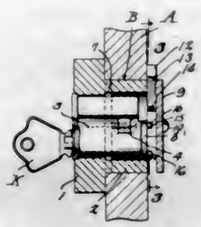
1. A loop antenna construction comprising a coiled conductor and a support in the form of a sheet of flexible material having its surface disposed in an optimum plane for desired reception, said coil being mounted in the plane and within the marginal lines of said sheet.

1,689,401. LOOSE-LEAF BOOK. DONALD S. MCCHESNEY, Syracuse, N. Y., assignor to Hall & McChesney Inc., Syracuse, N. Y., a Corporation of New York. Filed Mar. 4, 1927. Serial No. 172,622. 12 Claims. (Cl. 129—23.)



12. A loose leaf book comprising a back plate, covers hinged to the back plate, a tubular housing hinged to each edge of the back plate, a series of alined openings in each housing similarly disposed, posts having ends adapted to enter opposed openings in said housings to join the same together, a slide in each housing having slots for receiving the ends of the posts, and offset pintles on the slides adapted to engage holes in the posts.

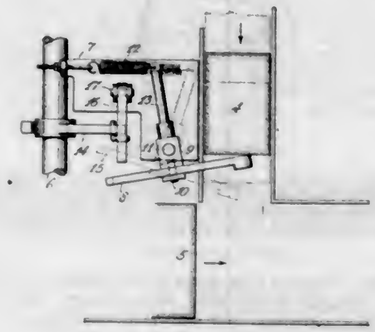
1,689,402. MOWING MACHINE. THEODORE JOHN NOACK, Phoenix, Ariz., assignor of one-half to Grace Ketcham, Phoenix, Ariz. Filed Oct. 19, 1926. Serial No. 142,701. 1 Claim. (Cl. 56—23.)



A mowing machine comprising a housing having its forward end open, a cutting mechanism carried by the bottom of the housing at the forward open end of the housing, a

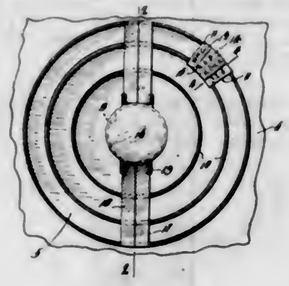
partition within the housing extending rearwardly from the cutting mechanism and dividing the housing into an upper chamber and a lower chamber, a shaft within the upper chamber and supported by the side walls of the housing closely adjacent to the open end of the housing, fan blades carried by said shaft, a motor within the lower

chamber, a driving connection between the motor and cutting mechanism, means for rotating the shaft from the motor, the upper chamber of the housing rearwardly of the shaft and blades being free and unobstructed, the rear of the upper chamber having means for connection with a collecting receptacle and into which the upper compartment is adapted to discharge.



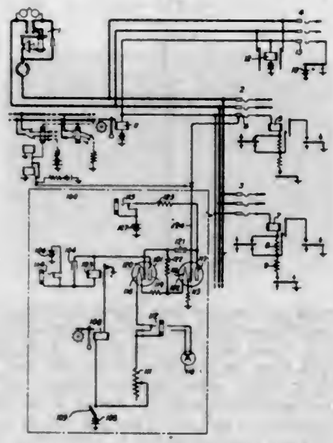
1,689,403. BUNG. ROBERT CARL OLSON, Zion, Ill. Filed Feb. 4, 1927. Serial No. 165,944. 1 Claim. (Cl. 217—108.)

The combination with a bung having a tubular extension, a bolt slidable radially on one end of the extension and means for retaining the bolt and guiding it, of a lock casing within the bung, opposed segmental retaining plates insertible in the extension at opposite sides of the lock casing, means carried by the casing for binding upon said plates to secure the plates in the extension and to fasten the lock in the bung, and key operated means carried by the lock casing for shifting the bolt radially relative to the extension.



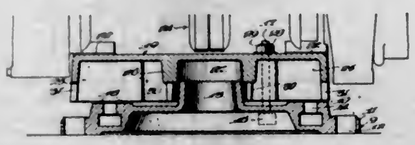
1,689,404. TIMING DEVICE FOR PACKAGE-WRAPPING MACHINES. BRUNNIE W. QUICK, Poughkeepsie, N. Y., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Aug. 17, 1927. Serial No. 213,478. 5 Claims. (Cl. 198—29.)

1. The combination with an angular pathway along which a succession of packages are normally forwarded in continuity toward the turn of said pathway, stop mechanism having a member normally riding inactively on top of the packages but arranged to drop into their path and



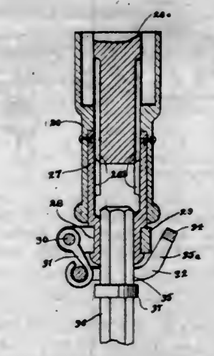
arrest oncoming packages when a break occurs in their continuity, and means for automatically resetting said member on top of the packages when continuity is restored.

1,689,405. RADIO INDICATING DEVICE. CLARENCE SCHAEFER, Davenport, Iowa. Filed Nov. 16, 1925. Serial No. 69,483. 4 Claims. (Cl. 116—124.)



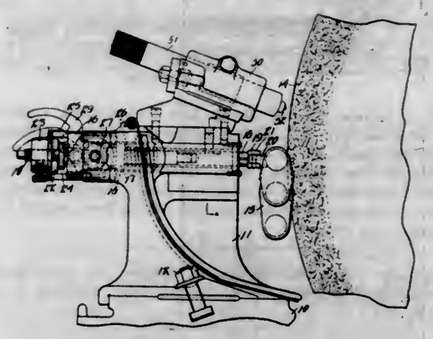
2. A wave indicator for radio receiving sets, comprising a disc member having a central aperture for the extension therethrough of an instrument shaft, a plurality of spaced concentrically arranged ribs projecting from the outer face of said disc, each of said ribs having the forward edge thereof formed to set up a bead, station indicator tags each comprising a plate like portion having a laterally extending corrugated leg at each end designed to be sprung between a pair of said ribs to engage the beads thereof, a pointer member adapted to be fixed to said shaft for rotation therewith for co-action with said tag to tune the set for the reception of a desired station, and a rib formed upon the outer face of the plate like portion of each tag to extend radially of the face of said disc, each of said ribs indicating the setting point for the indicator for the reception of the station indicated upon the tag.

1,689,406. RECORDING MEANS FOR BUSY TELEPHONE LINES. SYDNEY VICTOR COLLARD SCRUBY, BASIL ACKROYD TURKHUD, and FRANK DE FREMERY, Antwerp, Belgium, assignors, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed June 9, 1926, Serial No. 114,717, and in Great Britain July 9, 1925. 6 Claims. (Cl. 179—9.)



1. In a telephone system, lines, a recording device associated with one of said lines, means for interconnecting said line with a second line, means whereby an attempt may be made to connect a third line with said first line, and vacuum tube controlled means for recording said attempted connection.

1,689,407. MOUNTING FOR DRUMS AND THE LIKE. ARTHUR H. SKAER, THEODORE E. BARKER, and OMAR E. CLARK, Denver, Colo., assignors, by mesne assignments, to The Gardner-Denver Company, Quincy, Ill., a Corporation of Delaware. Filed Sept. 30, 1922. Serial No. 591,675. 2 Claims. (Cl. 248—15.)

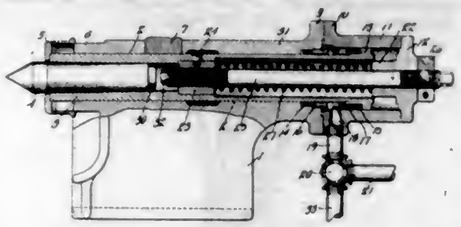


1. In a hoist, the combination of a base plate having an annular guideway, a bed plate, an upwardly extending annular flange on said bed plate cooperating with said guideway and adapted to enable said base plate to be rotated about said upwardly extending flange, and means rotatable with the base plate to prevent unseating of the base plate and for clamping said bed plate and base plate together against rotation.

1,689,408. DRILL-STEEL RETAINER. ARTHUR H. SKAER, Denver, Colo., assignor, by mesne assignments, to The Gardner-Denver Company, Quincy, Ill., a Corporation of Delaware. Filed Aug. 5, 1926. Serial No. 127,409. 3 Claims. (Cl. 121—32.)

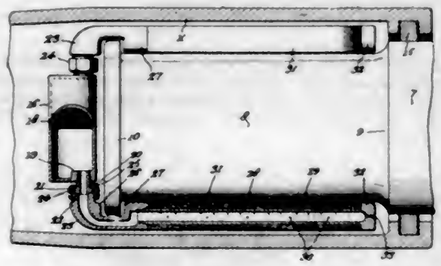
1. The combination with a drilling motor and a steel holding chuck rotatably mounted therein, of a steel retainer rotatably mounted on the chuck.

1,689,409. HYDRAULIC BACK REST. AMOS P. STEINER, Waynesboro, Pa., assignor to Landis Tool Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Oct. 22, 1926. Serial No. 143,482. 2 Claims. (Cl. 51—238.)



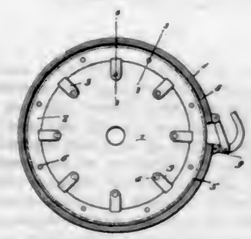
1. A hydraulic back rest comprising a casting, multiple cylinders in said casting, a piston and piston rod in each cylinder, said rod extending beyond the ends of the cylinder, a bearing block on one end of each rod, an adjusting nut on the opposite end of each rod, hydraulic means to force said rods in the direction of the work, mechanical means to force said rods in the opposite direction and a latch having a roller adapted to be placed between the adjusting nut and the cylinder end to retain said parts in the last mentioned position, substantially as set forth.

1,689,410. HYDRAULIC FOOTSTOCK. AMOS P. STEINER, Waynesboro, Pa., assignor to Landis Tool Company, Waynesboro, Pa. Filed Mar. 5, 1927. Serial No. 173,185. 2 Claims. (Cl. 82—31.)



1. A foot stock comprising a base having a longitudinal bore therein, a sleeve mounted within the bore adapted to carry a work center at one end and having a flange on the

other end, a cylindrical chamber in which said flanged piston is adapted to reciprocate, means for admitting fluid pressure against said flanged portion to actuate the sleeve

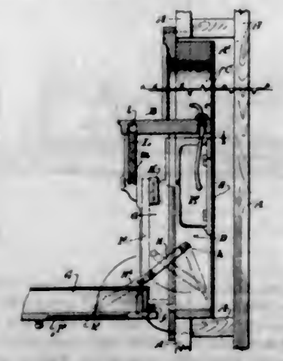


in one direction and resilient means for returning it in the other direction and adjustable means limiting its movement in said last-named direction, substantially as set forth.

1,689,411. RAILWAY JOURNAL-OILING DEVICE. CHARLES STERN and JAMES JOSEPH CARLOCK, Jersey City, N. J., assignors to B-S Manufacturing Corporation, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 8, 1927. Serial No. 218,299. 8 Claims. (Cl. 308—87.)

1. A railway journal oiling device comprising a source of lubricant supply, distributing means in communication with the lubricant in said source of supply and located adjacent the journal, said distributing means having eduction ports in the lateral and lower portions thereof, and porous means enveloping the ported portions of said distributing means.

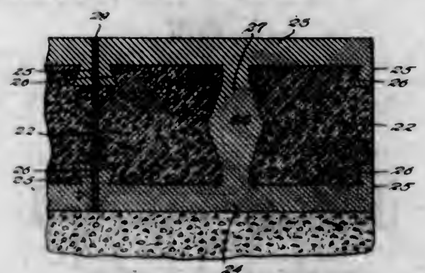
1,689,412. BRAKE. IRWIN F. STRAND, Benson, Minn. Filed Apr. 8, 1927. Serial No. 182,165. 2 Claims. (Cl. 188—77.)



1. In a vehicle brake, a shoe, a drum, a channel shaped shoe encircling the drum, inwardly extending lugs formed on the channel shaped shoe and secured to the side of the drum, an annular brake block arranged within the shoe, the outer peripheral portion of the block projecting beyond the outer edges of the sides of the channel shaped shoe, and securing bolts extending transversely through the sides of the shoe and said block.

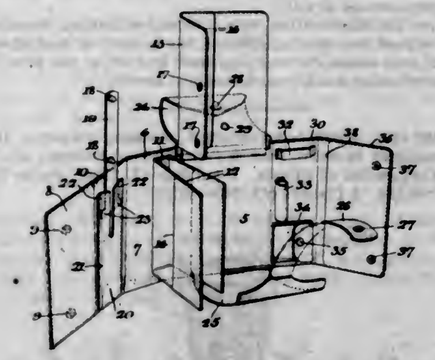
1,689,413. NEEDLE FOR TUFTING MACHINES. OSCAR TERVO, Quincy, Mass., ass'gnor to Wilfred B. Mathewson, North Weymouth, Mass. Filed Jan. 19, 1925. Serial No. 3,254. 2 Claims. (Cl. 112—224.)

1. A needle having a central thread-receiving bore and a single longitudinally-extending slot communicating with the bore in a radial direction, the mouth of the slot being of less width than the diameter of the bore and presenting relatively sharp edges directed toward each other and situated equidistant from the center of the bore, said needle also having at one end of the slot and in line therewith a threading opening which is wider than the slot, said opening communicating with the bore and also communicating with the slot through a converging throat, and said needle further having at the other end of the slot an eye extending transversely therethrough, in combination with a threading finger separate from the needle and extending across the converging throat and the adjacent portion of the threading opening, said threading finger being resiliently held against the needle whereby when a thread or cord is drawn under said finger the portion of the cord beneath the finger will be forced in the threading opening and the converging throat and the needle may then be threaded by drawing the cord or thread longitudinally of the slot and into the bore and subsequently inserting the end of the thread through the eye.



1,689,414. TELEPHONE CABINET. EARL M. TRAMMELL, El Paso, Tex., assignor to El Paso Sash & Door Company, El Paso, Tex. Filed July 9, 1927. Serial No. 204,534. 1 Claim. (Cl. 312—113.)

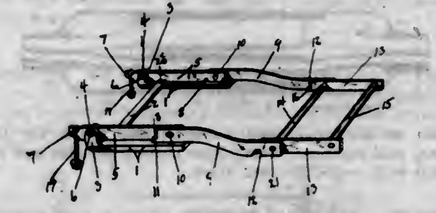
A telephone cabinet having a closet a shelf at the top of the closet to support a telephone outfit, a door hinged adjacent its lower end of the closet, said door having



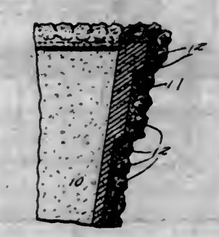
means to receive a telephone directory, said door being spaced materially both below said shelf and from the rear wall of the closet to accommodate a call box and permit access to the latter while the door is in closed position, a panel on the front of the closet normally closing the space between the shelf and door, and means for permitting said panel to be lifted upwardly and out of the cabinet.

1,689,415. COMPOSITE PAVING BLOCK. EDWIN C. WALLACE, Newton, Mass. Filed May 25, 1926. Serial No. 111,524. 8 Claims. (Cl. 94—15.)

1. A paving block having a body of concrete and top and bottom coverings of rubber material, said top and bottom coverings provided with devices for securing them to the concrete body, and a member connected with the said top and bottom coverings and passing through the said body to additionally secure the top and bottom coverings, the said member having a widened portion within the said body to secure the said member in place.



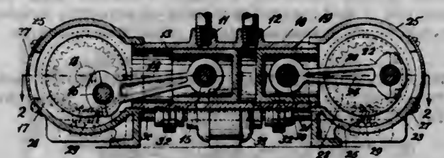
1,689,416. CARRYING CASE AND PORTFOLIO. ORVAL R. WOOD, Seattle, Wash. Filed Nov. 16, 1925. Serial No. 69,492. 2 Claims. (Cl. 224—47.)



1. A carrying case embodying compartments for a purse, pencil, and note pad mounted on the inside face and a carrying handle mounted on the outside face of the top closure; a book holder extensible from a side closure and foldable thereon to lie within the limits of the closure; a book cover mounted on the inside of the bottom closure, and defining a space for a third book; and means extensible from a second side closure for the support of the extensible book holder.

1,689,417. VEHICLE LOADING DEVICE. FREDERICK W. YELLS, Geneva, N. Y. Filed May 3, 1927. Serial No. 188,462. 5 Claims. (Cl. 214—84.)

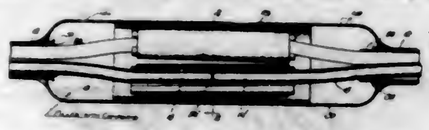
1. In a device of the class described, a base section, a rear section pivotally mounted thereon, an intermediate section pivotally mounted on said rear section, a front section pivotally mounted on said intermediate section, means attached to the vehicle for locking said sections one to the other in longitudinal alignment and in substantially the plane of the floor of the vehicle, means for removably affixing said rear section to the floor of a vehicle, and means for folding said sections one upon the other.



1,689,418. METHOD OF ORNAMENTING FLOWER-POTS. FRANK W. YOUNG, Crown Point, Ind. Filed Apr. 12, 1927. Serial No. 183,155. 1 Claim. (Cl. 41—36.)

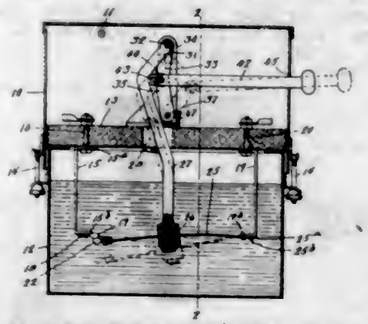
The method of ornamenting a flower pot of porous texture consisting in applying to the exterior surface and upper edge surface of the pot a plastic coating consisting of plaster of Paris, aluminum bronze and vinegar, then embedding a layer of cinders in the coating and finally firing the coating to produce an ornamental sheen surface at the exterior of the pot.

1,689,419. VALVELESS PUMP OR COMPRESSOR. WILHELM B. BRONANDER, Montclair, N. J., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Feb. 3, 1926. Serial No. 85,643. 7 Claims. (Cl. 103—166.)



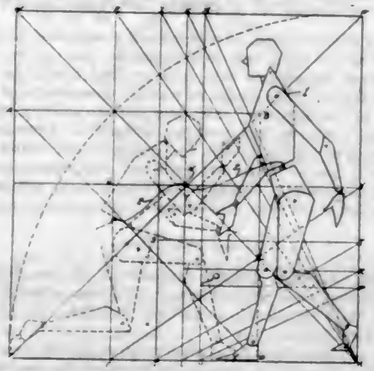
1. A valveless pump or compressor comprising a cylinder having an inlet port and an outlet port in its wall, two pistons working in said cylinder, and means for producing relative differential retreating movements of said pistons in the region of said inlet port to draw a charge into said cylinder, and relative differential approaching movements of said pistons in the region of said outlet port to expel a charge from said cylinder, said means including two crankshafts one at either end of said cylinder, a common drive for said crankshafts, and operative connections.

1,689,420. CABLE JOINT. NELSON E. BUCK, DENNEY W. ROPER, and ALEXANDER P. THOMS, Chicago, Ill. Filed Mar. 26, 1923. Serial No. 627,604. 11 Claims. (Cl. 173—268.)



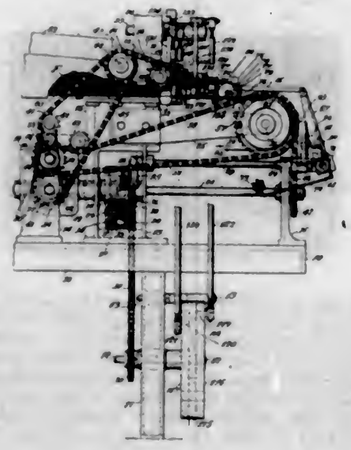
6. In a cable joint, in combination, a plurality of conductors, a plurality of separators individual to the conductors providing separate tubular passageways for said con-

ductors, said separators each having their surface in contact at a point with the surface of the adjacent separator inside the joint, all said contacting surfaces being sur-



faces of revolution, and an insulating filling for the joint, said separators comprising parts telescoped and rotated with respect to each other.

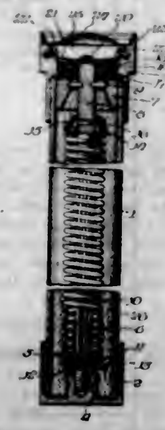
1,689,421. ELECTRIC SWITCH. GEORGE A. BURNHAM, Saugus, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed July 3, 1922. Serial No. 572,529. 2 Claims. (Cl. 200—153.)



1. In an electric switch, a supporting plate, a stationary switch member carried by and extended from said plate, a supporting member similar to said stationary switch member and carried by and extended from said plate, a spring arm secured to said supporting member and adapted to be reflexed against its own spring action into contact with said stationary switch member, a connecting rod connected with said spring arm and extended upwardly through said supporting plate, means to guide the upper end of said connecting rod for movement in substantially a straight line and means to operate said connecting rod whereby to flex said spring member against its own spring action into engagement with said stationary switch member including a toggle connected with the upper end of said connecting rod and an actuating member for said toggle having lost motion connection therewith.

1,689,422. EDUCATIONAL APPLIANCE. BHIMA BURTON, New York, N. Y. Filed Oct. 29, 1926. Serial No. 144,942. 8 Claims. (Cl. 35—16.)

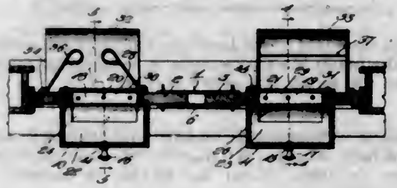
1. An educational appliance consisting of a combined diagram of geometrical figures based on the fundamental principles of dynamic symmetry and a figure associated therewith and having the various parts thereof constructed, proportioned and assembled according to the fundamental principles of dynamic symmetry.



1,689,423. FILLER FEED FOR SCRAP-BUNCH-CIGAR MACHINES. SIGURD CLAUSEN and CHARLES V. LINDBLAD, Brooklyn, N. Y., assignors to International Cigar Machinery Company, a Corporation of New Jersey. Filed May 17, 1927. Serial No. 192,053. 20 Claims. (Cl. 131—39.)

1. The combination with a density-measuring chamber, of means for feeding filler into said chamber, and means actuated by a wall of said chamber for stopping said feeding means when the filler in said chamber reaches predetermined density.

14. The combination with a density-measuring chamber, of a feed belt passing through the bottom of said chamber, and means for stopping said belt when the filler in said chamber reaches predetermined density.

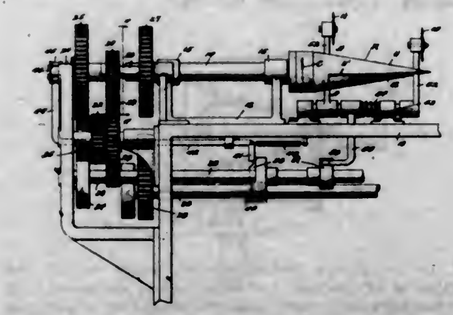


1,689,424. FUSE. NICHOLAS J. CONRAD, Wilmette, Ill., assignor to Schweitzer & Conrad, Inc., Chicago, Ill., a Corporation of Illinois. Filed May 17, 1926. Serial No. 109,814. 1 Claim. (Cl. 200—113.)

In a device of the class described, a pair of fuse terminals, a fuse element connected between them, a spring

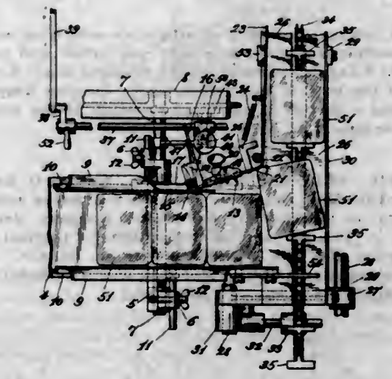
for moving one of said terminals away from the other when the fuse melts, a fluid tight casing for said element, said casing including a pair of external terminals and an intermediate glass tube within which the spring is disposed, a bath of arc extinguishing liquid in said casing, said arm extinguishing liquid comprising a halogen derivative of a hydrocarbon which is normally inert, but which, under the action of light, disintegrates and attacks the fuse, changing its capacity, said glass tube having embodied therein a substance which screens out the rays that tend to disintegrate the liquid, but permits sufficient visible light to pass therethrough to permit the position of the spring to be seen to determine whether the fuse has blown or not.

1,689,425. VENTILATOR. FRED DECELLE, Nashua, N. H. Filed May 10, 1927. Serial No. 190,255. 3 Claims. (Cl. 98—99.)



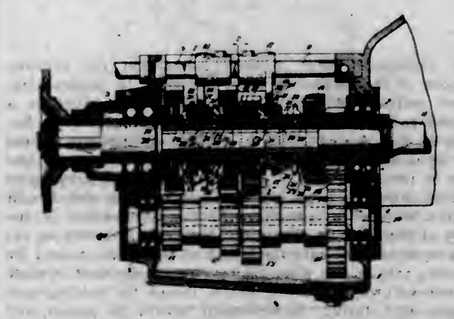
1. A ventilator comprising two sections adjustable with respect to each other and having openings therein, screens mounted over the openings, cylinders mounted on the sections, other cylinders arranged within the first cylinders, and movable with respect thereto and having openings adapted to communicate with the openings of the sections, funnel portions mounted on the first cylinders and communicating therewith and hoods arranged on the sections; one of which is provided with interior wings and the other of which is provided with a cut-out portion and being so constructed and arranged that they communicate with the openings in the sections.

1,689,426. DIFFERENTIAL COLORED FABRIC AND METHOD OF MAKING SAME. CAMILLE DREYFUS, New York, N. Y., and HERBERT PLATT, Cumberland, Md., assignors to Celanese Corporation of America, a Corporation of Delaware. Filed Aug. 13, 1927. Serial No. 212,832. 10 Claims. (Cl. 8—5.)



1. A fabric comprising yarn of a material other than cellulose having a design of cellulose material imprinted thereon.

1,689,427. MACHINE FOR MAKING PAPER CONES. CHARLES K. DUNLAP, Hartsville, S. C., assignor to Sonoco Products Company, Hartsville, S. C., a Corporation of South Carolina. Filed Nov. 1, 1926. Serial No. 145,609. 14 Claims. (Cl. 93—79.)

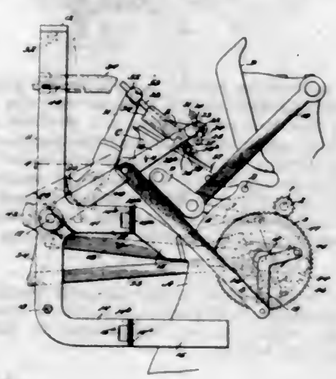


1. A substantially hollow conical mandrel comprising two relatively movable portions the outer surfaces of which normally define the conical mandrel surface, and means for retracting one of said portions within the other and replacing the same in normal position, said means including coaxial spindles, one secured to each portion of the mandrel, and mechanism for effecting relative axial movement of said spindles.

1,689,428. WRAPPING-MACHINE CONTROL. FRED FARMER, Brooklyn, N. Y., assignor to American Machine and Foundry Company, a Corporation of New Jersey. Filed July 31, 1926. Serial No. 126,187. 9 Claims. (Cl. 192—125.)

3. The combination with an inclined gravity feed chute, of a correspondingly inclined conveyor receiving articles from said chute and moving them in a direction substantially at right angles thereto, and machine-stopping mechanism automatically actuated only by a defective or misplaced article passing from said chute to said conveyor, said mechanism including an actuating member hinged to and forming a yielding section of one of the walls of said chute, and a conveyor wall hinged to the free end of said section.

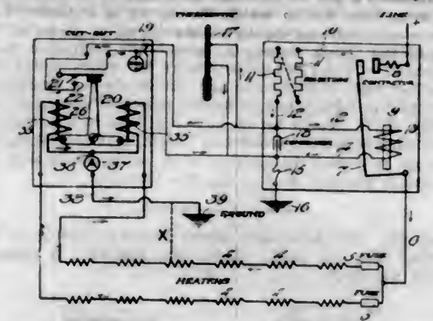
1,689,429. GEAR-LOCKING OR CLUTCH MECHANISM FOR GEAR-CHANGE SETS. CARLYLE B. FUNK, Chicago, Ill. Filed Apr. 20, 1925. Serial No. 24,574. 9 Claims. (Cl. 192—93.)



1. In a change-gear set of the type set forth, a shaft, a gear wheel rotatable relatively to said shaft, a clutch element rigid with said gear, a sleeve on said shaft, a clutch element non-rotatable relatively to the shaft and associated with said sleeve, said clutch elements movable relatively to each other longitudinally of said shaft and having opposed faces provided with radial formations adapted to intermesh, wedge-like cam-members pivotally associated with one of said clutch elements for forced engagement with the other thereof to effect intermeshing, and a member movable longitudinally of said shaft and of the clutch element carrying said cam members for actuating the latter.

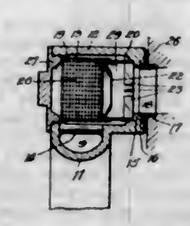
1,689,430. PACKAGE AND METHOD OF MAKING THE SAME. GEORGE W. GWINN, Hewlett, N. Y., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Apr. 26, 1927. Serial No. 186,659. 6 Claims. (Cl. 93—2.)

1. A package comprising an article, an underlying wrapper smoothly overlying one end of said article and overlying in a circular series of closely arranged pleats a portion of the body of said article, and a covering wrapper overlying a portion of the pleated portion of the underlying wrapper.



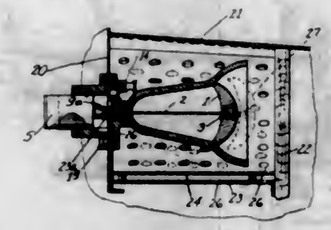
1,689,431. DELIVERY MECHANISM. WALTER O. HALL, Franklin, Mass., assignor, by direct and mesne assignments, to American Type Founders Company, Jersey City, N. J., a Corporation of New Jersey. Original application filed Feb. 26, 1923, Serial No. 621,438. Divided and this application filed June 12, 1924. Serial No. 719,673. 21 Claims. (Cl. 101—287.)

1. Automatic sheet delivery mechanism for printing presses of the oscillating type, including in combination, sheet gripping fingers mounted for reciprocation in a curved path extending from the face of the platen adjacent the tail edge of the sheet operated on to points outside the press, means for reciprocating said fingers in timed relation to the oscillation of said press, including a swinging member having a pivot below the path of the sheets, said means being adjustable whereby the termination of the path of the gripping fingers on the platen face may be varied in accordance with the length of the sheets, means for opening said fingers when they approach the limit of their movement away from the platen, means for holding said fingers open during the movement toward the platen, and means for releasing said holding means to permit said fingers to close on a sheet when said fingers approach the limit of their movement towards the platen.



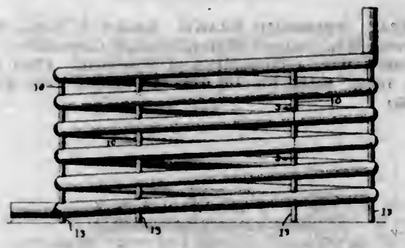
1,689,432. ELECTRIC HEATER SYSTEM. WILLIAM G. HARTWIG, Chicago, Ill. Filed Apr. 9, 1923, Serial No. 630,731. Renewed Feb. 25, 1927. 9 Claims. (Cl. 219—20.)

1. In a thermostatically constructed heater system for electric cars and the like, a plurality of heaters arranged in two parallel circuits, an electro-magnetically controlled contactor controlling the supply of current to said heaters, a thermostat normally controlling the circuit of said contactor, a normally open switch adapted to short circuit the thermostat when closed, means normally holding the



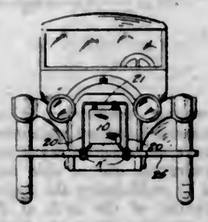
switch open, said means jointly controlled by the respective parallel heater circuits, whereby a short-circuit in either circuit will permit said switch to close.

1,689,433. CONDENSER CAGE FOR INTAKE MANIFOLDS. SAMUEL B. HARVEY, Wellston, Mo. Filed Sept. 3, 1925. Serial No. 54,174. 8 Claims. (Cl. 48—180.)



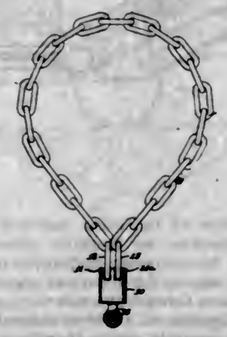
1. In a condenser cage for intake manifolds of internal combustion engines, a cylindrical tubular cage member having a section of wire mesh material and a section of imperforated material united as a unit, rods disposed at the outer end of the imperforated section and extending inwardly into the passageway formed by the tubular member and means disposed at the inner end of the section of non-wire mesh material for directing a central flow of gaseous mixture from the section of wire-mesh material through the section of imperforated material for direct impingement against said rods.

1,689,434. AUTOMOBILE THEFT-ALARM SYSTEM. HARRY C. HAY, Cincinnati, Ohio, assignor, by mesne assignments, to The Crim, Wadsworth & Thiel Auto Theft Alarm Development Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 21, 1926. Serial No. 103,622. 6 Claims. (Cl. 116—33.)



1. In an ignition locking system, means to lock the ignition in off position, and a bell casing connected with said locking system, said connection consisting of a clapper movable to a freely vibratory position in which exterior vibration will induce its vibration within said bell casing with the locking of the ignition.

1,689,435. HEAT-EXCHANGING COIL. EDWIN I. HEINSOHN, Cleveland, Ohio, assignor to The Glascote Company, Euclid, Ohio, a Corporation of Ohio. Filed Jan. 26, 1925. Serial No. 4,695. 8 Claims. (Cl. 137—75.)

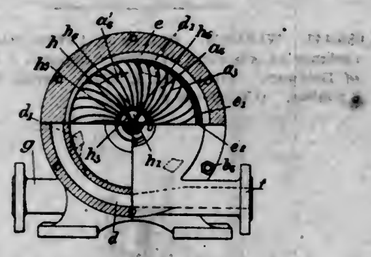


1. As a new article of manufacture, a glass-coated pipe coil comprising a plurality of convolutions formed from a single length of pipe and having glass-coated spacers between the convolutions and integrally united therewith.

1,689,436. WATER-BAG CARRIER. CHARLES S. HODGE, Seattle, Wash. Filed Feb. 23, 1927. Serial No. 170,147. 2 Claims. (Cl. 224—29.)

1. A water-bag carrier for an automobile, said carrier comprising a frame of substantially the shape of an inverted capital letter U, devices mounted upon the side elements of the frame, set screws engaging the devices for securing the devices in adjusted positions to the frame and securing the latter in a vertical position to the automobile, hooks depending from the bar element at the top of the frame for suspending the bag, hooks detachably engageable with the bottom of the bags, and springs connecting the last named hooks with said devices.

1,689,437. TIRE-CHAIN LOCK. EDWIN P. HUBD, Detroit, Mich. Filed Sept. 4, 1926. Serial No. 133,575. 6 Claims. (Cl. 70—17.)

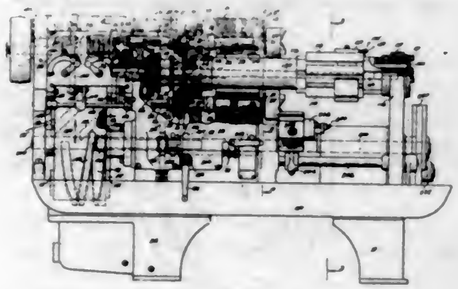


1. A lock comprising a casing provided with a pair of adjacent slots in one end thereof and adapted to receive the opposite end links of a chain, a rotary cam engageable within the said slots adapted to permit the entrance of one link at a time into said slots, and key controlled means for moving the said cam into engagement with the said end links.

1,689,438. TIRE COVER. ROSCOE B. JELLISON, Los Angeles, Calif., assignor to Parker and Waterman Manufacturing Company, Los Angeles, Calif. Filed Dec. 27, 1926. Serial No. 157,145. 5 Claims. (Cl. 150—54.)

1. A tire cover having one integral circular side member, a plurality of overlapping tread sections secured to the circular margin of said side, and a plurality of segments secured at their outer margins to said tread sections and forming a second side portion.

1,689,439. ROTARY AIR PUMP. FRANZ LAWACZECK, Munich, Germany, assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Sept. 29, 1926. Serial No. 136,352. 6 Claims. (Cl. 230—108.)



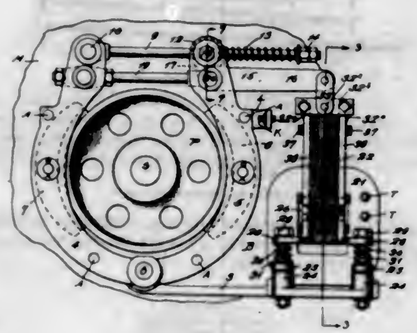
1. A rotary air pump comprising a casing, a runner having bladiug cells therein, a distributor for the supply and discharge of air to and from the runner, means for introducing fluid under pressure to the periphery of said runner for compressing and discharging the air from the runner and means for discharging the pressure fluid from the periphery of said runner for drawing in a further supply of air to be compressed, said pressure fluid constituting the sole means for rotating the runner.

1,689,440. CHUCKING MACHINE. ARTHUR J. LEWIS, Stratford, Conn., assignor to The Baird Machine Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 5, 1923. Serial No. 636,856. 36 Claims. (Cl. 29—38.)

1. In a machine of the class described, a supporting frame, a rotatable spindle carrying turret mounted in said frame, and a tool support extending through the turret and supported by the frame on opposite sides of the turret independently of the turret.

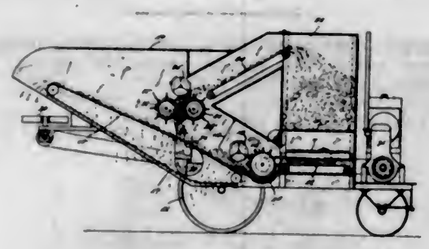
24. In a machine of the class described, a plurality of work spindles, drive shafts for said spindles, clutch connections between the shafts and spindles, a bracket, a rotat-

able sleeve mounted on said bracket, a ring or flange mounted on said sleeve and having connection with said shafts, and coacting cam means carried by said sleeve and flange arranged upon rotation of the sleeve to disconnect said clutch connections.



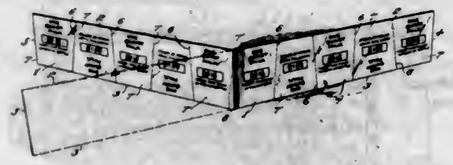
35. In a machine of the class described, a supporting frame, a rotatable turret mounted in the frame, a plurality of work spindles carried by the turret, driving shafts for the respective spindles mounted in the frame, detachable driving connections between the driving shafts and their corresponding spindles, a plurality of driving gears of different diameters on a shaft coaxial with the turret, a gear on each driving shaft meshing with one of said driving gears, means for disconnecting the driving connections between the shafts and the spindles, and means for indexing the turret.

1,689,441. WINDOW. CLAUDE A. LEWIS, Houston, Tex., assignor to American Window Company, a Corporation of Delaware. Filed July 6, 1926. Serial No. 120,599. 6 Claims. (Cl. 20—49.)



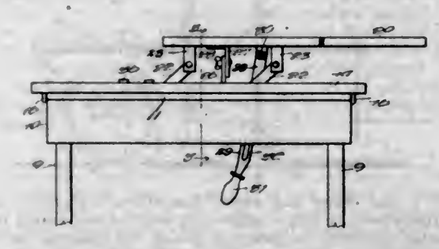
1. A window including a casing, a lower sash, laterally projecting pins thereon, an upper sash, plates at the lower end of said upper sash removably engaging said pins, said upper sash being adapted to swing on said pins, and means on said plates co-operating with said casing to hold said plates on said pins, while said sash is swung to a horizontal position.

1,689,442. SOLENOID BRAKE. GEORGE J. LEXA, Wauwatosa, Wis., assignor to Harnischfeger Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 14, 1926. Serial No. 101,971. 25 Claims. (Cl. 175—336.)



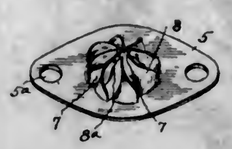
1. An electro-magnet comprising a solenoid, a core member and an armature member associated therewith and mounted for relative movement toward one another when the solenoid is energized, one of said members being resiliently mounted to yield under the impact, of the other and to move laterally of the path of flux through the solenoid, to magnetically cushion the force of the impact.

1,689,443. COMBINATION COTTON HARVESTER. WALLACE F. MACGREGOR, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed Mar. 22, 1927. Serial No. 177,409. 7 Claims. (Cl. 19—38.)



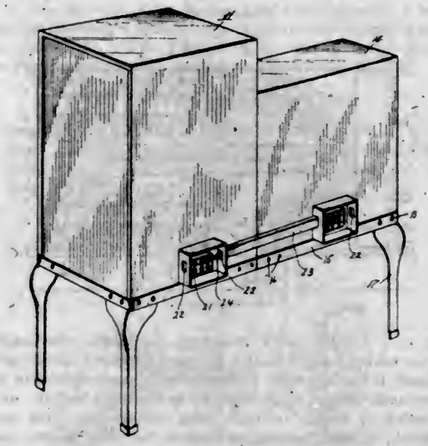
1. In a machine of the class described, a separator, means in the separator for breaking cotton bolls, means in the separator for conveying gathered cotton to the boll breaking means, means for conveying material from the boll breaking means through the separator, means for producing and discharging an air blast through the material in its travel to separate cotton therefrom, means intercepting the traveling material and gathering cotton lint therefrom, and means for conveying the cotton lint from the gathering means to a point of discharge.

1,689,444. ORDER TICKET OR COUPON. CHARLES MANSHEL, Newark, N. J. Filed Mar. 26, 1925. Serial No. 18,439. 3 Claims. (Cl. 283—51.)



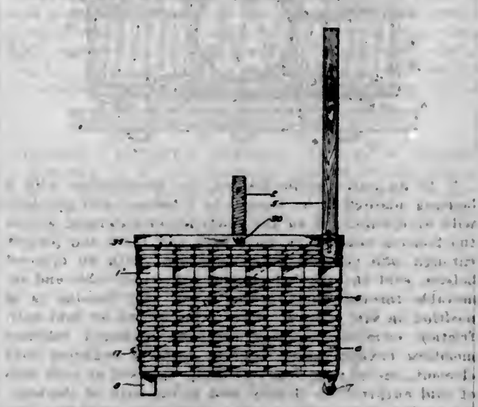
1. As a new article of manufacture, a sheet of paper or cardboard, having printed thereon a multiplicity of legends in spaced apart units, said sheet having edges and scorings defining a separable wedge-shaped outline for the space of each of said units.

1,689,445. IRONING BOARD. LEWIS E. MERRIMAN, Salina, Kans., assignor to The Merriman Manufacturing Corporation, Fort Wayne, Ind., a Corporation of Indiana. Filed June 23, 1924. Serial No. 721,765. 6 Claims. (Cl. 68—10.)



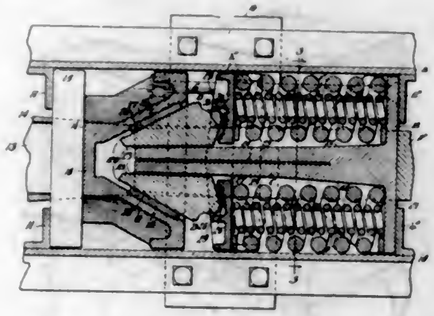
1. The combination with a support, of an ironing-board movable between a lowered position and an elevated position, links having permanent pivotal connections with different portions of the support and with different portions of the board, said links being movable between lowered positions and raised inclined positions beyond the transverse vertical planes passing through the pivots that connect the links with the support, and a stop for supporting the board in its elevated position and limiting the swinging movement of the links.

1,689,446. MIXING DEVICE. WILLIAM H. MILLER and HENRY G. THOMPSON, Cleveland, Ohio. Filed Dec. 5, 1921. Serial No. 519,941. 3 Claims. (Cl. 48—180.)



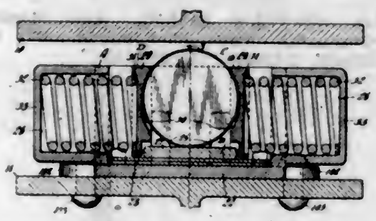
1. A mixing device comprising a base plate adapted to be secured between the sections of conduit, said plate having an opening, a plurality of vanes surrounding said opening and extending over said opening, each vane being attached at one end to the base, said vanes being of spiral shape and each having its other end adjacent and in the same vertical plane as the vertical axis of the opening in the base.

1,689,447. REVERSIBLE STOVE. LEWIS MOORE and CLAUDE M. DIBBLE, Joliet, Ill., assignors to Moore Brothers Company, Joliet, Ill., a Corporation of Illinois. Filed Nov. 2, 1925. Serial No. 66,243. 8 Claims. (Cl. 126—39.)



1. A stove, comprising a combined oven section and a burner box section, said sections being formed for reversible adjacent arrangement, and means arranged at the opposite sides of each section for securing adjacent faces of said parts together to combine the sections into a unitary stove construction, said means being also adapted for attaching supporting legs to said sections.

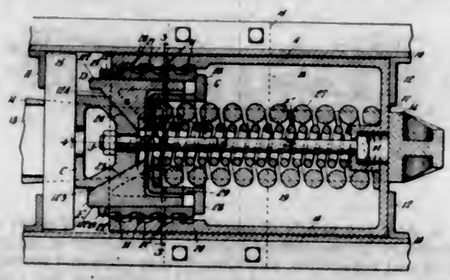
1,689,448. SHOPPING BASKET. ANNA MOYNAHAN, Cleveland Heights, Ohio. Filed Mar. 30, 1927. Serial No. 179,430. 2 Claims. (Cl. 280—51.)



1. In a basket receptacle comprising a basket body and an intermediate carrying handle, of a pair of rollers for supporting the basket when used as a vehicle affixed to the underside of the basket, and a propelling substantially inverted U-shaped handle pivoted to the basket adjacent an upper end portion thereof and adapted to be swung to either of two alternative positions, in one of which positions the handle embraces the basket exterior and in the other position the handle is upright and disposed above the basket at an end thereof, and means to secure the handle in the last named position, whereby it may be grapsed and adapted to communicate propelling means to the basket when supported on its rollers, said rollers being disposed below the end walls of the basket and within a continuation of the plane of any lateral side wall thereof.

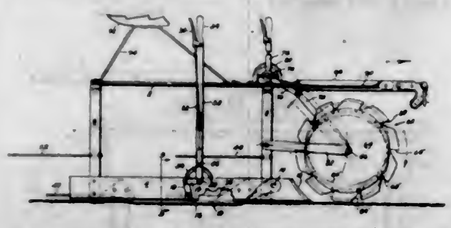
1,689,449. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 30, 1925, Serial No. 5,656. Renewed Mar. 30, 1928. 10 Claims. (Cl. 213—36.)

1. In a friction shock absorbing mechanism, the combination with a longitudinally disposed friction element, said element being laterally yieldable and compressible to an appreciable extent to provide for preliminary action; of a plurality of wedge friction shoes cooperating with said element; a main spring resistance for said shoes; and wedge pressure transmitting means cooperating with said shoes.



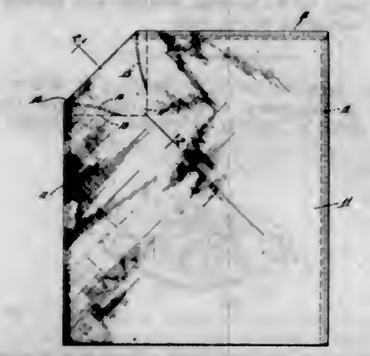
1,689,450. ANTIFRICTION BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 5, 1926. Serial No. 86,161. 4 Claims. (Cl. 308—226.)

3. In an anti-friction bearing, the combination with a housing adapted to be secured to a bolster, and provided with an opening; of an anti-friction roller element within the housing adapted to move back and forth and project through said opening into engagement with an opposed bolster, said anti-friction element being insertable and removable through said opening when said housing is in position on said bolster; of centering means for said anti-friction element including centrally arranged follower members having curved bearing surfaces engaging said element, one of said members being disposed at each side of said anti-friction element and in the path of the bearing surface thereof; means on said housing providing centrally disposed pockets telescopically receiving said members; means yieldingly opposing movement of each member independently, said members being adapted to be forced apart against said yielding means to effect removal of the roller through said opening.



1,689,451. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 27, 1927. Serial No. 164,011. 9 Claims. (Cl. 213—24.)

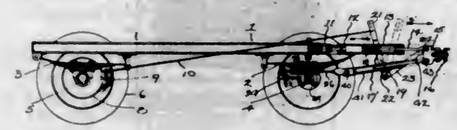
In a friction shock absorbing mechanism, the combination with a spring cage; of liners within the cage and having limited longitudinal movement with respect to the cage less than the full compression stroke of the mechanism; an anti-friction mounting for said liners; friction



means adapted for relative movement with respect to said liners; and spring resistance means opposing movement of the liners and friction means inwardly of the cage.

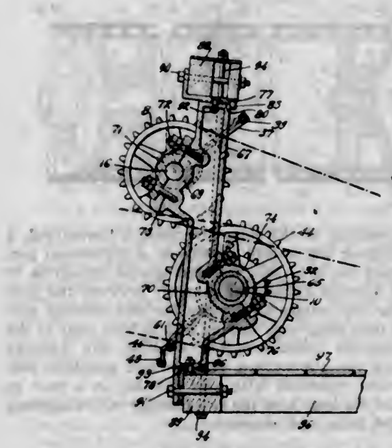
1,689,452. VINE CUTTER AND WEEDER. WALTER H. PHILLIPS, Modesto, Calif. Filed Sept. 25, 1926. Serial No. 137,662. 7 Claims. (Cl. 55—60.)

1. A vine cutter and weeder comprising a plurality of cutting knives, a frame supporting said cutting knives in mowing position, supporting means for guiding said frame along the ground, said supporting means comprising pivoted runners, means for adjustably raising and lowering said runners relative to said frame, and auxiliary means for adjustably raising or lowering any one of said cutting knives relative to the frame.



1,689,453. SELF-CLOSING BAG. LE MOINE F. RANDOLPH, Chicago, Ill. Filed Oct. 23, 1924. Serial No. 745,318. 1 Claim. (Cl. 150—9.)

A self closing bag comprising a sheet of fabric folded upon itself and secured at its side and top edges, one corner of the bag structure being left free and folded inwardly to present two contiguous fabric walls terminating in loosely lying pointed flap portions, and two converging lines of stitching securing said inturned corner walls together to form a funnel shaped filling opening,

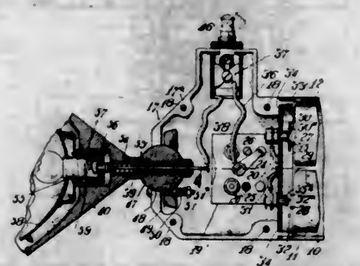


said lines of stitching terminating short of said loosely lying flap portions, whereby when the bag is filled said flap portions tend to cling to one another and obstruct the filling aperture to materially aid in preventing the escape of the contents of the bag.

1,689,454. DRAWBAR. ADAM A. RECTOR, San Francisco, Calif., assignor to Rectobar Manufacturing Company, Reno, Nev., a Trust Association. Filed Apr. 29, 1926. Serial No. 105,340. 4 Claims. (Cl. 280—33.55.)

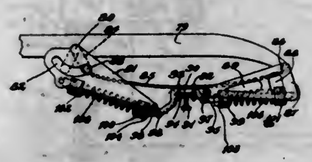
1. A draw bar and steering apparatus for vehicles comprising, in combination, a pair of slidably related bars each having the free ends thereof universally connected to a pair of independent vehicles, said bars having a limited sliding movement relative to each other; a steering apparatus on one of the vehicles; means to telescopically connect said steering apparatus to the other of the vehicles; and a lever pivoted at one end of the slidably related bars and having the telescopic means guided therein and pivoted at its other end to the other of the vehicles, to hold said bars and means together in all lateral movements.

1,689,455. DRILLING APPARATUS. WARREN A. ROSS, Long Beach, Calif., assignor of one-fourth to Donald M. Carter, Chicago, Ill., and one-fourth to Truman O. Boyd, Long Beach, Calif. Original application filed Feb. 11, 1927, Serial No. 167,567. Divided and this application filed Aug. 8, 1927. Serial No. 211,372. 5 Claims. (Cl. 254—187.)



1. A draw works comprising a shaft, a plurality of metal bearing supporting members provided with bearings for the shaft, top and bottom members connecting the bearing supporting members and aligning members separate from the bearing-supporting members and removably connected therewith and with said top and bottom members.

1,689,456. METALLURGICAL PRODUCT AND PROCESS OF PRODUCING SAME. EMIL SCHÜZ, Leipzig-Grosszschocher, Germany, assignor to the Firm Meier & Weichelt, Leipzig-Lindenau, Germany. Filed Nov. 3, 1925, Serial No. 66,662, and in Germany May 13, 1924. 6 Claims. (Cl. 148—1.)

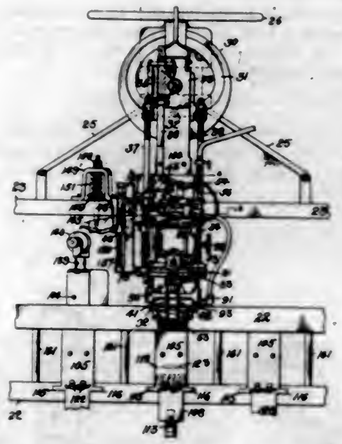


4. The process of producing grey iron comprising melting iron having a high silicon content and rapidly cooling the same, the silicon content being chosen in proportion to the chosen rate of cooling.

1,689,457. ELECTRIC LAMP. JOHN W. SENGER, JAMES REED, and THOMAS EUGENE MOORHEAD, Cleveland, Ohio. Filed Mar. 1, 1926. Serial No. 91,460. 8 Claims. (Cl. 240—10.5.)

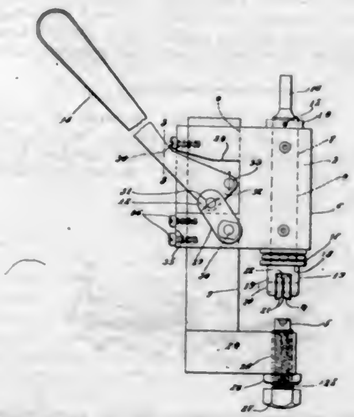
1. In a portable electric lamp the combination with a light producing element having a grounded connection, of a body casing, a plurality of sources of electric energy in said casing, a closure for said casing, a partition of insulating material positioned across said closure member and means for selectively connecting any one of said sources of electric energy with the light producing means, comprising spring pressed contact members carried by said insulating partition and engaging a contact of each of said sources, a switchboard having a plurality of contact plugs thereon, electric conductors connecting said plugs with said spring contacts, a switch for selectively engaging any one of said contact plugs, and an electric conductor leading from the switch to said light producing means.

1,689,458. VEHICLE SPRING. SUMNER S. SHEARS, Brooklyn, N. Y., and EDGARTON ROLAND WILSON, Peterboro, Ontario, Canada; said Wilson assignor to said Shears. Filed Nov. 18, 1922. Serial No. 601,823. 9 Claims. (Cl. 267—28.)



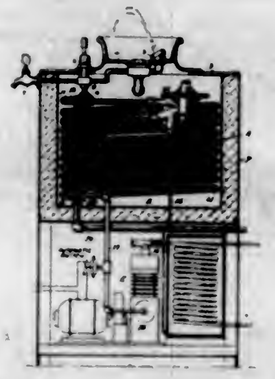
1. Vehicle springs comprising flexible metal supports secured to the vehicle frame and axle, bell crank levers fulcrumed to the vehicle frame, pivoted links connecting said levers to the axle, and coil springs pivotally connected to the levers and axle to carry the vehicle load.

1,689,459. HEEL-BUILDING MACHINE. WILLIAM E. SMALL, Brooklyn, N. Y. Filed June 19, 1925. Serial No. 38,190. 29 Claims. (Cl. 12—50.)



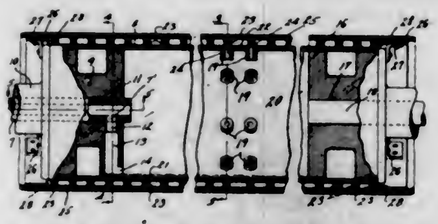
1. The combination in a heel building machine, of a pair of members, one being movable with respect to the other, receiving units on said movable member for lifts

of heels to be built and each including a key element for centering the respective lifts, a movable frame carried by the other member, means for advancing the movable member to dispose the various receiving units successively



beneath the frame, means carried by the frame for pressing each lift on the key of the unit therebeneath, and a power element for actuating said frame to move it toward and away from each receiving unit.

1,689,460. RIVET-SPINNING ATTACHMENT. WALTER STUMPF, Baltimore County, Md., assignor to The Black and Decker Manufacturing Company, Towson, Md., a Corporation of Maryland. Filed Nov. 6, 1925. Serial No. 67,264. 4 Claims. (Cl. 78—48.)



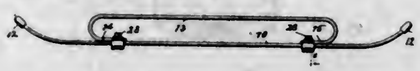
1. A rivet spinning attachment for a portable, power-driven, rotary tool, the attachment consisting of a spindle having one end adapted to be connected to a rotary portion of the tool the other end being adapted to support a rivet spinning bit, a work support, a sliding bar on which said support is mounted in alignment with the spindle, a bearing for the sliding bar parallel to the spindle, means including a thrust bearing mounted on the spindle supporting said bearing for the sliding bar, and means for actuating the sliding bar to compress the rivet between the work support and the tool.

1,689,461. APPARATUS FOR COOLING LIQUIDS. HALSEY W. TAYLOR, Warren, and JAMES T. SMITH, Cleveland, Ohio; said Smith assignor to The Halsey W. Taylor Company, Warren, Ohio, a Corporation of Ohio. Filed June 30, 1927. Serial No. 202,553. 8 Claims. (Cl. 62—141.)

1. An apparatus for cooling drinking water, comprising a chambered body having a drinking fountain at its top, and a cooling coil confined within said chambered body comprising two pipes sleeved one within the other and spaced apart to provide a water passage having an outlet connected to said drinking fountain, the inner pipe having intake and outlet connections at its opposite ends for a refrigerating fluid.

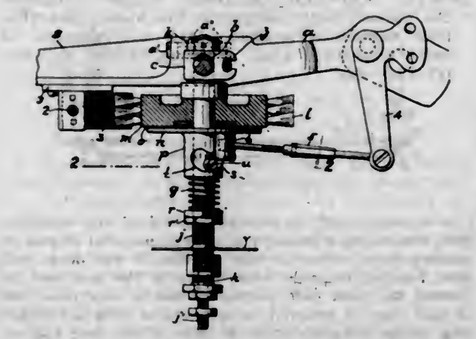
1,689,462. CONDENSATION EXHAUSTER FOR IRONING MACHINES AND THE LIKE. CLARENCE E. TROTTER and FORREST J. COUCH, Cincinnati, Ohio, assignors to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 23, 1927. Serial No. 208,019. 4 Claims. (Cl. 68—9.)

1. In a machine of the class described, a heated bed, a rotatable ironing roll spaced therefrom, a cylindrical pervious padding encasing said roll and spaced therefrom to provide an annular cylindrical chamber between the padding and the roll, supporting means for said padding providing openings completely around and at both ends of the roll to establish communication between the annular chamber and the atmosphere, and air and moisture conducting means connected with said chamber in a zone at the center of the length of the roll through which air may be exhausted from said chamber.



1,689,463. METAL ROLLING. JOHN B. TYTUS, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Apr. 8, 1925. Serial No. 21,661. 14 Claims. (Cl. 29—18.)

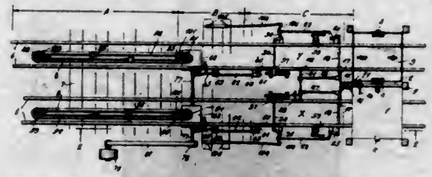
14. A continuous process of sheet rolling which consists in passing a heated pack through successive stands of rolls for single engagement by each stand, passing the pack through a furnace between two at least of said stands, and manipulating the pack to separate and align the pieces forming the pack with each other and with the



line of feed from stand to stand, in the open intermediate the furnace and at least one of the stands between which the furnace lies.

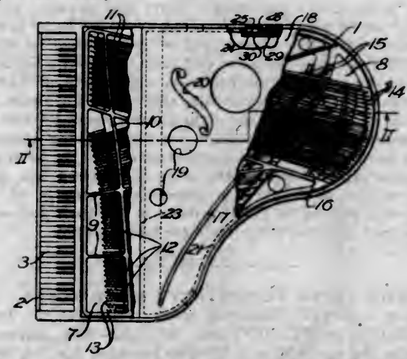
1,689,464. AUTOMOBILE BUMPER. GEORGE W. VEALE, Cleveland, Ohio, assignor to The Eaton Axle & Spring Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 16, 1928. Serial No. 247,109. 6 Claims. (Cl. 293—55.)

6. As a new article of manufacture, a clamping device comprising a stamped sheet-metal member provided with a pair of marginal flanges, each of which has an extension projecting between said flanges, a nut on the interior of said member engaging said extensions, and lugs on said extensions bent around said nut to secure it to said extensions.



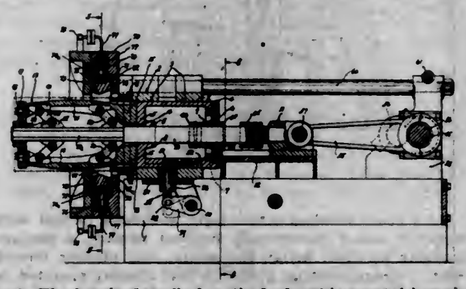
1,689,465. LOOPER FOR HOSIERY. MYER L. VICTORIUS, New York, N. Y. Filed Dec. 14, 1923. Serial No. 680,618. 3 Claims. (Cl. 112—26.)

1. In a thread end removing device for looping machines, a support adapted to be connected to the looping machine, a brush carried by the support, a comb carried by the support and in engagement with the brush, means for oscillating the brush, a guard pivotally secured to the support and adapted to overlie the brush, and means carried by the guard and adapted to bear on the rotating table of the looping machine whereby the guard will be supported.



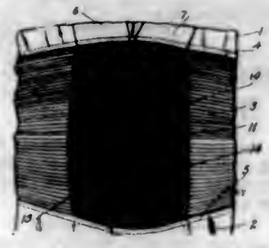
1,689,466. CAR-CAGING DEVICE. THOMAS E. WEETHEE, Dacono, Colo., assignor of one-half to The Consolidated Coal and Coke Company, Denver, Colo., a Corporation of Colorado. Filed Sept. 15, 1927. Serial No. 219,665. 7 Claims. (Cl. 214—126.)

1. A caging device comprising, in combination, a pair of interconnected cages adapted to move simultaneously, in opposite direction, between vertically separated levels, two spaced tracks on the lower level, said tracks being adapted to support a plurality of cars, a car stop associated with each track, means operated by the downward movement of each cage for moving the stop associated with the corresponding track to inoperative position whereby a car is permitted to pass along the track towards the cage, means operated by the car as it moves towards the cage for moving the stop to operative position and means



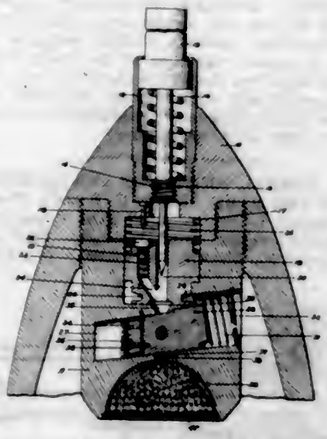
operated by the car as it moves towards the cage for rendering the cage controlled stop operating means inoperative for again removing the stop until the other cage has been at its lowermost position.

1,689,467. GRAND PIANO. WALTER WEISER, Chicago, Ill. Filed Apr. 30, 1927. Serial No. 187,732. 6 Claims. (Cl. 84—189.)



2. In a grand piano of the type described, a casing having openings in the rim thereof, a sound box mounted therein having openings in the top sound board thereof and a plurality of openings in the rim registering with the openings in the case rim, slotted screens mounted in the case rim openings, shutters slidably mounted in the sound box to permit regulation of the registering openings in said sound box rim and in the piano case rim, and means connected with said shutters projecting through said slotted screens to permit the shutters to be adjusted from the exterior of the piano case.

1,689,468. BARREL, METHOD OF AND MACHINE FOR MAKING THE SAME. HARRY C. WILCOX, West Allis, Wis., assignor to Pressed Steel Tank Company, West Allis, Wis., a Corporation of Wisconsin. Filed Jan. 13, 1927. Serial No. 160,828. 37 Claims. (Cl. 113—48.)



1. The herein described method of making metal barrels which consists of expanding the central portion of an open ended metal shell beyond the original diameter thereof and reducing it at its end portions to less than the original diameter.

1,689,469. GARMENT. CLAIR G. WRIGHT, Kansas City, Mo., assignor to Ely & Walker Dry Goods Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 15, 1925. Serial No. 2,569. 1 Claim. (Cl. 2—78.)

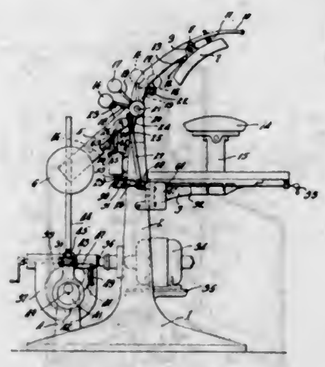
In a garment comprising a shirt and drawers and a band connecting the shirt and drawers, the band having its wales extending transversely of the garment to afford elasticity between the shirt and drawers, a strip approximately the width of the band spanning the band, having its ends connected with the shirt and with the drawers and having its edges free, the strip having its wales extending parallel with those of the band and having diagonal cross threads permitting limited expansion of the band and whereby expansibility of the strip is rendered less than that of the band, thereby preserving elasticity of the band and tending to permit return of the band and strip to normal position after each stretching action.

1,689,470. BORE SAFETY DEVICE FOR FUSES. ARTHUR ADELMAN, Chesaning, Mich. Filed Feb. 20, 1925. Serial No. 10,564. 13 Claims. (Cl. 102—39.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

1. A fuse including a fuse body, said body formed with a cavity and a transversely inclined passage, a plunger movably mounted within the cavity, said plunger formed with a circumferential groove, a bolt slidably mounted in the passage, a hooked extension on said bolt for engaging the groove of the plunger, a firing element carried by the bolt, and a centrifugally moving locking member whose center of gravity is shifted on set back, to permit functioning to release the bolt.

1,689,471. ILLUMINATED MIRROR, ALBUM, AND CLOCK. JOHN A. ANDRUSIS, Brooklyn, N. Y. Filed Jan. 27, 1928. Serial No. 249,977. 4 Claims. (Cl. 240—4.)

1. A device of the class described comprising a mirror having openings formed therein by removing portions of the coating, one of these openings forming a clock dial, pictures placed in the other openings, a clock attached to the mirror and having its arbors passing through the dial portion thereof with the hands on the arbors arranged in front of the dial part and means at the rear of the mirror for illuminating the dial and pictures.

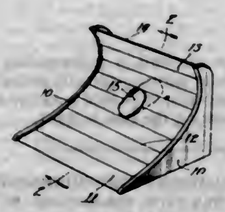


1,689,472. METALLIC CAR DOOR. ALLAN S. BARROWS, Los Angeles, Calif., assignor to The Youngstown Steel Door Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 1, 1925. Serial No. 59,753. 8 Claims. (Cl. 189—46.)

1. A sheet metal car door having a door edge construction, comprising a plurality of plies of material of greater number than the main body portion of the door, said plies forming the edge construction of the door and including the main body portion as one of said plies, one of said plies of material being provided with a corrugation spaced inwardly from the edge of the door and extending along said door adjacent said edge; and a reinforcing edge member of angular formation secured to the door along that portion located outwardly of said corrugation and extending substantially parallel with said corrugation, said angular member having an angular portion extending outwardly substantially at right angles to the main body portion of the door, and another angular portion secured to and lying flatwise against the face of the door.

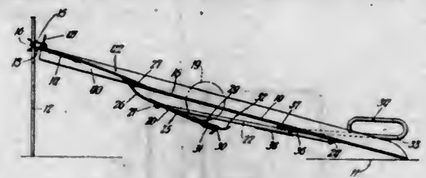
1,689,473. PRESSING MACHINE. BLUFORD W. BROCKETT, Cleveland Heights, Ohio, assignor, by direct and mesne assignments, of one-half to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio, and one-half to United States Hoffman Machinery Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 29, 1926. Serial No. 84,655. 3 Claims. (Cl. 68—9.)

1. A pressing machine comprising a stationary work support, a head and head lever structure counterbalanced to be free of any normal tendency to move to closed or open position, operator energized motor means capable of energization by the operator independently of head movement and arranged for actuation by the operator to be made effective upon the head for closing the press, and power



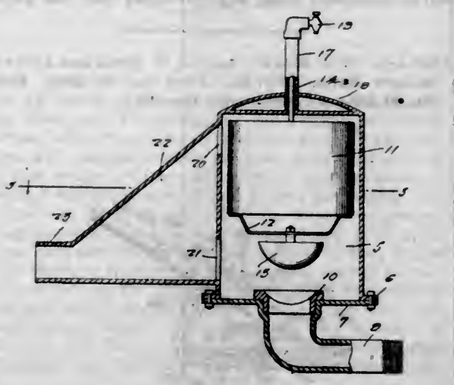
means including a controller operatively connected to said head, said power means being effective upon said head for producing final heavy pressure when the press is closed.

1,689,474. CUTTING TOOL FOR LATHES, PLANERS, ETC. WALTER BROWN, Toledo, Ohio. Filed Dec. 12, 1921. Serial No. 521,603. Renewed June 18, 1928. 3 Claims. (Cl. 29—98.)



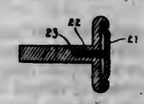
1. The combination with a tool holder member having a tapering socket, of a removable cutting tool member having a correspondingly tapered shank for frictionally engaging said socket, and an integral cutting portion extending transversely of said shank, one of said members having a series of angularly arranged recesses and the other member having a projection alternatively engageable with said recess to angularly position the cutting tool with respect to said holder.

1,689,475. PUTTING GAME. WILLIAM C. BRUMDER, Milwaukee, Wis. Filed July 31, 1922. Serial No. 578,661. 5 Claims. (Cl. 273—36.)



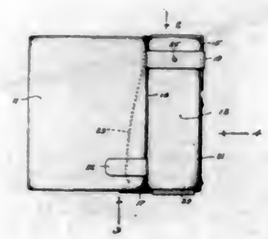
1. Game apparatus of the character described comprising a runway having an upwardly inclined portion and a recurved portion joining said upwardly inclined portion, and a pocket in said runway above the bottom of said inclined portion.

1,689,476. BALL-RETURNING GOLF APPARATUS. WILLIAM C. BRUMDER, Milwaukee, Wis. Filed Aug. 15, 1923. Serial No. 657,529. 7 Claims. (Cl. 273—36.)



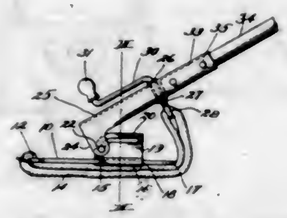
1. In a ball returning golf apparatus of the character described, an inclined runway having an opening therein, said opening being adapted to receive a golf ball rolled along said runway, means for supporting said ball within said opening, and means for ejecting said ball from said opening to return it to the players.

1,689,477. AIR TRAP FOR PIPE LINES. ISAAC LEONIDAS CAPERS, Eastland, Tex., assignor to Charles Edgar Capers, Amarillo, Tex. Filed Sept. 7, 1927. Serial No. 218,085. 1 Claim. (Cl. 137—68.)



In an automatic cut off for pipe line comprising an air trap having a trap chamber provided with an air discharge port in its upper end, a pipe line connection at its lower end, a pair of intake ports one adjacent each end, an offset formed at one side of the trap adapted to provide communication between the supply tank and each of said intake ports, a float arranged in the chamber, a valve carried at its upper end controlling communication with said air discharge port and a valve at its lower end controlling communication with said pipe line, said valve being disposed for opposite actuation upon the opposite movement of the float, said air discharge port also being provided with the manually operable valve permitting closure thereof under certain predetermined conditions.

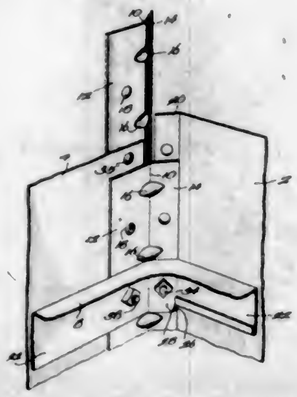
1,689,478. ATTACHMENT FOR DENTAL BRIDGE-WORK. HERMAN E. S. CHAYES, New York, N. Y., assignor to Chayes Dental Instrument Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 17, 1924. Serial No. 756,410. 12 Claims. (Cl. 32—12.)



5. A T-head attachment for the purpose set forth, having a separate wear plate removably carried on the outer face of the head.

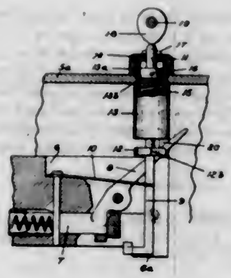
1,689,479. ATTACHABLE MATCH BOX. DONALD V. CONKLIN, Alhambra, Calif. Filed Jan. 24, 1927. Serial No. 162,958. 5 Claims. (Cl. 206—31.)

1. In an attachable match box: a match receptacular element; a metallic frame secured thereabout; and means for removably securing said frame to a package of cigarettes comprising a back plate carrying an outwardly and downwardly dependent finger and rearwardly bent side plates.



1,689,480. MOP HEAD. SAMUEL W. FRIES and ERVIN E. MALOTT, Kansas City, Mo. Filed Mar. 29, 1926. Serial No. 98,212. 4 Claims. (Cl. 15—120.)

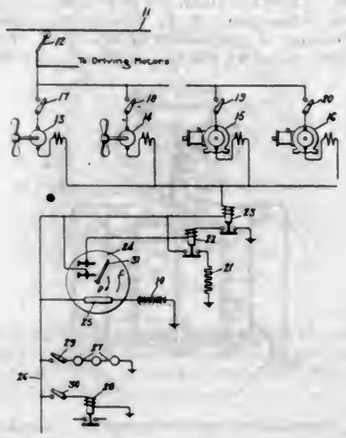
1. A mop and wringer structure comprising a mop head frame having a bracket element, a ferrule member having a connection slidingly engaging said bracket element and permitting said frame to swing into depending relation to said ferrule at one of the limits of said sliding movement, means preventing relative sliding movement of said ferrule and bracket elements at the other limit of said movement, a mop cloth attached to said frame, and a wringer device journaled in said ferrule and also attached to said mop cloth and operative to wring the same when said frame is in depending position.



1,689,481. SHELVING. CLARENCE E. GEBBERICH, Aurora, Ill., assignor, by mesne assignments, to Lyon Metal Products, Incorporated, Aurora, Ill., a Corporation of Illinois. Filed Jan. 15, 1927. Serial No. 161,303. 15 Claims. (Cl. 211—136.)

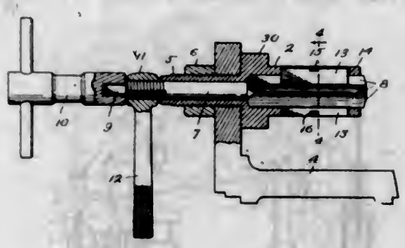
1. A plurality of connected unit stacks of rectangular shape, the adjacent corners of the connected stacks each having a vertical corner strip providing flanges disposed at an obtuse angle, corresponding flanges being arranged back to back with a common stack plate therebetween, said flanges, plate and shelf members of each stack being fastened together by means passing therethrough, the other flanges extending flaringly outwardly to form beveled corners and an exterior plate having a flange overlapping the flaring flange of each strip and fastening means passing through said overlapping flange, the flange of the strip, and

through a shelf member of such beveled corner, said fastening member last mentioned lying within the planes of projection of the exterior plates of adjacent stacks.



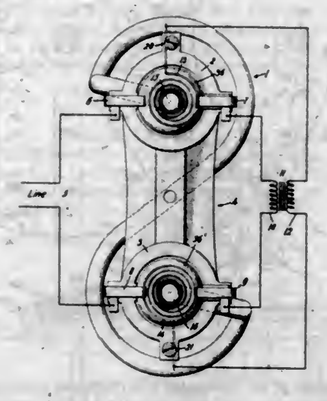
1,689,482. MACHINE-GUN UNIT. SAMUEL G. GREEN, Gray, Ga. Filed Jan. 18, 1926. Serial No. 82,121. 20 Claims. (Cl. 89—27.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

16. In a machine gun unit, a reciprocating sear, a rectilinearly movable sear actuator directly engaging the sear, a cam member engageable with said actuator and a motor driven shaft for rotating the cam member.



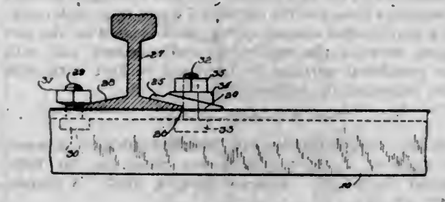
1,689,483. STORAGE-BATTERY-CHARGING SYSTEM. WILLIAM S. H. HAMILTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 25, 1925. Serial No. 11,552. 10 Claims. (Cl. 171—313.)

1. A charging system for an electric storage battery comprising a variable current charging circuit for the battery, automatic means responsive to the current in the said charging circuit, independently operable automatic means responsive to the condition of charge of the battery, and means jointly controlled by said automatic means for decreasing the charging current of the battery only when



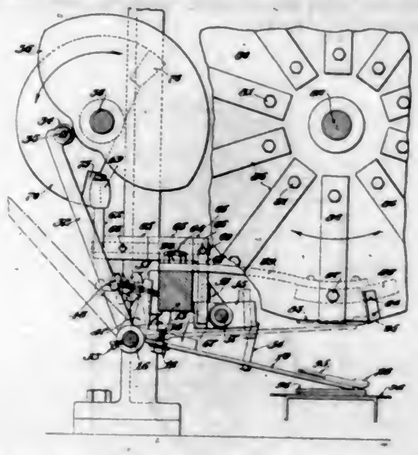
both the current in the charging circuit exceeds a predetermined value and the battery is charged to a predetermined condition.

1,689,484. EXPANDING MANDREL. WILBUR J. HEMPY, Kansas City, Mo. Filed July 6, 1925. Serial No. 41,709. 1 Claim. (Cl. 77—62.)



A device of the character described consisting of a tubular member having an axial shank adapted to be threaded in a support and provided with a peripheral shoulder for abutting one side of said support, a jam nut threaded upon said shank and adapted to abut the opposite side of the support and coact with said shoulder in holding the tubular member stationary, a rotary member extending through the axis of the tubular member and projecting from one end of the latter to receive a wrench whereby it can be rotated, peripheral ribs arranged within the tubular member and integral with and extending longitudinally of said rotary member, a longitudinal side of each rib being curved, blades bearing against said curved sides and adapted to be adjusted outwardly through guide slots in the tubular member when the rotary member is rotated in one direction, a handle including a lock nut threaded upon the projecting end of the rotary member and adapted to be adjusted into engagement with the adjacent end of the tubular member and coact with the adjacent ends of the ribs in locking said rotary member, and spring means for yieldably holding the blades in engagement with the ribs.

1,689,485. CURRENT-SUPPLY SYSTEM. WILLIAM F. HENDRY, Ossining, N. Y., assignor to Manhattan Electrical Supply Company, Inc., a Corporation of Massachusetts. Filed May 12, 1927. Serial No. 190,804. 12 Claims. (Cl. 176—14.)



10. An electric lighting arrangement comprising an electrical discharge tube having two end portions, a contact terminal attached to each of said end portions and connected with electrodes inside the tube, metallic sleeves on said tube, a pair of sockets for receiving said end portions, a contact spring on each of said sockets for making connection with each of said terminals, a pair of contact springs on each of said sockets so positioned as to press against said metallic sleeves when the tube is fully seated in the socket, a transformer for supplying current to said tube, one side of the primary thereof being connected in series with one of said pairs of contacts and the other side of said primary being connected in series with the other of said pairs and the secondary of said transformer being connected to the terminals on the said end portions of the tube.

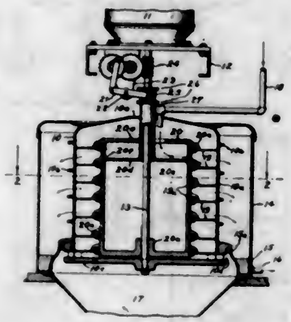
1,689,486. COMBINATION TIE AND RAIL FASTENING. JAKOB HOJNOWSKI, Nekoosa, Wis. Filed Feb. 1, 1928. Serial No. 251,077. 4 Claims. (Cl. 238—60.)

1. In a device of the class described, a metal tie comprising a grooved top plate, depending side flanges on said plate to form a space for the reception of the road bed material, means formed by the grooves to firmly hold the tie in place in said material, a centrally located saddle formed by the grooves on said top plate, said saddle adapted to be engaged by the rail fastening means, and a means for firmly locking the parts in their relative adjusted positions.

1,689,487. HEEL-LIFT-DEPOSITING MECHANISM. LESLIE A. HOLMAN, Waltham, Mass. Filed Jan. 12, 1926. Serial No. 80,800. 19 Claims. (Cl. 12—50.)

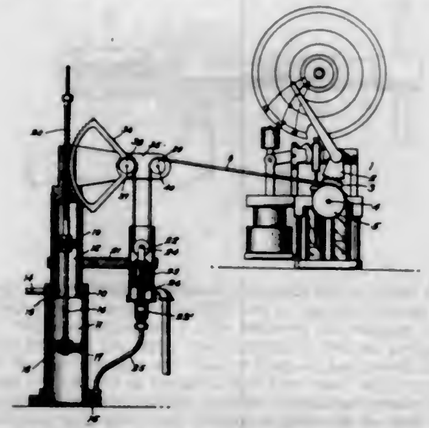
1. In a device of the character described, the combination of a pair of co-operating jaws mounted for a vertical reciprocating motion through an arc of a circle, and means for opening and closing said jaws transversely to said reciprocating motion to grip and release heel lifts.

1,689,488. LIGHTING FIXTURE AND THE LIKE. DONALD HOLT, Chicago, Ill. Filed Sept. 30, 1927. Serial No. 223,084. 4 Claims. (Cl. 287—14.)



4. As a new article of manufacture a swivel joint for the purpose specified comprising in combination a pair of members rotatable with respect to each other, a hub member on which they are journaled, means in conjunction with the end portions of said hub member serving to retain the members on the hub member and also serving to prevent the members from moving outwardly away from each other, and a pair of dish shaped spring disks located on the hub member between the first mentioned members and with their peripheral portions in frictional contact with each other, substantially as described.

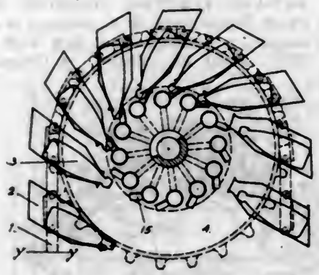
1,689,489. TEMPERED-AIR DIRECTIONER. ADOLPH J. JANECEK, Cedar Rapids, Iowa. Filed Oct. 30, 1925. Serial No. 65,720. Renewed Nov. 4, 1927. 5 Claims. (Cl. 98—2.)



1. In an automotive vehicle, the combination with the vehicle controlling foot pedals and an operating stud, of a heat distributor mounted at one side of said pedals and enclosing said stud, an extension stud extending through said heat distributor into engagement with said operating stud, said heat distributor forming a support for the foot of the driver.

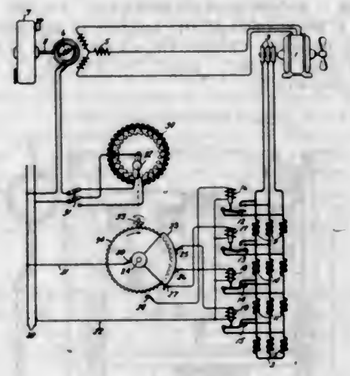
1,689,490. CENTRIFUGAL EXTRACTOR. CHARLES A. KELSEY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 10, 1927. Serial No. 239,100. 5 Claims. (Cl. 210—68.)

1. A centrifugal extractor comprising a receptacle having a perforated side wall, means for rotating said receptacle, a feeding element adjacent the side wall of said receptacle, means for supporting said element, and means for moving said support so that said element moves back and forth along the side wall of said receptacle, said supporting means being arranged so that said element moves away from said side wall when said supporting means is moved in one direction.



1,689,491. PROPORTIONAL-FEED CONTROLLING APPARATUS. PAUL LANHAM, Lanham, Md. Filed Dec. 20, 1926. Serial No. 155,935. 5 Claims. (Cl. 137—78.)

1. The combination of a meter for mensuring the rate of flow of a fluid, a motor for operating a material feed control device, and mechanical connections between the meter and the motor to effect the actuation of the latter proportionately to the rate of flow indicated by the meter.

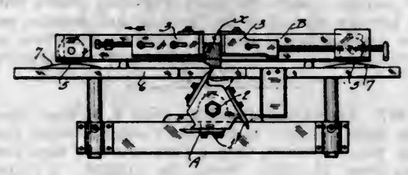


1,689,492. BOTTLE-RINSING MACHINE. SVEN ERIK LANNMARK, Stockholm, Sweden. Filed Oct. 18, 1927. Serial No. 227,017, and in Sweden Oct. 19, 1926. 2 Claims. (Cl. 141—7.)

1. Bottle washing apparatus, including a conveyor chain having uniformly spaced bottle receiving pockets, said conveyor including a rinsing sprocket wheel comprising a rotatably mounted nave, spaced tubes arranged about said nave parallel to the axis thereof and being provided with parts

adapted to register with and discharge into the mouths of the bottles entrained about said sprocket, and means for supplying fluid under pressure to said tubes, substantially as set forth and shown.

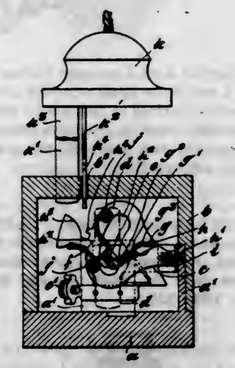
1,689,493. POWER SYSTEM. CAMPBELL MACMILLAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 3, 1925. Serial No. 34,684. 10 Claims. (Cl. 172—237.)



1. The combination of an induction motor comprising primary and secondary circuits, an alternating current generator comprising a field circuit and an armature circuit interconnected with said primary circuit, means for controlling the resistance of said secondary circuit, means for controlling the excitation of said field circuit, and means independent of the electrical characteristics of said generator and said motor for correlating the operation of said resistance and excitation control means in a manner to cause an abrupt change to be produced in the excitation of said field circuit prior to a change in the resistance of said secondary circuit.

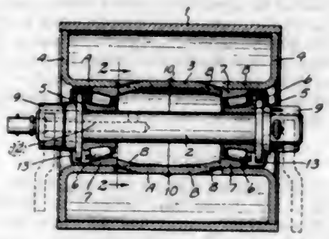
4. The method of operating a power system comprising an alternating current generator interconnected with an induction motor which comprises abruptly changing the excitation of said generator, abruptly changing the secondary resistance of said motor, and gradually changing the excitation of said generator as the speed of said motor changes due to said change in secondary resistance.

5. The method of operating a power system comprising an alternating current generator interconnected with an induction motor which comprises abruptly decreasing the excitation of said generator, abruptly decreasing the secondary resistance of said motor, and gradually increasing the excitation of said generator as said motor accelerates due to said decrease in secondary resistance.



10. The method of operating a power system comprising an alternating current generator interconnected with an induction motor which comprises abruptly changing the secondary voltage of said motor and abruptly changing the excitation of said generator a sufficient interval of time prior to said change in secondary voltage to eliminate objectionable fluctuations in the electrical conditions of said system.

1,689,494. HEEL-BLANK-GROOVING MACHINE. DAVID O. MARSHALL, St. Louis, Mo., assignor to Mound City Wood Heel and Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed May 14, 1927. Serial No. 191,443. 4 Claims. (Cl. 12—47.)

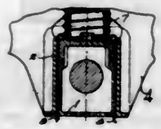


1. A machine for grooving heel blanks, comprising a rotatable cutter and a heel blank carrier adapted to move relatively to each other so as to cause the cutter to form a transverse groove in the breast portion of the blank, and means for producing relative rocking movement in an arc between the blank and the cutter during the grooving operation in a direction to form a breast face whose vertical center line is located at a point in advance of the side edges of said breast face.

1,689,495. ELECTRIC SWITCH. FRANK MCELROY, Manchester, England, assignor to J. H. Tucker & Company, Limited, Birmingham, England. Filed Aug. 9, 1926, Serial No. 128,307, and in Great Britain Nov. 3, 1925. 6 Claims. (Cl. 200—51.)

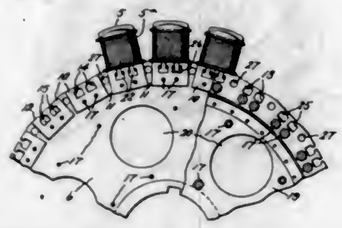
1. In an electric switch of the plug type, plug pins constituting removable contacts of the switch, circuit completing means comprising members movable into and out of the path of movement of the plug pins, and means whereby withdrawal of the plug removes the circuit completing means of the switch from the path of the plug pins.

1,689,496. CONVEYER ROLLER. WHITLEY B. MOORE, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Mar. 2, 1925. Serial No. 12,628. 1 Claim. (Cl. 308—208.)



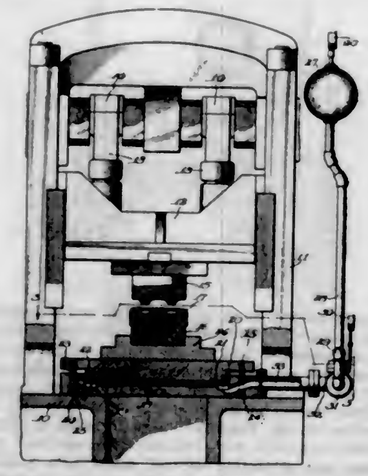
A shaft, a hollow roller rotatably mounted thereon, a tubular member extending through said roller, and conical roller bearings comprising cones, cups and rollers interposed between said shaft and said tubular member, said tubular member having portions struck up therefrom and constituting abutments for the cups of said roller bearings.

1,689,497. VACUUM CLEANER. JOHN F. MORGAL, Cleveland, Ohio, assignor to Electric Vacuum Cleaner Company, Inc., Cleveland, Ohio, a Corporation of New York. Filed Sept. 13, 1927. Serial No. 219,330. 2 Claims. (Cl. 15—10.)



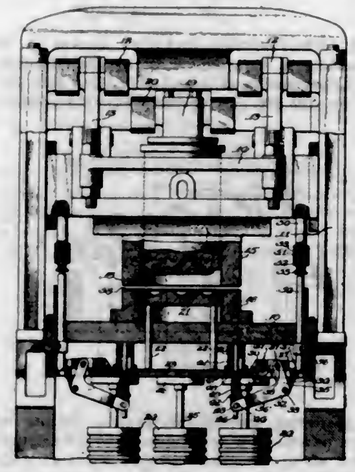
1. The combination with a vacuum cleaner having a suction nozzle and a motor the shaft of which projects into said nozzle, of an endless carrier in the nozzle which carrier extends over said shaft and is moved longitudinally of the nozzle by said motor, and nap disturbing and separating means carried by said carrier.

1,689,498. JOURNAL-BOX WEAR PLATE. HARRY M. PFLAGER, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Nov. 23, 1925. Serial No. 70,923. 6 Claims. (Cl. 105—225.)



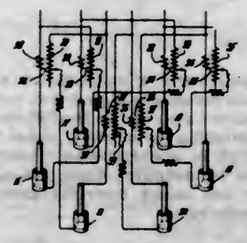
1. As a new article of manufacture, a one-piece wear plate adapted to be applied to and removed from a standard A. R. A. journal box for railway trucks to prevent contact between the sides of the box and the truck pedestal, said plate including means for engaging the top and both sides and the bottom of the box so that they move together n the pedestal.

1,689,499. DYNAMO-ELECTRIC-MACHINE ROTOR. HENRY G. REIST, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 17, 1927. Serial No. 169,046. 8 Claims. (Cl. 171—252.)



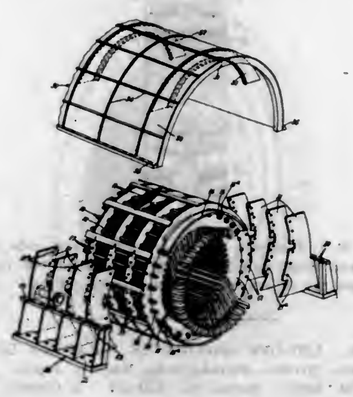
1. In a dynamo-electric machine, a rotor including a shaft, laminations carried by said shaft, means adjacent thereto for spacing laminations longitudinally thereof, said laminations being slotted adjacent their periphery, means interposed between said laminations adjacent their periphery having slots conforming with the slots in said laminations to form continuous grooves axially of said rotor, means for clamping said laminations together, and pole pieces extending into said grooves.

1,689,500. SHEET-METAL-WORKING PRESS. FREDERICH J. RODE, Chicago, Ill., assignor to Marquette Tool & Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed June 2, 1927. Serial No. 195,895. 6 Claims. (Cl. 113—46.)



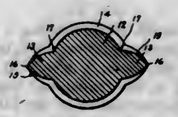
1. A press for drawing sheet metal and the like embodying a bed, a movable supporting member forming with said bed a piston and cylinder unit, a die anchored rigidly to said supporting member, and a ram reciprocable with a set throw, said cylinder containing a fluid which resists the movement of the piston and the die that is connected therewith when the latter is subjected to the action of the co-operating die on the ram, the said fluid operating to return the die on the first said movable member to its normal position if it should be moved against said resistance.

1,689,501. MECHANICAL LOCKING DEVICE FOR PRESSURE PADS. FREDRICH J. RODE, Chicago, Ill., assignor to Marquette Tool & Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed June 6, 1927. Serial No. 196,792. 15 Claims. (Cl. 113—46.)



1. A sheet metal working press embodying a pressure pad, means for yieldingly resisting the movement of the pad in one direction, a reciprocable element, a member connected with the said element for movement therewith, the said member having a shoulder adjacent said pad, a spring controlled locking member carried with the pad and adapted to be automatically projected beneath said shoulder to be engaged therewith at the limit of the lower-most movement of the pad for locking the pad against return movement, and spring influenced means rendered active by the movement of the pad in one direction for automatically retracting the said locking member at a predetermined time in the cycle of operation of the press.

1,689,502. RECTIFYING SYSTEM. CAMIL A. SABBAH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 9, 1927. Serial No. 167,021. 7 Claims. (Cl. 175—363.)



1. The combination of a mercury arc rectifier provided with a cathode and a plurality of anodes and with a grid arranged to control the current of one of said anodes, and means comprising a current transformer arranged to apply to said grid a potential which is dependent on the current of another of said anodes.

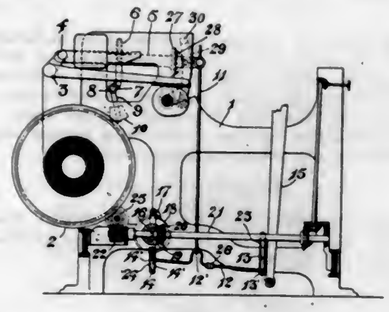
1,689,503. STATOR CONSTRUCTION. MARION A. SAVAGE, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 20, 1927. Serial No. 199,896. 4 Claims. (Cl. 171—252.)

2. A stator for dynamo-electric machines including an annular structure having laminations supported therein, foot members on each side of said annular structure attached thereto, and a cover structure secured to said foot members and extending in spaced relation about said annular structure to form a ventilating passage for air circulated between the stator laminations.

1,689,504. REENFORCING BAR. JOHN SHEEDY, Seattle, Wash. Filed Sept. 20, 1926. Serial No. 136,455. 1 Claim. (Cl. 72—111.)

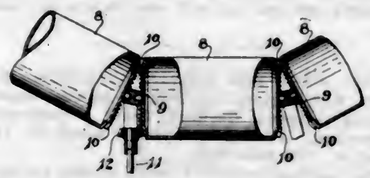
In a reenforcing bar, a main bar portion, continuous flanges extending longitudinally along opposite sides of said main bar portion, said flanges having arcuate external surfaces that converge to a point at their extremities and said flanges having relatively wide base portions that form longitudinally extending grooves at the locations where said curved surfaces intersect said main bar portion and continuous ribs arranged at intervals and each extending around said bar and over said flanges in transverse planes.

1,689,505. CAGE FOR ROLLER BEARINGS. HAAKON STYRI, Philadelphia, Pa., assignor to The Skayef Ball Bearing Company, Hartford, Conn., a Corporation of Connecticut. Filed Oct. 8, 1926. Serial No. 140,240. 6 Claims. (Cl. 308—218.)



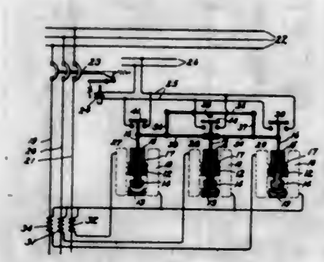
1. The combination with a roller bearing having inner and outer race rings and two rows of rollers, the inner ring having an outwardly directed guiding flange between the rows of rollers, of a sheet metal cage comprising a center part constructed and adapted to conform to and ride upon

the perimeter of the guiding flange, side flanges carried by such center part and projecting outwardly with a laterally flaring formation and constructed and adapted to



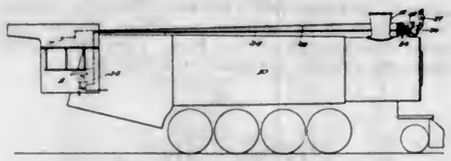
conform to and engage the inner or abutting ends of the rollers, and fingers projecting laterally from the rims of the flanges for interposition between the rollers.

1,689,506. LET-OFF MOTION IN WEAVING LOOMS. KUCHIRO TOYODA, Shirakabecho, Nagoya, Japan. Filed Nov. 24, 1926. Serial No. 150,437. 3 Claims. (Cl. 139—110.)



1. In a loom, a let-off device having a positive drive, a back rest, an arm securely connected to said back rest, means for moving said arm, a weighted lever pivoted in an inclined position to the frame and adapted to be oscillated according to the movement of the said arm, means for varying the angular position of the said lever according to the change of the position of said back rest to vary the effective position of the weight, and means for increasing the speed of the drive as the diameter of the beam decreases, whereby a uniform tension upon the warps is maintained.

1,689,507. TAKING-UP DEVICE FOR CIRCULAR LOOMS. SAKICHI TOYODA, Nagoya, Japan. Filed Jan. 10, 1928. Serial No. 245,641. 1 Claim. (Cl. 139—16.)



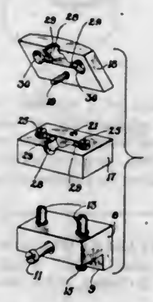
A taking-up device for a circular loom, wherein a plurality of propelling rollers are arranged above the beating part of the loom and are connected to each other to form a polygonal unit, each roller being provided at both ends with bevel gears meshing with those of the adjacent rollers, and a driving shaft is operatively connected to at least one of said propelling rollers so as to cause simultaneous rotation of all propelling rollers, whereby the tubular fabric engaging with said polygon of propelling rollers is positively propelled toward the taking-up rollers.

1,689,508. PROTECTIVE DEVICE. OLIVER C. TRAVER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 14, 1924. Serial No. 725,870. 14 Claims. (Cl. 175—294.)

1. A protective system for electric circuits wherein means are provided for interrupting the circuits upon the occurrence of an abnormal circuit condition, comprising in combination with said circuit interrupting means, a relay including a plurality of armatures, a plurality of windings connected respectively to said circuits for respectively controlling said armatures, said armatures being mechanically interconnected and arranged to balance the forces exerted by said windings on the respective armatures when said windings are equally energized, and means for restraining each armature against the operating force exerted by the other armature or armatures, said restraining means being arranged to exert an effect proportional to the energization of the corresponding winding.

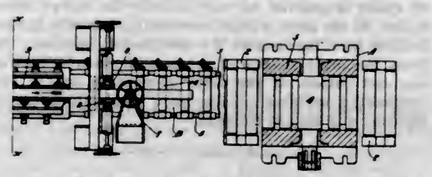
1,689,509. DEVICE FOR CONTROLLING AND OPERATING LOCOMOTIVE WHISTLES. HARRY VISSERING, Kenilworth, Ill. Filed Mar. 27, 1926. Serial No. 97,991. 9 Claims. (Cl. 105—37.)

1. The combination of a locomotive, a steam whistle, a casing to which the whistle is connected, mounted directly upon the locomotive shell and in front of the smoke-stack, a valve for controlling the supply of steam to operate the whistle, mounted in said casing, a connection disposed within the shell for delivering steam into said casing and to said valve, and means controlled from the cab for opening the steam valve.



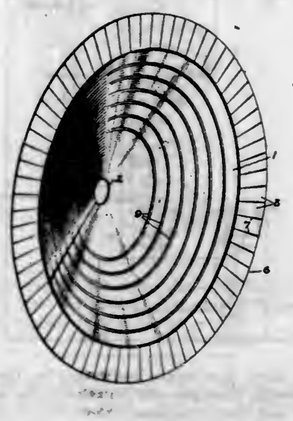
1,689,510. CLOSURE SEAT FOR METALLIC CONTAINERS. LOUIS B. WACKMAN, St. Louis, Mo. Filed Nov. 16, 1925. Serial No. 69,292. 6 Claims. (Cl. 220—39.)

1. A sheet metal container having an aperture formed in one of its walls, a closure seat having an interiorly threaded body portion located in the aperture of said wall, said wall having a countersunk part formed around the aperture thereof, said body portion of said closure seat having an outwardly extending flange which is seated in



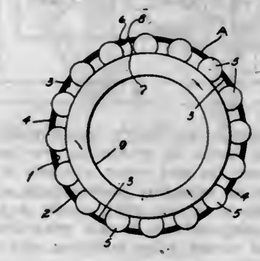
said counter-sunk part, said flange of said body poriton being provided with a plurality of openings, and a plurality of raised portions formed in said wall for engagement with respective openings of said flange.

1,689,511. SWITCH PLUG. WILLIAM J. WISE and THOMAS O. ADAMS, New Philadelphia, Ohio, assignors, by mesne assignments, to Wise-McClung Corporation, New Philadelphia, Ohio, a Corporation of Ohio. Filed Jan. 19, 1922. Serial No. 530,293. 1 Claim. (Cl. 173—324.)



A separable switch plug comprising a fixed insulated block and a movable insulated block, means for attaching the fixed insulated block to a support, terminal pins molded in the fixed block and extending entirely through the same, a binding screw at one end of each terminal pin, a reduced bifurcated shank at the opposite end of each terminal pin, terminal bushings molded within the movable block and arranged to receive said bifurcated shanks and binding screws located at the opposite extremities of the terminal bushings, an insulated cover for the movable block, said cover and movable block being provided with corresponding sockets to receive the supply wires, the axes of the sockets being at right angles to the terminal bushings, a nut molded in the movable block and a screw carried by the cover and arranged to engage said nut.

1,689,512. HOT ROLLING. SAMUEL G. WORTON, Duquesne, Pa. Filed Dec. 19, 1921. Serial No. 523,362. 4 Claims. (Cl. 51—278.)

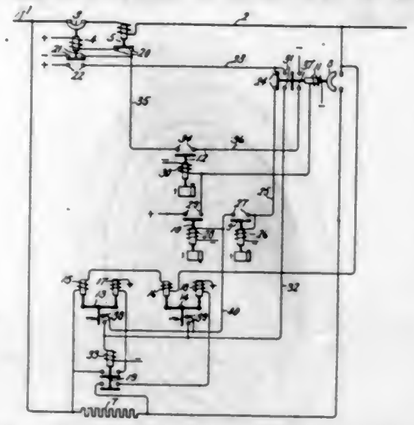


1. The method of removing surface defects from rolled steel articles before final rolling, which consists in grinding off of the side surfaces of said articles having said defects therein while said articles are heated to approximately a rolling temperature.

1,689,513. SOUND-REPRODUCING DEVICE. ARTHUR G. ZIMMERMAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 29, 1927. Serial No. 164,620. 6 Claims. (Cl. 181—32.)

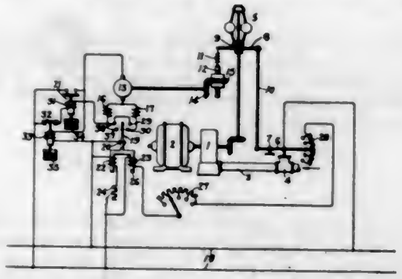
1. In a sound reproducing device, a fibrous, conical diaphragm having a series of spaced circumferential corrugations radially spaced from one another along the conical surface of said diaphragm.

1,689,514. CAGE FOR ROLLER BEARINGS. VIRGIL L. ABEL, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Feb. 7, 1927. Serial No. 166,468. 4 Claims. (Cl. 308—217.)



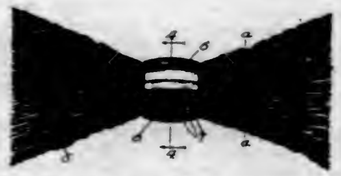
1. A conical cage for roller bearings and the like comprising a perforated strip wrapped on itself to form a cage of double thickness and comprising end rings connected by bridges, the perforations of the inner portion being wider than the perforations of the outer portion, and the bridges of the inner portion of the cage contacting throughout their length with the bridges of the outer portion.

1,689,515. AUTOMATIC RECLOSING-CIRCUIT-BREAKER SYSTEM. ARVID E. ANDERSON, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 26, 1926, Serial No. 90,950. Renewed June 29, 1928. 11 Claims. (Cl. 175—294.)



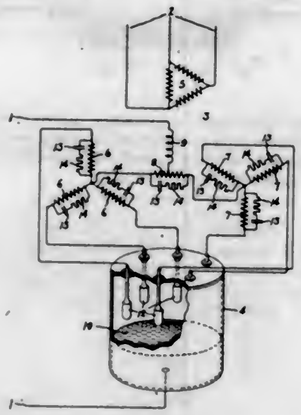
1. In an automatic reclosing circuit breaker system, two electric circuits, a circuit breaker for connecting said

circuits together, an impedance, means for periodically connecting said impedance between said electric circuits for a predetermined length of time when said circuit



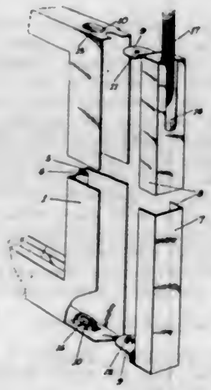
breaker is open, and means controlled by the amount of current flowing through said impedance for effecting the closing of said circuit breaker.

1,689,516. REMOTE-CONTROL SYSTEM. ELMER F. BLISS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 9, 1924. Serial No. 712,171. 2 Claims. (Cl. 175—355.)



2. In combination, an electric motor which is apt to over-travel, and means for preventing over-travel thereof including a circuit for said motor, contacts in said motor circuit, a relay for actuating said contacts, a circuit for said relay, contacts in said relay circuit, a second relay for actuating said contacts in said relay circuit, and a circuit for said second relay including said contacts in said motor circuit.

1,689,517. BRUSH. GUSTAF V. BRANNSTROM and VERNER J. CARLSON, Chicago, Ill. Filed Aug. 27, 1926. Serial No. 131,844. 2 Claims. (Cl. 15—159.)

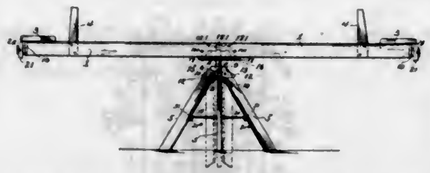


1. A brush consisting of a bunch of elongated crinkled cleaning elements of substantially the same length secured intermediate their ends by a band corrugated lengthwise to securely bind said elements.

1,689,518. RECTIFYING SYSTEM. HERBERT D. BROWN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 5, 1927. Serial No. 166,232. 3 Claims. (Cl. 175—363.)

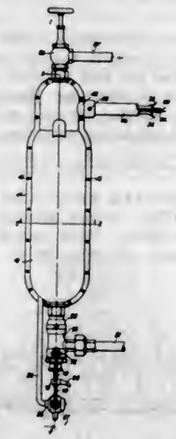
1. The combination of a rectifier comprising a vaporizable cathode and a plurality of anodes, a transformer comprising secondary windings each connected to a different one of said anodes, and a plurality of damping means each connected in shunt to a different one of said windings.

1,689,519. ADJUSTABLE WINDOW SASH. WILLIAM J. CONNORS, San Jose, Calif. Filed Apr. 18, 1927. Serial No. 184,551. 3 Claims. (Cl. 20—52.3.)



1. In window construction, a sash, one vertical outer edge of which is grooved for substantially the entire transverse extent of the sash, a plate member having side flanges projecting into the groove for horizontal movement to and from the adjacent edge of the sash, horizontal ears on the top and bottom of the plate member to engage the corresponding surfaces of the sash, and adjustment means securing the ears to the sash.

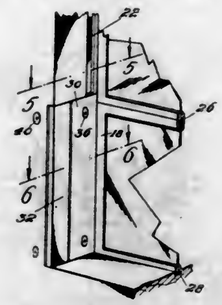
1,689,520. ROUNDABOUT. FRANK H. DICKSON, FRANCIS F. DICKSON, and ADRIAN J. DICKSON, Auburn, N. Y. Filed Dec. 3, 1926. Serial No. 152,469. 1 Claim. (Cl. 272—30.)



A roundabout comprising a support, a conoidal pivot post rising from the support and having a semispherical upper end, a teeter-board provided with a longitudinal slot

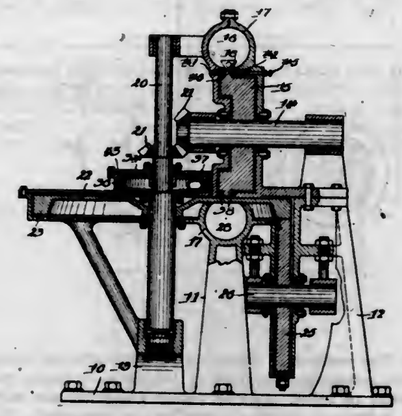
receiving the pivot post, and a saddle secured to the teeter-board and housed within the slot therein over the post, said saddle being in the form of an arch internally chan-

neled and provided in the under side of its crown with a longitudinal series of sockets selectively engageable over the top of the post, the post being housed in the saddle.



1,689,521. WATER HEATER. MANUEL D. DOMINGUEZ, New Orleans, La. Filed Aug. 15, 1927. Serial No. 213,020. 4 Claims. (Cl. 219—39.)

1. An electrical water heater comprising, in combination, a central electrode connected to one side of an electric circuit, a tube surrounding said first named electrode and having its walls spaced therefrom connected to the other side of the circuit, a shell rigidly and electrically connected to said first named electrode surrounding said tube, a second shell rigidly and electrically connected to said tube and surrounding said first named shell, said shells annularly spaced apart, insulating means to preserve the spacing and alignment of said tube and shells, said tubes having an opening for passage of water at one end thereof, said last named shell having an opening for passage of water at its end opposite said first named passage, said first named shell and said tube also having openings for passage of water at opposite ends whereby to provide a tortuous path for flow of water through the spaces between opposite electrodes.

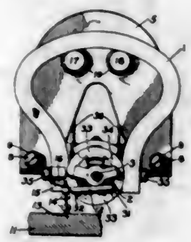


1,689,522. DRAFTLESS VENTILATED WINDOW. JOHN EHARDT and LUDWIG STARK, Chicago, Ill.; said Ludwig Stark assignor to Irene S. Stark, Chicago, Ill. Filed Sept. 21, 1925. Serial No. 57,760. 1 Claim. (Cl. 20—43.)

In combination with a window frame, an upper sash pivotally and slidably mounted in said frame, the upper edge of said upper sash extending substantially to the upper edge of said upper frame when said upper sash is in its uppermost position, a lower sash pivotally and slidably mounted in the frame, supporting slides for the sashes, sheets of transparent material disposed in both sashes, and means for locking said upper and lower sashes in a single slide when in closed position, said locking means comprising a hinged retaining element normally forming

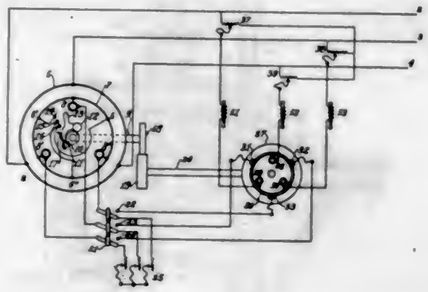
a portion of a slide and adapted for hinged motion to close said slide to lock the sashes, said hinged element secured to the lower portion of said frame.

1,689,523. ROTARY ENGINE. ELOV ERICSSON, St. Paul, Minn. Filed June 6, 1925. Serial No. 35,350. 6 Claims. (Cl. 121—71.)



6. The combination with a pair of shafts extending in the same plane at an angle one to the other, of a rotor mounted on one of said shafts, a piston on said rotor adapted to be moved in a circular path, an annular chamber adapted to receive said piston, a disc fixed on the other of said shafts, disposed to intersect said chamber and dividing the same into a power segment and an inert segment, said disc being formed with an opening through which said piston is adapted to pass from one of said segments into another during the rotation of the disc, and a valve for controlling the admission of fluid to said power segment mounted adjacent to said disc on said last mentioned shaft.

1,689,524. ELECTROMAGNETIC PICK-UP APPARATUS. PAUL R. FORTIN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 21, 1924. Serial No. 727,142. Renewed May 4, 1926. 7 Claims. (Cl. 179—1.)

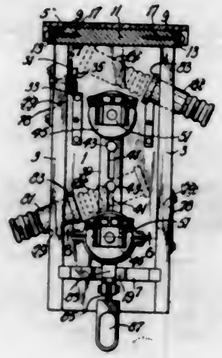


1. In an electromagnetic pick-up device, the combination of a magnet adapted to be disposed in proximity to the sounding board of a musical instrument, an armature pivotally mounted in the field of said magnet, lever means

adapted to transmit the vibrations of said sounding board to said armature to cause said armature to generate a pulsating current, said means comprising a stylus adapted to make contact with said sounding board and a lever

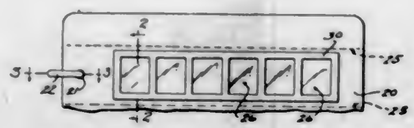
connecting said stylus with said armature, resilient means for maintaining the armature in the field of the magnet and damping means for suppressing the natural frequency of vibration of said lever means.

1,689,525. ASYNCHRONOUS MOTOR. VALÈRE A. FYNN, St. Louis, Mo. Filed Dec. 18, 1925. Serial No. 76,151. 15 Claims. (Cl. 172—280.)



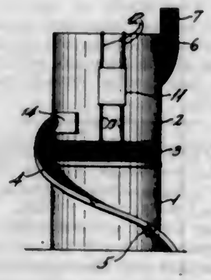
1. The method of operating an asynchronous induction motor comprising, impressing polyphase voltages on the primary to induce working voltages in polyphase working and polyphase exciting paths on the secondary, closing the secondary exciting paths over impedances to start and accelerate the motor, closing the secondary working paths after the motor has reached a speed near its operating speed and in a way to facilitate the formation of working currents in the so formed working circuits, disconnecting the secondary exciting paths from the starting impedances after the secondary working circuits are formed, and thereafter connecting the secondary exciting paths to auxiliary polyphase voltages to produce at least part of the revolving field of the motor from the secondary.

1,689,526. PROCESS OF OBTAINING SODIUM CARBONATE SULPHATE. ALFRED W. GAUGER, Tottenville, and HENRY HERMAN STOSCH, New York, N. Y., assignors to Burnham Chemical Company, Reno, Nev., a Corporation of Nevada. Filed Jan. 9, 1926. Serial No. 80,345. 13 Claims. (Cl. 23—41.)



1. The process of obtaining a given salt having a decreasing solubility above a certain temperature from a brine containing the same and other salts having an increasing solubility above the certain temperature which comprises heating the brine out of contact with the atmosphere and above the certain temperature.

1,689,527. SWITCH. WALTER A. HEINRICH, St. Louis, Mo., assignor to W. N. Matthews Corporation, St. Louis, Mo. Filed July 27, 1925. Serial No. 46,238. 6 Claims. (Cl. 200—114.)

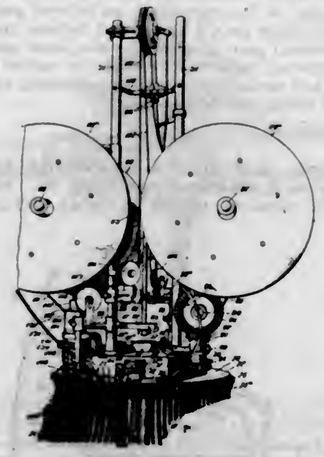


1. A safety switch comprising a box, movable and relatively spaced line terminals therein, insulating members passing through the box and adapted to be applied from within the box, said relatively spaced terminals being adjustably movable without affecting said spacing to permit application of said insulating members.

1,689,528. PROTECTIVE MOUNTING FOR STAMPS OR OTHER OBJECTS. NIELS MARIUS ANDERSEN KJELLERUP, St. Paul, Minn. Filed June 6, 1927. Serial No. 196,838. 6 Claims. (Cl. 129—20.)

2. A protective mounting for stamps and other objects comprising a two-ply leaf having coincident apertures, and a slide removably mounted between the plies of the leaf and having a transparent pocket within the field of said apertures.

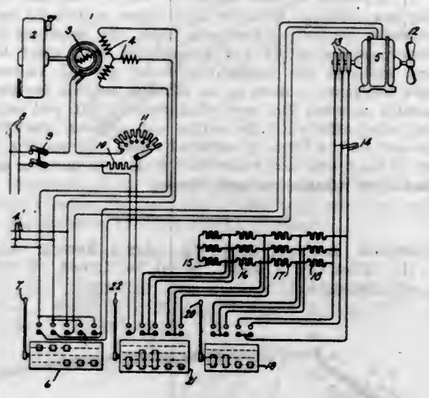
1,689,529. RAT OR MOUSE TRAP. ROBERT WESLEY KNAPP, Chester, Ill. Filed May 13, 1927. Serial No. 190,981. 4 Claims. (Cl. 43—65.)



1. A trap including a receptacle and an extension to the receptacle, a portion of said extension having reticulations, an annular trough positioned interiorly of said extension adjacent to said reticulations, and a reticulated incline extending around the outside of said trap and from the bottom of said receptacle to the top of said extension.

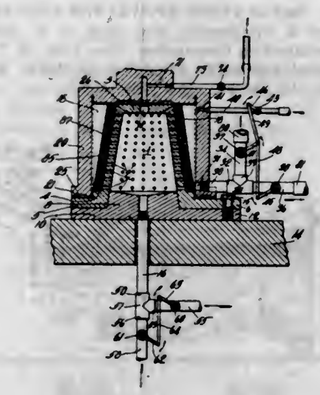
1,689,530. CHRISTMAS TREE. BERT A. LANDERS, Los Angeles, Calif. Filed Feb. 28, 1928. Serial No. 257,561. 7 Claims. (Cl. 41—15.)

1. In an artificial tree, a plurality of limbs, each of said limbs comprising a relatively flexible wire wound with cord and having a tinseled cord wound over said cord, a length of tinsel secured adjacent the end of said wire by said cord and other lengths of tinsel secured to said wire by said cord intermediate the length of said wire.



1,689,531. MACHINE FOR WEAVING REED FABRIC. MARSHALL B. LLOYD, Menominee, Mich., assignor to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 29, 1924. Serial No. 758,548. 39 Claims. (Cl. 139—14.)

1. An apparatus for weaving a stake and strand fabric embodying therein, means adapted to engage desired stakes to move them out of their normal plane, and an endwise movable member having one of its edges so formed as to operatively engage said means for actuating the same to move said desired stakes.

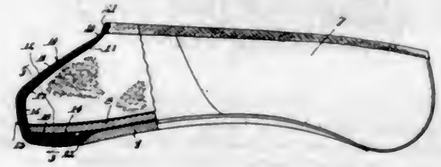


1,689,532. POWER SYSTEM. CAMPBELL MACMILLAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 18, 1925. Serial No. 38,080. 5 Claims. (Cl. 172—237.)

5. The method of operating an electric power system wherein current is supplied to an induction motor from an alternating current generator, which comprises producing definitely related changes in the excitation of said generator and in the secondary resistance of said motor

throughout one range of operation, and changing said secondary resistance independently of said generator excitation throughout another range of operation.

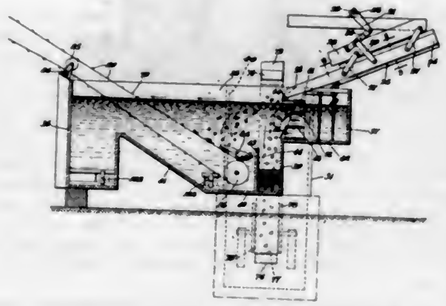
1,689,533. METHOD OF AND APPARATUS FOR MOLDING REDUCERS FOR FIBROUS CONDUITS. HOWARD PARKER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed June 11, 1925. Serial No. 36,433. 12 Claims. (Cl. 92—54.)



1. A method of producing a tapered fibrous article, which comprises placing a fibrous tube over a frusto-conical form, wetting said tube so as to soften it, applying pressure on the wall of said tube so that it assumes the shape of the form, removing the tapered tube from the form, and drying it.

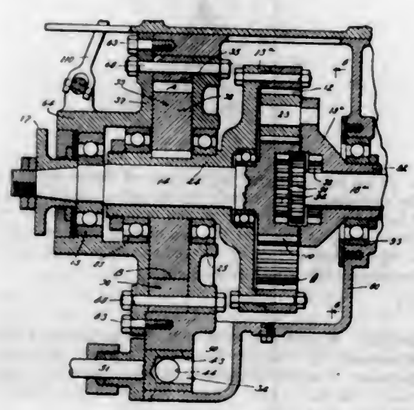
3. Apparatus for forming fibrous reducers, comprising a form over which a tubular fibrous conduit may be positioned, a cover adapted to be placed over said form, an expansible rubber diaphragm covering the interior wall of said cover and secured thereto at its edges, and means for causing said diaphragm to expand and press the tube against the form.

1,689,534. CYCLIC PROCESS FOR THE MANUFACTURE OF KRAFT PULP. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Dec. 4, 1925. Serial No. 73,194. 12 Claims. (Cl. 92—13.)



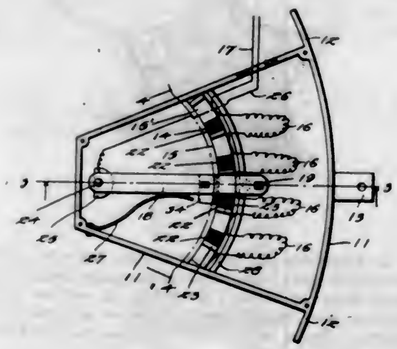
1. A process of fiber liberation, which comprises digesting raw cellulosic material in a liquor containing sodium sulphide, separating the pulp from the resulting spent liquor, concentrating and evaporating said spent liquor and smelting the inorganic content thereof, recovering said inorganic content in an aqueous solution for the digestion of other like raw cellulosic material, and recovering substantially all the sodium and sulphur constituents present in the form of sublimed solids and sulphur dioxide in the products of combustion from such smelting operation in an alkaline aqueous liquor.

1,689,535. BALLET SLIPPER. MAX I. ROVICK, Chicago, Ill. Filed Dec. 7, 1925. Serial No. 73,608. 2 Claims. (Cl. 36—1.)



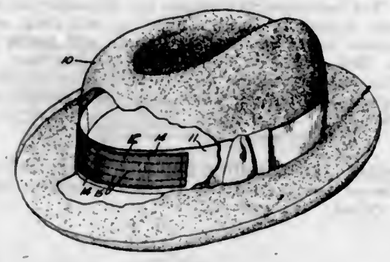
1. In a ballet slipper having a toe portion for toe dancing, a stiffening layer embedded within and extending beyond the boundary lines of the toe portion; and a second stiffening layer embedded within the toe portion and extending beyond the boundary lines of the first named stiffening layer, substantially as described.

1,689,536. SEPARATION APPARATUS AND PROCESS. ANTHONY R. SILVERSTON, New York, N. Y., assignor to Coke Reclamation Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 15, 1924. Serial No. 750,042. 13 Claims. (Cl. 209—156.)



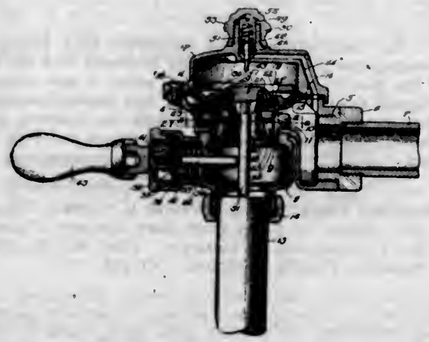
1. Apparatus for separating granular material composed of particles of different specific gravity, comprising a tank for containing liquid, means for causing the liquid in said tank to flow in a predetermined direction, a series of vanes in said tank for sectionalizing the body of flowing liquid to render the direction of flow of the various portions of the stream more uniform, a series of adjustable plates adjacent the downstream end of said vanes for deflecting the flow in a vertical direction; a chute for conveying said material to said tank at a point adjacent said plates, conveyor means extending transversely of said flow of liquid for removing the particles of relatively greater specific gravity, and conveyor means extending longitudinally of said flow of liquid for removing the particles of relatively less specific gravity.

1,689,537. POWER TRANSMISSION. CLARENCE S. SORENSEN, Los Angeles, Calif. Filed Oct. 9, 1924. Serial No. 742,514. 5 Claims. (Cl. 74—34.)



1. A drive including, a drive shaft, a driven shaft, a drive gear on the drive shaft, an internal gear concentric with the drive gear, a planet gear between the drive gear and internal gear, a carrier for the planet gear, a releasable driving connection between the carrier and driven shaft, and means for releasably connecting the drive and driven shafts directly together.

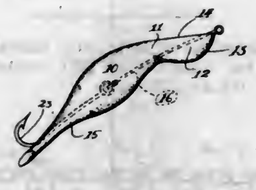
1,689,538. AUTOMOBILE HEADLIGHT REGULATOR. EDMUND B. VOLKERDING, St. Louis, Mo. Filed Apr. 30, 1927. Serial No. 187,897. 5 Claims. (Cl. 201—48.)



1. A light control consisting of a rheostat including a series of contacts, a lever for traversing the same and to be successively held thereby, means for moving the lever out of engaging position with respect to the contacts and for holding the lever in such position, and means for restoring the lever to normal position while being held by said moving means.

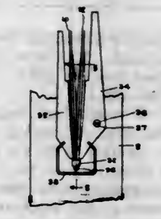
1,689,539. HAT PAD. ALBERT P. WAGNER, San Francisco, Calif. Filed May 11, 1927. Serial No. 190,416. 1 Claim. (Cl. 2—181.)

A pad adapted to be disposed under a hat band comprising a plurality of elongated strips of fabric stitched together along their edges and along a plurality of spaced parallel lines running the length of the strips intermediate the top and bottom edges thereof, and absorbent chemicals in powdered condition disposed in the elongated pockets formed by said fabric.



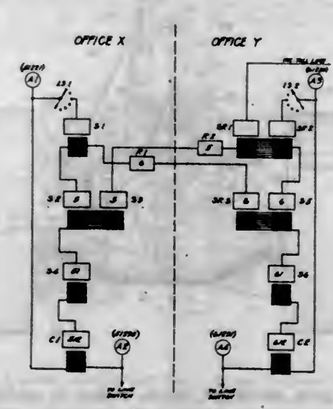
1,689,540. FLUSHING VALVE. EARL G. WATROUS, Chicago, Ill. Filed Feb. 13, 1925. Serial No. 8,924. 4 Claims. (Cl. 137—93.)

1. In a flushing valve, of the character set forth, the combination with a valve body having an intake connection, with a discharge chamber having an outlet connection and supporting the operating handle, and means comprising a sleeve which is threaded for engagement with the discharge chamber and which has a flange for engagement with the valve body for adjustably connecting the discharge chamber to the valve body for rotative adjustment.



1,689,541. ARTIFICIAL BAIT. JACK T. WELCH, Dowagiac, Mich., assignor to James Heddon's Sons, Dowagiac, Mich., a Corporation of Michigan. Filed May 29, 1926. Serial No. 112,583. 2 Claims. (Cl. 43—42.)

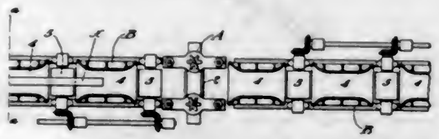
1. A fish bait comprising a body of buoyant plastic material terminating at its rear end in separated legs in simulation of a frog, a connected skeleton comprising a backbone portion extending longitudinally through the body and terminating at its forward end in a line tie and terminating at its rear end with diverging skeletal leg portions embedded within the legs, said leg portions being weighted to cause the rear end of the bait to sink downwardly when at rest, and a hook lying between the legs



and upturned at its barbed end, and having its shank entered through the rear end of the body and connected with the skeleton, substantially as described.

1,689,542. THERMOSTAT. EVERETT H. WHITE, St. Paul, Minn. Filed July 20, 1927. Serial No. 207,193. 7 Claims. (Cl. 297—3.)

6. A thermostat comprising hollow members filled with an expansible fluid, said members consisting of strips of sheet material bent into U-shape at their middle and secured together along their margins.

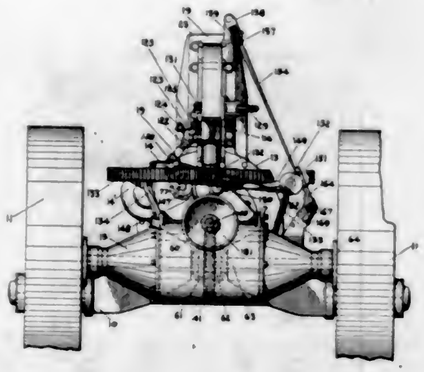


1,689,543. MULTIOFFICE TELEPHONE SYSTEM. JOHN WICKS, Oak Park, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Mar. 7, 1927. Serial No. 173,258. 16 Claims. (Cl. 179—27.)

9. In a telephone system wherein a train of automatic switches is operated over one talking conductor independent of the other and the change over operation of the switches is controlled over the other talking conductor

independent of the first, means for transmitting back a supervisory signal over the established connection to set up an answered-supervision state at the originating end thereof when the called subscriber answers.

1,689,544. METHOD OF ROLLING. SAMUEL G. WORTON, Duquesne, Pa. Filed Dec. 19, 1921. Serial No. 523,363. 2 Claims. (Cl. 51—278.)

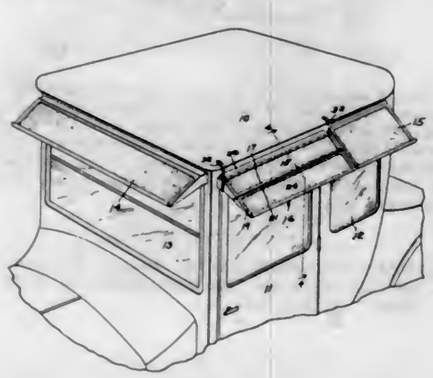


1. The method of finishing rolled metal shapes, which consists in grinding the shapes after completion of the rolling operation and while heated to a temperature approximating that at which the rolling operation is completed.

1,689,545. PROCESS OF SEPARATING SULPHUR FROM OTHER MATERIALS. KENNETH M. BAUM, San Francisco, Calif. Filed Sept. 3, 1927. Serial No. 217,530. 3 Claims. (Cl. 23—229.)

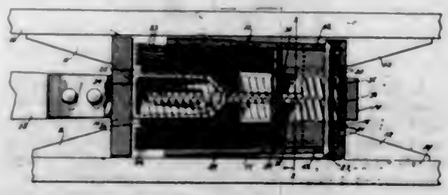
1. In a process of separating elemental sulphur from other materials, the steps of heating material containing elemental sulphur together with an aqueous solution of zinc chloride of a strength such that the specific gravity of this solution is greater than the specific gravity of molten sulphur when at the same temperature and less than the specific gravity of the main portion of the extraneous matter other than sulphur present, to a temperature above the melting point of sulphur, and removing the floating molten sulphur substantially free from other materials.

1,689,546. TRACTOR. CARL P. BROCKWAY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed May 12, 1921. Serial No. 468,941. 8 Claims. (Cl. 180—77.)



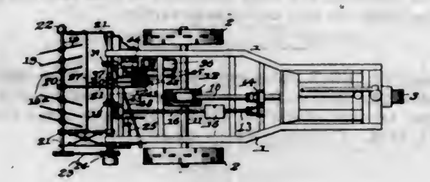
1. A latch device for levers having in combination a standard; a support pivoted to the standard; and a latch pivoted to the support, said latch having a holding ledge and camming surfaces on either side of the ledge, one of said surfaces being operative to move the latch in a direction transverse to that in which the latch is moved by the other surface.

1,689,547. METHOD FOR MAKING TRI-SODIUM PHOSPHATE. JOHN N. CAROTHERS, Anniston, Ala., assignor to Federal Phosphorus Company, Birmingham, Ala., a Corporation of Alabama. Filed Aug. 8, 1925. Serial No. 48,965. 6 Claims. (Cl. 23—107.)



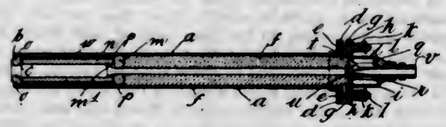
1. The hereindescribed process for the production of tri-sodium phosphate, which consists in subjecting sodium carbonate to the action of phosphoric acid having more than 50% H_3PO_4 to form di-sodium phosphate, then adding sufficient caustic soda to convert said di-sodium phosphate into tri-sodium phosphate, substantially as described.

1,689,548. AUTOMOBILE VISOR. GEORGE A. CLARK, Elwood, Nebr. Filed Aug. 19, 1925. Serial No. 51,253. 4 Claims. (Cl. 296—44.)



1. The combination of an automobile body having a swinging door, of a visor pivotally connected with the top of the door to swing in a vertical plane, a gear element attached to the visor, a co-acting gear element mounted upon the door, a lever connected with the co-acting gear element, and a link connected with the lever and with the body.

1,689,549. DRAFT GEAR. WALTER H. COTTON, Chicago, Ill., assignor to Union Draft Gear Company, Chicago, Ill., a Corporation of Delaware. Filed May 31, 1924. Serial No. 716,875. 9 Claims. (Cl. 213—33.)

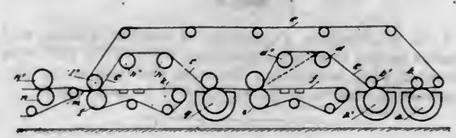


1. In a draft gear, in combination, a chambered follower having flaring side walls, two sets of friction plates anchored within the casing and parallel, respectively, with its side walls and of approximately the same length as said follower, two sets of floating friction plates intercalated with the plates of the first-named sets and approximately of the same length as said first-named plates, wedge elements located between the two groups of intercalated plates, springs opposing the movement of the wedge elements into the chambered follower, and an opposed follower engageable with the floating friction plates and wedge elements.

1,689,550. AGRICULTURAL MACHINE. ARTHUR DICK and JACOB A. DIRSCHAUER, Evansville, Ind. Filed Oct. 16, 1926. Serial No. 142,046. 1 Claim. (Cl. 79—40.)

In a wheeled agricultural machine, the combination with the machine frame, of arms movably suspended from said frame and adapted to be secured where positioned, a gang of soil-treating disks carried by said arms, other arms which are adjustably mounted on the first-named arms and adapted to be set in different raised or lowered positions, a main shield or housing which is secured to the first-named arms and covers the upper parts of the disks, and a supplemental shield or housing which is carried by the last-named arms and is adapted to slide in relation to the first-named housing when the last-named arms are adjusted, said supplemental shield or housing enabling the effective coverage of the disks to be increased, more or less, by adjusting the arms which carry said supplemental housing.

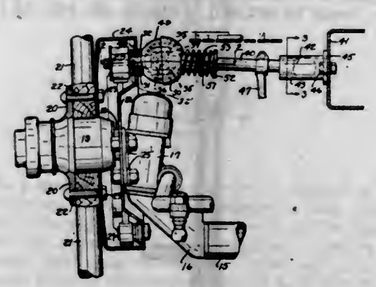
1,689,551. GASEOUS-FUEL BURNER. CECIL FEATHERSTONE HAMMOND, London, England, assignor of one-fifth to William Shackleton, London, England. Filed June 2, 1926, Serial No. 113,191, and in Great Britain June 2, 1925. 17 Claims. (Cl. 158—99.)



1. Submersible burner comprising two tubular parts of different bore freely communicating one with the other, the part of smaller bore being adapted for low temperature maintenance during operation and the parts of larger bore being adapted for high temperature maintenance during operation, and combustible fluid mixture supply means in communication with the part of smaller bore, the length of the part of larger bore being predetermined to ensure complete combustion within the burner, and the relation between the bores of these parts being such as to ensure that the velocity of the mixture from the supply to the combustion chamber shall exceed the velocity of flame propagation substantially as set forth.

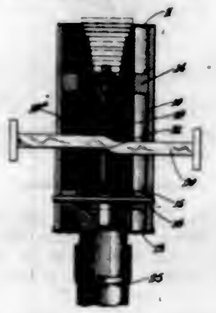
1,689,552. HOTBED. EMIL KÄSTEL, Magdeburg, Germany, assignor to the Firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Filed Dec. 18, 1926, Serial No. 155,690, and in Germany Dec. 15, 1925. 10 Claims. (Cl. 80—42.)

1. A hot bed for the purpose set forth, comprising in combination a plurality of receiving troughs the latter being composed of stationary supporting members and movable lifting members, stationary partition walls arranged so as to separate the receiving troughs from each other, said partition walls being provided at their tops with inclined delivery surfaces, a cooling bed arranged alongside the receiving troughs, a plurality of obliquely disposed conveying rollers arranged so as to transfer the material longitudinally from the rolling mill into the receiving troughs and to push the material laterally in the direction of the cooling bed.



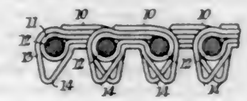
1,689,553. PAPER, CARDBOARD, AND PASTEBOARD MAKING MACHINE. OTTO LEONHARDT, Crossen, Germany. Filed Dec. 30, 1926, Serial No. 158,073, and in Germany Aug. 7, 1925. 1 Claim. (Cl. 92—39.)

An arrangement for the manufacturing of paper, cardboard or pasteboard couched together from several layers of paper, comprising in combination with the round-sieve cylinders the couching rollers and the long-sieve elements, an endless felt for successively taking the paper layers prepared on the several sieve-elements from these sieve elements to unite the paper layers from the preceding sieve elements with the paper layer prepared on the next following sieve elements, guide-rollers for guiding said felt, and covers of said guide-rollers of a material permeable to water so that the paper layers on said felt come in contact with said cover.



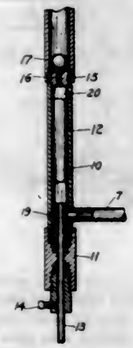
1,689,554. BRAKE. VINCENT LINK and HODGSON S. PIERCE, Detroit, Mich., assignors to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed June 28, 1926. Serial No. 119,098. 8 Claims. (Cl. 188—194.)

3. In a brake mechanism for a motor vehicle, an open-ended bracket carrying a rotatable shaft, a cam on one end of said shaft bearing against said bracket, a second shaft universally connected within said open end to the first-mentioned shaft, a cover for said open end carried by said second shaft and axially slidable thereon, an abutment on said second shaft in close proximity to said cover, and a coil spring encircling said second shaft and held under



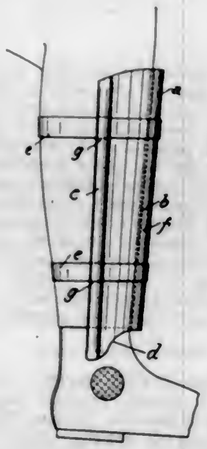
compression between said cover and said abutment whereby to resiliently hold said cover and said cam in contact with said bracket, said abutment providing the sole stop for limiting the axial movement of said cam away from said bracket.

1,689,555. PULP MOLD OF LAMINATE STRUCTURE. FELIX LOUISOT, Hasbrouck Heights, N. J. Filed Oct. 8, 1927. Serial No. 224,798. 12 Claims. (Cl. 92—54.)



1. In combination, a plurality of slidable laminæ, said laminæ having their edges defining a mold cavity and being provided with intervening channels and means for successively moving said laminæ relative to each other.

1,689,556. DRIVE CHAIN. EDGAR B. NICHOLS, Rochester, N. Y. Filed Aug. 20, 1926. Serial No. 130,530. 5 Claims. (Cl. 74—32.)

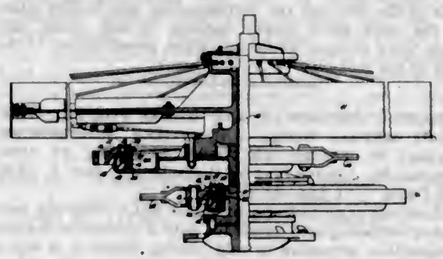


3. A link for drive chains comprising a plurality of metal layers, one layer including pin loops, and another layer in contact with the first layer throughout the greater part of its length, and spaced from the first layer adjacent the pin loops to form gear engaging teeth.

1,689,557. MEANS FOR FEEDING FLUID BY INTERMITTENT CHANGES OF FLUID PRESSURE. CARL H. NORDELL, Fort Wayne, Ind., assignor to The Permutit Company, a Corporation of Delaware. Filed Sept. 12, 1922. Serial No. 587,837. 1 Claim. (Cl. 103—52.)

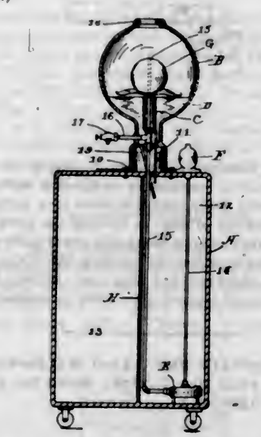
Liquid feeding means comprising a vertically disposed cylinder, a loosely fitting piston slug disposed therein, means formed in the cylinder for admitting fluid to the underside of the slug, means positioned above said slug operative to permit the escape of fluid from said cylinder, an adjustable stop member for limiting the stroke of said slug, a closure for said liquid escape means, said closure being forced away from said escape means when the piston slug moves upwardly, and being positioned to close said escape means when the slug moves downwardly.

1,689,558. SHIN-BONE-PROTECTING SHIELD FOR SPORTS. JULIUS PATTEN, Duisburg, Germany. Filed Dec. 14, 1926, Serial No. 154,801, and in Germany Oct. 31, 1925. 1 Claim. (Cl. 2—22.)



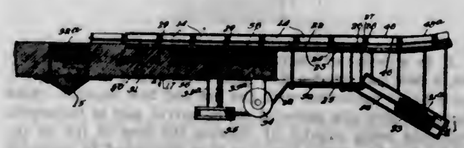
A shin-bone protecting shield for sports, comprising in combination, a shield of semi-circular cross section, outwardly flanged edges on the long sides of said shield, an insertion of elastic material fixed in the flanged edges of said shield and extending in space relation thereto across the inner side of said shield so that a free space is formed between said inner surface of said shield and said insertion, and straps of elastic material for attaching said shield on the leg.

1,689,559. AUTOMATIC STARTING DEVICE FOR ALTERNATE-CURRENT MOTORS. BRUNO RAETTIG, Hoffnungsthal, near Cologne, Germany. Filed Feb. 9, 1926, Serial No. 87,118, and in Germany Jan. 13, 1925. 6 Claims. (Cl. 172—280.)



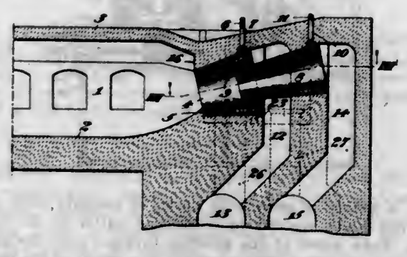
1. An automatic starting device for a polyphase induction motor mounted on the rotor of said induction motor, including in combination, a closed magnetic circuit core, a winding on said core in circuit with each phase winding on the rotor of said motor, said core being composed of laminations of different thicknesses throughout its cross section whereby eddy currents are automatically decreased at high frequencies when there is a relatively large slip.

1,689,560. LUBRICATING DEVICE. JOHN REID, Oil City, Pa., assignor to Joseph Reid Gas Engine Company, Oil City, Pa. Filed Oct. 20, 1927. Serial No. 227,569. 12 Claims. (Cl. 308—130.)



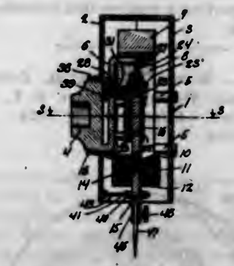
1. In combination with two relatively movable members having substantially vertical mutual bearing surfaces, one of said members having at its lower edge a cup adapted to retain oil flowing from said bearing surfaces, a rotatable disk extending from said cup to the upper limit of said bearing surfaces, and means for rotating said disk.

1,689,561. DISPENSING APPARATUS. RUSSELL M. RODDICK, Pasadena, Calif. Filed Apr. 15, 1927, Serial No. 183,997. Renewed Mar. 23, 1928. 2 Claims. (Cl. 225—28.)



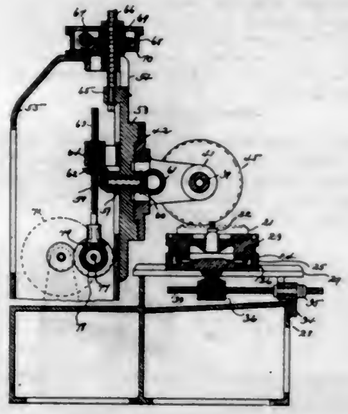
1. Apparatus of the class set forth, comprising, in combination, an image representing fruit from which the juice to be dispensed is extracted, a basin below said image, a duct terminating above said image and through which juice is adapted to bubble and flow over said image and drop into said basin, and means for circulating the juice caught by said basin upwardly through said duct.

1,689,562. PRINTING PRESS. THOMAS C. SPELLING, Chicago, Ill. Filed Aug. 13, 1927. Serial No. 212,819. 22 Claims. (Cl. 101—55.)



19. In a machine of the character described, guiding means for chases, chases therein having an engaging part, propelling means having a releasable part cooperating with the engaging part of each chase, and means for moving said propelling means back and forth to engage said successive chases including a spring for retracting the same to normal position, and means opposed to said spring for influencing movement in an opposite direction including a slidable member, a chain or the like connecting the same with the chase propelling means, and a spring-held actuating member adapted to cooperate with the slidable member to shift the same, the slidable member having a depending stop, and a bevelled releasing device in the path of movement of the stop to free the same from the shifting actuating member.

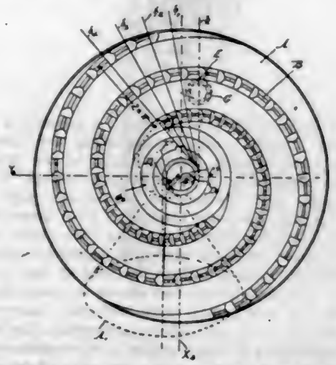
1,689,563. FURNACE AND METHOD OF OPERATING THE SAME. RICHARD H. STEVENS, Melrose Park, Pa., assignor to Bethlehem Steel Company, a Corporation of Pennsylvania. Filed Sept. 2, 1921. Serial No. 497,814. 5 Claims. (Cl. 263—15.)



1. An open hearth furnace entrance port of tuyère construction, a flue connecting the rear end thereof to a regenerator, another port of tuyère construction the forward end of which projects within the rear end of the first-mentioned port and provided with a flue connection to another regenerator, means for controlling the flow of gases to said ports, and additional openings near the furnace end to said regenerators controlled by valves.

1,689,564. MEANS FOR THE RADIO-TRANSLATION OF PHONOGRAPHICALLY-RECORDED SOUND WAVES. FLETCHER THORINGTON, Birmingham, Ala. Filed Dec. 30, 1927. Serial No. 243,611. 8 Claims. (Cl. 179—100.1.)

5. In a device of the class described, a support, a vibratory element, resilient means supporting the vibratory element from the support, means carried by the vibratory element for supporting a phonographic stylus, a fixed condenser plate upon the support, a condenser plate movable with the said vibratory element, a fixed magnet upon the support including spaced opposing pole pieces, a coil supported between said pole pieces, an armature supported by said vibratory element within the field of said coil and between the said pole pieces, and means for centering and maintaining the said armature in uniformly spaced relation with respect to the pole pieces and within the field of the coil, comprising a resilient yieldable connection between said support and said element below the point of suspension of the element.



1,689,565. METHOD OF AND MACHINE FOR GENERATING WORM GEARS AND THE LIKE. NIKOLA TRBOJEVICH, Detroit, Mich., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Jan. 28, 1924. Serial No. 689,130. 51 Claims. (Cl. 90—4.)

1. A method of generating worms of constant pitch and the like which consists in selecting a cutter in the form of a crown wheel of the modified involute type having a plurality of cutting teeth arranged in a spiral of the modified involute type, said teeth being of equal width in a plane perpendicular to the axis of the tool, in placing said cutter in tangential relation with the blank, and in rotating said blank and cutter in timed relation.

49. In a machine for producing worms, a blank spindle, a rotary tool, having a plurality of cutting teeth extending in the general direction of its axis and arranged in a spiral which is of constant pitch along a straight line offset from its axis, said teeth being of equal width in a plane perpendicular to said axis and having their outermost points lying in a plane perpendicular to said axis, means for positioning the tool and blank in tangential relation with the projected axis of the blank coinciding with the line of constant pitch of the tool, means for rotating the tool and blank in timed relation, and means for simultaneously imparting a relative feed movement between the tool and blank.

1,689,566. HOB. NIKOLA TRBOJEVICH, Detroit, Mich., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Jan. 28, 1924. Serial No. 689,131. 25 Claims. (Cl. 29—103.)

1. A rotary gear cutting tool having a plurality of axially disposed teeth projecting from a plane face and arranged to form an effective operating portion which is of rack section of constant pitch, each tooth being provided with a top cutting edge and opposite side cutting edges, the top cutting edges all lying in a plane perpendicular to the axis of the tool and the corresponding side cutting edges of the teeth being equally inclined to said plane, said teeth being of equal width, in a plane perpendicular to the axis of the tool.

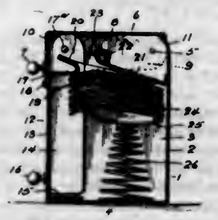
1,689,567. METHOD OF AND MEANS FOR PROTECTING METAL, WOOD, AND OTHER SUBSTANCES. PERRY W. TURNER, Ada, Ohio. Filed Aug. 18, 1926, Serial No. 130,108, and in Great Britain Dec. 1, 1925. 1 Claim. (Cl. 154—41.)

A method of protecting a substance which comprises completely enclosing said substance with a protective coating composition, attaching to said coating before it is dry a moist fabric to cover the substance, allowing the fabric to dry and shrink, and covering and impregnating the fabric thereafter with said protective composition.

1,689,568. PROCESS OF MAKING RADIATOR CORES. BENJAMIN HATHAWAY WADE, Chicago, Ill. Filed Feb. 17, 1927. Serial No. 169,014. 2 Claims. (Cl. 113—116.)

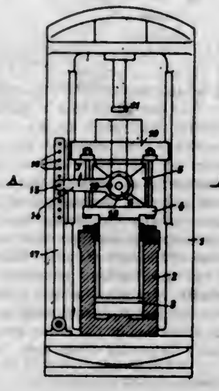
1. The herein described steps in a process of making a radiator core, which consists in making a series of cuts extending inwardly from opposite sides of a strip of metal to provide a plurality of fins, in folding the strip along its central longitudinal axis to bring the outer ends of the fins in substantial registration, in bending the strip along the inner common edges of the fins into spiral form, and placing said spirally-formed strip over a conducting tube.

1,689,569. FOUNTAIN PEN. ANNA WALEROWICZ, Wyandotte, Mich. Filed Mar. 7, 1928. Serial No. 259,650. 4 Claims. (Cl. 120—48.)



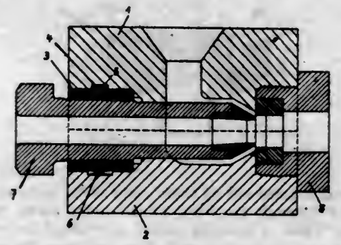
1. In a device of the class described, a fountain pen barrel, a pen point and a flow member engaged in the barrel, an ink tube connected with the pen and flow member, choke members pivotally mounted to the barrel, and in horizontal positions being capable of choking the flow of ink in the said ink tube, spring actuated rods connected to normally urge the choke members to inclined positions, and a cap member engaged on the barrel, and holding the rods in restrained positions so that the choke members are horizontal.

1,689,570. PROCESS OF MAKING REINFORCED HARD RUBBER. WILLIAM BURTON WESCOTT, Boston, Mass., assignor to The Rubber Latex Research Corporation, Boston, Mass., a Corporation of Massachusetts. Original application filed Nov. 18, 1922, Serial No. 601,910. Divided and this application filed Dec. 23, 1926. Serial No. 156,764. 1 Claim. (Cl. 18—50.)



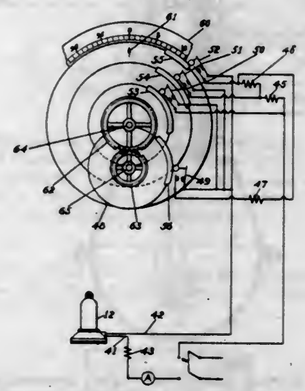
In the manufacture of articles composed of or comprising hard rubber, the process which comprises admixing comminuted hard rubber, disintegrated partially cured rubber, sulfur, fiber and rubber latex, drying, molding and vulcanizing.

1,689,571. DISPENSING CABINET. GEORGE B. WEST, U. S. Army, Washington, D. C. Filed June 7, 1926. Serial No. 114,329. 3 Claims. (Cl. 312—61.)



1. A dispenser for interfolded sheets of paper or the like, comprising a rectangular body portion adapted to receive a pile of interfolded sheets of paper, open at its top and having a recharging opening in its front, means adjacent to the upper portion of the body portion for separate discharge of the sheets of paper, compressible means for lifting sheets of paper into contact with said discharging means, a closure for said recharging opening and a lid for closing the top of the body portion and retaining said closure in closed position, substantially as described.

1,689,572. LEAD-CABLE PRESS. PAUL WIEGHARDT, Magdeburg, Germany, assignor to the Firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Filed Dec. 31, 1926, Serial No. 158,367, and in Germany Feb. 6, 1926. 3 Claims. (Cl. 207—1.)

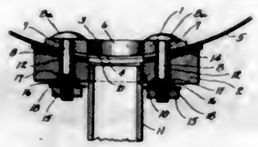


1. In a lead cable press having a tool holder adjustable by rotational movement, a lever coupled to said tool holder, and means for coupling the opposite end of said lever to a part of the press between which and said tool holder there is relative motion during the normal operation of the press.

1,689,573. VERTICAL LEAD-CABLE PRESS. PAUL WIEGHARDT, Magdeburg, Germany, assignor to the Firm: Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Filed Dec. 31, 1926, Serial No. 158,368, and in Germany Feb. 19, 1926. 2 Claims. (Cl. 207—1.)

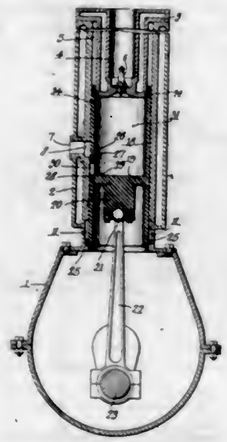
1. A vertical lead cable press having a divided press head the division surfaces of which lie parallel to the tool holder axis, the two parts of said press head having recesses, a one piece sleeve non-rotatably mounted in said recesses, and a tool holder threaded in said sleeve.

1,689,574. METHOD AND APPARATUS FOR SOUND PRODUCING. ROBERT LONGFELLOW WILLIAMS, Newton, Mass., assignor to Submarine Signal Corporation, Boston, Mass., a Corporation of Delaware. Filed Dec. 11, 1924. Serial No. 755,291. 7 Claims. (Cl. 177—386.)



6. An electric sound generating system of the impact type comprising an impact member, a diaphragm on which said impact member operates, a restraining spring and electromagnetic means for retracting said impact member against said restraining means and means for controlling the supply of current to said electromagnetic means including means for decreasing the current supplied to said electromagnetic means after said impact member is in its retracted position and means for breaking the current and releasing said impact member after it has been reduced.

1,689,575. BOILER FITTING. SPERRY H. WINN, Seattle, Wash. Filed Dec. 20, 1926. Serial No. 155,977. 1 Claim. (Cl. 285—50.)

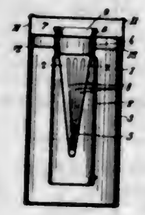


In combination, a tank, having a wall provided with an opening and slots extending in the same line at opposite sides of said opening, and a fitting comprising an inner plate that is insertable edgewise into the tank through said opening and slots, and which may then be turned to overlie

said opening and slots and is provided with a central outlet and with bolt holes adapted to register, respectively, with the said tank wall opening and ends of said slots, an outer plate fitted to the outside of the tank wall having a central opening that is threaded to receive a pipe and with bolt holes alined with the bolt holes of the inner plate; said

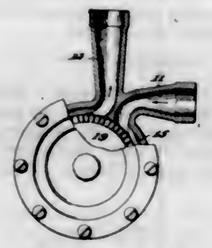
holes being reamed out at their outer ends, bolts projected outwardly through the holes of the inner plate, the wall and outer plate, a packing gasket interposed between the tank wall and outer plate, nuts threaded onto the bolts for drawing the parts together and gaskets inserted about the bolts within the reamed parts of the holes for precluding leakage about the bolts.

1,689,576. GASOLINE ENGINE. HARRY LEE ADAMS, Elvins, Mo. Filed May 21, 1927. Serial No. 193,338. 3 Claims. (Cl. 123—45.)



2. In an internal combustion engine, cooperating members including a cylinder and a piston mounted to reciprocate in the cylinder, the cylinder having intake and exhaust ports, and the piston being provided with a port, one of said cooperating members having a circumferential zigzag guide groove comprising branches, and the other of said cooperating members having a projection slidable in the groove, the projection and the groove coacting to rotate the piston and to bring the port of the piston into communication with the intake and exhaust ports at different times, as the piston is reciprocated, and back-stop pawls in the branches of the groove, and constituting means for directing the projection from one branch of the groove into the other branch thereof.

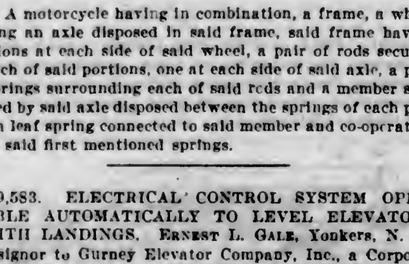
1,689,577. WELDING ROD. FREDERICK M. BECKET, New York, N. Y., assignor to Oxweld Acetylene Company, a Corporation of West Virginia. Filed Mar. 30, 1926. Serial No. 98,555. 3 Claims. (Cl. 219—8.)



1. A welding rod consisting of an iron alloy containing manganese 1.0% to 4.0%; nickel 0.2% to 4.0%; and silicon 0.1% to 0.3%.

1,689,578. RAPID FREEZER. FERDINAND FRANZ BENZ, Hamburg, Germany. Filed Oct. 4, 1927. Serial No. 223,945. 1 Claim. (Cl. 62—75.)

A rapid freezer comprising in combination a double-walled evacuated metal vessel for the freezing solution the outer wall of which is of light metal, the inner wall being of German silver said inner wall being offset at the upper end to form a slightly conical neck, an insertion serving as mould for the iceblock to be produced and tightly fitting into the neck portion of said vessel and having longitudinal grooves pressed in the inner surface to enlarge the surface upon which said freezing solution acts, a slightly conical portion at the upper end of said insertion, tightly fitting into said neck, and an air evacuated air tightly closed conical stopper tightly fitting into the top portion of said insertion.

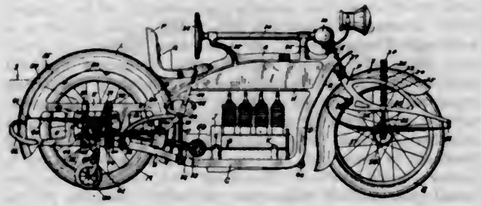


1,689,579. ROTARY PUMP. ARTHUR W. BURKS, Decatur, Ill. Filed Aug. 24, 1921. Serial No. 494,995. 2 Claims. (Cl. 103—96.)

1. A pump comprising a casing and a rotatable disc therein forming a rotor, said casing having a plurality of annular raceways partially separated by an interposed web paralleling the raceways and directed radially inwardly toward the periphery of the rotor, said rotor having two independent annular series of buckets, the buckets of each series being disposed adjacent the margin of the rotor with the buckets opening radially outwardly and also laterally into one of said raceways, a common inlet and a common outlet for said series of buckets whereby fluid entering the inlet is impelled by said buckets partially through one raceway and partially through the other raceway simultaneously, said rotor and said casing making substantially fluid-tight joints at the sides of the rotor whereby to resist flow of fluid radially inwardly from said buckets.

1,689,580. VACUUM CLEANER. PASQUALE DADDIO, New York, N. Y. Filed Oct. 8, 1927. Serial No. 224,036. 1 Claim. (Cl. 15—15.)

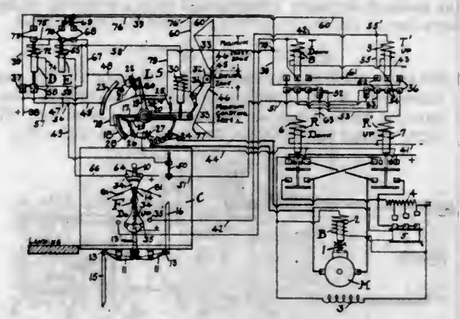
In a vacuum cleaner, a motor casing including a forward casing section and a rear casing section arranged in end-to-end relation, a suction chamber casing including a rear casing section formed integral with the forward motor casing section, and a forward casing section detachably connected with the last named rear casing section, said suction chamber casing having an inlet and outlet, a motor mounted within the motor casing and including a field member having one end projecting into the forward motor casing



section and its opposite end projecting into the rear motor casing section to serve as a coupling between the same, a fan mounted within the suction chamber casing and driven by the motor, a nozzle connected with the inlet of the suction chamber casing, a dust collecting bag connected with the outlet of the suction chamber casing, and a handle carried by the motor casing.

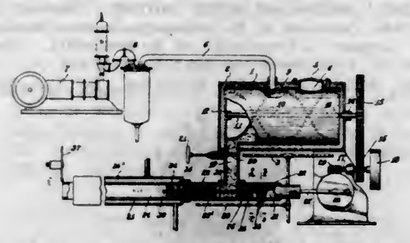
1,689,581. STABILIZED LATEX AND PROCESS OF PRODUCING SAME. MORGAN ROBERT DAY, Boston, Mass., assignor to Rubber Latex Research Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 3, 1927, Serial No. 158,828. Renewed Mar. 27, 1928. 6 Claims. (Cl. 18—50.)

1. As a new material, stabilized latex containing blood proteid.



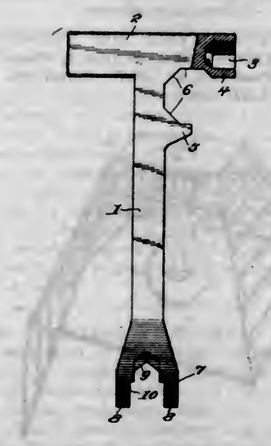
1,689,582. MOTOR VEHICLE. ANDREW DURESEN, Minneapolis, Minn. Filed May 23, 1925. Serial No. 32,515. 19 Claims. (Cl. 208—101.)

1. A motorcycle having in combination, a frame, a wheel having an axle disposed in said frame, said frame having portions at each side of said wheel, a pair of rods secured in each of said portions, one at each side of said axle, a pair of springs surrounding each of said rods and a member supported by said axle disposed between the springs of each pair and a leaf spring connected to said member and co-operating with said first mentioned springs.



1,689,583. ELECTRICAL CONTROL SYSTEM OPERABLE AUTOMATICALLY TO LEVEL ELEVATORS WITH LANDINGS. ERNEST L. GALE, Yonkers, N. Y., assignor to Gurney Elevator Company, Inc., a Corporation of Pennsylvania. Filed July 13, 1925. Serial No. 43,080. 30 Claims. (Cl. 187—29.)

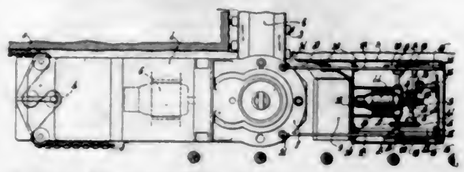
12. In an elevator system, the combination with the car, a hoisting motor, a car switch to initiate the start of the car, means operable by centering the car switch automatically to continue the movement of the car, and a stopping switch controlled automatically by the load and



rendered operable to control the hoisting operation always at a pre-determined fixed point relative to a pre-determined landing.

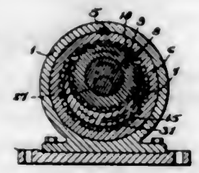
1,689,584. METHOD OF MOLDING COMPOSITE-CORK BODIES. WILLIAM F. GRUPE, Lyndhurst, N. J., assignor to Boucher Cork Company, New York, N. Y., a Corporation of New York. Filed Aug. 10, 1923. Serial No. 656,744. 17 Claims. (Cl. 18—48.)

1. The process of forming molded products of cork, comprising subjecting granules of cork to an elevated temperature in a partial vacuum to render the cork and the resins natural in cork plastic and molding the same while in plastic form under vacuum condition.



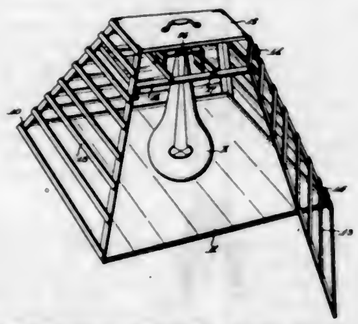
1,689,585. TIRE TOOL. LOUIS F. HASCHART, Lynbrook, N. Y. Filed May 9, 1927. Serial No. 190,059. 1 Claim. (Cl. 81—119.)

A tool of the class described comprising a handle and a hammer-like head, one end of the head having a depending part with the sloping shoulder at the inner end of the de-



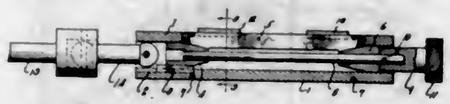
pending part, and a projection on the handle forming with said shoulder of said depending part a nut-receiving space, the walls of the space being formed with a plurality of flat faces one of the flat faces being formed by the shoulder.

1,689,386. MINING APPARATUS. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Oct. 27, 1921. Serial No. 510,699. 57 Claims. (Cl. 262—30.)



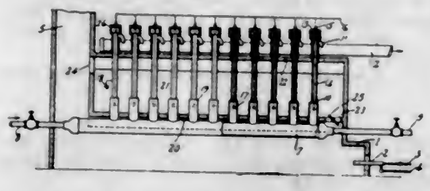
1. In a mining apparatus, kerf cutting mechanism movable along a face in which a kerf is being cut, and slack handling mechanism for moving slack laterally from the face and out of the path of the apparatus, said handling mechanism being connected to said cutting mechanism and disposed wholly outside of and parallel to the face and laterally of the trailing edge of said cutting mechanism.

1,689,587. PRESSURE-FLUID MOTOR. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 27, 1918, Serial No. 242,175. Renewed Oct. 31, 1921. Serial No. 511,842. 28 Claims. (Cl. 121—53.)



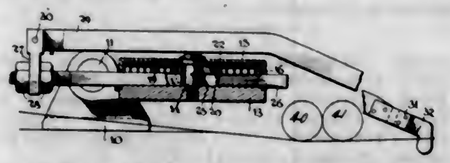
1. In combination, a compound epicyclic gear reduction including a plurality of pairs of intermeshing gears, means cooperating with the teeth of the gears of each pair to form pressure fluid receiving pockets increasing in volume on relative movement between said gears, and means for supplying motive fluid to the pockets formed between the teeth of each pair.

1,689,588. SAFETY DEVICE FOR TRANSPORTING FRAGILE ARTICLES. WALTER J. HOY, Woodside, New York, N. Y. Filed Oct. 23, 1926. Serial No. 143,669. 10 Claims. (Cl. 217—52.)



1. A transporting container for fragile articles including means for suspending the articles within the container for universal swinging movements in a substantially horizontal plane, said suspension means including an apertured frame, a yieldable resilient article-embracing girdle secured to the upper portion of the article and presenting an enlargement of greater diameter than the aperture in the frame adapted to seat upon the frame, and means for preventing upward or lateral displacement of the enlargement with respect to the frame whereby to maintain the article centered in the aperture.

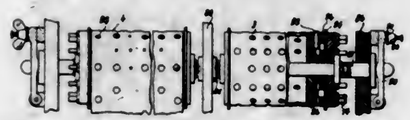
1,689,589. GRINDER. MARSDEN C. HUTTO, Detroit, Mich. Filed July 20, 1925. Serial No. 44,644. 2 Claims. (Cl. 51—206.)



2. In a grinder for truing cylindrical apertures, a hollow body member having a series of longitudinally extending radial slots therein, a series of abrasive holders fitting the said slots, means in the body for adjusting the holders radially in the slots, and an abrasive member adjacent each end of each holder providing a tool with a series of abrasive elements in longitudinally spaced relation adapting the same for grinding pairs of spaced apertures in axial alignment.

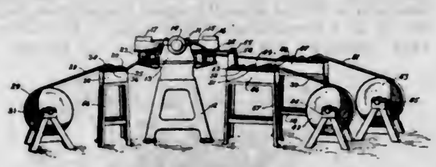
1,689,590. PETROLEUM-CRACKING PROCESS AND APPARATUS. JOHN JAY JAKOSKY, Los Angeles, Calif. Filed Oct. 15, 1925. Serial No. 62,553. 7 Claims. (Cl. 196—57.)

1. The process of cracking petroleum or petroleum products which comprises passing the material to be cracked under pressure through a retort, heating such retort to a sufficient temperature to effect cracking thereof, the pressure being such as to maintain the uncracked material substantially wholly in the liquid phase while permitting vaporization of cracked products, removing vaporized products of such cracking at a plurality of points distributed lengthwise of said retort, subjecting each of such vaporized products to a separate electrical precipitating operation to remove liquid particles therefrom and returning the material precipitated from each of such products to the retort at substantially the point at which such product was removed and then collecting such vaporized products.



1,689,591. FELL GAUGE FOR LOOMS. JOHN EDWIN JOHNSON, South Manchester, Conn., assignor to Cheney Brothers, South Manchester, Conn., a Corporation of Connecticut. Filed June 24, 1924. Serial No. 722,144. 14 Claims. (Cl. 139—1.)

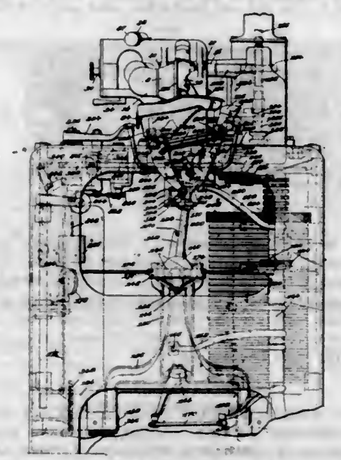
1. A fell gauge for looms comprising a support, a casing thereon, a rotary element in the casing having a hair line, a spring coiled about the axis of said rotary element



for holding said element in one position, a window in the casing having a hair line adapted to register with that first mentioned, a comb adapted to engage the fell of the cloth and gearing between said comb and said rotary element for turning the same against the action of the spring, substantially as set forth.

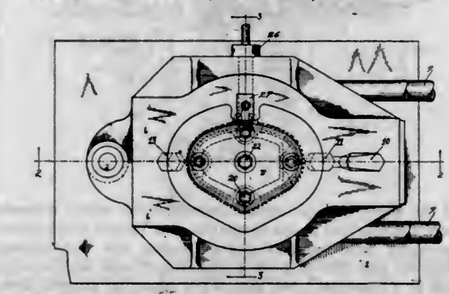
1,689,592. PATTERN MECHANISM FOR KNITTING MACHINES. VINCENT LOMBARDI, Brooklyn, N. Y. Original application filed Sept. 17, 1925, Serial No. 56,895. Divided and this application filed June 2, 1927. Serial No. 195,967. 3 Claims. (Cl. 66—156.)

2. A knitting machine comprising a perforated cylinder for holding a perforated pattern comprising a plurality of radially extending pins at each end of said cylinder and passing through perforations in the pattern and a control member for the pins at each end of said cylinder, said control member in one position causing said pins to be retracted sufficiently to withdraw the pins from the pattern perforations and in a second position causing said pins to project through the perforations.



1,689,593. PROCESS AND APPARATUS FOR FORMING GREASE-PROOF FIBER CONTAINERS. DONALD G. MAGILL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 24, 1921. Serial No. 509,937. 1 Claim. (Cl. 93—80.)

The process of forming grease-proof fiber containers, which comprises passing a strip of paper in contact with a quantity of grease-proofing compound, and then passing said strip onto a forming mandrel with the grease-proofing compound in contact with said mandrel, feeding other strips of paper coated with adhesive upon the mandrel and over said first mentioned strip and rotating and advancing the resulting tubing upon the mandrel, and causing by winding pressure the grease-proofing material to enter all interstices of the paper and to impregnate thoroughly the body of the paper forming the inner ply of the container.

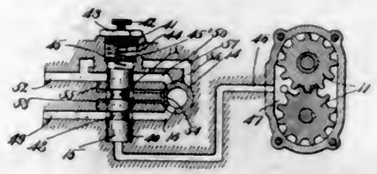


1,689,594. SHOE MACHINE. ALFRED R. MORRILL, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 2, 1920, Serial No. 355,583. Renewed Jan. 20, 1928. 76 Claims. (Cl. 12—17.)

3. A machine for operating on shoes having, in combination, means for operating on a shoe comprising an inseam trimming knife and welt beating elements, guides in contact with which the shoe is moved, mechanism for changing the relative positions of the shoe and the operating means to present the shoe properly to the operating means as the point of operation is transferred about the

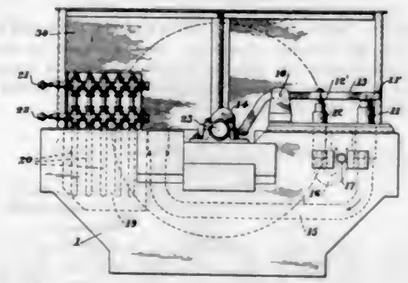
shoe, and automatic mechanism for relatively moving the guides and for relatively moving the welt beating elements to permit the disengagement of the shoe.

1,689,595. METAL MOLD AND METHOD OF CASTING. ALLEN B. NORTON, Cleveland, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 28, 1924. Serial No. 694,479. 20 Claims. (Cl. 22—155.)



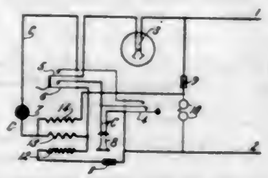
9. A mold for making aluminum alloy castings comprising relatively movable mold members having their adjacent faces suitably recessed to form a casting cavity for an enlarged cup shaped article, a gate cavity and a feeder cavity, the gate and feeder cavities communicating with the casting cavity at one side thereof, a core supported on the mold members and extending into the casting cavity with the inner end and side surfaces spaced apart from the adjacent surfaces of the mold members to form a thin walled casting, and a recess formed in one of the mold members separate from but communicating with the casting cavity at points adjacent to and remote from the feeder cavity.

1,689,596. DRILLING MECHANISM. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 13, 1924. Serial No. 699,123. 27 Claims. (Cl. 121—5.)



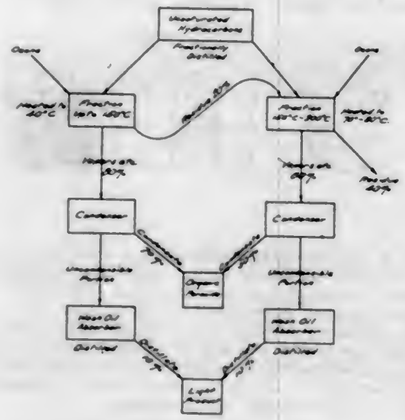
1. A drilling mechanism comprising a drilling motor, a steel actuated thereby, pressure fluid actuated rotation means for the steel, feeding means for the steel, and pressure fluid actuated means responsive to the resistance to rotation for automatically controlling said feeding means, said controlling means including means for providing

therein sharply distinct degrees of responsiveness to said resistance and said controlling means comprising valve mechanism to vary the rate of feed up to a predetermined point and to cut out the feed when said point is exceeded.



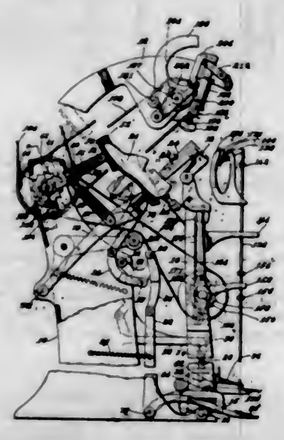
24. In a drilling mechanism, a drilling motor for actuating a drill steel, rotation means for the steel, reversible feeding means for the steel, means responsive to the resistance to rotation for automatically varying the power of, or reversing said feeding means, and means for preventing an excessive rate of forward feed when the resistance on the drill steel is removed.

1,689,597. CELL FOR ELECTRODEPOSITION OF METALS. ROBERT D. PIKE, Piedmont, GEORGE H. WEST, Berkeley, and BENJAMIN PLUMMER LITTLE, Oakland, Calif.; said West and Little assignors to said Robert D. Pike. Filed Sept. 23, 1925. Serial No. 58,010. 8 Claims. (Cl. 204—5.)



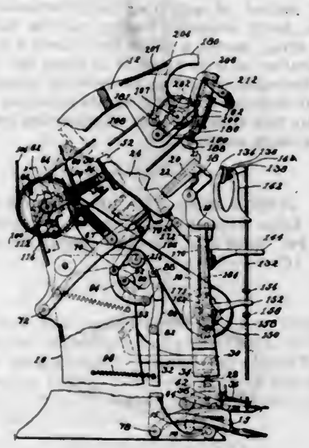
1. In a cell for the electro-deposition of metal, cathode compartments and anode compartments, porous diaphragms separating said compartments, means for introducing catholyte into the cathode compartment and maintaining same at a constant level, means for removing anolyte from the anode compartments, common channels connected with the anode compartments on each side, and means for automatically admitting catholyte so as to maintain the level of the anolyte substantially constant.

1,689,598. TELEPHONE SUBSTATION CIRCUITS. HAROLD C. PYE, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Oct. 23, 1925. Serial No. 64,293. 7 Claims. (Cl. 179—81.)



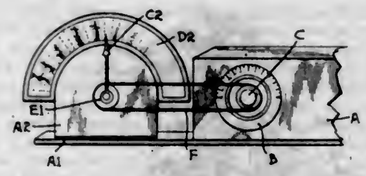
1. In an automatic telephone substation, a group of equipment comprising a ringer, a condenser and an induction coil, a second group comprising a transmitter and a receiver, and circuit means for connecting said elements to form a common battery booster antiside tone circuit, said means including a cord of only three conductors connected between said equipment groups.

1,689,599. PEROXIDE OF HYDROCARBON AND PROCESS OF MAKING THE SAME. ALEXANDER S. RAMAGE, Detroit, Mich. Filed Apr. 27, 1925. Serial No. 26,295. 7 Claims. (Cl. 260—16.)



6. Process which comprises ozonizing a liquid mixture of hydrocarbons such as may be obtained by cracking petroleum hydrocarbon mixtures.

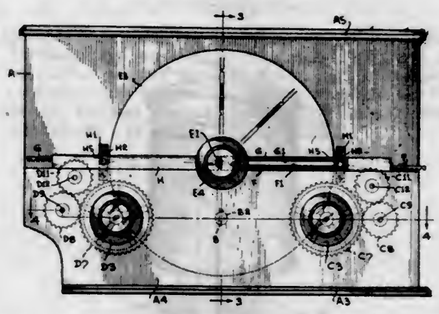
1,689,600. RELASTING MACHINE. JOHN H. RICHARDSON, Melrose, and ALBERT E. HUDSON, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 9, 1919. Serial No. 309,555. 62 Claims. (Cl. 12—15.)



1. A machine of the class described having, in combination, means for supporting the forepart of a shoe, means for gripping the heel portion of the sole of a shoe, and means for moving the supporting and the gripping means to force a last into the forepart of the shoe while so held.

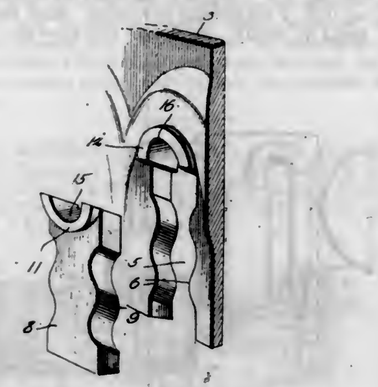
1,689,601. SOLE-FORMING MACHINE. JOHN H. RICHARDSON, Melrose, and ALBERT E. HUDSON, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed July 9, 1919, Serial No. 309,555. Divided and this application filed Nov. 28, 1922. Serial No. 603,821. 25 Claims. (Cl. 12—33.)

1. A machine of the class described having, in combination, a beater, a handle for moving the beater into and out of operative position, means for reciprocating the beater, and means constructed and arranged to actuate the beater reciprocating means when the handle is operated to move the beater into operative position.



1,689,602. RADIO APPARATUS. ALFRED F. SANFORD, Knoxville, Tenn. Filed June 30, 1924. Serial No. 723,286. 4 Claims. (Cl. 116—129.)

1. In a radio receiving apparatus, the combination of a tuning shaft, a tuning knob on said shaft, a pointer support rotatable on an axis which is non-coincident with the tuning shaft axis, a pointer supported by said pointer support, a writing surface near the path of the free end of the pointer, and motion-transmitting connection between the pointer support and the tuning shaft.

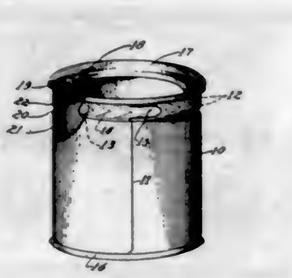


1,689,603. RADIO APPARATUS. ALFRED F. SANFORD, Knoxville, Tenn. Filed Aug. 18, 1925. Serial No. 51,066. 28 Claims. (Cl. 116—124.)

1. In an apparatus of the kind described, the combination of three independently turnable tuning shafts, a movable record-receiving member in operative relation with one of said shafts for movement therewith, two guide members movable independently of each other and supported near each other and in front of the face of the record-receiving member for movement transversely to the course of the record-receiving member and each bearing position indication, one of said guide members being in operative relation with the second of said shafts for movement simultaneously with the turning of said shaft, and the other

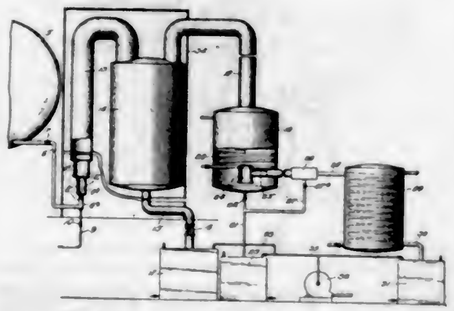
guide member being in operative relation with the third tuning shaft for movement simultaneously with the turning of said shaft.

1,689,604. ADJUSTABLE GRATE-BAR SUPPORT. CLAUDE IVY WALLIS and JOHN S. AMBROCK, Mobile, Ala. Filed Dec. 4, 1926. Serial No. 152,620. 1 Claim. (Cl. 308—37.)



In a device of the class described, a plate-like support having an upwardly extended opening in its lower edge, and a bearing member in the opening, the upper end of the bearing member being spaced from the upper end of the opening to afford a place of journaling for a grate bar; the vertical longitudinal edges of the bearing member, and the corresponding members of the support, being provided with interengaged ribs which cooperate to hold the bearing member against dropping downwardly out of the opening, the bearing member tapering in width from front to back, and the longitudinal edges of the opening being correspondingly inclined from front to back, thereby to prevent the bearing member from sliding through the opening in a substantially horizontal direction, and the ribs slanting downwardly and inwardly to cause the bearing member to move rearwardly to a firm seat in the opening of the support.

1,689,605. METHOD AND APPARATUS FOR FORMING AN INTERIORLY-BEADED OR LOOPED TEARING-STRIP CAN. GEORGE FREDRICK WALTER, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New York. Filed Mar. 17, 1926. Serial No. 95,272. 21 Claims. (Cl. 153—9.)



1. In an apparatus of the character described, the combination of a support, a clamping head comprising a holding member, means for shifting the same, clamping fingers car-

ried by said holding member and arranged to receive the can body end thereover and to hold the same rigidly and a stripping member carried by said clamping head, and mov-

able relatively thereto, said stripping member having means for engaging the can body end and forcing it from said clamping fingers.

1,689,606. ART OF DISTILLATION. GEORGE W. WATTS, Whiting, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Apr. 3, 1925. Serial No. 20,415. 10 Claims. (Cl. 196—85.)

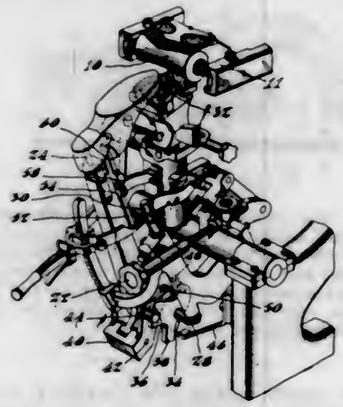
1. The method of distilling hydrocarbon oils wherein a stream of oil is introduced into a mixing device, steam is superheated and introduced into the mixing device while reducing its pressure, thereby causing an expansion of the steam simultaneously with the introduction of the oil, the steam supplying at least the heat required for vaporization of the desired proportion of the oil, the mixture of steam and oil is conveyed in constant flow through an externally unheated passage until substantially equilibrium conditions are attained at a predetermined temperature and pressure without separation, and the resulting liquids and vapors introduced into a chamber, from which the unvaporized liquids and vapors are separately withdrawn.

6. In apparatus for distilling hydrocarbon oils, an expanding mixer, means for supplying superheated steam and oil separately to the mixer, an unheated conduit into which the mixer opens, said conduit being of length sufficient to permit the admixed oil and steam to come to substantial equilibrium, means at the end of the conduit for separating vapors and unvaporized liquids, and means for maintaining the conduit at a pressure lower than that of the steam supplied.

1,689,607. INVERTASE PREPARATION AND METHOD OF PREPARING AND UTILIZING THE SAME. LEONARD WICKENDEN, Flushing, N. Y., assignor to John J. Naugle, Brooklyn, N. Y. Filed Nov. 6, 1925. Serial No. 67,463. 51 Claims. (Cl. 167—6.)

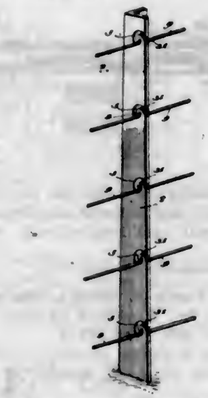
1. The method of preparing an invertase-containing preparation, which comprises heating yeast in the presence of a sugar.

15. The method of preparing an invertase-containing preparation, which comprises heating yeast in the presence of a sugar syrup, having a pH of from about 4 to about 5, at a temperature of from about 55 to about 65° C.



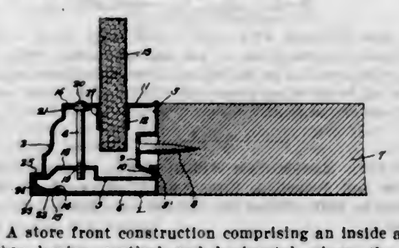
47. An invertase-containing preparation comprising an invert sugar medium containing therein invertase and being substantially free from alcoholic fermentation bodies, said preparation being sensibly acid.

1,689,608. PISTON RING AND PROCESS OF MAKING SAME. JOHN WILLIAMS and JUDSON WILLIAMS, Philadelphia, Pa. Filed Mar. 20, 1926. Serial No. 96,266. 2 Claims. (Cl. 74—109.)



1. As a new article of manufacture, a piston ring forming element consisting of an endless circular cast metal band of substantially uniform width and thickness throughout its circumference, said band being of such thickness that it may be readily snapped at any point about its circumference.

1,689,609. SHOE-PRESSING MACHINE. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 14, 1925, Serial No. 23,051, and in Great Britain Apr. 22, 1924. 39 Claims. (Cl. 12—34.)

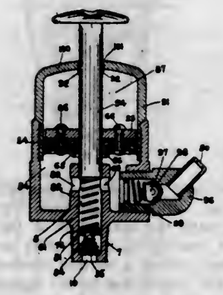


1. In a shoe pressing machine, a pressing tool, a last heel support, a last forepart support, and additional means for supporting a jointed last between said supports in the neighborhood of the joint between its heel and fore parts, said additional means being adjustable to effect operative contact with the last in a location between its opposite sides irrespective of the position of the last heightwise on said supports.

1,689,610. FENCE POST. CHRISTIAN WINTER, Oskaloosa, Iowa. Filed Nov. 17, 1926. Serial No. 148,885. 2 Claims. (Cl. 256—48.)

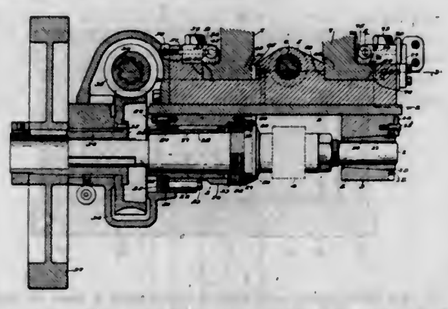
1. A fence post having an outstanding flange formed with a slot for the reception of a fence wire, said slot comprising an entrance portion in the edge of said flange with a substantially vertical body portion, and a plug adapted to close and frictionally engage with the edges of said entrance portion of the slot.

1,689,611. STORE-FRONT CONSTRUCTION. CHARLES B. YOUNG, Pittsburgh, Pa. Filed Oct. 25, 1927. Serial No. 228,615. 5 Claims. (Cl. 20—56.4.)



1. A store front construction comprising an inside angle member having vertical and horizontal wings, the vertical wing being provided with a downwardly opening groove, an outside member provided with an interior groove, an intermediate connecting member provided at the back with an upwardly extending flange and having a downwardly extending flange at the front, said flanges being interlocked with the said grooves, and a screw connecting the outside and intermediate members and maintaining the latter in interlocked relation with the inside and outside members.

1,689,612. CONTAINER. JOHN M. YOUNG, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 4, 1924. Serial No. 753,763. 6 Claims. (Cl. 220—54.)

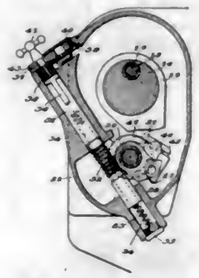


1. A can, comprising a body provided with score lines setting off an encircling tearing strip beneath the top, the body being in one piece with said tearing strip, a collar member arranged within the body and extending across the tearing strip, and a flexible hinge strip secured to the body beneath and above said tearing strip.

1,689,613. AUTOMATIC LUBRICANT CUP. OSCAR ULYSSES ZERK, Newark, N. J., assignor, by mesne assignments, to The Bassick Manufacturing Company. Original application filed July 5, 1923, Serial No. 649,703. Divided and this application filed Aug. 11, 1924. Serial No. 731,300. 10 Claims. (Cl. 184—38.)

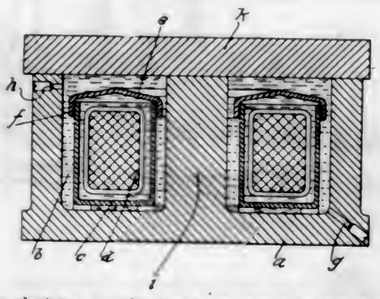
1. A lubricant feeding device comprising a receptacle having an inlet, an outlet tube extending partly within the contour of said receptacle, ejecting means operating in said outlet passage, and a movable wall for separating a mass of lubricant from a body of air above said wall, said outlet tube forming an abutment to limit the movement of said wall.

1,689,614. SPINDLE-CARRIAGE GUIDE AND ADJUSTMENT. WILLIAM F. ZIMMERMANN, Maplewood, N. J., assignor to Gould & Eberhardt, Newark, N. J., a Corporation of New Jersey. Filed June 30, 1925. Serial No. 40,543. 3 Claims. (Cl. 90—4.)



1. A machine combining two parallel T-rails; an E-shaped carriage interfitting directly against four of the guide-ways of said two T-rails and having four slide-ways in spaced opposition to the remaining four guide-ways of said two T-rails; and four adjustable bearing-blocks intervening between said spaced guideways, the four guide-ways of each T-rail being successively at right angles to form a rectangular contour.

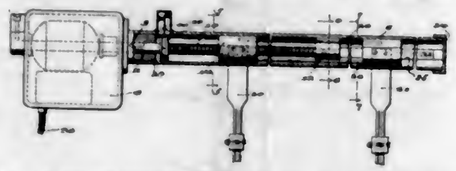
1,689,615. SHAPER FEED MECHANISM WITH STATIONARY CONTROL. WILLIAM F. ZIMMERMANN, Maplewood, and HENRY HAUSER, Irvington, N. J., assignors to Gould & Eberhardt, Newark, N. J., a Corporation of New Jersey. Filed Mar. 5, 1926. Serial No. 92,558. 13 Claims. (Cl. 90—39.)



1. A shaper feed mechanism comprising a lever oscillated through a fixed arc; a pawl-lever having a portion thereof in the path of movement of the oscillating lever;

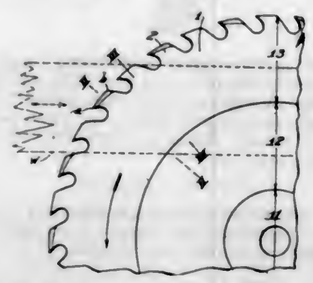
a fixed stop; means for adjusting the angular location of the position of rest of the pawl lever with relation to said fixed stop to vary the arc through which it is advanced by the oscillating lever; a feed shaft; and a pawl and ratchet operated by the pawl lever for operating the feed shaft.

10. A shaper feed mechanism comprising an oscillating lever; means for oscillating said lever through a fixed arc in accordance with the movement of the shaper ram; a pawl lever for controlling the feeding movements of the shaper table and having a portion thereof in the path of movement of the oscillating lever; means comprising an axially reciprocatable member engaging teeth on the pawl lever for determining the rotative position of the pawl lever; a stop for limiting the movement of said member; and means for exerting a force tending to hold pawl lever in engagement with the oscillating lever until disengaged by said stop.



1,689,616. ELECTROMAGNETIC CHUCK. JULIUS BING, Eisenach, Germany, assignor to Magnet-Werk G. m. b. H. Eisenach, Spezialfabrik für Elektromagnet-Apparate, Eisenach, Germany. Filed June 3, 1924, Serial No. 717,657, and in Germany June 5, 1923. 2 Claims. (Cl. 175—367.)

1. An electro-magnetic chuck comprising a base of magnetic material provided with an annular channel extending downwardly from its top, a cover plate of magnetic material covering the channel, an annular open topped casing seated in said channel and spaced from the sides and bottom of said channel, a removable annular cover having inner and outer peripheral flanges and of inverted V-shape between said flanges, said cover resting on the open top of the casing with the flanges extending down the sides thereof, and a magnet winding in said casing and having its convolutions extending horizontally through said casing.



1,689,617. WINDSHIELD WIPER. JOSEPH BORNSTEIN, Boston, Mass., assignor, by direct and mesne assignments, to Sombco, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Oct. 17, 1927. Serial No. 226,784. 14 Claims. (Cl. 15—253.)

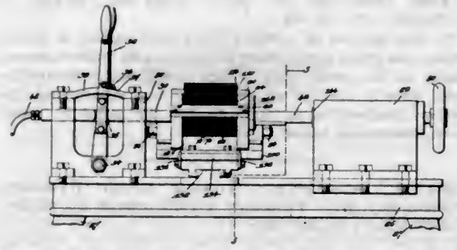
1. In a structure of the character specified, the combination of a support, a motor carried by said support and having a shaft, a feed screw carried by said support and being movable endwise with respect to the motor, there being a loose driving connection between said feed screw and said

shaft, a bearing enclosing the connection between said feed screw and said shaft, and a motor reversing mechanism having connection with said longitudinally movable feed screw.

1,689,618. SAW. JAMES F. BROWN, Shaler Township, Allegheny County, Pa. Filed July 22, 1927. Serial No. 207,613. 1 Claim. (Cl. 143—133.)

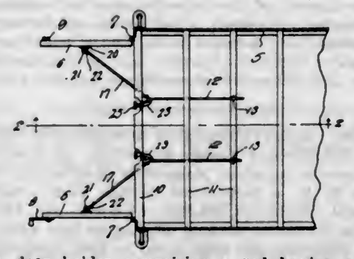
A saw provided with teeth whose front faces are perpendicular to the plane of cut and whose top edges, prolonged in the line of travel, are beveled transversely, the angle of bevel being greater at the forward than at the rear end of the tooth.

1,689,619. MONOGRAM STRUCTURE. MICHAEL CHERNOW and JOSEPH I. CHERNOW, Brooklyn, N. Y. Filed June 8, 1927. Serial No. 197,480. 3 Claims. (Cl. 40—140.)



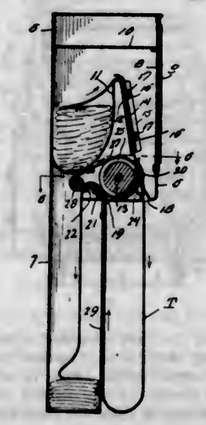
1. A monogram structure or the like, including a relatively thin base plate, the margin of the rear face of which is adapted to lie flat against a supporting surface, said rear face being formed with a shallow adhesive-receiving recess occupying substantially the entire area of the plate within the support-contacting margin, the front face of the plate having a shallow recess therein, and a flat character bearing unit of no greater thickness than the depth of said last mentioned recess, fitting and adhesively mounted therein, and protected laterally by the walls thereof.

1,689,620. APPARATUS FOR PRODUCING BELLOWS FOLDS IN TUBING. WALTER B. CLIFFORD, Framingham, Mass., assignor, by mesne assignments, to Clifford Manufacturing Co., Boston, Mass., a Corporation of Delaware. Filed Apr. 2, 1926. Serial No. 99,418. 28 Claims. (Cl. 153—73.)



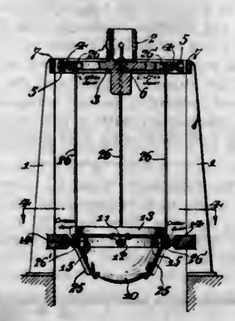
1. Apparatus for producing bellows tubing comprising a bed, a series of separable die plates slidingly supported upon the bed and having complementary openings for the reception of a tube therein, means for initially

positively spacing the die plates, means for locking individual die plates about the tube lengthwise, means for contracting the tube, and means for preserving substantial



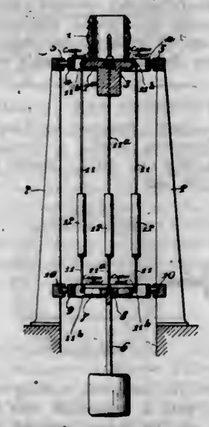
parallelism of the die plates during the contraction of the tube while permitting a relatively free movement of the die plates with the tube.

1,689,621. DOOR HOLDER. JOHN R. CLOVER, Enid, Okla. Filed June 14, 1927. Serial No. 198,751. 2 Claims. (Cl. 292—262.)



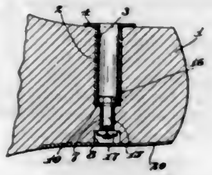
1. A door holder comprising a rod having an intermediate straight portion for attachment to the frame of the door at the opening thereof, said intermediate portion at one end thereof merging into a return bent offset portion, said offset portion merging with an angularly disposed guide portion, and a second rod having an eye receiving the guide portion of the first-mentioned rod, said eye adapted to enter said return bent portion of the first-mentioned rod and contact with the intermediate straight portion at the end thereof.

1,689,622. TOWEL CABINET. JOHN R. CLOVER, Enid, Okla. Filed Aug. 23, 1927. Serial No. 214,798. 3 Claims. (Cl. 312—38.)



1. In a towel cabinet, a casing including an upper portion having a forwardly projecting part and a lower portion to receive soiled toweling, a receptacle for clean toweling in the rear of said upper portion of the casing, said forwardly projecting part of the casing having spaced transverse front and rear slots in the bottom thereof, a roller journaled in the lower portion of said forwardly projecting part of the casing between said slots, means to press the toweling against the front side of said roller before passing down through the front slot, means to press the toweling against the rear side of said roller after passing up through the rear slot, and means to direct the toweling rearwardly and downwardly from the rear side of said roller into said lower portion of the casing.

1,689,623. PENDULUM LENS APPARATUS. SVEN AUGUST ESKILSON, Stockholm, Sweden, assignor to American Gasaccumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Nov. 15, 1927, Serial No. 233,392, and in Sweden May 8, 1924. 10 Claims. (Cl. 9—8.3.)

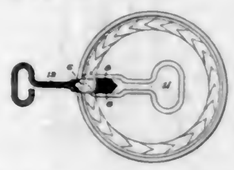


2. The combination of a pendulum structure, comprising swinging relatively movable parts, with fluid means interposed between said parts for retarding the relative movements between the same.

1,689,624. PENDULUM LENS APPARATUS. SVEN AUGUST ESKILSON and HUGO ABRAMSON, Stockholm, Sweden, assignors to American Gasaccumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Nov. 15, 1927, Serial No. 233,393, and in Germany Mar. 12, 1927. 13 Claims. (Cl. 9—8.3.)

11. In a pendulum lens apparatus, the combination of a pendulum, a lens support, a connection between the said pendulum and the said support, which connection comprises a dash pot whereby relative movements between the pendulum and the said lens apparatus are retarded.

1,689,625. SHOE LAST AND METHOD OF MAKING THE SAME. ERNEST M. FULLERTON, Stoughton, Mass. Filed Dec. 13, 1926. Serial No. 154,410. 1 Claim. (Cl. 12—139.)

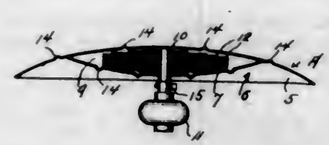


An improved last having a thimble recess and a recess of smaller diameter in alinement therewith, the last bottom having an enlarged counterbored opening in alinement with said smaller recess, a thimble having an opening through the bottom fitted in said thimble recess, a metallic tube of proportional length fitted in said smaller recess between the thimble recess and said counterbored opening, a bolt fitted through the tube and the opening in the thimble, and retaining means on each end of said bolt, one bearing on the thimble bottom and the other on said tube, one of said retaining means being removable and adjustable, in combination with a heel plate on the last bottom covering and protecting said counterbored recess.

1,689,626. OVER-THE-BED TABLE. GUSTAVE A. GALLOWITZ, New York, N. Y., assignor to The Kny-Scheerer Corporation of America, New York, N. Y., a Corporation of New York. Filed Sept. 21, 1926. Serial No. 136,764. 3 Claims. (Cl. 45—110.)

1. In a table adapted to stand over a bed a pair of base members, a pair of legs rigidly mounted thereon, a top mounted on said legs, means for raising and lowering said top to any desired height comprising rack bars supporting said top, said bars being mounted in each of the legs of said table in engagement with gears in gear casings at the upper ends of said legs, said gears being operated by intermediate gears in mesh with worm gears on a horizontal shaft passing through said gear boxes said shaft being operated by a crank and handle, means for revolving said top on a horizontal axis and means for securing it at any desired point in said revolution.

1,689,627. KEY-OPENING CAN. CHARLES W. GRAHAM, San Francisco, Calif., assignor to American Can Company, San Francisco, Calif., a Corporation of New Jersey. Filed Sept. 11, 1923. Serial No. 662,062. 5 Claims. (Cl. 220—52.)

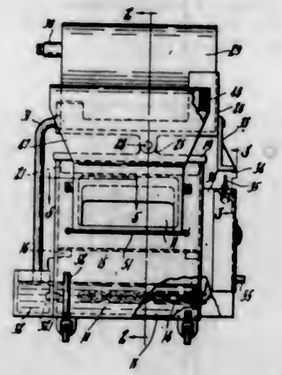


1. A cover for the hermetic sealing of metallic containers provided with a removable tear section situated within an area of the cover bounded by scored lines formed in the metal thereof and terminating in an inwardly extended tongue section which lies within an area bounded by scored lines in the metal and an opening key permanently united to the tongue extension section of the tear strip.

1,689,628. METHOD OF BONDING RUBBER TO METAL. HAROLD GRAY, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 27, 1927. Serial No. 187,113. 7 Claims. (Cl. 18—59.)

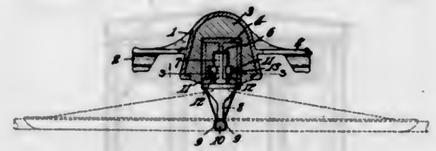
1. The method of bonding vulcanized rubber to metal which comprises superposing a vulcanizable rubber composition on the metal with a film comprising sulphurchloride, directly contacting the metal and vulcanizing the rubber composition in contact with the metal at usual heat vulcanizing temperatures.

1,689,629. ANTENNA. WILLIAM HENRY HAWORTH, Green Bay, Wis. Filed July 9, 1925. Serial No. 42,398. 3 Claims. (Cl. 250—33.)



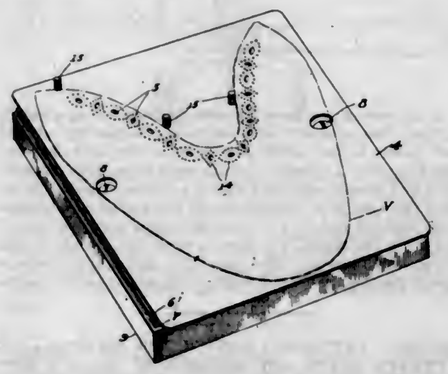
1. An antenna of the character described, comprising a body forming a chamber, a post extending centrally into said chamber and fastened to said body, and a series of metal plates within the chamber, and insulations disposed between said plates, said plates snugly embracing the post.

1,689,630. HEAT TREATING MAGNESIUM ALLOYS. ZAY JEFFRIES and ROBERT S. ARCHER, Cleveland, Ohio, assignors to American Magnesium Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Oct. 14, 1921. Serial No. 507,766. 6 Claims. (Cl. 148—11.)



6. The process of working magnesium base alloys, comprising subjecting the solid metal to heat treatment at a high temperature for a period of hours but below the melting temperature of the most fusible constituent of the alloy to increase the plasticity of the alloy and thereafter mechanically deforming the alloy.

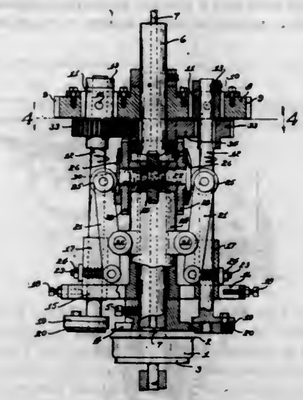
1,689,631. APPARATUS FOR CONDITIONING BOX TOES. MELVIN O. JENNINGS, East Lexington, Mass., assignor to Harry H. Beckwith, Brookline, Mass. Filed May 7, 1927. Serial No. 189,492. 6 Claims. (Cl. 12—1.)



1. Apparatus of the class described, comprising a casing having a steaming chamber and an aperture for inserting work, means for supplying hot vapor to said chamber, and a cover on said casing having spaced upper and lower portions having a hollow space between them communicating with said steaming chamber, said lower portion having a sloping lower face.

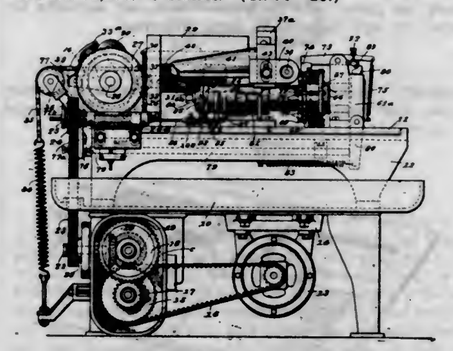
1,689,632. HANGER FOR TROLLEY WIRES. EDWARD F. JOYCE, Wheeling, W. Va. Filed Sept. 16, 1926. Serial No. 135,793. 1 Claim. (Cl. 191—42.)

A trolley wire suspension device including a suspension member having a bell, a vertical socket in the bell, means to secure the socket to the bell, said socket having an internal annular channel forming shoulders, said channel communicating with the socket interior and disposed at a distance below the top of the socket and at a distance above the lower end of the socket and further having spaced longitudinal ways leading from its lower end into said channel, and a trolley wire engaging member having an upright post formed with lugs receivable in said ways and in the channel, said lugs being located at a distance above the lower end of the post and at a distance below the upper end of the post whereby said post has elongated parts engaging the socket both above and below the channel thereof.



1,689,633. APPARATUS FOR MANUFACTURING ORNAMENTED SHOE UPPERS. HENRY B. LUPIEN, Manchester, N. H. Filed Aug. 26, 1925. Serial No. 52,530. 4 Claims. (Cl. 164—93.)

1. An apparatus of the character described comprising a die for cutting leather to produce a desired pattern, a plate having projections thereon for making lines of indentation in the leather in a definite relationship to the pattern cut by said die, supporting means for holding said die and plate in operative relationship to each other with said die projecting through said plate, cushioning means between said support and plate permitting the plate to yield relatively to the die, and yieldingly supported pins projecting through said plate for gaging the position of the work relatively to said die and said projections.

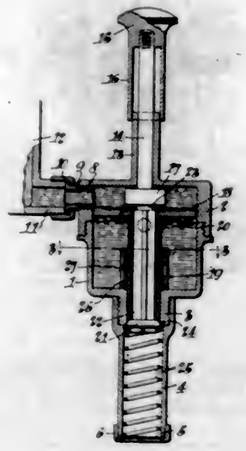


1,689,634. OVAL-GEAR DOUBLE-SEAMER HEAD. JOHN OSCAR MALMQUIST, San Francisco, Calif., assignor to American Can Company, San Francisco, Calif., a Corporation of New Jersey. Filed June 21, 1926. Serial No. 117,303. 7 Claims. (Cl. 113—24.)

1. In a can seaming machine, a chuck member and a head member, one of said members being rotatable, and said chuck member being adapted for engagement with the end of a non-circular can; a seaming roll carried by the head member and adapted for rolling contact with the periphery of the can; and means including a gear

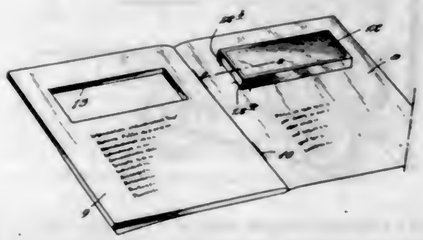
having an eccentric axis for rotating said seaming roll with a varying speed corresponding to its natural rotation in traveling around and in contact with the periphery of the can.

1,689,635. MILLING MACHINE. NEWMAN M. MARSILIUS, Bridgeport, Conn., assignor, by mesne assignments, to The Producto Machine Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 14, 1925. Serial No. 75,276. 5 Claims. (Cl. 90—15.)



1. In a milling machine, a frame, a slide mounted for reciprocating movement in said frame, a bearing carried by said slide, a spindle having one end mounted in said bearing, a cutter on said spindle, an offset arm on said slide, said arm carrying a bearing receiving the other end of the spindle so that the cutter is arranged between two bearings and steadied thereby, and a work holder arranged in advance of the spindle and toward and away from which the spindle and cutter are adapted to be moved as the slide is reciprocated.

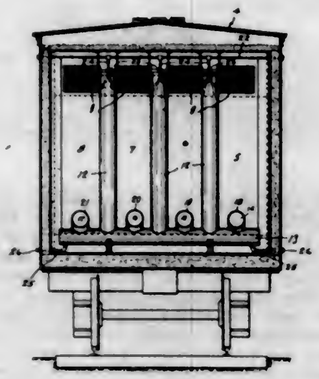
1,689,636. DISPENSING VALVE. WILLIAM MILDER, Omaha, Nebr., assignor to Victor Valves, Inc., Omaha, Nebr., a Corporation of Nebraska. Filed Oct. 14, 1927. Serial No. 226,147. 6 Claims. (Cl. 221—113.)



1. In a device of the class described, a hollow casing having a cylindrical liquid receiving chamber, means to deliver liquid to the chamber, a tubular neck depending from the casing, a piston slidable in the chamber and having a tubular stem fitting slidably in said neck, said tubular stem having a valve seat in its lower end and ports adjacent

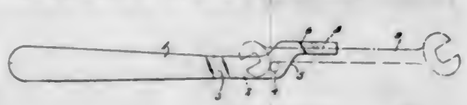
the piston and adapted to communicate between the chamber beneath the piston and the interior of the tubular stem at times, a lower valve member adapted to seat on the tubular stem seat and having a non-circular stem slide-guided in said tubular stem and a portion projecting slightly above the piston top, a spring normally acting to force the lower

valve member upwardly to hold it to its seat, a plunger, a guide for the plunger carried by the casing, and an upper valve carried by the plunger and adapted at times to seat on the piston to close communication from the chamber above the piston into the tubular stem but normally unseated by said lower valve stem projection.



1,689,637. ADVERTISING DEVICE. WALTER C. MORDECAI, Kew Gardens, N. Y. Filed Sept. 18, 1923. Serial No. 663,414. 4 Claims. (Cl. 281—3.)

1. An advertising device comprising a pamphlet having front and back cover sections, a plurality of leaves adapted to bear descriptive matter secured between said front and back cover sections, and a container for samples detachably secured to the inner face of the back cover section, said container protruding through the leaves and front cover section of the pamphlet.

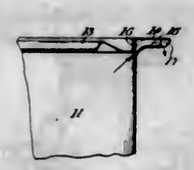


1,689,638. METHOD OF REFRIGERATING CARS AND CAR FOR PERFORMING SAID METHOD. ROBERT BRUCE MUSSER, Seattle, Wash. Filed May 19, 1924. Serial No. 714,275. 1 Claim. (Cl. 62—24.)

A refrigerator car embodying an ice box; air circulating and cooling devices adjacent said ice box, consisting of a plurality of upright cylinders having open top ends spaced from the top of the car and their lower ends connected to a collecting header, said header having air outlet connections opening above said header and a brine outlet connection, and means for delivering a cold brine in the form of downwardly directed jets into each cylinder, whereby warm air from the top of the car is drawn into the tops of said

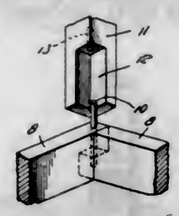
cylinders and discharged at the bottom of the car in cooled condition through said air outlet connections by the injector action of said jets.

1,689,639. EXTENSION HANDLE FOR WRENCHES. HARRY D. NEFF, Newport, Pa. Filed May 15, 1928. Serial No. 278,010. 2 Claims. (Cl. 81—180.)



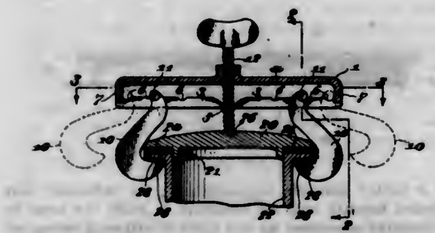
1. An extension handle for wrenches comprising a handle portion, two parallel sides extending forwardly of and each united to the handle portion by a relatively short inclined portion, a crossbar uniting said sides, said crossbar, sides and handle portion forming a recess of a size to receive the head of a wrench, the forward ends of said sides being inclined inwardly to a union having a groove therein to receive the shank of a wrench whose head seats in said recess, said crossbar, sides and union forming a recess to permit the passage therethrough of the head of said wrench.

1,689,640. FASTENING DEVICE FOR WRIST-WATCH STRAPS, BANDS, AND BRACELETS. ALMYR L. NEWMAN, Warwick, R. I., assignor to A. L. Newman Company, Providence, R. I., a Corporation of Rhode Island. Filed Aug. 3, 1926. Serial No. 126,803. 5 Claims. (Cl. 24—71.)



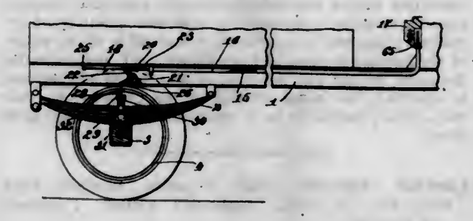
1. In a device of the type specified, the combination of hinged members adapted to be folded together in overlying relation, means for attaching one end of a strap, band, or bracelet to the free end of one member, means on the free end of the other member for adjustably fastening the other end of the strap-length thereto, a positively acting slidable latch on one member adapted to engage the other member to lock said members in overlying relation, and manually-operable means for sliding said latch to release the lock to permit extension of said members.

1,689,641. METHOD AND MEANS OF VACUUMIZING AND DOUBLE SEAMING. CHARLES PICKLES, San Francisco, Calif., assignor to American Can Company, San Francisco, Calif., a Corporation of New Jersey. Filed Oct. 8, 1923. Serial No. 667,320. 16 Claims. (Cl. 113—82.)



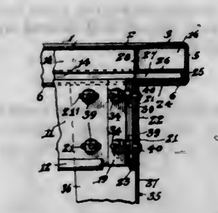
1. In combination a metallic container provided with an annular double seaming flange, a can cover adapted to fit the container and having an annular flange portion adapted to overlie and interlock with the flange of the can body, and spaced depressions formed in the flange of the can cover for supporting the can cover upon the flange of the metal container and to provide space between the lower surface of the flange of the container, said depressions being arranged about said flange and spaced apart from each other.

1,689,642. SECTIONAL-BUILT PORTABLE HOUSE. GEORGE W. RAFFLEYEA, New Orleans, La. Filed Mar. 14, 1927. Serial No. 175,189. 3 Claims. (Cl. 20—2.)



1. In a structure of the class described, in combination, a supporting pier, a pair of right angularly disposed sills having their adjacent ends notched to provide extensions, said extensions being disposed in overlapping and interconnected relation, and a vertically extending post resting partly on said pier and partly on said sill, and having a recess for accommodating adjacent end portions of said sills.

1,689,643. HOLDING DEVICE. ALFRED J. RUDOLPH, Philadelphia, Pa. Filed July 2, 1923. Serial No. 649,187. 9 Claims. (Cl. 220—57.)



1. A device of the character described, comprising an elongated rigid member having hook members connected therewith, which hook members are adjustable both bodily and pivotally toward and from each other lengthwise of the said elongated rigid member and means for effecting engagement of the said device with an object.

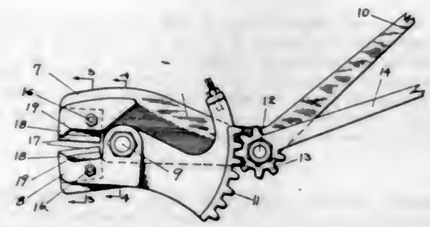
1,689,644. LOAD-MEASURING DEVICE. FREDERICK J. TROLL, Baltimore, Md., assignor to The Loadmeter Company, a Corporation of Delaware. Filed May 8, 1922. Serial No. 559,151. 7 Claims. (Cl. 265—42.)

1. In a road vehicle having a body and wheels, springs for supporting the vehicle body on the wheels, a flexible thrust rod and means for communicating to the thrust rod the variation in relative position between the vehicle body and the wheels due to flexing of the springs, and an indicating instrument reading in terms of the load connected to said thrust rod to be actuated thereby.

1,689,645. TABLE. HEINRICH TURK, Lutherville, Md., assignor to The Porcelain Enamel & Manufacturing Co., Baltimore, Md. Filed Aug. 25, 1926. Serial No. 131,413. 8 Claims. (Cl. 45—31.)

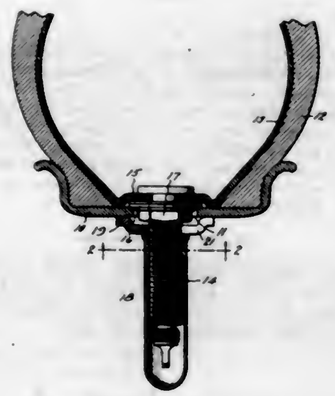
5. In a table, the combination with a top having a depending rim terminating in an inwardly extending flanged portion vertically disposed sheet metal side and end members engaging said top, each of said members having integrally formed projections thereon contacting with said depending rim and top for reinforcing said top and coupling the same to said members, and means for removably securing said members together to lock the same in firm engagement with the top.

1,689,646. COVER PLATE FOR CABLE CHANNELS AND THE LIKE. RUDOLF TUTSCH, Berlin, Germany. Filed Apr. 22, 1927, Serial No. 185,840, and in Germany Apr. 23, 1926. 4 Claims. (Cl. 94—34.)



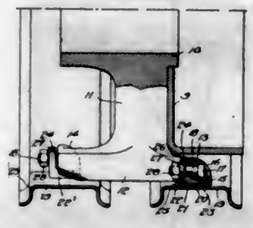
1. A cover plate comprising a frame of angle metal having an upright outer web and lower inner web; a corrugated plate in said frame having its margins resting on said lower flange; and a hardened mass of plastic material adhered to and filling the corrugations of said sheet and filling the part of the frame above said sheet.

1,689,647. ACTIVE CARBOMINERAL PRODUCT. EDOUARD URBAIN, Paris, France, assignor to Urbain Corporation, a Corporation of Delaware. Filed May 5, 1926, Serial No. 106,933, and in France June 25, 1925. 2 Claims. (Cl. 252—3.)



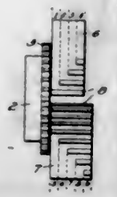
1. The method of making an absorptive material which comprises mixing together carbonizable vegetable material, mineral material comprising a sufficient quantity of tricalcium phosphate to constitute at least 25% of the weight of the finished product and phosphoric acid, agglomerating the mass, drying and calcining at a sufficient temperature to eliminate the major portion of the phosphorus, other than such phosphorus as is combined in a tri-basic phosphate.

1,689,648. SHEARS. JOHN VOLESKE, Portland, Oreg. Filed Feb. 15, 1926. Serial No. 88,462. 2 Claims. (Cl. 164—81.)



1. In a shear: pivotally mounted jaws; knives mounted upon said jaws; guards projecting from said jaws at the extreme ends of said knives, and filleted upon said jaws towards the pivotal point thereof.

1,689,649. RIM WITH VALVE-STEM FASTENER. JAMES H. WAGENHORST, Jackson, Mich. Filed Jan. 26, 1925. Serial No. 4,906. 5 Claims. (Cl. 152—20.)

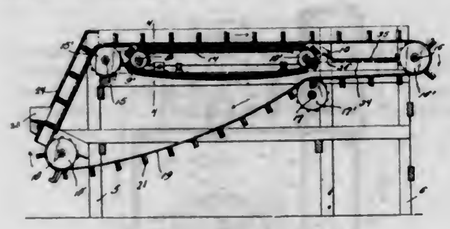


2. The combination of a tire carrying rim having a valve stem opening, a valve stem projecting through said opening and carrying an element adapted to contact with the rim, a cap carried by the valve stem and adapted to pass through said opening with the latter, and a member carried by the rim and adapted to be removably interposed between said cap and rim and engageable by said cap to hold said element in contact with the rim and prevent movement of the valve stem in said opening.

1,689,650. AUTOMOBILE WHEEL. JAMES H. WAGENHORST, Jackson, Mich. Filed July 6, 1925. Serial No. 41,834. 5 Claims. (C. 301—12.)

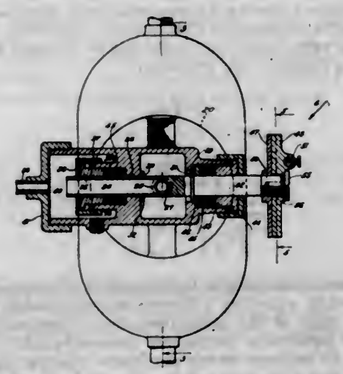
1. In a wheel, a cast metal wheel body comprising a plurality of spokes having cross-arms at the outer ends thereof, said cross-arms being provided with rim-seating surfaces arranged in two sets, one in front of and the other in rear of the central plane of the wheel, the surfaces of one set being staggered with respect to the surfaces of the other set.

1,689,651. SELECTING MECHANISM FOR CALCULATING MACHINES. EDWARD CLAXTON WALTER, Orange, N. J., assignor to The Elliott-Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 21, 1925. Serial No. 24,771. 11 Claims. (Cl. 235—82.)



1. In a calculating machine, the combination with a denominational member, of a plurality of selectors adapted to operate said member and movable in the same direction to different set positions.

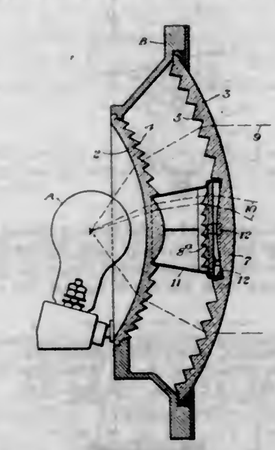
1,689,652. TABLE. ANDREW F. WARNOCK, Portland, Oreg., assignor of one-third to Thomas Tesdal, Portland, Oreg. Filed Apr. 6, 1926. Serial No. 100,084. 1 Claim. (Cl. 45—112.)



In a table: movable top members; an extension leaf positioned beneath said top members to guide the same in their relative movement as the table is extended when not in use; coacting slides for said members; coacting notches in said slides to receive said leaf and adapted to raise the leaf when said slides are operated; a shaft journaled in said slides; a cam upon said shaft adapted to position the raised leaf intermediate said top members; a lever upon said shaft; and a rod connected to said lever for operating said shaft.

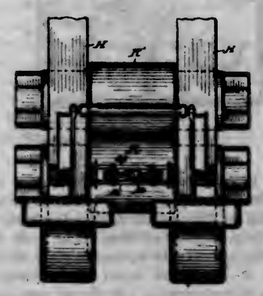
1,689,653. FRUIT CLEANING AND POLISHING MACHINE. EDWIN M. WAYLAND and ALLAN H. MCINTYRE, Covesville, Va. Filed May 14, 1927. Serial No. 191,418. 4 Claims. (Cl. 146—202.)

1. In a fruit or vegetable cleaner, and in combination, a belt having a brush surface, and a second belt having transverse spaced combined flights and brushes, said belts also having runs in substantial parallelism, and the faces of the combined flights and brushes of the second named belts in the said run thereof being disposed angularly to and above the brush surface in said run of the first named belt and exposed to and adapted to contact with fruits or vegetables supported on said surface.



1,689,654. LIQUID-LEVEL CONTROL FOR PRESSURE TANKS. EDWIN C. WEISGERBER, Los Angeles, Calif., assignor to Petroleum Appliance Syndicate, Los Angeles, Calif., a Business Trust. Filed Sept. 14, 1925. Serial No. 56,250. 6 Claims. (Cl. 137—68.)

1. For use in a liquid level control for pressure tanks, a valve control organization comprising: a float chamber; means rendering said float chamber communicative with a pressure tank; a bearing member formed in said float chamber having an inner chamber, an outer recess and a shaft receiving aperture therein; a shaft rotatably mounted in said aperture having a hollow end, extending into said recess; a float mounted in said chamber; a tubular element mounted between said float and said shaft forming internal communication between said float and the hollow end of said shaft; and adjustable means operable by said shaft for operating a control valve.

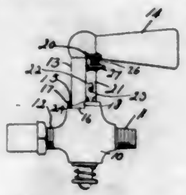


1,689,655. LIGHT SIGNAL. WESLEY B. WELLS, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 20, 1925. Serial No. 17,032. 4 Claims. (Cl. 177—329.)

4. In a railway light signal comprising a source of light and a doublet made up of two echelon lenses for projecting a beam of parallel rays from said source to a distant point, the steps on the inner lens being on the outer surface thereof and the steps on the outer lens being on the inner surface thereof, the combination with the foregoing elements, of a tube one end of which fits into the center step

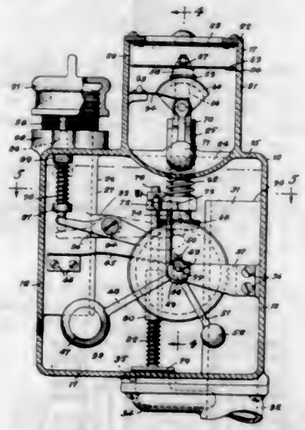
of the inner lens and the other end of which fits into the center step of the outer lens, and a prismatic screen mounted in said tube for projecting a portion of the rays from said source downwardly to provide an indication to an observer close to the signal.

1,689,656. ROLL POLISHER. JOHN D. WILLIAMS, Niles, Ohio. Filed Apr. 6, 1926. Serial No. 100,031. 11 Claims. (Cl. 80—1.)



1. In combination with a rolling mill, a roll polishing device comprising a polishing block, a guide, a holder for the block mounted in the guide and adapted for reciprocation with respect thereto, means for supporting the guide between the housings of the mill adjacent one of the rolls thereof, said means being adapted to permit limited movement of the guide to and from the roll, means for reciprocating the holder in the guide to move the block back and forth longitudinally of the roll, and yielding means connected with said supporting means and with the guide operative to continually urge the guide forwardly toward the roll so as to maintain the block in operative engagement therewith.

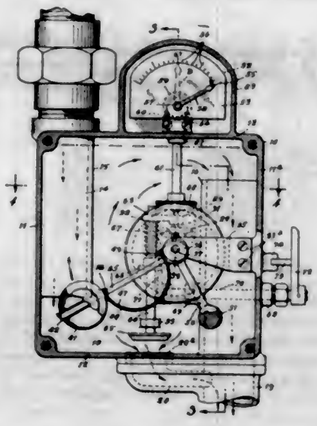
1,689,657. LOCKING VALVE FOR GAS BURNERS. CHARLES E. WISE, Philadelphia, Pa. Filed Aug. 1, 1927. Serial No. 209,772. 1 Claim. (Cl. 251—164.)



A locking valve for gas burners comprising a valve body having a slot and notch in its upper edge, a valve stem, a pin projecting from the stem into the slot, a guideway longitudinally of the stem, a lug at the outer end

of said guideway, a latch slidably mounted in the guideway and provided with a nose for registration with the notch when the valve stem is in a closed position and riding on the edge of the valve body when in other positions, a

finger hold at the outer end of the latch, a spring between the lug and finger hold to normally force the latch inward, and a handle on the stem to rotate the same when the latch is withdrawn from the notch against the action of the spring.

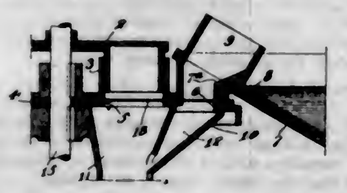


1,689,658. SPECIFIC-GRAVITY REGISTER. WALTER J. ALBERSHEIM, New York, N. Y. Filed Nov. 13, 1925. Serial No. 68,864. 8 Claims. (Cl. 265—44.)

1. A specific gravity register, comprising a casing having provision for flow of liquid therethrough and for retaining a portion of the liquid during its flow, a counterbalanced rotatively supported displacing body in the casing whose specific gravity is approximately similar to the specific gravity of the liquid when of a standard density, said body being submerged in the liquid for being moved by the buoyant effort of the retained liquid when of a density varying from its known standard, means operative by the body when moved to indicate the relative difference of density of the liquid, and means for closing the inlet of the casing and to remove the body from its support and for yieldingly holding the body in its separated position.

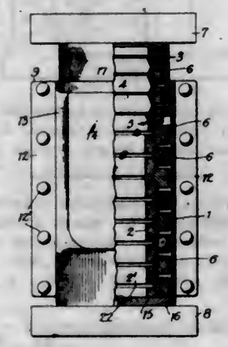
1,689,659. SPECIFIC-GRAVITY INDICATOR. WALTER J. ALBERSHEIM, New York, N. Y. Filed Nov. 13, 1925. Serial No. 68,865. 10 Claims. (Cl. 265—44.)

1. A specific gravity indicator, comprising a casing having an inlet and an outlet relatively arranged for flow of liquid therethrough and for retaining a portion of the liquid during its flow, a slidable rotatively supported counterbalanced air chamber in the casing of a weight whose specific gravity is about equal to the specific gravity of the liquid when of a standard density, said air chamber being submerged in the retained liquid for being rotatively moved by the buoyant effort of the liquid when of a density varying from its known standard, means operative with the rotary movement of the air chamber to indicate the relative difference of density of the liquid, and means associated with the air chamber for being made effective by the influence of change of the standard temperature of the



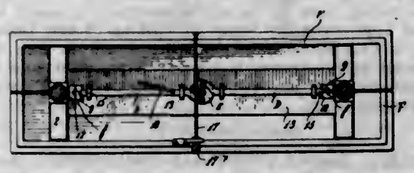
liquid to slidably adjust the air chamber for keeping the indicating means in its normal position at all temperatures of the liquid.

1,689,660. METHOD AND ARRANGEMENT FOR COMPARATIVE ALTERNATING-CURRENT MEASUREMENTS. DIETER ALBRECHT, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Jan. 29, 1925, Serial No. 5,541, and in Germany Feb. 2, 1924. 4 Claims. (Cl. 171—95.)



3. In measuring circuits for measuring alternating current values by adjusting a known measured value to an unknown value of the same character in combination a regulating resistance, means for measuring the known value and an indicator of the watt-meter type having fixed field coils and a movable coil, and circuit connections for affecting the ampere turns of both sets of coils by the currents resulting from the known and the unknown value.

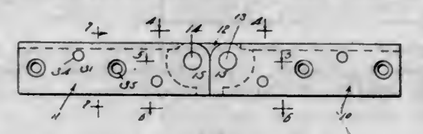
1,689,661. CAN-FILLING MACHINE. CHARLES H. AYARS, Salem, N. J., assignor to Ayars Machine Company, Salem, N. J. Filed June 11, 1924. Serial No. 719,268. 5 Claims. (Cl. 226—97.)



1. In a can filling machine, a distributing wheel having a plurality of measuring cups for granular material; a distributing wheel for liquid material; a bed plate for the granular distributing wheel having openings for discharge of granular and liquid material; a cut-off plate normally closing both openings, and means actuated by the cans for clearing the openings.

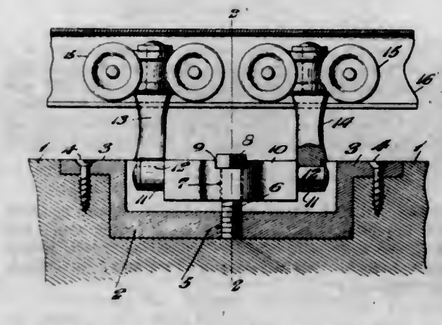
1,689,662. CUSHIONING OR SHOCK-ABSORBING DEVICE. FRANK B. BELL and OSCAR R. WIKANDER, Pittsburgh, Pa., assignors to Edgewater Steel Company, Pittsburgh, Pa. Filed Apr. 21, 1927. Serial No. 185,557. 16 Claims. (Cl. 267—4.)

1. A cushioning or shock absorbing device comprising a stiff main backing spring of ring spring type, and a relatively weaker precessional spring or ring spring type frictionally coupled to the backing spring for initially receiving and transmitting a force to said backing spring.



1,689,663. LATCHING MEANS FOR ADJUSTABLE TABLES. JOSEPH COOPER, New York, N. Y. Filed Feb. 10, 1927. Serial No. 167,089. 2 Claims. (Cl. 45—9.)

1. In latching means for adjustable tables, comprising two opposed table top units and a third top unit normally disposed above said first named top units, of a supporting member connected to the third top unit and projecting upwardly between the first named units, a spring acting upon said supporting member, a pawl adapted to engage a shoulder formed on said supporting member, a rotatable actuator, a link connecting the pawl with the rotatable actuator, and means for manually imparting movement to the actuator.



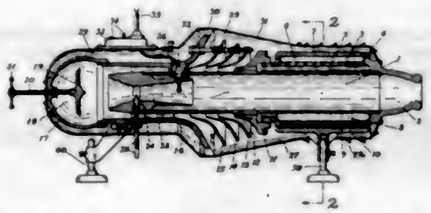
1,689,664. HINGE. ERNEST G. COVELL, Los Angeles, Calif., assignor to Cameo Refrigerator Corporation, Los Angeles, Calif. Filed Aug. 3, 1927. Serial No. 210,265. 5 Claims. (Cl. 16—163.)

1. A hinge including two sections, one having a segmental part, the other having a part projecting from its end, a pivot pin connecting the segmental part and projecting part, the end of said other section having a concave portion fitting the segmental part, shoulders at the ends of the segmental part, and shoulders at the ends of

the concave portion, the shoulder on the two sections being related to engage simultaneously to stop movement of the sections.

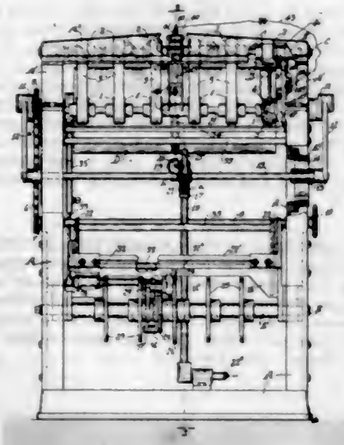
1,689,665. SLIDING-DOOR HANGER. WILLIAM P. CRAMP, Philadelphia, Pa. Filed Feb. 9, 1927. Serial No. 166,904. 2 Claims. (Cl. 16—103.)

1. In a structure of the character stated, a sliding door the top of which is cutaway, a dished member fitted to said cutaway portion and having a threaded opening in its bottom, a wheeled member arranged to travel upon a track, a pair of independent pendant arms carried by said wheeled member, each arm having a single bearing and provided with a pair of wheels, a tiltable, solid block having pintles arranged in said bearings and having an opening in alignment with said threaded opening, and a bolt extended through said block and directly engaging said threaded opening.



1,689,666. METHOD OF TRANSMITTING PICTURES AND SENDING PLATE THEREFOR. MARVIN FERREE, New York, N. Y., and JOSEPH WISSMAR, Cleveland, Ohio, assignors, by direct and mesne assignments, to Picture Transmission Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 28, 1925. Serial No. 5,258. 1 Claim. (Cl. 178—5.)

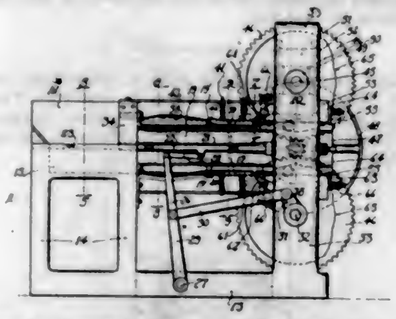
A method of transmitting a picture which consists in producing a series of electric pulses corresponding to the differences in light value of the successive small areas of said



picture, and producing electric pulses of the type which substantially correspond to a pure white tone in transmitting the small areas which correspond to light grey tone.

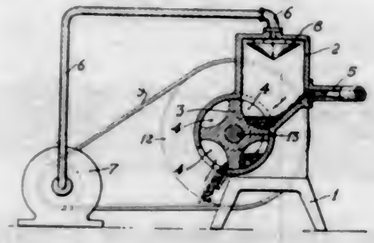
1,689,667. LIQUID-FUEL COMBUSTION. WALTER H. FREE, New Rochelle, N. Y. Filed Oct. 15, 1926. Serial No. 141,789. 23 Claims. (Cl. 158—73.)

1. In a hydro-carbon fuel burner, the combination of a flame chamber, a steam generator adapted to be heated by said flame chamber, a fuel carbureter discharging into said flame chamber, a steam-operated air suction means encircling said chamber and discharging into said carbureter, and means disposed in said chamber for igniting the resultant combustible.



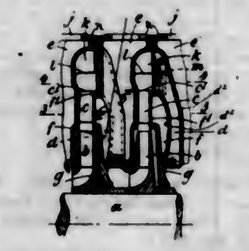
1,689,668. BLANK-FEED MECHANISM. JAMES A. GRAY, San Francisco, Calif., assignor to American Can Company, San Francisco, Calif., a Corporation of New Jersey. Filed June 4, 1924. Serial No. 717,853. 28 Claims. (Cl. 271—31.)

1. An apparatus for the described purpose comprising a holder adapted to contain a stack of blanks, means for initially separating successively the lower edges of said blanks and re-stacking them within said holder; and means for successively removing the re-stacked blanks from said holder.



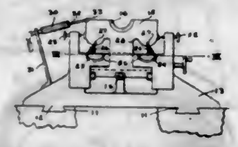
1,689,669. APPARATUS FOR INTERLOCKING AND UNITING THE HOOKED EDGES OF BLANKS TO FORM CAN BODIES. JAMES A. GRAY, San Francisco, Calif., assignor to American Can Company, San Francisco, Calif., a Corporation of New Jersey. Filed Nov. 12, 1924, Serial No. 749,497. Renewed Mar. 26, 1928. 37 Claims. (Cl. 113—8.)

1. A machine for the described purpose comprising means for receiving a pair of separate blanks having hooked flanges capable of mutual inter-engagement, a horn having means for causing the inter-engagement of said flanges,



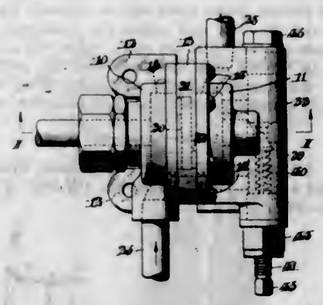
means for feeding the sheets along the horn so as to be inter-engaged by their hooked flanges, and means for clinching the inter-engaged flanges to unite the two blanks.

1,689,670. ENTRAIL-COLLECTING MEANS FOR EVISCERATING APPARATUS. JAMES A. GRAY, San Francisco, Calif., assignor to American Can Company, San Francisco, Calif., a Corporation of New Jersey. Filed Aug. 18, 1925. Serial No. 50,897. 2 Claims. (Cl. 302—59.)



1. In an entrail collecting apparatus the combination of a container, an entrail conductor entering said container at a point above the bottom of the same, an air exhaust pipe leading from the top of the container, a smooth surfaced baffle depending below the opening of said exhaust pipe, and having an annular air space around the same, and a rotary pocketed valve in air-tight engagement with the bottom part of the container and operating to remove viscera therefrom.

1,689,671. TURBO AIR OR GAS COMPRESSOR. ALEXANDER JUDE, Birmingham, England, assignor to Bellias and Morcom Limited, Birmingham, England, a British Company. Filed Apr. 9, 1927, Serial No. 182,263, and in Great Britain May 31, 1926. 5 Claims. (Cl. 230—209.)

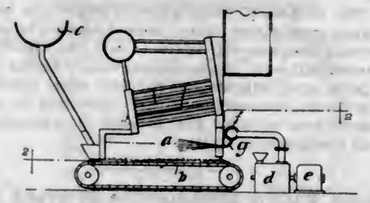


1. In a turbo gas compressor, a casing formed with an outer water cooling chamber, a plurality of impellers in said casing, said casing being formed with a diffuser and a return channel leading from one said impeller to the next impeller, walls of said return channel separating said outer water chamber from an inner water cooling chamber between said diffuser and said return channel, and approximately radial webs formed with approximately radial passages communicating with said outer and inner water chambers interconnecting said walls.

1,689,672. BALANCING MACHINE. ALEXANDER T. KASLEY, Moore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 10, 1924. Serial No. 705,619. 15 Claims. (Cl. 73—51.)

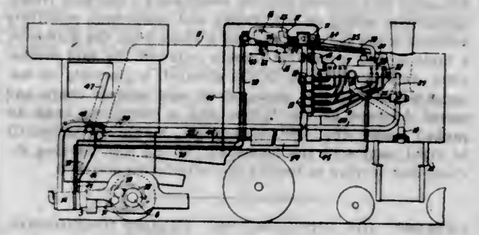
1. In a balancing machine, the combination of a vibratory supporting member for a body to be balanced, springs inclined and connected at opposite sides of the supporting member, and common means for simultaneously changing the effectiveness of the springs.

1,689,673. GEAR PUMP. JAMES D. LALOR, Baltimore, Md., assignor to The Lalor Fuel Oil System Company Inc., Baltimore, Md., a Corporation of Maryland. Filed June 13, 1925. Serial No. 36,860. 1 Claim. (Cl. 103—126.)



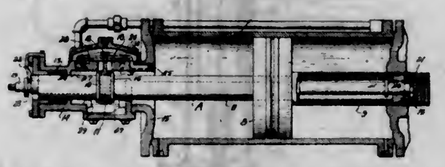
A multi-stage gear pump comprising complementary parts with an intervening ported partition affording housing for independent fluid-displacing gear sets, said partition having a passage therethrough connecting the intake side of the high pressure stage and delivery side of the low pressure stage of the pump sequentially and continuously, a by-pass between the intake space adjacent the low pressure gear set and the delivery space proximate the high pressure gear set having an obstructive ported partition, a spring-pressed relief valve in the by-pass normally preventing flow through the ported partition but adapted to automatically establish local circulation between the intake and delivery sides aforesaid for relief of back pressure on the pump, a stuffing box threaded in the wall of said by-pass, a tubular adjusting screw threaded in the stuffing-box, said valve including a stem afforded guidance in said tubular adjusting screw, and a spring interposed between said valve and said adjusting screw, whereby provision is made for varying the power of the spring and for removal of the valve as a unit.

1,689,674. COMMERCIAL BLASTING EXPLOSIVE. RALPH AUSTIN LONG, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed May 13, 1925. Serial No. 30,087. 2 Claims. (Cl. 52—11.)



1. A blasting explosive of the character described, comprising nitro-glycerine up to 8%, ammonium nitrate, trinitrotoluene and a non-explosive combustible, the nitroglycerine and the trinitrotoluene complementally constituting a sensitizer not in excess of 12 per cent of the whole, and in which the nitroglycerine is in excess of the trinitrotoluene.

1,689,675. FURNACE BURNING PULVERIZED FUEL. WARNER LULOFS, Amsterdam, Netherlands. Filed Oct. 18, 1923, Serial No. 669,263, and in Great Britain Oct. 23, 1922. 1 Claim. (Cl. 110—40.)

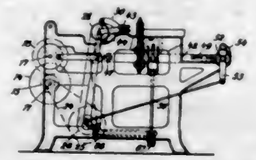


In combination with a boiler furnace having an offtake above the rear of the furnace chamber and a traveling grate adapted to carry the burning fuel toward the rear of the furnace, a plurality of fuel jet pipes projecting through the rear wall of the furnace above the grate, adjacent the path of exit of the stream of furnace gases, and adapted to deliver jets of pulverized fuel into said gas stream.

1,689,676. LOCOMOTIVE BOOSTER. FREDERICK W. MARTIN, Bronxville, N. Y., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed Oct. 31, 1923, Serial No. 671,839. Renewed Sept. 27, 1926. 11 Claims. (Cl. 105—45.)

1. The combination with a locomotive and a booster, of superheating means for the locomotive steam supply, and means for passing separately therethrough the steam supply for the booster when the latter is in operation.

1,689,677. POWER-REVERSE GEAR. FREDERICK W. MARTIN, Brooklyn, N. Y., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed Jan. 27, 1925. Serial No. 5,038. 8 Claims. (Cl. 121—41.)

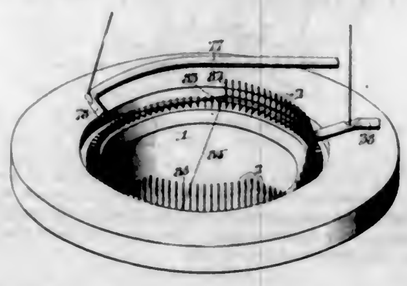


1. In a servo-motor power reverse gear, a cylinder, a piston having a hollow internally threaded rod, a controlling valve, and an operative connection between valve and piston comprising a rotatable sleeve having a head having threaded engagement with the rod and a rod extending through the sleeve and keyed to the head for turning the sleeve.

1,689,678. METHOD OF MAKING PILES. ARTHUR MAUTERER, Dortmund, Germany. Filed Apr. 20, 1925. Serial No. 24,398. 5 Claims. (Cl. 29—155.)

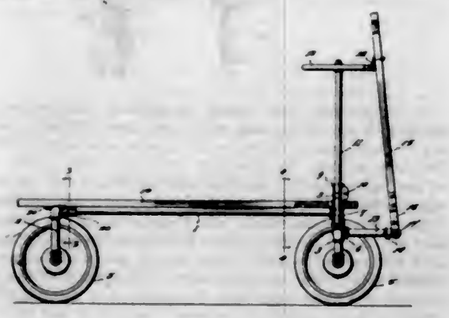
1. The method of constructing a metal pile having a full wave cross-section, which method consists in separately forming complementary parts of said pile with oppositely curved half-wave cross-sections, and in rigidly uniting said parts along adjoining longitudinal edges thereof with the half-wave cross-sectioned parts extending in opposite directions from the rigid joint between the adjoining edges of said complementary parts.

1,689,679. MACHINE FOR SORTING BRISTLES, HAIRS, FIBERS, AND THE LIKE ACCORDING TO DESIRED LENGTHS. KARL MAUZ, Wurttemberg, Germany. Filed Feb. 12, 1925, Serial No. 8,693, and in Germany May 21, 1924. 6 Claims. (Cl. 300—18.)



1. A machine for sorting bristles, hairs, fibers and like filaments into desired lengths, comprising a machine frame, mechanism acting on said frame and comprising relatively movable tongs for gripping and withdrawing the filaments, a table having a channel therein adjacent the said mechanism, an endless chain in the channel, a plurality of material-holding devices mounted on said endless chain and moved forward by the latter, and a conveying band arranged under the said mechanism, moved substantially at right angles to the movement of the said holding devices, and serving to receive the withdrawn material.

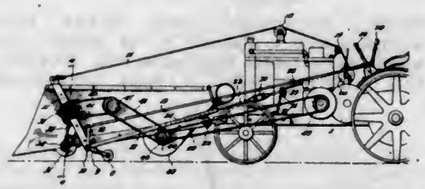
1,689,680. OIL DISTRIBUTOR. HERBERT OPPENHEIMER, New York, N. Y. Filed Apr. 19, 1927. Serial No. 184,848. 4 Claims. (Cl. 128—233.)



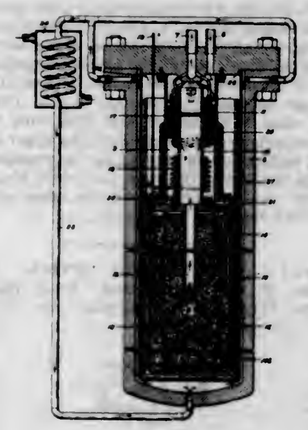
1. An oil distributor comprising a casing, an oil receptacle located within the casing, having two diameters, and having a removable cover to permit the introduction of oil into said receptacle, a heating unit located within the casing and surrounding a portion of the smaller diameter of the oil receptacle, the heating unit having its terminals carried out of the casing, together with means for controlling the flow of oil from the oil receptacle when desired.

1,689,681. CIRCULAR-KNITTING MACHINE. ALBERT M. PIGEON, Philadelphia, Pa., assignor to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Filed Oct. 25, 1912. Serial No. 727,700. 53 Claims. (Cl. 66—49.)

1. In a knitting machine, the combination of a needle cylinder, a series of needles carried thereby, a yarn feeding device, means whereby said yarn feeding device may be rendered inoperative, and a yarn clamping and cutting device, said cutting device being located between the clamping device and the web, and means for positively guiding the yarn from contact with the cutter when the yarn feeding device is thrown into operation and for pulling the yarn from the clamping device, the yarn being removed first from the clamping device and then from the cutter.



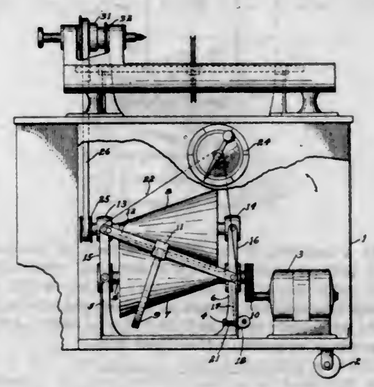
1,689,682. TOY WAGON. AUSTIN E. RAINEY, Grove City, Pa. Filed Apr. 28, 1927. Serial No. 187,362. 2 Claims. (Cl. 280—87.5.)



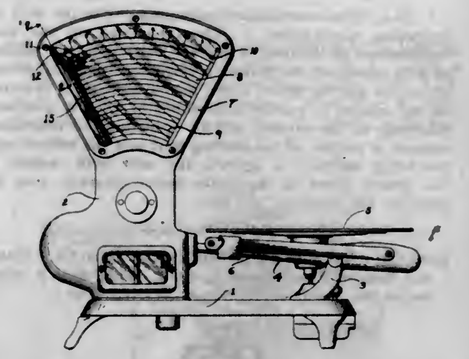
1. In a vehicle of the character specified, the combination of a reach, a cross bar, a fitting forming connecting means between the cross bar and reach, an axle, a member projecting upwardly from said axle and pivotally mounted in the fitting connecting the said cross bar and reach, and a steering post coupled to the member projecting upwardly from the axle.

1,689,683. SNOWPLOW. FRANK M. REDMER, Norfolk, Nebr., assignor of forty-nine one-hundredths to Charles W. Hass, Norfolk, Nebr. Filed Jan. 14, 1927. Serial No. 161,140. 3 Claims. (Cl. 37—43.)

1. A snow plow, comprising a hollow casing having a discharge outlet at its rear, and an inlet at its front, and having its bottom upwardly and rearwardly inclined from its front edge which is adapted to dig into and lift the snow, and said bottom having front and rear depressions, a rotary beater mounted within the front depression, a fan located within the rear depression, and rotary beaters within the upper portion of the casing and adapted to coact with the lower beater and fan to positively move the snow through the casing and discharge the same through the outlet.

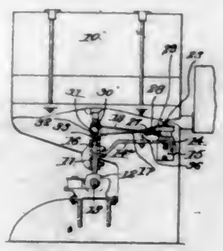


1,689,684. CATALYTIC APPARATUS FOR THE SYNTHESIS OF AMMONIA. FORREST C. REED, San Francisco, Calif. Filed Aug. 2, 1927. Serial No. 210,104. 9 Claims. (Cl. 23—289.)



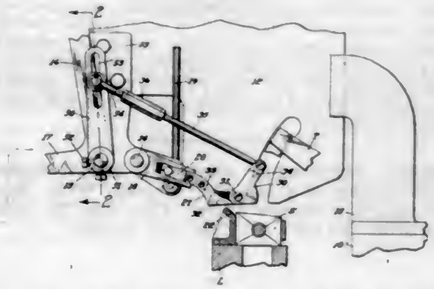
1. In an apparatus for the synthesis of ammonia, a pressure sustaining vessel, a plurality of concentric members connected as a unit to the cover of said vessel and forming a catalytic chamber and an annular heating chamber located above the catalytic chamber, a heat exchanger in the upper portion of the heating chamber, a heater in the lower portion thereof, means for admitting the incoming gases to the heating chamber, means for conducting them into the catalytic chamber at points midway of the wall of said chamber, an annular baffle within the catalytic chamber for directing the flow of gases in an axial direction, means for conducting the gases from the center of the catalytic chamber to the heat exchanger, a cylindrical shell attached to the cover of the vessel and spaced from the concentric members and the vessel, and a circulating line including a condenser connecting the upper portion and the under portion of the vessel.

1,689,685. BENCH MACHINE. ORWELL C. REEVES, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Apr. 28, 1921. Serial No. 465,341. 3 Claims. (Cl. 74—26.)



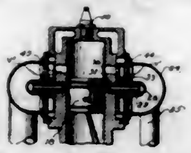
1. In a device of the class described, in combination, a cabinet, transmission mechanism mounted within said cabinet, said transmission mechanism comprising a stationary frame, a conical pulley journaled therein, pivoted frames connected to said stationary frame, an oppositely turned conical pulley supported by said pivoted frames, a belt passing between said pulleys, means for swinging said pivoted frames to bring said pulleys into operative engagement with said belt, and a bench machine mounted upon said cabinet and operatively connected to said transmission mechanism.

1,689,686. INDICATOR. ORWELL C. REEVES, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Sept. 28, 1922. Serial No. 591,028. 4 Claims. (Cl. 16—129.)



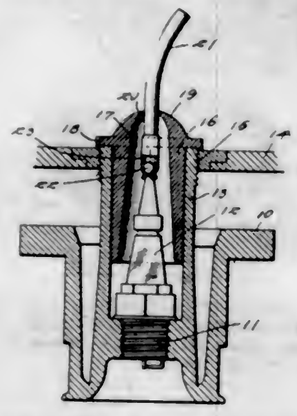
1. In a device of the class described, in combination, a relatively movable chart and indicator hand, said chart being divided into two portions by an arcuate opening, said indicator hand having a part with its surface lying in the plane of a surface of the outer of said portions and a part lying before the inner of said portions, the outer portion of said chart bearing weight indicia, and the inner portion thereof bearing value computations.

1,689,687. SPRING HINGE FOR PULP SCREENS. GEORGE REYNOLDS, Anderson, Ind. Filed Nov. 26, 1927. Serial No. 235,863. 4 Claims. (Cl. 92—32.)



1. In a machine of the class described, in combination with a plunger provided with a slot, and relatively stationary guide means for the plunger, return spring means extended into said slot, means to anchor said return spring means, an under arm, and hold-down means for said spring means secured to the under arm.

1,689,688. THREAD CUTTER FOR LOOMS. WALTER Y. ROSS, Whitinsville, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 18, 1927. Serial No. 184,652. 4 Claims. (Cl. 139—264.)



1. In a thread cutting and clamping device for weft replenishing mechanisms, a carrier mounted on the weft replenishing mechanism, a shuttle feeler pivotally mounted with respect to the carrier, a thread cutting unit mounted on the shuttle feeler, a rod holder adjustably mounted on the carrier to assume a plurality of angular positions relatively to the carrier, and an operating rod interposed between a portion of the cutting unit and the holder, said rod being effective to operate the unit with respect to the shuttle feeler as the latter moves pivotally with respect to the carrier.

1,689,689. INTERNAL-COMBUSTION ENGINE. CHESTER GORDON ROSS, Glendale, Calif. Filed May 9, 1927. Serial No. 189,925. 7 Claims. (Cl. 123—59.)

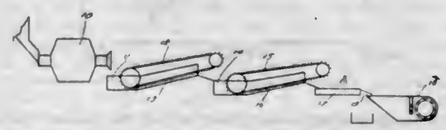
1. In an internal combustion engine, ports in the walls of the cylinders, communicating pockets in the outer walls of the cylinders, rotary disk valves in the pockets having their peripheries formed with intermeshing teeth to provide driving connections between the valves, means for driving one of the valves, an intake manifold covering all of the pockets, and means in the manifold and operable by the valves for further vaporizing and positively injecting a gaseous fuel into the cylinders through said ports.

1,689,690. ATTACHMENT FOR SPARK PLUGS. ARTHUR L. SANDIN, Bismarck, N. Dak., assignor of one-half to Charles J. Blue, Bismarck, N. Dak. Filed Feb. 24, 1927. Serial No. 170,582. 2 Claims. (Cl. 123—198.)

1. The combination with the cylinder head of an internal combustion engine having a socket in the lower wall of which a spark plug receiving opening is formed, of a plug for closing the upper end of the socket extending into the socket for a considerable distance and having at its upper end a flange seating upon the face of the cylinder head about the edges of the socket, said plug being chambered at its lower end for the reception of the upper end of the spark plug and having an opening for the passage of a lead wire for the spark plug, the upper face of the plug inclining downwardly and outwardly from the edges of the lead wire receiving opening.

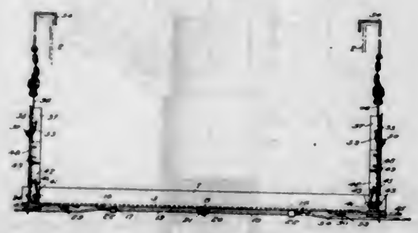
1,689,691. CORD-SEALING DEVICE. FRIEDRICH SCHAEFER, St. Gall, Switzerland. Filed Apr. 7, 1927, Serial No. 181,663, and in Germany Nov. 20, 1926. 2 Claims. (Cl. 292—325.)

1. A sealing device for cord and the like, comprising a cup-shaped member and a cooperating member fitted within the rim of the cup-shaped member, the rim of the cup-shaped member being adapted to be turned down upon the cooperating member to hold it in place with the cord interposed between the bottom of the cup-shaped member and the cooperating member, a channel formed in the bottom of the cup-shaped member to receive the cord, and prongs cooperating with the channel section to engage the cord.



1,689,692. AURAL TELEPHONE SYSTEM. HELMUT SELL, Berlin-Siemensstadt, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, and elsewhere, Germany. Filed Apr. 22, 1925, Serial No. 24,986, and in Germany Aug. 20, 1924. 6 Claims. (Cl. 179—107.)

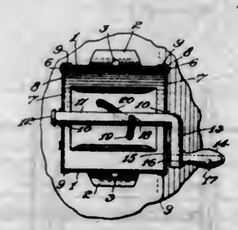
3. In an aural telephone system of the character described a sound pick-up michrophone, at least one microphonic amplifier device electrically connected in cascade with said pick-up microphone, an ear phone, suitable conductors for connecting said ear phone with said microphones, all of said microphones being mounted on a common base, a battery and a plug and socket connection between



said base and said battery to make a rigid but separable unit of said two elements, said plug connecting the battery in parallel to said microphones and said ear phone, an adjustable resistance in circuit with said ear phone and a common cut-out switch between said battery and said microphones and ear phone.

1,689,693. FLOTATION PROCESS. COOPER SHAPLEY, Bishop, Calif. Filed Oct. 13, 1927. Serial No. 225,907. 5 Claims. (Cl. 209—207.)

1. The process of separating finely divided particles by flotation comprising contacting the particles with a soap solution which does not chemically react with the particles, and then bringing the particles to the surface of a body of water free from any reagent which would decompose the soap.



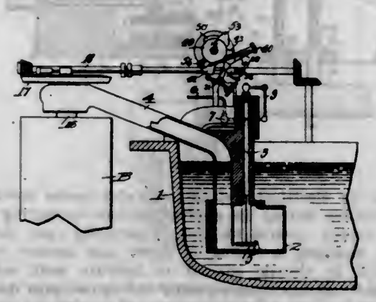
1,689,694. BALLAST SPREADER. BERNARD W. STRAW, Mount Airy, Md., assignor to Straw Ballast Distributer Corporation, Wilmington, Del., a Corporation of Delaware. Filed July 14, 1926. Serial No. 122,463. 68 Claims. (Cl. 105—239.)

1. In combination, a car formed with a body for holding granular material, and means removably positioned beneath said body for receiving said material, said means being formed with a door adapted for gradual operation to release said material as needed for spreading it beneath said car.

1,689,695. CLOTHESLINE REEL. JULIUS STROMBACH, Maplewood, N. J., assignor to Colonial Stamping Company, Newark, N. J., a Corporation of New Jersey. Filed Jan. 10, 1925. Serial No. 1,553. 1 Claim. (Cl. 242—101.)

A clothes-line reel, comprising a cylindrical shell and a pair of plates secured thereto and closing the opposite ends thereof, said shell having a pair of perforations through its wall and a pair of supporting ears at the side of the shell diametrically opposite said perforations, a spindle mounted for rotation in said plates and provided with a transversely extending perforation normally in alinement with one of the perforations in the shell, said spindle being of greater length than the shell and having

its opposite ends extending beyond said end plates whereby the spindle is capable of axial movement in its bearings, a crank handle carried by the spindle at one end thereof, the end plate at that end being provided with a plurality of perforations, and a stud carried by said handle and adapted to engage one of said perforations when the spindle is moved axially thereby to prevent rotation of the spindle.

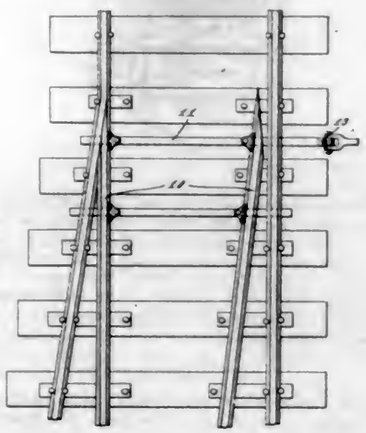


1,689,696. ESTER OF SALICYLIC ACID AND PYRUVIC ACID. SAMUEL LEWIS SUMMERS, Fort Washington, Pa. Filed June 30, 1925. Serial No. 40,683. 5 Claims. (Cl. 260—107.)

1. As a new therapeutic agent the chemical reaction product of salicylic acid and pyruvic acid substantially in the proportions of 1 part of the former to 1.23 parts of the latter.

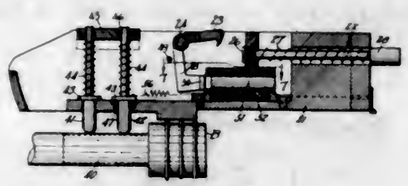
1,689,697. PHOSPHATE AND PROCESS. ERNEST W. THORNTON, East Orange, N. J., assignor to R. B. Davis Company, Hoboken, N. J., a Corporation of New Jersey. Filed Feb. 9, 1926. Serial No. 87,178. 5 Claims. (Cl. 23—243.)

1. A salt of phosphoric acid in the form of small spherical particles.



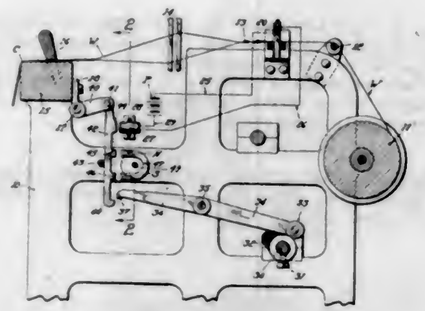
1,689,698. TIMING DEVICE FOR PNEUMATIC METAL PUMPS. ISIDOR TORNBERG, Plainfield, N. J., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Dec. 8, 1924, Serial No. 754,632. Renewed Mar. 30, 1928. 19 Claims. (Cl. 22—69.)

3. In a device for supplying molten metal to a movable casting box, the combination with the casting box, a pneumatic pump, and means for supplying air under pressure



to the pump for operating it, of means for automatically stopping the flow of air to the pump and the flow of metal to the casting box when the casting box is not in casting position.

1,689,699. SWITCH BAR. JOHN D. TURNER, Birmingham, Ala. Filed Oct. 26, 1927. Serial No. 228,895. 2 Claims. (Cl. 246—449.)



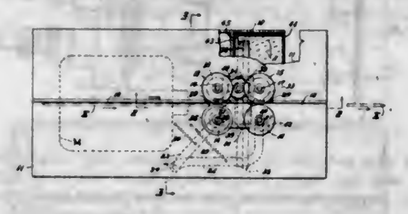
1. In combination with a railway switch, a tie bar adapted to be connected to the switch points, a curved inwardly extending hook-shaped extremity spaced from and parallel with one end of the bar and means extending transversely of the bar and hook-shaped extremity to close the end of the hook.

1,689,700. ELECTRICAL FEELER IN LOOM TRANSFERRER ARM. RICHARD GREENLEAF TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 26, 1926. Serial No. 150,696. 6 Claims. (Cl. 139—271.)

1. In an electrical weft detector for looms operating with bobbins having an electric current conducting portion normally covered by weft, a normally open electric circuit including a source of power and member to be energized by electric current to indicate weft exhaustion, said electric circuit normally having two gaps therein, a transferrer arm having a movement toward the surface to be detected on each detecting beat of the loom, means carried by the transferrer arm to close one of the gaps in the circuit on each detecting beat of the loom, and additional means carried by the transferrer arm to have contact with the electric current conducting portion of the bobbin on indicating beats of the loom, whereby the other gap of said circuit will be closed at exhaustion of weft to energize the member.

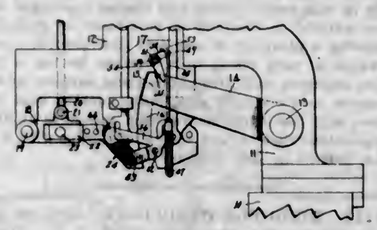
1,689,701. ELECTRICAL WARP STOP MOTION. RICHARD G. TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 6, 1928. Serial No. 244,976. 12 Claims. (Cl. 139—353.)

1. In an electrical warp stop motion for looms having a stopping member to be moved to stop the loom and an electro-magnetic device to be energized whenever a fault occurs in the warp, an armature member pivotally connected to the stopping member to be moved by the electro-magnet into stopping position, a permanent magnet to hold the armature member in stopping position, and means to move the stopping member when the armature member is held in stopping position by the permanent magnet.



1,689,702. FISHING TOOL. RICHARD N. VICKERS, Smackover, Ark. Filed Dec. 29, 1927. Serial No. 243,392. 3 Claims. (Cl. 294—102.)

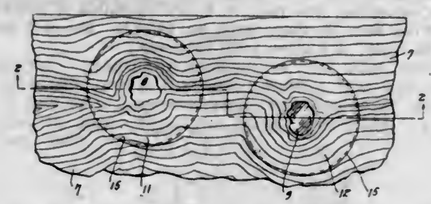
1. A device of the class described comprising a cylindrical body having a seat in its lower end, a collar threaded into the body and having spaced skirts upon its lower



end, a pair of yieldably connected jaws mounted in the body for cooperation with the seat, said jaws each having a web upon its upper end and capable of being interlocked with the skirts when the body is rotated in one direction and to be released when the body is rotated in another direction.

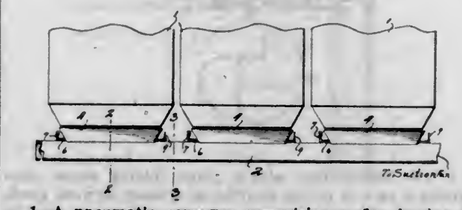
1,689,703. LETTER OPENER. MAXWELL VIDAVER, New York, N. Y. Filed Aug. 21, 1926. Serial No. 130,599. 17 Claims. (Cl. 120—35.)

1. In a machine of the character described, in combination, a feed table, a grinding wheel with its edge projecting into an aperture in the feed table, mechanism for feeding an envelope into engagement with said projecting edge of the grinding wheel, a covering and sealing mechanism for said aperture, and automatic mechanism including a member positioned in the path of a fed envelope and controlled thereby to adjust said sealing mechanism to permit contact of the envelope with the grinding wheel.



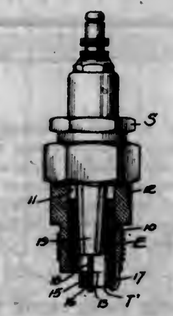
1,689,704. THREAD CUTTER FOR WEFT-REPLENISHING LOOMS. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 27, 1926. Serial No. 157,091. 4 Claims. (Cl. 139—267.)

1. In a filling thread cutter for looms, a transferrer arm, a lay, a shuttle feeler to be moved to shuttle feeling position prior to the movement of the transferrer arm, a thread cutting mechanism mounted on the shuttle feeler, means including a connection with the transferrer arm to open the cutter as the shuttle feeler moves to shuttle feeling position and the transferrer arm is raised, and means operated by the lay to close the cutter positively while the shuttle feeler is in feeling position and the transferrer arm has started a transferring movement to break said connection.



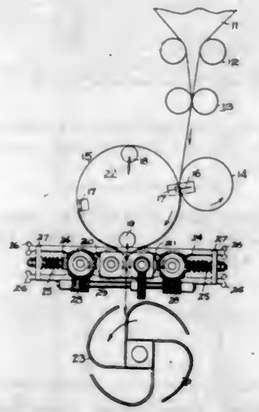
1,689,705. PROCESS FOR MANUFACTURING PLYWOODS. FLETCHER L. WALKER Westwood, Calif. Filed Aug. 11, 1926. Serial No. 128,662. 1 Claim. (Cl. 144—309.)

The steps in the manufacture of ply wood which consists in the removal of a defective portion from a ply, tapering the walls of the opening thus provided, inserting a piece of ply in the opening that conforms therewith, and



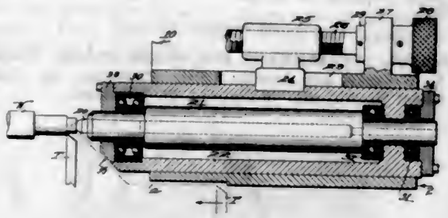
attaching this ply upon other plies in a manner to cause the larger surface of the inserted piece to contact with the adjacent ply.

1,689,706. COTTONSEED CONVEYER. JOHN H. WHITLEY, Stantonsburg, N. C. Filed June 9, 1927. Serial No. 197,669. 3 Claims. (Cl. 19—39.)



1. A pneumatic conveyer comprising a flue having an opening in its upper wall, said opening being defined by upstanding walls providing a hopper, a shaft supported by opposed walls of the hopper and extending through the hopper, a valve for the opening in the flue fixed to the shaft and opening into the flue, a rock arm carried by the shaft and providing means for constantly urging the valve into open position, a second arm carried by the shaft, a disc supported for rotation, said second arm having contact with the periphery of the disc, the periphery of said disc having a depression into which said arm extends upon rotation of the disc to permit the valve to move into open position, said valves being positively maintained shut by the engagement of the arm with the perimeter of the disk, except when said arm is released by the depression of the disk.

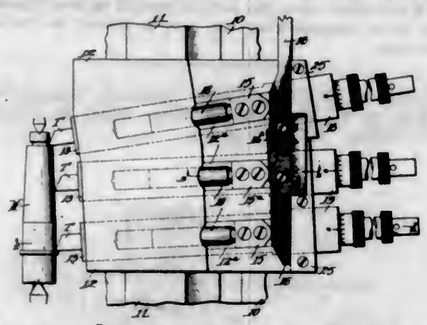
1,689,707. ATTACHMENT FOR SPARK PLUGS. DAVID L. WINTERS, Los Angeles, Calif. Filed Apr. 12, 1926. Serial No. 101,491. 8 Claims. Cl. 123—169.)



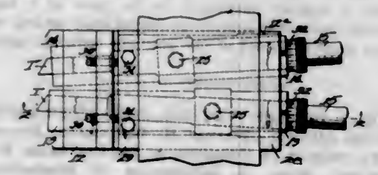
5. An attachment for spark plugs comprising a tubular element adapted to be inserted into the shell of the plug for electrical connection with the shell, and a tongue on the member shaped to move laterally and in a plane transversely of the length of the tubular element in response to changes in temperature.

1,689,708. DEVICE FOR PREVENTING SMUTTING OF PRINTED PRODUCTS. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Mar. 20, 1922, Serial No. 545,224. Renewed Mar. 30, 1928. 2 Claims. (Cl. 101—423.)

1. The combination with a paper folding device comprising a pair of rollers for folding a sheet between them, of a pair of spring pressed cleaning rollers mounted in guide ways on opposite sides of said folding rollers, each separately in contact with one of said folding rollers, said cleaning rollers being covered with absorbent material, and driving means between one of said folding rollers and the cleaning rollers for rotating said rollers at different rates of speed.



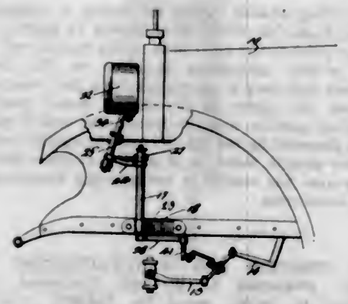
1,689,709. TAILSTOCK FOR LATHES. RICHARD A. ASHTON, Seneca Falls, N. Y., assignor to Seneca Falls Machine Co., Seneca Falls, N. Y., a Corporation of Massachusetts. Filed Mar. 18, 1926. Serial No. 95,776. 4 Claims. (Cl. 82—31.)



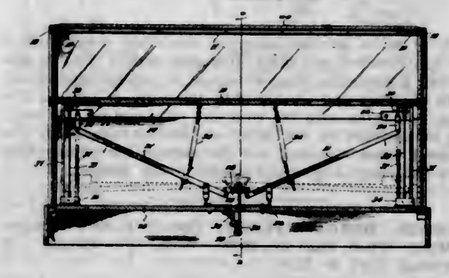
1. In a tail stock, a frame, a sleeve slidable axially therein, a spindle freely rotatable in said sleeve, and a center supported by said spindle, removable anti-friction bearing raceways mounted in said sleeve for said spindle at both ends thereof and also an additional removable thrust bearing raceway mounted in said sleeve for resisting axial pressure on said spindle.

1,689,710. MULTIPLE TOOL SLIDE FOR MACHINE TOOLS. RICHARD A. ASHTON, Seneca Falls, N. Y., assignor to Seneca Falls Machine Co., Seneca Falls, N. Y., a Corporation of Massachusetts. Filed Mar. 18, 1926. Serial No. 95,779. 8 Claims. (Cl. 82—14.)

1. In a machine tool, a frame, a tool carriage slidable longitudinally of the work on said frame, a plurality of directly actuated tool slides mounted for transverse movement in said tool carriage toward and from the work, a templet bar held from longitudinal movement and having cam portions in different planes, and templet blocks on said tool slides, each block being in one of said planes and cooperating with a cam portion in the same plane.

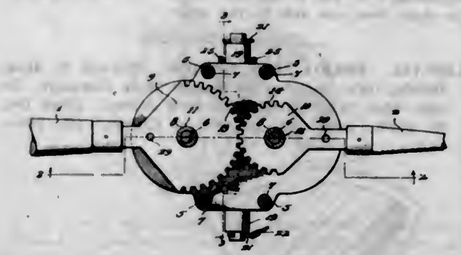


1,689,711. MULTIPLE TOOL SLIDE FOR MACHINE TOOLS. RICHARD A. ASHTON, Seneca Falls, N. Y., assignor to Seneca Falls Machine Co., Seneca Falls, N. Y., a Corporation of Massachusetts. Filed Mar. 18, 1926. Serial No. 95,780. 3 Claims. (Cl. 82—14.)



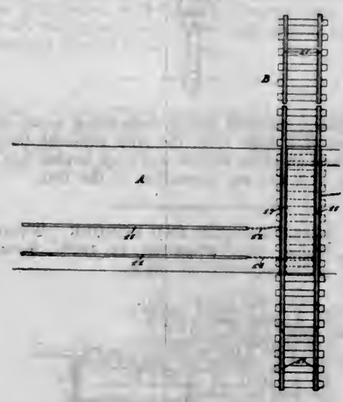
1. In a machine tool, a carriage movable axially of the work, a plurality of tool slides movable transversely in said carriage toward and from the work, a cam plate fixed axially in said machine tool and having a straight bearing surface parallel to the path of movement of said carriage and having a plurality of separate cam grooves extending lengthwise of said plate, said carriage having a bearing member engaging said straight bearing surface, and yielding means to force said cam plate against said bearing member, said tool slides having cam followers at different axial positions thereon and each cooperating with a selected cam groove in said cam plate.

1,689,712. DIRIGIBLE HEADLIGHT. EDMUND BARBER, Troy, and NATHAN INGRAHAM, Athol, N. Y. Filed Jan. 27, 1927. Serial No. 164,068. 3 Claims. (Cl. 240—62.)



3. A vehicle headlight comprising a pair of rotatable shafts one of said shafts being raised in vertical position, the other of said shafts being tilted slightly from the vertical, a link connecting the shafts for causing simultaneous oscillation of the same, and means for connecting said vertical shaft with the vehicle steering apparatus for actuation simultaneously therewith, said tilted shaft having the upper end angled to normally extend in a horizontal plane to support a vehicle headlight in position to cast a horizontal beam of light when a vehicle is travelling in a straight path and to swing the light to direct the beam downwardly and laterally when the shafts are oscillated during the turning movement of the vehicle.

1,689,713. DISPLAY CASE. WISTER P. BOTT, Homer, La., assignor of three-fourths to Fred C. McClanahan, Homer, La. Filed Jan. 12, 1927. Serial No. 160,686. 7 Claims. (Cl. 312—139.)



1. In a display case having a vertically movable front, operating means for the front including levers arranged in a plane parallel with the said front and pivoted adjacent their inner ends and inclining upwardly and outwardly, means connecting the outer ends of said levers with opposite end portions of the front, and an operating lever having connection with the inner ends of the said levers.

1,689,714. OAR. ARTHUR H. BURNS, Penn Yan, N. Y. Filed Nov. 29, 1926. Serial No. 151,490. 1 Claim. (Cl. 9—25.)
